ABSTRACT

This study was designed to provide schools, districts, and states with a means for identifying the knowledge and skills that are most important for students to learn for the subject areas of geography and history. Five state standards documents were selected to represent the exemplary content in geography and history. These documents were selected by analyzing the critical reviews of state curriculum documents conducted by the Fordham Foundation and the American Federation of Teachers. Once the five state documents were selected for a given area, the next step was to identify and classify the content. The eventual product was a master document that organized the knowledge and skills from the five state documents and information indicating where that content is found. The product of the study is a set of standards and benchmarks identified in the two subject areas at differing grade bands. For geography and history the standards and benchmarks are provided in six tables, organized by grades K-2, 3-5, 6-8, and 9-12. (Contains 16 references.) (SLD)

INTRODUCTION

Purpose

This study was designed to provide schools, districts, and states with a means for identifying the knowledge and skills that are most important for students to learn for the subject areas of geography and history. It follows and is modeled upon a similar study done for the areas of language arts, mathematics, and science (Kendall, Snyder, Schintgen, Wahlquist & Marzano, 1999). The standards and benchmarks in this document reflect the subject-area content consistently identified in documents from a handful of states that have been highly rated by national organizations for the quality of their standards. It is hoped that this material will assist those who are attempting to reduce the amount of content identified as important to a manageable level.

In recent years, it has frequently been observed that all of the knowledge and skills identified as important by national organizations cannot be addressed in the classroom given the time available in the school day. Education researcher Chester Finn, after reviewing documents produced by many standards-setting groups, asserted that "the professional associations, without exception, lacked discipline. They all demonstrated gluttonous and imperialistic tendencies" (in Diegmueller, 1995, p. 6). A similar perspective can be found in the report of the Third International Mathematics and Science Study (TIMSS), a large-scale, cross-national comparative study of math and science curricula. In addressing the relatively poor performance of U.S. students, the report's authors note that our "preoccupation with breadth rather than depth, with quantity rather than quality, probably affects how well U.S. students perform in relation to their counterparts in other countries" (Schmidt, McKnight, & Raizen, 1997). Researchers Marzano and Kendall (1999) show that at least by one measure, attempting to address all the content identified in standards documents would mean that "schooling would have to be extended from kindergarten to grade 21" (p. 104). It appears evident that practitioners and others could find this report to be of some use if they seek to ensure that as they reduce content to a manageable amount, they retain the most significant knowledge and skills.

Method for Selecting the Top State Documents

Five state standards documents were selected to represent the exemplary content in geography and history. In order to select these documents, we analyzed the critical reviews of state curriculum documents conducted by two national organizations that undertook a state-by-state review of the social studies: the Fordham Foundation and the American Federation of Teachers (AFT). The Fordham Foundation reviewed the geography and history content separately for each state; AFT reviewed social studies as a whole for each state and gave ratings by school levels (primary, middle, and high school) rather than by subject area. The other subject areas commonly associated with the social studies — behavioral studies, civics, and economics — did not receive a separate review by either organization, and so could not be examined in this study.

Selection of State Documents by Subject Area

For each subject-area — geography and history — we ranked the states according to how well they fared in the state-by-state reviews. Without exception, the top states were easily selected, ranking high in both reports. Three state documents in the social studies were selected for the analysis in both geography and history: Alabama, Arizona, and Kansas. To round out the top five in geography, the curriculum documents from Louisiana and South Carolina were chosen; for the area of history, the additional documents came from the states of California and Virginia.

Method of Identification and Synthesis

Once the five state documents were selected for a given subject area, the next step was to identify and classify the content found in these documents. In order to account for all content, we mapped most of the content identified during the review process against the standards and benchmarks identified in *Content Knowledge: A Compendium of Standards and Benchmarks for K-12 Education* (Kendall & Marzano, 2000). The *Compendium* represents McREL's synthesis of 137 significant curriculum and standards documents across 14 subject areas. Knowledge and skills identified in the *Compendium* are presented in each subject area as overarching categories (or *standards*) under which the knowledge and skills appropriate for students at particular grade ranges (*benchmarks*) are organized. We selected the *Compendium* as a cataloguing tool because it represents a synthesis of major documents in each subject area and thus very likely identifies most, if not all, of the significant content in each subject area.

