## ABSTRACT

This Kids Count Factbook details county and statewide trends in the well-being of Oklahoma's children. The statistical portrait is based on eight indicators of child well-being: (1) low birth weight infants; (2) infant mortality; (3) births to young teens; (4) child abuse and neglect; (5) child and teen death; (6) child poverty; (7) high school dropouts; and (8) juvenile violent crime arrests. Statewide findings, presented in the Factbook's overview, indicate that five of the eight benchmarks (low birth weight infants, child abuse and neglect, child poverty, high school dropouts, and juvenile violent crime arrests) worsened compared to data from a decade or more ago. Three benchmarks (infant mortality, births to young teens, and child death) improved over the comparable decade-old data. The Factbook presents current statewide and county data for each of the benchmarks. Each benchmark is defined, state and county trends are presented, and racial differences are indicated. The bulk of the Factbook is comprised of county profiles in which data for each of the indicators are presented graphically. Tables of county data for each indicator, methodology and sources, and a directory of Kids Count Leaders conclude the Factbook. (SD)

## A Day in the Lives of Children in Oklahoma

*Every day in Oklahoma...*

**127 babies are born**

8 of the babies are born to children (mothers under age 18)  
48 of the babies are born without receiving adequate prenatal care  
9 of the babies are born too small

*Every day in Oklahoma...*

**133 incidents of child abuse and/or neglect are investigated**

37 incidents are confirmed to be child abuse and/or neglect

*Every day in Oklahoma...*

**26 children drop out of school without graduating**

*Every day in Oklahoma...*

**89 children are arrested for a crime**

3 of those are arrested for a violent crime

*Every day in Oklahoma...*

**226,841 children live in poverty (1 of every 4)**

20 more children join them in poverty

*Every day in Oklahoma...*

**1 infant dies before his or her first birthday**

*Every day in Oklahoma...*

**1 child or teen dies**

**Oklahoma KIDS COUNT Leadership**

Oklahoma KIDS COUNT Leaders are trained in the areas of legislative and grass roots advocacy, communicating children's issues and community organizing. KIDS COUNT Leaders are available for group presentations and individual meetings. A director of KIDS COUNT Leaders begins on page 88.

KIDS COUNT Leaders are chosen annually through an application process. To receive an application call 405-236-5437.

**Child Watch Visitation**

The Child Watch Visitation program is designed to create a climate of change for children and youth by creating a sense of urgency and compelling participants to act. During a Child Watch Tour, participants see firsthand the problems that Oklahoma's children and youth face. This visitation program has been highly effective in strengthening the voice for children in Oklahoma and other states.

Oklahoma KIDS COUNT can provide training and technical assistance for conducting a Child Watch Tour in your community.

**Internet Access**

Data from the Oklahoma KIDS COUNT Factbook '99 is included on the website for the Oklahoma Institute for Child Advocacy at <http://www.oica.org>.

**National KIDS COUNT Databook**

An annual publication which reports on the well-being of children, youth and families in the United States. Also available is a special report entitled *When Teens Have Sex: Issues and Trends*. The publications are free and available through: The Annie E. Casey Foundation, 701 St. Paul Street, Baltimore, MD 21202, 1-410-547-6600.

**Features of the 1999 Oklahoma KIDS COUNT Factbook**

**Statements of Impact on Oklahoma**  
There are brief statements highlighted on each of the eight benchmark topic pages (pages 12 - 27). The statements are designed to 1) link the eight indicators by highlighting common causes and solutions, 2) emphasize the impact these issues have on children, families and communities in Oklahoma, and 3) facilitate the sharing of the Oklahoma KIDS COUNT data. The statements have been written to be useful in grantwriting, public speaking, communicating with the media and other opportunities in which the scope and severity of these issues needs to be clearly conveyed.

**Interpreting the Data**

An instructive section, located on page 6, has been included in this publication to assist in understanding and using the data.

**Key to Using County Benchmark Tables**

There is a guide to direct the reader to the various types of data information located on the County Benchmark Tables. The Key can be found on page 29, at the beginning of the County Benchmark section. Several types of data information are available for each benchmark: numbers, average annual numbers, county and state rates, percentage change between years, base and recent data and county rankings.

## Interpreting the Data

### Understand What is Being Measured

It is important to understand what is being measured and how. Several types of data information are available for each benchmark: numbers, average annual numbers, county and state rates, percentage change between years, base and recent data, and county rankings. A “key” directing the reader to the various types of data information is presented at the beginning of the County Benchmarks section (page 29). The Methodology and Sources (page 82) details what each benchmark means, what data is included and where it is from.

### Beware of Small Numbers

County populations vary significantly. Such variations should be considered when interpreting the differences among counties. Be aware that small counties may have a small number of events (e.g., child deaths, arrests for violent crimes) which can cause rates to vary considerably from year to year without reflecting real change. For this reason, many benchmarks use multiple year averages to improve the reliability of rate comparisons. Low rates may appear in counties with large populations. Relying solely on rates, without considering the numbers involved, may result in overlooking locations which have large numbers of suffering children.

### Remember the Uses and Limits of Data

Benchmarks provide important baseline information. Effective use of benchmarks requires them to be understood in a broad context. They provide one way to look at how children are doing in a county or state. Benchmarks can provide the starting place to initiate dialogue with others who share your interest. There are many important perspectives required to piece together a complete picture. Collect additional data and viewpoints to flesh out the most useful view of child well-being in your own area.

a state profile

## Overview & Findings

Oklahoma's people remain her strength and promise. One in four (26.5%) Oklahomans are children.

Today, almost eight hundred eighty thousand (878,305) children live, play and go to school in Oklahoma communities.

Tomorrow their ideas and dreams will frame yours. They will have your job, your responsibilities. They will run the businesses and be the workers. One will be your grocer, one your pharmacist. One will be your neighborhood cop, one your child's doctor. Tomorrow

they will be the teachers. One will marry your child. Today's children will be tomorrow's policy makers and voters. One will be Governor. They will decide if your grandchildren are safe, healthy and happy.

Today, thousands of Oklahoma children are safe, healthy and happy. Thousands are not. Some will overcome the challenges depicted in these pages. Others will fail.

There is not one child to waste. The problems are complex, but not without promising solutions.

Community understanding, *combined with action*, will improve the well-being of today's children and secure a safe, healthy and happy future for tomorrow's children.

The Oklahoma KIDS COUNT Partnership, a project of Oklahoma Institute for Child Advocacy (OICA), uses key strategies to achieve its goal. *First*, KIDS COUNT "counts kids," providing accurate and up-to-date data on the status of Oklahoma's children and youth. *Second*, KIDS COUNT cultivates leadership on behalf of children and youth, giving

### Oklahoma

Indicator	Base Data	Worsened	Improved	Recent Data	Recent Number

	5.5% of grades 9-12 1994-1995 School Year	-1.7%		5.6% of grades 9-12 1996-1997 School Year	11,673 all grades 1996-97 School Year
	172.4/100,000 youth 10-17, 1980	-44.5%		283.7/100,000 youth 10-17 1997	1,171 arrests 1997

voice to their needs at the local level. *Third*, KIDS COUNT communicates the needs of children and youth, using extensive public awareness activities.

The Oklahoma KIDS COUNT Factbook uses benchmarks to profile the status of children and youth in our state. Benchmarks are quantifiable measures that, when taken together, help determine child, family and community well-being. The eight benchmarks in the 1999 KIDS COUNT Factbook are **low birthweight infants, infant mortality, births to young teens, child abuse & neglect, child death, child poverty, high school dropouts and juvenile violent crime arrests**. This book, the fifth annual Oklahoma KIDS COUNT Factbook, shows the interrelatedness of these benchmarks and how they impact each other.

From an established baseline, OICA is tracking progress, or the lack of progress, for each benchmark over time. Progress requires action. Progress requires using all of this information — and more — to make good decisions about state and community budgets and programs that affect children and youth. Effective programs and policies work together with strong communities and families to improve the benchmarks. A benchmark is not just a collection of numbers; each individual number has a face, a family, and a future.

The 1999 Oklahoma KIDS COUNT Factbook reveals that five of the eight benchmarks tracked *worsened* when compared to data from a decade or more ago:

- Low birthweight infants
- Child abuse & neglect
- Child poverty
- High school dropouts
- Juvenile violent crime arrests

Three benchmarks *improved* over the comparable decade-old data:

- Infant mortality
- Births to young teens
- Child death

*The goal of the*

**Oklahoma Institute for**

**Child Advocacy (OICA)**

*is to improve life for Oklahoma's children. OICA believes that:*

- ▶ All children deserve to be free from hunger and preventable disease and to receive regular health care.
- ▶ All children deserve an education that prepares them to meet the future and inspires them to achieve their potential.
- ▶ All children deserve to grow up free from abuse, violence, and the devastation of alcohol and other drugs.
- ▶ All children deserve a secure future and to grow up in an economically stable family.

The cluster of Oklahoma's 27 *poorest* counties has the worst indicators in four of the eight benchmark areas investigated by Oklahoma KIDS COUNT. Taken together these counties have the highest rates of births to young teens, child abuse & neglect confirmations, child death and child poverty.

The cluster of Oklahoma's 21 *wealthiest* counties has the best indicators in seven of the eight benchmark areas investigated by Oklahoma KIDS COUNT. Taken together these counties have the lowest rates of low birthweight infants, infant mortality, births to young teens, child death, high school dropouts, child poverty and juvenile violent crime arrests.

### Comparing Profiles Oklahoma Economic Clusters

	State of Oklahoma	Number 1 / Wealtheist	Number 2 / Wealtheier	Number 3 / Middle	Number 4 / Poorer	Number 5 / Poorest
Total Population (1997)	3,317,091	733,823	716,245	696,517	583,134	587,372

Number of Children Receiving Public Assistance (FY1997)	62,599	6,691	11,569	17,988	11,999	14,352
Percent of Children Receiving Public Assistance (FY1997)	7.1%	3.4%	6.2%	9.8%	7.7%	9.3%
Per Capita Income (1996)	\$19,574	\$18,773	\$24,022	\$22,065	\$16,624	\$15,158
Unemployment Rate (1997)	4.1	2.8	3.7	3.6	4.7	7.0
Percent of Low Birthweight Babies (1992-1996)	6.9%	6.0%	6.9%	7.7%	7.0%	6.7%
Rate of Infant Mortality (1992-1996)	8.5 per 1,000 births	6.5 per 1,000 births	9.2 per 1,000 births	9.4 per 1,000 births	8.6 per 1,000 births	8.3 per 1,000 births
Rate of Births to Teen Girls ages 15 through 17 (1992-1996)	38.3 per 1,000 teen girls	25.9 per 1,000 teen girls	39.3 per 1,000 teen girls	43.7 per 1,000 teen girls	38.5 per 1,000 teen girls	46.0 per 1,000 teen girls
Rate of Child Abuse/Neglect Confirmations (FY1997)	15.5 per 1,000 children	12.9 per 1,000 children	12.1 per 1,000 children	14.8 per 1,000 children	18.8 per 1,000 children	20.5 per 1,000 children
Death Rate among Children ages 1 through 14 (1992-1996)	33.5 per 100,000 children	26.7 per 100,000 children	30.3 per 100,000 children	36.3 per 100,000 children	37.0 per 100,000 children	38.7 per 100,000 children
High School Dropout Rate (School year 1996-1997)	5.6%	4.8%	5.9%	7.6%	4.8%	5.2%
Violent Crime Arrests of Children ages 10 through 17 (1997)	283.7 per 100,000 children	124.9 per 100,000 children	504.3 per 100,000 children	417.7 per 100,000 children	202.7 per 100,000 children	170.5 per 100,000 children

## Low Birthweight Infants

Each year nearly thirty-two hundred Oklahoma babies (3,191 annual average) are born too small (weighing less than 5½ pounds).

A disquieting number of these low-weight infants (526 annual average) are born very, very tiny (weighing less than 3 pounds, 5 ounces).

During this past year the proportion of Oklahoma babies born too small slowly and steadily continued to worsen (increasing from 6.8% to 6.9% of all births), with comparable rates also worsening during the year in most (46 of 77) of Oklahoma's counties.

This trend has continued for years. A higher proportion of Oklahoma babies (6.9% of all births) are born too small today as compared to the population born in the mid-1980s (6.5% of all births), with such rates also worsening in the majority (46 of 77) of Oklahoma's counties during the same period.

The rates of low birthweight births in the majority of Oklahoma counties (41 of 77) were worse than the average county rate (6.5% of all county births). The highest and worst low birthweight rate (9.5% of all county births) continues to be found in Choctaw County; the lowest and best (3.1% of all county births) is in Harper County during this most recent period.

The low birthweight rate for Black infants (12.4% of all Black births) nearly doubles the rate for White infants (6.4% of all White births). The best low birthweight rate and trend is recorded for American Indian infants (5.6% of all American Indian births).

While early prenatal care is known to improve these rates, less than two-thirds (62.0%) of Oklahoma's babies were born to mothers who received the recommended level of prenatal care.

Ranking in the top half of all the states, Oklahoma's rate of low birthweight infants is good relative to other parts of the country. Oklahoma's national rank improved from 23rd to 21st during the most recent year (1995) measured.

## Impact on Oklahoma

- ▶ *Low birthweight kills Oklahoma babies.* Almost 60 percent of the infant deaths each year result directly from low birthweight. In Oklahoma, seven out of 10 infants who die in the first month of life are low-weight babies.
- ▶ *Low birthweight hurts Oklahoma babies and limits their futures.* Of those who live, one in four will experience serious health and developmental problems — dyslexia, hyperactivity, blindness, deafness, chronic respiratory problems, mental retardation, mental illness, cerebral palsy, or others.

## Babies Weighing Under 5 1/2 Pounds

*Average Annual Percent of All Babies, By Race, Oklahoma 1983-87 & 1992-96*

- ▷ *The lower the birthweight, the greater the harm.*  
Twenty percent of *very tiny* (less than 3 pounds, 5 ounces) babies experience cerebral palsy or other forms of brain injury. Fifty percent of *very tiny* (less than 3 pounds, 5 ounces) babies later enroll in special education.
- ▷ *Risk factors.* Infants are at risk of being born too small if their mothers are poor, are adolescents, smoke during pregnancy, drink alcohol or take drugs during pregnancy, or fail to receive adequate prenatal care.

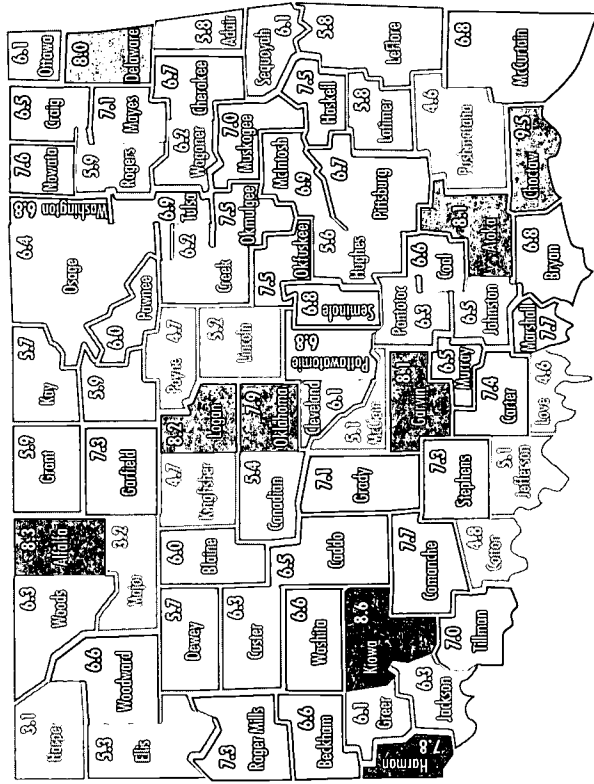

**Low Birthweight Infants**

*Five-Year Average Annual Percent of Infants Born Weighing Less Than 5 1/2 Pounds; Oklahoma: 1992-1996, State Rate: 6.9%, Average of County Rates: 6.5%*

*Forty-three percent (1,371 per year) of the infants weighing less than 5 1/2 pounds at birth were born to mothers who live in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together account for just under forty percent (39.8%) of Oklahoma's births.*

- 10 Best Counties
- Above Average
- Below Average
- 10 Worst Counties

## Infant Mortality

Each year nearly four hundred babies born in Oklahoma (393 annual average) do not live to see their first birthday.