The next step of the process involved identifying and organizing all of the similar content in the selected state documents. Briefly, the method consisted of identifying each description of knowledge or skill in the state documents and matching that content to the *Compendium* benchmark that addressed the same, or closely related, knowledge or skill. If necessary, the *Compendium* benchmark was rewritten in order to more accurately reflect the content described in several state documents. Infrequently, when sufficient representation warranted it, new benchmarks were created that were not present in the *Compendium*. These new benchmarks were placed under the *Compendium* standard most suited to them. This approach is compatible with our use of the *Compendium* as a convenient organizing device, rather than a selection device or filter.

When the five state documents had been analyzed, the resulting product was a master document that organized all of the knowledge and skills identified in the five state documents, as well as information indicating where that content was found. This information is preserved in this report by a set of codes, called a *citation log*, which appears just above each benchmark — for example, BD (AZIV.E9.5;CA6.2.9;KIII.1-4;V8.2) is the citation log for the 5-12 benchmark “Understands the development of alphabets and writing systems in Mesopotamia, Egypt, and the Indus Valley,” found under World History standard 1. A key for the citation logs appears at the bottom of each page so that readers can locate the original material.

In addition to this basic document information, each citation log also includes a code that designates the cognitive character of each benchmark as either *declarative* knowledge or *procedural* knowledge. Simply put, declarative knowledge (identified in the log as *BD*) describes information — facts, events, episodes, generalizations, and the like — that students should know. Procedural knowledge (indicated by *BP*) describes the skills or processes — such as reading a map, editing, or adding — that students should be able to perform. (A more complete description of declarative and procedural knowledge can be found in the *Compendium*, pages 22–24). The citation log also sometimes includes an asterisk (*), which indicates that the content represents material not found in the *Compendium*.

Selection of Criteria for Reduction

The original intention of the study was to provide a report that identified only that content that was common to all five documents. However, as we learned in our previous study on the language arts, mathematics, and science, it became clear that using such a method resulted in the identification of very few benchmarks. If we had selected only the content that was common to all five of the documents for either geography or history, the number of items, or benchmarks, that would have resulted would have been so small as to be of limited usefulness (as our preliminary analysis determined). We also determined that very few benchmarks would remain if we selected the content that was only common to any four of the five documents. (We did not find this to be the case in our previous study of language arts, mathematics, and science. In that study, we found that choosing content found in any four of the five documents provided an acceptable number of benchmarks). On the other hand, if we had selected content that was common to only *two* of the five state documents, the result would have been the identification of nearly as many benchmarks as were found in the *Compendium*, and thus our study would not achieve its purpose. We found, however, that if we selected benchmarks that were common to any *three* of the top five documents, the result was neither so small as to be not useful nor so large as to not serve the purpose of winnowing down the amount of content. Thus, for the subject areas of geography and history, the standards and benchmarks identified in this study represent content that was found to be present in any *three of the five* standards documents selected for review.

Product and Caveat

The product of this study is a set of standards and benchmarks identified in two subject areas at differing grade bands (see the introduction of each study for a description). The benchmarks represent concepts and skills identified for student learning by at least three of the five states whose documents have been rated highly for, among other things, the clarity, specificity, and appropriateness of their standards. It should be noted that the technique described and used here is not designed to produce a clearly sequenced set of content. Further, this document should not be mistaken for a well-planned set of standards and benchmarks. Each document that we analyzed might well have possessed either an implicit or explicit design and scaffolding. Our technique was intended not to identify a scope and sequence, but, rather, to identify the concepts and skills that were most common to the five

documents for each subject area. Thus, users of this document are encouraged to consider it as one that identifies knowledge and skills that across these documents, at least, could be considered essential.

GEOGRAPHY

Identification of National Reports

For the subject area of geography, two reports were used to help select the state documents analyzed in this study. One report was the American Federation of Teachers' (AFT) *Making Standards Matter* (1999), which includes ratings of the state standards in terms of specificity and clarity. The second report, "The State of State Standards in Geography" (in the *State of State Standards 2000*, Finn & Pitrelli, Eds.), was written by Susan Monroe for the Fordham Foundation.

Selection of Reference Documents

As noted in the introduction to this report, five state documents were selected for review for geography. The selection of the top five state documents for geography was determined by comparing information found in the two evaluation reports cited above. Specifically, the reviews of those states that received a "B" or above in the Fordham report on geography were compared with those states rated in the AFT's *Making Standards Matter* report as having clear and specific standards in the social studies. The analysis resulted in the selection of the following documents for the purpose of identifying important content for K-12 geography:

- *Alabama Course of Study: Social Studies* (1998, February), by the Alabama State Department of Education,
- *Social Studies Standards* (2000), by the Arizona Department of Education,
- *Kansas Curricular Standards for Civics-Government, Economics, Geography, and History* (1999, July), by the Kansas State Board of Education
- *Social Studies Content Standards* (1997, May), by the Louisiana State Department of Education
- *Curriculum Standards: Social Studies* (2000), by the South Carolina State Department of Education