On the average at least one Oklahoma infant dies every day.

Although Oklahoma's rate of infants who die in their first year of life decreased (8.7 to 8.5 deaths per 1,000 live births) during this past year, rates worsened in nearly half (37 of 77) of Oklahoma's counties during the same period.

The decline in infant death rates has continued for years. Today, proportionately fewer Oklahoma babies (8.5 per 1,000 live births) die in their first year of life than did in the mid-1980s (10.4 per 1,000 live births), with such rates also improving in the large majority (55 of 77) of Oklahoma counties during the same period.

The rates of infant death in a majority of Oklahoma counties (42 of 77) were better than the average county rate (8.3 per 1,000 live births). During this most recent period, the highest and worst infant death rate (18.0 per 1,000 live births) is found in Haskell County; the lowest and best (0.0 per 1,000 live births) is in Major County.

The death rate for African American infants (15.3 per 1,000 African American births) is almost twice as high as the rate for White infants (8.1 per 1,000 White births). The best death rate is recorded for American Indian infants (6.4 per 1,000 American Indian births).

Ranking in the bottom half of all the states, Oklahoma's rate of infant death is only fair relative to other parts of the country. Oklahoma's national rank remained at 36th during the most recent year (1995) measured.

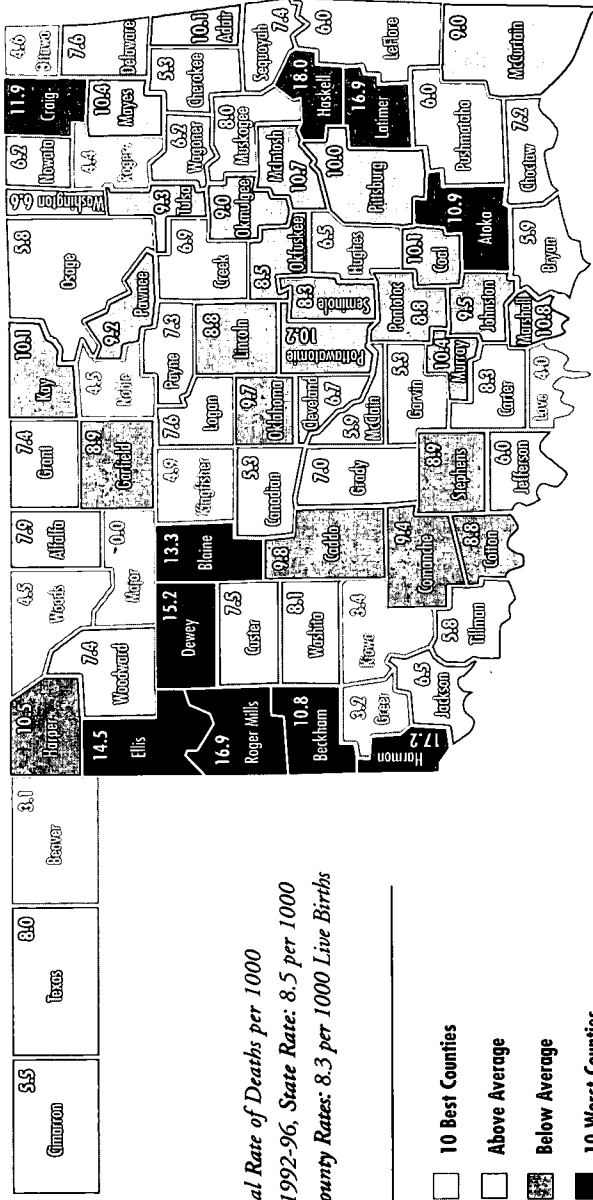

## Impact on Oklahoma

- ▷ *Unforgiving circumstances prematurely terminate the lives of defenseless Oklahoma infants. Causes of death range from birth complications and birth defects to poverty and inadequate living conditions to abuse and inadequate care to accidents and infections.*
- ▷ *The infant mortality rate is an indicator of a community's overall quality of life. The rate reflects the effectiveness of economic, social and health care interventions.*

**Infant Deaths**  
 Average Annual Rate Per  
 1000 Births, By Race, Oklahoma  
 1983-87 & 1992-96

- ▶ *Low birthweight and infant mortality are related.* The infant mortality rate can be predicted with reasonable accuracy from the proportion of babies born very small.
- ▶ *Improving the outcomes.* Lowering infant mortality rates requires providing education, ensuring adequate nutrition, reducing teen births, providing appropriate health care, reducing poverty and changing behavior during pregnancy to reduce smoking, drinking and drug use.

Nearly half (175 per year or 44.5%) of the infant deaths occurred where mothers lived in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together account for just under forty percent (39.8%) of Oklahoma's births and are populated with just under forty percent (38.1%) of Oklahoma's infants.

## Births To Young Teens

In 1996, nearly eight thousand (7,842) babies were born to Oklahoma women under the age of twenty. Close to five thousand (4,939) of those babies were born to teen mothers ages 18 and 19. Nearly three thousand (2,903) Oklahoma school age girls (age 17 and under) had babies. One hundred forty-five of those school age girls were between eleven and fourteen years of age.

The rate of births to Oklahoma young teens continued to steadily decline (from 41.0 to 38.3 births per 1,000 girls ages 15 through 17) during the past year. Birth rates for that age group improved in a majority of Oklahoma counties (51 of 77) during the year.

The progress made in decreasing the high Oklahoma birth rate to young teens of the early 1980s (from 42.2 to 38.2 births per 1,000 girls ages 15 through 17) has been evident at the county level where such rates also improved in most (58 of 77) of Oklahoma's counties during the same period of time.

The rates of births to young teens in a majority of Oklahoma counties (41 of 77) were worse than the average county rate (36.1 births per 1,000 girls ages 15 through 17). During this most recent period, the highest and worst rate (66.5 births per 1,000 girls ages 15 through 17) is found in Tillman County; the lowest and best (5.4 births per 1,000 girls ages 15 through 17) is in Grant County.

The large majority (67.4%, excluding Other) of Oklahoma's young teen mothers are White. However, while non-White teenage girls comprise only about one-fifth (21.6%) of the teenage girl population, they account for almost one-third (32.6%) of the teenage girls giving birth in Oklahoma.

On the average, every three hours an Oklahoma child (age 17 or younger) becomes a mother.

Oklahoma's teen childbearing rate was substantially above other states in 1980, but by 1996, the gap had narrowed. Even so, Oklahoma's young teen childbearing ranking relative to other states is poor, with two-thirds (33 states) having a teen (age 15 through 17) birth rate lower than Oklahoma during the most recent year (1996) measured.

## Impact on Oklahoma

- ▶ *Disquieting trends.* More young people are having sex in their teens than ever before. A child's age at their first experience with sexual intercourse is becoming increasingly younger.
- ▶ *Teen mothers face bleak futures.* Each young mother is more likely to be poor, to be a victim of physical violence, to have another child before reaching adulthood, to drop out of school, to have unsteady employment, to be on public assistance at some point in her life, to be less skilled, and to experience marital instability compared to peers who delay childbearing until age twenty or later.
- ▶ *Sexual abuse plays a major role.* There is a direct link between child sexual abuse, early sexual activity and teen pregnancy. Most teen mothers indicate

## Child Abuse & Neglect

During Fiscal Year 1997 (FY 97) more than fifty thousand (51,001) situations were called to the attention of Oklahoma Department of Human Services (DHS) as possible abuse and/or neglect of one or more children.

This year DHS investigated and confirmed record-high numbers of those allegations. Close to fourteen thousand (13,627) of the more than forty-eight thousand (48,399) incidents investigated were found to be actual abuse and/or neglect.

In Oklahoma, approximately every thirty-eight minutes a child is a victim of confirmed abuse and/or neglect.

During this past year the rate of confirmed child abuse and/or neglect in Oklahoma rose to an all-time high (moving from 13.4 to 15.5 confirmations per 1,000 children in the community), with comparable rates worsening in the large majority (51 of 77) of Oklahoma's counties.

Today, Oklahoma's rate of confirmed child abuse and/or neglect (15.5 confirmations per 1,000 children) is close to double what it was in the mid-1980s (8.5 confirmations per 1,000 children). Such rates also worsened in the vast majority (65 of 77) of Oklahoma's counties during the same period.

The rates of confirmed child abuse and/or neglect in the majority of Oklahoma counties (43 of 77) were better than the average county rate (17.2 confirmations per 1,000 children in the county). During this most recent period, the highest and worst proportion of children confirmed to be victims of child abuse and/or neglect (40.8 per 1,000) is again found in Garvin County; the lowest and best (2.0 per 1,000) is in Harmon County.

A total of forty-two Oklahoma children died from child abuse and/or neglect during FY 1997. Among the dead were twenty-three girls and nineteen boys of all races. One was a newborn; most were infants and toddlers. The dead also included school age children ranging from preschoolers to children old enough to be in high school. One should have been graduating instead of dying.

The large majority (63.7%) of confirmations of abuse and/or neglect in Oklahoma involve children who are White. However, while non-White children comprise only about one-fifth (21.7%) of the child population, they account for nearly one-third (31.8%, excluding Hispanics) of the confirmed child abuse and/or neglect incidents. Hispanic children, recorded as a nationality rather than a race, comprise just over five percent (5.5%) of Oklahoma's child population. A slightly lower proportion of confirmed abuse and/or neglect in Oklahoma (4.5%) involved children counted as Hispanic.

## Impact on Oklahoma

- ▶ *Child abuse and neglect kills Oklahoma children.* The number of Oklahoma abuse and neglect related deaths is increasing. Deaths from neglect are more common than deaths from abuse. Infants and toddlers account for about half of Oklahoma's child abuse and neglect deaths. Child abuse and neglect deaths of Oklahoma teenagers are on the rise.
- ▶ *Child abuse and neglect hurts Oklahoma children and limits their futures.* Half will suffer delay in their development or serious physical or emotional impairments. Attachment disorders are common. Victims of child abuse and neglect are more likely

May not total 100% due to rounding

## Child Abuse & Neglect Confirmations

By Race of Child,  
Oklahoma, FY 1997

## Child & Teen Death

About nine Oklahoma children and youth die every week. Almost fifty (49.0) of every 100,000 Oklahoma children and youth from the ages of 1 through 19, or just under five hundred (461 average) children, die each year.

Just under half (49.0% or 226) of these annual child deaths are children from the ages of 1 through 14; the remainder are teenagers (ages 15 through 19).

The rate of death among Oklahoma children from the ages of 1 through 14 worsened slightly (from 33.2 to 33.5 per 100,000) this past year. The number of Oklahoma counties (38 of 77) in which child death rates stayed the same or improved during the year was just under the number of counties in which child death rates worsened (39 of 77).

A proportionately lower rate (33.5 per 100,000) of children from the ages of 1 through 14 die currently than did in the early 1980s (45.1 per 100,000), with such rates also improving in the large majority (54 of 77) of Oklahoma's counties during the same period.

The rates of death for children from the ages of 1 through 14 in the majority of Oklahoma counties (43 of 77) were better than the average county rate (35.7 per 100,000 children age 1 through 14 in the county). During this most recent period,

the highest and worst rate of child death (85.8 per 100,000 children age 1 through 14 in the county) is found in Tillman County; the lowest and best (0.0 per 100,000) is in three Oklahoma counties (Harmon, Dewey and Greer).

Overall, Oklahoma children and teens are more likely to die of accidents (48.2%) than to die of diseases (31.6%) or violence (20.2%).

Violence among teens from the ages of 15 through 19 is common with more than one-fourth (27.8%) of all teen deaths resulting from violence. An African American teen is about two and one-half times more likely to die of violence (58.4% of all African American teen deaths) in Oklahoma than his or her White peers (23.4% of all White teen deaths).

Oklahoma's young people kill themselves at a rate almost twice the national average. Thirty-eight Oklahomans under age 20 typically commit suicide each year. While most are older White adolescents, Oklahoma suicides include children under the age of ten.

Even with the improvement in death rates since the 1980s, Oklahoma's ranking relative to other states for the most recent year on record (1995) remains among the worst (45th in child death; 36th in teen death) in the nation.

## Impact on Oklahoma

- ▷ *Disquieting trends.* Over the last several decades, the leading causes of death for children and teens have changed from natural causes, such as illness and birth defects, to injury and violence. Increases in suicide are much greater among adolescents than among the general population. AIDS is fast becoming a disease of the young. Today, one-half of all new HIV infections in the United States occur in people under the age of twenty-five. Children increasingly imitate violence they observe on television.

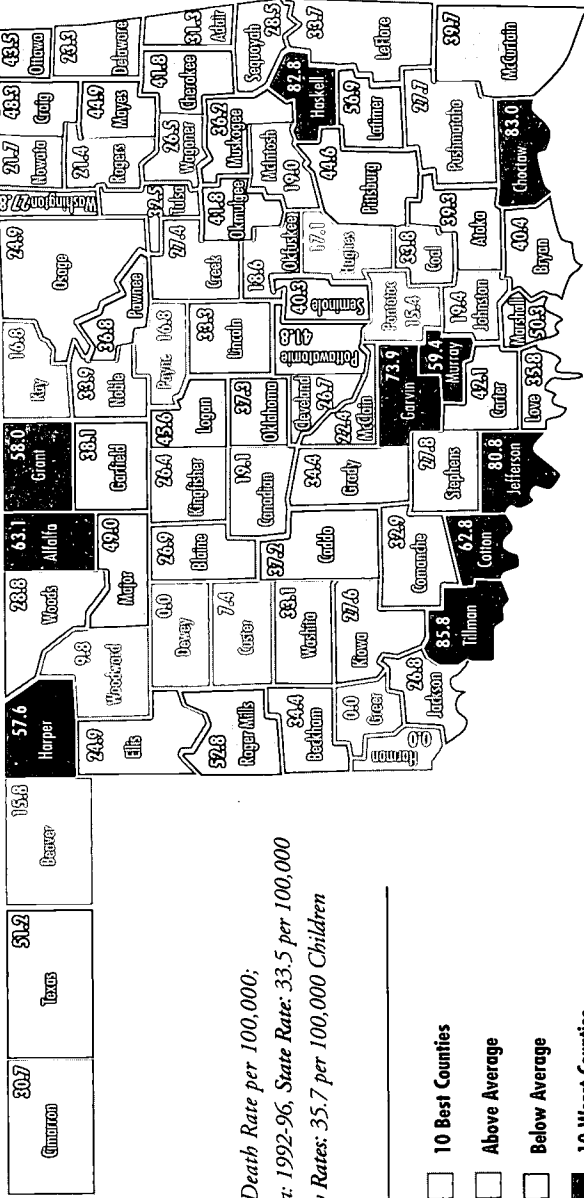

**Deaths Among Children & Teens**  
*Average Annual Percent, By Cause, By Race, Oklahoma 1992-1996*

Disease  
 Accident  
 Violence

▷ **Risk factors.** The majority of teen deaths can be attributed to preventable factors, including unhealthy behaviors such as sedentary lifestyle, poor nutritional habits, substance use and abuse, unsafe sexual practices and risky vehicle use. Having a gun at home is associated with increased suicide risk among older adolescents. Poor and minority children are at greater risk of death due to the lack of health insurance and the difficulty obtaining appropriate and necessary medical care. Poor and minority children are less likely to receive lifesaving preventive services. Risk of accidents and the resulting deaths increases for low-income families as they are less likely to use safety devices due to lack of money, lack of transportation to obtain them and/or a lack of control over their housing conditions.

▷ **Improving the outcomes.** Being connected with community, school and family decreases the risk of violence and death. Reducing poverty, providing effective education, ensuring adequate health care and changing behavior among children and youth to reduce drinking, drug use and other risk-associated behaviors prevent premature death.

Slightly more than one-third (83 per year or 36.7%) of children ages 1 through 14 who died lived in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated with just over one-third (35.0%) of children ages 1 through 14.

## Child Poverty

During the most recent year on record (1993, revised), more than a quarter of a million (226,841) Oklahoma children lived in poverty. Oklahoma children are poorer (25.4%) than the general population (18.3%).