Benchmark Construction

As described in the general introduction, material from each of the five documents was analyzed to identify the knowledge and skills students were expected to attain. This information was then organized under the geography standards and benchmarks found in the *Compendium*. Finally, the combined material was synthesized into benchmarks. Benchmarks are commonly made up of a sentence stem followed by examples, which are intended to illustrate, but not exhaust, the kind of information found in the documents. For example, the following benchmark appears in this study under standard 2, "Understands the characteristics of places and regions," at the 3–5 grade range:

Knows the causes and effects of physical and human changes in a place over time (e.g., erosion, river systems, agriculture, urban growth, transportation, settlement patterns)

The stem "Knows the causes and effects of physical and human changes in a place over time" represents what was common to three (in this particular case) state documents. The parenthetical content following the stem, however, provides a representative set of examples. Once the analysis was finished and the content synthesized, the entire document was reviewed to determine how best to organize the benchmarks under standards.

Standards Construction

Given the considerable reduction in content that resulted from this process — from the 238 benchmarks across 18 standards in the *Compendium* to the 66 benchmarks in this study — it was clear that the number of standards should be similarly reduced. Working from what has come to be called the "five themes of geography," we were able to construct five standards that organized the content.

Organization of the Content

The standards and benchmarks that resulted from our synthesis of state standards are provided in the tables that follow. The benchmarks are organized primarily by grades K–2, 3–5, 6–8, and 9–12, a structure that accommodates the various designs of the state documents reviewed. Each state analyzed presents its standards and benchmarks in different ways. Two states organize their standards grade by grade; the other states use varying grade-band structures — for example, K–2, 3–5, 6–8, 9–12 or K–4, 5–8, 9–12. In order to represent as closely as possible the range of grades under which the content was found, we also have provided broader ranges where appropriate. Thus, grade bands in this report may appear, for example, as K–5 or 6–12. These grade bands (in this case, K–5 and 6–12) indicate the range of grades under which the content was found in the state documents. The citation log provided with each benchmark indicates the documents in which that content was found.

Summary of Standards for Geography

Table 1 provides a listing of content present in at least three of the five top-rated state documents selected for this study. This content was synthesized to form benchmarks, which were then organized under the following standards:

1. Understands the world in spatial terms,
2. Understands the characteristics of places and regions,
3. Understands the Earth's physical systems,
4. Understands human culture and social systems, and
5. Understands the interaction of the environment and society.

Table 1. Summary of State Benchmarks on Geography

1. Understands the world in spatial terms	
<i>Grades K-2</i>	<ul style="list-style-type: none"> Knows the purposes and features of maps and globes (e.g., relative location terms, cardinal directions, simple grid systems, basic map symbols)
	<ul style="list-style-type: none"> Knows the location of school, home, neighborhood, community, state, and country
<i>Grades K-5</i>	<ul style="list-style-type: none"> Knows basic physical and human features of places as they are represented on maps and globes (e.g., land forms, mountains, valleys, water bodies, continents, political boundaries, cities)
<i>Grades 3-5</i>	<ul style="list-style-type: none"> Knows the basic elements of maps and globes (e.g., legend, distance, scale, compass, cardinal and intermediate directions, meridians and hemispheres, latitude and longitude or alphanumeric grid systems)

HISTORY

Identification of National Reports

For the subject area of history, two reports were consulted to select the state documents analyzed in this study. One report was from the American Federation of Teachers (AFT), *Making Standards Matter* (1999), which includes ratings of the state standards in terms of specificity and clarity. The second report, *The State of State Standards in History* (in the *State of State Standards 2000*, Finn & Pitrelli, Eds.), was written for the Fordham Foundation by David Warren Saxe.