One out of every four (25.4%) Oklahoma children lives in poverty. Oklahoma's youngest are Oklahoma's poorest (32.8%) with more than eighty-four thousand (84,255) infants, toddlers and preschoolers under the age of five living in poverty. Oklahoma led all other states in worsening poverty for young children over the last two decades.

During the most recent three years on record, the proportion of Oklahoma children living in poverty worsened from 21.7% (1990) to 25.4% (1993, revised), with comparable rates also worsening in the vast majority (60 of 77) of Oklahoma's counties.

Oklahoma child poverty has skyrocketed (from 15.7% to 25.4%) since 1980. Every day since 1980, almost twenty (average 19.7) children joined those who were already poor. Poverty for children worsened in almost every Oklahoma county (75 of 77) during the same period.

The rates of poverty for children were better than the average county rate (26.5%) in about half of Oklahoma's counties (38 of 77) and worse in about half of Oklahoma's counties (39 of 77). During this most recent period, the highest and worst rate of child poverty (45.9%) is found in Harmon County; the lowest and best (11.0%) is in Beaver County.

During Fiscal Year 1997, the average number of children living in families depending on public assistance, Temporary Assistance to Needy Families (TANF), for basic needs each month dropped from just over seventy-eight thousand (78,021 or 9.0% of all children) to less than sixty-three thousand (62,599 or 7.1% of all children).

Oklahoma child poverty is racist. African American children (44.5% poor), American Indian children (34.8% poor) and children of Hispanic origin (35.8% poor) are more than twice as likely to be poor than White children (16.6% poor). About half (49.3%, excluding Hispanics) of Oklahoma child recipients of TANF are non-White. Hispanic children, recorded as a nationality rather than a race, comprise just over five percent (5.5%) of Oklahoma's child population. A slightly lower proportion of Oklahoma child recipients of TANF (4.4%) are counted as Hispanic.

Among countries with data available, the United States is the only wealthy industrialized country to have double-digit child poverty rates. Children in Oklahoma are more likely to be poor than children in most other parts of the United States. Oklahoma's child poverty ranking relative to other states has steadily worsened over the past decade and is among the worst (39th) in the nation for the most recent year compared (1995).

## Impact on Oklahoma

- ▶ *Poverty kills Oklahoma children.* Poor children are three times more likely to die during their childhood than non-poor children.
- ▶ *Children are limited by their family's low income status.* Being poor means living on an income which renders a family unable to purchase enough food for an adequate diet. One out of every three adolescents who live in poverty has no health insurance.
- ▶ *Poverty hurts Oklahoma children.* Poor children are more likely than non-poor children to eat an inadequate diet, to stay cold in the winter, and

May not total 100% due to rounding

## Child Recipients of Temporary Assistance to Needy Families (TANF)

By Race, Oklahoma, FY 1997

to receive little health care. Children represent twenty-five percent of the residents in Oklahoma's general population homeless shelters. Poor children are more likely to experience poor health, have out-of-wedlock births, experience violent crime, act out violently later in life and end up poor as adults.

▶ *The younger the child, the greater the harm.* The first years of a child's life are a formative period, crucial to emotional and intellectual development. Poverty for infants and toddlers poses serious threats to brain development. Poverty increases the risks of inadequate nutrition, poor health care, exposure to environmental toxins and substance abuse, maternal depression, trauma and abuse, and inadequate child care.

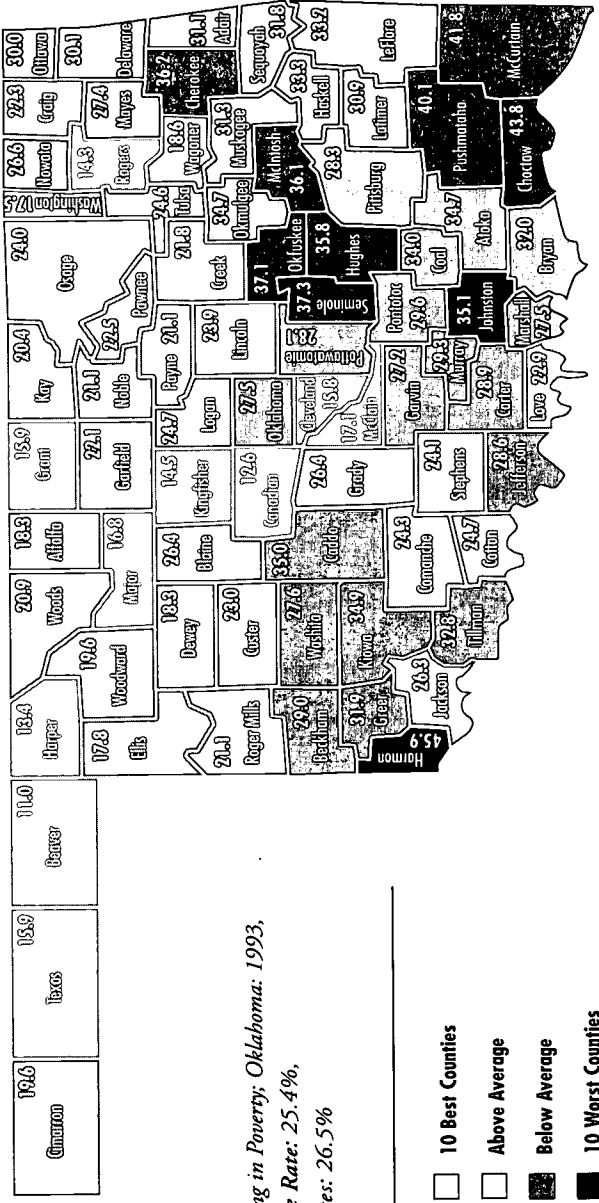

▶ *Poor children face bleak futures.* Poor children are more likely to have reduced access to transportation, communication and quality education. Poor children are more likely than non-poor children to score low on standardized tests, drop out of school and face resulting severe economic and social consequences including less employment opportunity, poorer earning ability, higher rates of substance abuse, and higher unemployment.

▶ *Improving the outcomes requires community participation and planning.* Lowering poverty requires employment which provides parents with adequate wages to support their family. Access to medical care, child care, housing and transportation are essential for people to move successfully from welfare to work. Child poverty rates will decrease with community support for quality education, adequate nutrition, appropriate health care, and changes in behavior to reduce drinking, drug use, abuse, and premature sexual activity.

### Child Poverty

*Percent of Children Living in Poverty, Oklahoma: 1993,  
Revised Estimates, State Rate: 25.4%,  
Average of County Rates: 26.5%*

*Slightly more than one-third (81,084 children or 35.7%) of poor children live in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated with just over one-third (36.4%) of Oklahoma's children.*

During the most recent year on record (school year 1996-97), almost twelve thousand (11,673) young Oklahomans quit school without graduating. Nearly ten thousand (9,513) of those dropping out were ages 18 or younger.

About two of every ten students in Oklahoma who start high school as freshmen do not earn a high school diploma. This year students dropped out sooner. Most left school in the ninth grade.

Even though the number of children (under age 19) dropping out of high school (grades 9 through 12) improved slightly for the state (449 fewer) during this past year, the rate of children leaving school without graduating worsened (from 5.3% to 5.6%). The dropout rates worsened in more than half (45 of 77) of Oklahoma's counties during the same period.

This year Oklahoma's high school dropout rate (5.6%) is slightly worse, but remains close, to that of the comparison school year of 1994 - 1995 (5.5%). Such rates also worsened in a majority (45 of 77) of Oklahoma's counties during the same period.

The dropout rates were better than the average county rate (4.4%) in about half of Oklahoma's counties (38 of 77) and worse in about half of Oklahoma's counties (39 of 77). During this most recent period, the highest and worst rate of children leaving school without graduating (9.0%) is found in Pawnee County; the lowest and best (1.3%) is in Cimarron County.

During this past year, the proportion of girls failing to finish high school increased only slightly (from 44.7% to 45.1% of all dropouts) as the proportion of boys decreased accordingly (55.3% to 54.9% of all dropouts).

The large majority (62.3%) of children failing to finish high school are White. However, while non-White children comprise only about one-fifth (21.7%) of the child population, they account for nearly one-third (30.4%, excluding Hispanics) of the high school dropouts. Hispanic children, recorded as a nationality rather than a race, comprise just over five percent (5.5%) of Oklahoma's child population. A slightly higher proportion of Oklahoma dropouts (7.3%) are counted as Hispanic.

## Impact on Oklahoma

- ▷ *A lack of education impacts a child's health and well-being.* Dropouts have higher rates of substance abuse than those who complete high school. Smoking is far more common among women who have lower levels of education.
- ▷ *Risk factors.* Factors which place students at risk of dropping out include teen pregnancy, adolescent fatherhood, poor school performance, substance abuse and behavior problems. If children can't read well by the end of third grade, their entire school experience is at risk. Children from families whose parents never completed high school, or started the family as teens themselves, are more likely to drop out than their peers.

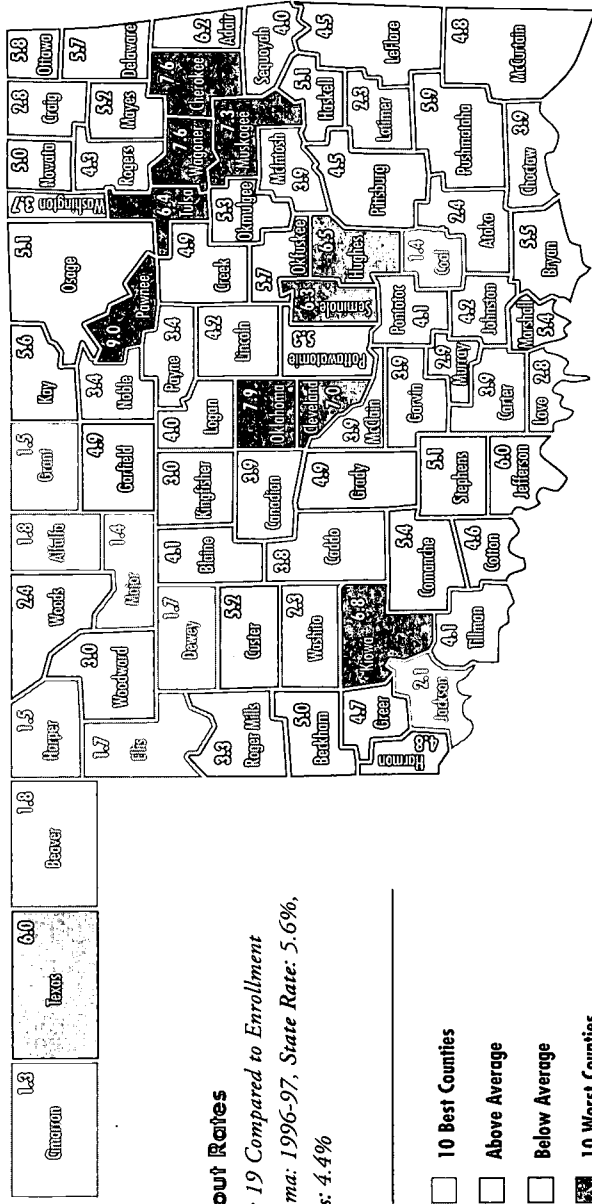

## Students Quitting High School Without Graduating

*All Ages, By Race, Oklahoma  
School Year 1996-1997*

▷ *High school dropouts face bleak futures.* Youth not completing high school face severe economic consequences including poverty, little employment opportunity, poor earning ability and the possibility of a lifetime of financial dependence. Unemployment rates for workers over age 19 are twice as high for dropouts than for graduates. The lack of education is intertwined with crime. In 1996, a majority of Oklahoma inmates were high school dropouts.

*A number approaching half (4,233 youth or 44.5%) of the children under age 19 who quit high school without graduating live in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together account for just under one-third (31.5%) of Oklahoma's high school attendance.*

## Juvenile Violent Crime Arrests

In 1997, juveniles accounted for about one-fifth (20.3%) of all persons arrested for all Oklahoma crimes.

In 1997, nearly twelve hundred (1,171) Oklahoma youths from the ages of 10 through 17 were arrested for committing violent crimes. Twenty-four were arrested for murder, four for manslaughter, 63 for forcible rape, 332 for robbery and 748 for aggravated assault.

The overwhelming majority of youth arrested for violent crimes in Oklahoma are male (982 youth or 83.9%).

During this past year the proportion of Oklahoma youths from the ages of 10 through 17 arrested for violent crimes continued to improve from 1995's record high (from 393.2 arrests per 100,000 youths in 1995 to 341.5 arrests per 100,000 youths in 1996 to 283.7 arrests per 100,000 youths in 1997), with comparable rates also improving or remaining the same during the most recent year in the large majority (56 of 77) of Oklahoma's counties.

Oklahoma's current juvenile violent crime arrest rate (283.7 arrests per 100,000) remains significantly higher than that of 1980 (172.4 arrests per 100,000), with such rates also worsening in a majority (45 of 77) of Oklahoma's counties during the same period.

The juvenile violent crime arrest rates for 1997 were better than the average county rate (153.7 arrests per 100,000) in most of Oklahoma's counties (50 of 77). During this most recent period, the highest and worst rate of youths from the ages of 10 through 17 (771.5 arrests per 100,000) arrested for violent crimes is found in Kay County. The lowest and best rates (0.0 arrests per 100,000) are in nineteen Oklahoma counties (Adair, Alfalfa, Atoka, Beaver, Choctaw, Delaware, Ellis, Grant, Harmon, Harper, Haskell, Jefferson, Love, Major, McIntosh, Nowata, Okfuskee, Roger Mills and Woods).

While non-White children comprise only about one-fifth (21.7%) of the child population, they account for nearly half (46.6%) of the violent crime arrests of children under age 18. Hispanic children, recorded as a nationality rather than a race, comprise just over five percent (5.5%) of Oklahoma's child population. A slightly higher proportion of the juvenile violent crime arrests in Oklahoma (6.0%) were arrests of Hispanic youth.

Based on the latest figures available (1995), Oklahoma's current rate (283.7 arrests per 100,000) of arresting young people for violent crimes continues to remain well below the corresponding national rate of 507 arrests for every 100,000 youths ages 10 through 17.

## Impact on Oklahoma

- ▶ *Disquieting trends.* The number of juveniles arrested for carrying or being in the possession of a weapon is on the rise in Oklahoma. Juvenile drug possession arrests have tripled in the past decade. Juvenile arrests for violent crimes are outpacing juvenile arrests for non-violent crimes. Police in Oklahoma are increasingly likely to refer juvenile violators to criminal or adult court.

Hispanic youth may be of any race and comprise 6.0% of the 1997 juvenile violent crime arrests

## County Benchmark Key

### A Comprehensive Guide to Understanding Benchmark Data

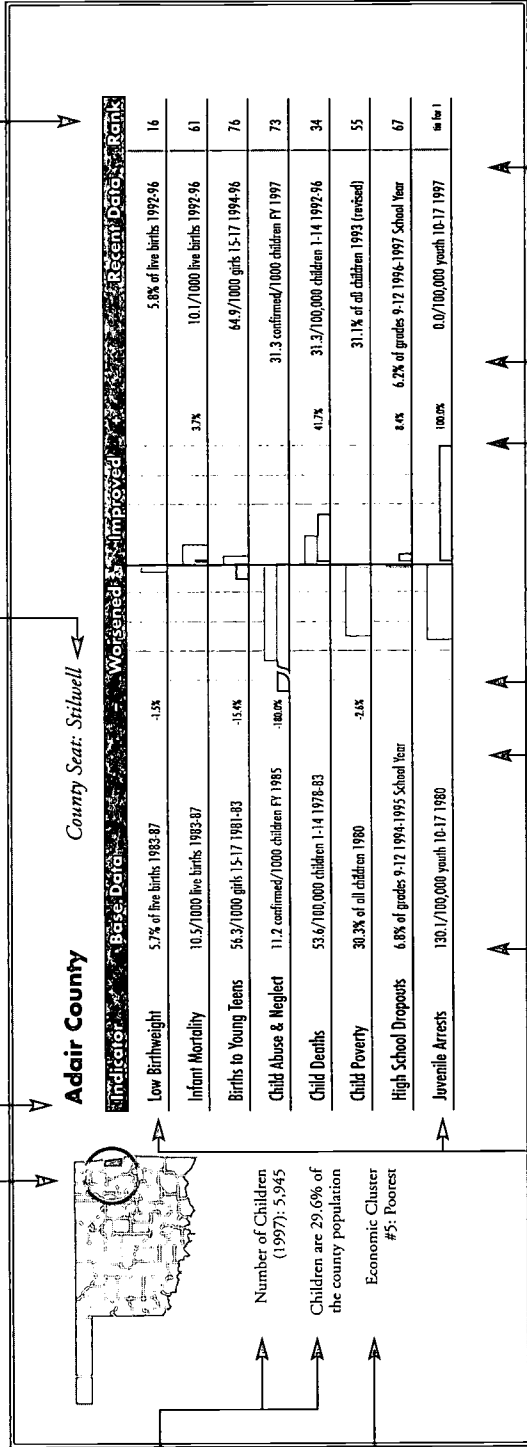

The county is ranked on each indicator to allow you to compare this county with other counties. 1 is the best ranking; 77 is the worst ranking.