Selection of Reference Documents

The selection of the top five state documents for history was determined by comparing information found in the two evaluation reports cited above. Specifically, the reviews for those states that received a "B" or above in the Fordham report on history were compared with those states rated in the AFT's *Making Standards Matter* report as having clear and specific standards in the social studies. The analysis resulted in the selection of the following documents for the purpose of identifying important content for K-12 history:

- *Alabama Course of Study: Social Studies* (1998, February), by the Alabama State Department of Education
- *Social Studies Standards* (2000), by the Arizona Department of Education
- *History-Social Science Content Standards for California Public Schools: Kindergarten Through Grade Twelve* (2000), by the California State Board of Education
- *Kansas Curricular Standards for Civics-Government, Economics, Geography, and History* (1999, July), by the Kansas State Board of Education
- *Standards of Learning For Virginia Public Schools* (1995, June), by the Board of Education, Commonwealth of Virginia

Benchmark Construction

As described in the general introduction, material from each of the five documents was analyzed to identify the knowledge and skills students were expected to attain. For ease of collection and analysis, this information was then organized under the history standards and benchmarks in the *Compendium*. Depending upon the content of the material, the knowledge and skills identified as a result of this analysis were organized under one of five areas: Historical Understanding, K-4 History,

State History, United States History, and World History. The material from the documents was then synthesized into benchmarks.

Benchmarks are commonly made up of a sentence stem, which describes the specific content found in the documents, followed by examples, which are intended to illustrate, but not exhaust, the kinds of examples provided in the documents. For example, the following benchmark appears in this study under Standard 2, “Understands the origins and development of emerging institutions in the colonies and the impact of slavery on European and African lives in the Americas”:

Understands economic life in the New England, Chesapeake, and Southern colonies (e.g., development of a free-market economic system; differences in economic systems in different colonial regions; economic relationship between colonies and England)

The stem “Understands economic life in the New England, Chesapeake, and Southern colonies” represents what was common to four of the five (in this particular case) state documents. The parenthetical content following the stem, however, provides a representative set of examples.

The synthesis process yielded material that was identified in state documents as important for the study of history, but not addressed in the national documents synthesized in the *Compendium*. In these instances, the end of the citation log includes an asterisk (*) to indicate that the content represents material not found in the *Compendium*.

Standards Construction

Once the analysis was completed, the content was reviewed for commonalities. Given the reduction in content — from the 1,280 benchmarks across 87 standards in the *Compendium* to 191 benchmarks in this study — it was clear that the number of standards should be similarly reduced. We found that those standards that had been developed from the national documents and formed the basis for the *Compendium* were often too specific to be useful as categories, with the exception of the areas of Historical Understanding, K–4 History, and State History. The process of developing standards for the other areas — U.S. History, and World History — was in part informed by the categories used in the national documents. However, more commonly, these standards were developed by working from the “bottom up,” that is, reviewing the content to draft standards that best organized the material. Not surprisingly, nearly all standards in the U.S. and World History sections were built from a chronological perspective.

* * * *

Organization of the Content

The standards and benchmarks that resulted from our synthesis of state standards in history are provided in the tables that follow. The benchmarks are organized into grade bands that reflect the source documents from which they were derived. Thus, the knowledge and skills that address the area of Historical Understanding are identified as K–12 content because the material that addresses this area was found at all grade levels in the source documents. The standards for K–4

History, as can be deduced by the label, reflect the content found in state documents for students in kindergarten through the 4th grade. The sole standard for State History is designated as grade 4 because all five state curriculum documents analyzed address state history at this grade and, with the exception of Kansas (which takes the topic up again in grades 2, 8, and 11), do not systematically address this topic at any other grade than 4th grade. For the areas of U.S. History and World History, the range is designated as grades 5–12 for two reasons. First, a preliminary analysis made clear that confining our synthesis of material to content that was common within a narrower range of grades (such as separate tables for middle school and high school) would have resulted in very little content being identified as common across the states. Second, it is commonly recognized that the events, facts, and episodes — the “stuff” of history — do not lend themselves to assignation to a particular grade. Thus, it appeared that narrower grade bands than the 5–12 presented here would not be useful.

Summary of Standards for History

The following tables provide a listing of content found to be present in at least three of the five top-rated state documents selected for this study. This content was synthesized to form benchmarks, which were then organized by standards under the following topic headings:

Table 2: Summary of State Benchmarks on Historical Understanding.

1. Understands and knows how to analyze chronological relationships and patterns
2. Understands the historical perspective

Table 3: Summary of State Benchmarks on K–4 History.

1. Understands family life now and in the past, and family life in various places long ago
2. Understands the history of a local community and how communities in North America varied long
3. Understands how democratic values came to be and how they have been exemplified by people, events, and symbols
4. Understands major discoveries in science and technology, some of their social and economic effects, and the major scientists and inventors responsible for them

Table 4: Summary of State Benchmarks on State History.

1. Understands the people, events, problems, and ideas that were significant in creating the history of the state

Table 5: Summary of State Benchmarks on U.S. History.