The map of Oklahoma has the location of the county highlighted.

The numbers and percentages of children in the county are here.

The economic cluster the county falls within is here. Each of the five clusters (wealthiest, wealthier, middle, poorer, poorest) is composed of approximately 20 percent of the state's population. A county is placed in a cluster with other counties with similar conditions based on four economic factors: (child poverty rates, per capita personal income, percent of children receiving public assistance and unemployment rates).

The county name and county seat are along the top of each benchmark chart.

The eight indicators tracked by KIDS COUNT profile the status of children and youth in Oklahoma.

Base data for each indicator presents a rate for a previous year when data comparable to that measured currently was available. Each item specifies the base rate and period in which it was collected.

The bar chart shows the percent change between the base data and the recent data for each indicator. If the bar goes to the left of center, the county rate has worsened. If the bar goes to the right of center, the county rate has improved. The lighter colored wider bar behind the bar chart is the state rate for that indicator and allows you to compare the county with the state as a whole.

Recent data for each indicator presents a rate for the most recent year. Each item specifies the recent rate and period in which it was collected.

**Adair County** County Seat: Stilwell

methodology & sources

Data and information used in the 1999 Oklahoma KIDS COUNT Factbook came from a wide variety of sources in Oklahoma and around the nation. This section identifies the sources for the information found in this document and the method used for computations where applicable. Each county benchmark and the rate of change calculated for each county benchmark is rounded for presentation on the county pages. The rounding may cause the results to vary from the rates which might be calculated from the numbers appearing on each county page.

There is no agreement about the specific terminology or the number of categories which should be used to classify race and ethnicity. The categories listed in this report are the categories in the sources relied upon for information. At times different sources will use different categories to report racial characteristics. Some indicators were not available by race at all. This makes it difficult to look across the indicators by race. *Persons within each race or ethnic group are encouraged to re-title or refer to the data in a manner which reflects their preferences.*

Extreme caution should be used when reviewing, using and comparing data related to Hispanic populations. Some agencies count Hispanic children as a race and others consider Hispanic to be a nationality whose children can be any race (White, African American, Native American, and so on). Of those counting Hispanic children as a nationality, only a few maintain statistics on the proportion of children who are Hispanic.

As a result, when Hispanic is considered to be a race, data may appear as follows:

White	70.0%
Native American	10.0%
American Indian	10.0%
Hispanic	5.0%
Asian	2.0%
Other	3.0%
<b>TOTAL</b>	<b>100.0%</b>

When Hispanic is considered to be a nationality, data may appear as follows:

White	72.0%	
Native American	11.0%	
American Indian	11.0%	
Asian	2.0%	Hispanic 5.0%
Other	4.0%	non-Hispanic 95.0%
<b>TOTAL</b>	<b>100.0%</b>	<b>TOTAL 100.0%</b>

**Economic Distress** is a generalized term depicting a poor economic climate in a community. **Deprivation Index** is a measure developed by ranking Child Poverty Rates, Percent of Children receiving Aid to Families with Dependent Children (AFDC) and/or Temporary Assistance to Needy Families (TANF), level of Per Capita Personal Income and Unemployment Rates. Each county is ranked on each factor. The four individual county rankings are combined into a *Deprivation Index* in which the lower the number, the wealthier the country. **Economic Clusters** (more commonly referred to as Quintile Divisions) result from each county being

ranked according to its Deprivation Index and grouped into one of five clusters composed of approximately twenty percent (20%) of the state's population.

**Cluster 1 (Wealthiest)** includes 21 counties with a combined population of 733,823 (22.1% of the state's population). "Wealthiest" counties each have a Deprivation Index between 23 and 91.

**Cluster 2 (Wealthier)** includes 8 counties with a combined population of 716,245 (21.6% of the state's population). "Wealthier" counties each have a Deprivation Index between 95 and 119.

**Cluster 3 (Middle)** includes 2 counties with a combined population of 696,517 (21.0% of the state's population). "Middle" counties each have a Deprivation Index between 130 and 140.

**Cluster 4 (Poorer)** includes 19 counties with a combined population of 583,134 (17.6% of the state's population). "Poorer" counties each have a Deprivation Index between 141 and 181.

**Cluster 5 (Poorest)** includes 27 counties with a combined population of 587,372 (17.7% of the state's population). "Poorest" counties each have a Deprivation Index between 183 and 297.

**Children in Poverty** counts the related children under age 18 who live in families with incomes below the U.S. poverty threshold (poverty income guidelines). Related children are the children related to the "family head" by birth, marriage or adoption and include relatives such as nieces and nephews. Children under age 18 who do not live in a household where they are related to the head of the household are not included in this analysis. The Poverty Income Guidelines, as defined by the U.S. Office of Management and Budget, are based upon the amount of money that is required to purchase a nutritionally adequate diet. A family is classified as poor if its income falls below this minimum standard. Data counts poor children calculated as a percent of all children. Trends compare percent of child poverty in 1980 to the percent of child poverty in 1993 as estimated by U.S. Bureau of the Census, Small Area Income and Poverty Estimates Program: *State and County Income and Poverty Estimates - 1993*. Children Receiving AFDC and/or TANF counts the number of child recipients of AFDC during FY 1981 and the average monthly number of child recipients of TANF during FY 1997. Rates are displayed as the percent of the total child population. Base child population data for the state and counties is the 1980 Census population. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1997. Per Capita Personal Income measures income available to each individual by dividing the total personal income in an area by the population of that area. Base data is for 1980; current for 1996. Unemployment Rate measures the percent of the population searching for work. The rate is generated by dividing the total number of unemployed by the total number in the labor force. Because these official figures do not distinguish between part-time and full-time workers, do not count underpaid working poor and do not count workers who have given up looking for work, they are commonly understood to underestimate the true level of unemployment in a community. Base data is for 1980; current for 1997.

Source: Poverty data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce, using U.S. Bureau of the Census, *Census of the Population and Housing 1980, Summary Tape File 3A* and U.S. Bureau of the Census, *Census of the Population and Housing 1990, Summary Tape File 3A* and U.S. Bureau of the Census, Small Area Income and Poverty Estimates Program: *State and County Income and Poverty Estimates - 1993*. AFDC/TANF data provided by the Oklahoma Department of Human Services. Income data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce, using data from the U.S. Department of Commerce, Economic and Statistics Administration, Bureau of Economic Analysis, Regional Economic Management Division, CD-ROM. Unemployment data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce, using data from the Oklahoma Employment Security Commission, Research Division.

**Child Population** is the total resident population under age 18 including dependents of Armed Forces personnel stationed in the area. Child population data for 1980 and 1990 for the state and counties are counts from the 1980 and 1990 Census. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1997.

Source: U.S. Bureau of the Census, *Census of the Population and Housing 1980, Summary Tape File 1A and 2B* and U.S. Bureau of the Census, *Census of the Population and Housing 1990, Summary Tape File 1A and Summary Tape File 2B*. Current population data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce, using U.S. Bureau of the Census, *Census of the Population and Housing 1980, Summary Tape File 1A*; U.S. Bureau of the Census, *Census of the Population and Housing 1990, Summary Tape File 1A*; and U.S. Bureau of the Census, Population Estimates Branch, 1997.