1. Understands the characteristics of the societies in the Americas, Western Europe, and Western Africa and their interactions during the Age of Exploration
2. Understands the origins and development of emerging institutions in the colonies and the impact of slavery on European and African lives in the Americas
3. Understands the causes of the American Revolution, its course, and its impact on politics, the economy, and society
4. Understands significant changes in the American political system from 1781 to the 1830s
5. Understands the United States territorial expansion between 1801 and 1861 and how it affected relations with external powers and Native Americans
6. Understands the significant technological and social changes in the antebellum period
7. Understands the causes, course, and character of the Civil War and Reconstruction
8. Understands significant changes in the industrialization and urbanization of America from the late 19th to the early 20th centuries
9. Understands federal Indian policy and foreign policy from the Civil War to World War I
10. Understands political and social movements of the late 19th and early 20th centuries
11. Understands significant social and political changes in the United States from World War I through the Great Depression
12. Understands the causes and course of World War II and its legacy
13. Understands American foreign policy from the inception of the Cold War and its impact on domestic politics
14. Understands social issues and domestic policies in the post-World War II period

15. Understands economic, social, and cultural developments in the contemporary United States

Table 6: Summary of State Benchmarks on World History.

1. Understands the development of civilization in Mesopotamia, Egypt, the Indus Valley, and the Mediterranean to 1000 BCE
2. Understands cultural developments in the Mediterranean and southwest Asia from 1000 to 200 BCE
3. Understands the rise of religious and large-scale empires in the Mediterranean basin, China, and India from 500 BCE to 300 CE
4. Understands the Imperial crises and their aftermath in various regions from 300 to 700 CE
5. Understands the development of Islamic, European, Japanese, and Meso- and South American societies from 300 to 1000 CE
6. Understands significant events and changes in world society from 1000 to 1500 CE
7. Understands significant events and changes from the Age of Exploration to the Age of the Enlightenment (1450–1750 CE)
8. Understands political, social, and industrial revolutions from the late 18th to the early 20th century
9. Understands the causes and global consequences of World War I and the Great Depression
10. Understands the causes and global consequences of World War II and the post-war world
11. Understands contemporary issues and events in an interdependent world

Table 2. Summary of State Benchmarks on Historical Understanding

3. Understands how democratic values came to be and how they have been exemplified by people, events, and symbols

Grades K–4

- Understands how important figures reacted to their times and why they were significant to the history of our democracy (e.g., individuals who fought for the nation's freedom, including Thomas Jefferson, George Washington, and Benjamin Franklin; individuals who took risks to secure rights and freedoms of others, including Harriet Tubman, Abraham Lincoln, Martin Luther King Jr., Cesar Chavez, Frederick Douglass, and Anne Hutchinson)

BD (AL1.26; AL2.25; AZII.F4.1; AZII.F4.2; CA3.4.6; KI.1-2.47; VK.1)

- Understands the people and events honored in commemorative holidays and celebrations (e.g., Martin Luther King, Jr. Day; the Fourth of July; Memorial Day; Veteran's Day; Thanksgiving)

BD (AL2.24; AZI.RI.2; CAK.6.1; CA1.3.2; KI.3-2.47; KI.3-3.47; KI.3.2.58; VK.1; V1.3)

- Knows the history of American symbols and icons (e.g., flag, bald eagle)

BD (AL3.27; CAK.2; CA3.4.3; KI.3-1.47; V1.15)

- Knows the Pledge of Allegiance and patriotic songs, poems, and sayings that were written long ago, and understands their significance

BD (ALK.9; CA5.7.6; KI.3-1.47; V1.15)

4. Understands major discoveries in science and technology, some of their social and economic effects, and the major scientists and inventors responsible for them

Grades K–4

- Knows the accomplishments of major scientists and inventors (e.g., George Washington Carver, Thomas Edison, Benjamin Franklin, Marie Curie, Jonas Salk, Jane Goodall)

BD (AL2.26; AL2.27; KI.1-1.47; V1.2)

REPRODUCTION RELEASE

(Specific Document)

I. DOCUMENT IDENTIFICATION:

Title: A Distillation of Subject-Matter Content for the Subject Areas of Geography and History

Author(s): John S. Kendall, Lisa Schoch-Roberts, Sara Young-Reynolds

Corporate Source: Mid-continent Research for Education & Learning

Publication Date:
9.30.00

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

1

Level 1

 X

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

The sample sticker shown below will be affixed to all Level 2A documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE, AND IN ELECTRONIC MEDIA FOR ERIC COLLECTION SUBSCRIBERS ONLY, HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

2A

Level 2A

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only

The sample sticker shown below will be affixed to all Level 2B documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

2B

Level 2B

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.