**Low Birthweight Infants** are live births weighing under 5.5 pounds (2,500 grams). **Very Low Birthweight Infants** are live births weighing under 3 pounds, five ounces (1,500 grams). The data is reported by place of mother's residence, not place of birth. Births count both the total resident live births and the low-weight births and compare two five-year periods (1983 through 1987 and 1992 through 1996). Resulting rates create average annual percentages for each five-year period. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for White. Beginning in 1989, the "race of child" was redefined to reflect the mother's race. State totals may vary from the total of all the counties since state totals may include births for which the county of residence was unknown. **Level of Prenatal Care** addresses the timing and amount of medical care and monitoring an expectant mother receives. Levels of care include: *adequate* (the recommended level of care beginning in the first trimester with ten or more visits), *intermediate* (care beginning in the first trimester with four through nine visits OR care beginning in the second trimester with four or more visits), *early* (care beginning in the first trimester), *late* (care beginning in the third trimester with one or more visits), *little* (care beginning in the first or second trimester with one through three visits), and *no care*. Rates are calculated as percentages of all live births. Births count both the total resident live births and the level of care for the five-year period from 1992 through 1996. Resulting rates create an average annual percentage.

Source: Data provided by MCH Planning and Evaluation, Maternal & Child Health Service, Oklahoma State Department of Health: Oklahoma City, Oklahoma.

**Infant Mortality** is death occurring to an infant under 1 year of age. The data is reported by place of mother's residence, not place of birth or death. Rates are calculated per 1,000 live births. The data counts the total resident live births and the deaths for two five-year periods (1983 through 1987 and 1992 through 1996). Resulting rates create average annual percentages for each five-year period. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for White. Beginning in 1989, the "race of child" was redefined to reflect the mother's race. State totals may vary from the total of all the counties since state totals may include births for which the county of residence was unknown.

Source: Birth and mortality data provided by MCH Planning and Evaluation, Maternal & Child Health Service, Oklahoma State Department of Health: Oklahoma City, Oklahoma.

**Births to Young Teens** are live births which occur to mothers ages 15 through 17. The data is reported by place of mother's residence, not place of birth. Births count the total resident live births to mothers in this age group for two three-year periods (1981 through 1983 and 1994 through 1996). Rates are displayed as births per 1,000 females between ages 15 through 17. Base female teen population data is from the 1980 Census. Current population for the state is estimated by the U.S. Bureau of the Census and adjusted by the Oklahoma State Department of Health to arrive at 1994 through 1996 estimates of females between the ages of 15 through 17 for the state and each county. Resulting rates create average annual rates for each three-year period. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for White. Beginning in 1989, the "race of child" was redefined to reflect the mother's race. State totals may vary from the total of all the counties since state totals may include births for which the county of residence was unknown.

Source: Birth and population data provided by MCH Planning and Evaluation, Maternal & Child Health Service, Oklahoma State Department of Health: Oklahoma City, Oklahoma.

**Child Abuse and Neglect** means harm or threatened harm to a child's health or welfare by a person responsible for the child's health or welfare. Abuse includes sexual abuse, sexual exploitation or non-accidental physical or mental injury. Sexual Abuse includes rape, incest and lewd or indecent acts or proposals by a person responsible for the child's welfare. Sexual Exploitation includes a person responsible for the child's welfare allowing or encouraging a child to engage in prostitution or pornography or engaging in child pornography. Neglect means failing to provide adequate food, clothing, shelter or medical care. *10 O. Supp. 1996 section 7102.* Data includes reports of suspected abuse or neglect for which there were formal investigations and, of those, the number for which abuse or neglect was confirmed. The data compares child abuse and neglect confirmations for two one-year periods (Fiscal Year 1985 and Fiscal Year 1997). Rates are displayed as confirmations per 1,000 children (under age 18). Base child population data for the state and counties is the midpoint between the 1980 and 1990 Census populations. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1997.

Source: Child abuse and neglect data provided by the Division of Child Welfare, Oklahoma Department of Human Services (DHS): Oklahoma City, Oklahoma. Population data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce, using U.S. Bureau of the Census, *Census of the Population and Housing 1980, Summary Tape File 1A*; U.S. Bureau of the Census, *Census of the Population and Housing 1990, Summary Tape File 1A*; and U.S. Bureau of the Census, Population Estimates Branch, 1997.

**Child Deaths** are the number of deaths of children from ages 1 through 14. Teen Deaths are the number of deaths of youth from ages 15 through 19. The data is reported by place of residence, not place of death. The data counts deaths from all causes. The data compares the death rates for two five-year periods (1978 through 1982 and 1992 through 1996). Resulting rates create average annual rates for each five-year period for each age group. Rates are displayed as deaths per 100,000 children from ages 1 through 14 and deaths per 100,000 teens from ages 15 through 19. Base child population data for the state and counties is the 1980 Census population. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1997 and adjusted by the State Data Center to arrive at a 1997 estimate of the number of children from the ages of 1 through 14. Current teen population data for the state is estimated by the U.S. Bureau of the Census for 1997 and adjusted by the State Data Center to arrive at a 1997 estimate of the number of teens from the ages of 15 through 19. State totals may vary from the total of all the counties since state totals may include deaths for which the county of residence was unknown. Cause of Death measures the percent of deaths that are caused by diseases, accidents and violence. By definition, deaths by violence include murder, suicide and deaths that occur during legal interventions. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for White.

Source: Death data provided by MCH Planning and Evaluation, Maternal & Child Health Service, Oklahoma State Department of Health: Oklahoma City, Oklahoma. Population data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce, using U.S. Bureau of the Census, *Census of the Population and Housing 1980, Summary Tape File 1A*; U.S. Bureau of the Census, *Census of the Population and Housing 1990, Summary Tape File 1A*; and U.S. Bureau of the Census, Population Estimates Branch, 1997.

**Child Poverty** counts the related children under age 18 who live in families with incomes below the U.S. poverty threshold (poverty income guidelines). Related children are the children related to the "family head" by birth, marriage or adoption and include relatives such as nieces and nephews. Children under age 18 who do not live in a household where they are related to the head of the household are not included in this analysis. The Poverty Income Guidelines, as defined by the U.S. Office of Management and Budget, are based upon the amount of money that is required to purchase a nutritionally adequate diet. A family is classified as poor if its income falls below this minimum standard. Data counts poor children calculated as a percent of all children. Trends compare percent of child poverty in 1980 to the percent of child poverty estimated and revised by the U.S. Bureau of the Census for 1993. The data describes poor children calculated as a percent of the children in each race. For census purposes race is self-identified in one of four categories: White, Black, Indian (American Indian or Alaska Native), and Asian (or Pacific Islander). Hispanic Origin is counted separately and as an ethnicity, not as a race. Other includes races not selected and other races written in.

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce, using U.S. Bureau of the Census, *Census of the Population and Housing 1980, Summary Tape File 3A* and U.S. Bureau of the Census, *Census of the Population and Housing 1990, Summary Tape File 3A* and U.S. Bureau of the Census, *Small Area Income and Poverty Estimates Program: State and County Income and Poverty Estimates - 1993*.

**High School Dropouts** count youths of any age who quit school without graduating. The data presents the number of high school dropouts for the 1996-97 school year. The data also presents the total number of high school dropouts who are under the age of 19. **High School Dropout Rates** compare number of high school dropouts under age 19 to the enrollment in grades 9 through 12. School officials in Oklahoma are required to notify the State Department of Education of the name, address, race and age of any pupil dropping out of school. *70 O.Supp. 1996 section 35e(A)*. Race is reported as White, Black, Indian, Asian and Hispanic. There is no provision for reporting other races. Hispanic children, for the purposes of this data, are counted as a race, rather than an ethnic group preventing precise racial comparisons between this data and other data in the Oklahoma KIDS COUNT Factbook.

Source: Data provided by the Office of Accountability, Oklahoma State Department of Education (OSDE); Oklahoma City, Oklahoma.

**Juvenile Violent Crime** counts arrests of youth from the ages of 10 through 17 for violent offenses (homicide, forcible rape, robbery, or aggravated assault). The annual arrest figures include all arrests for violent offenses during the year, including repeated arrests of the same individual for different offenses. Rates compare the number of arrests of youth ages 10 through 17 for violent offenses (homicide, forcible rape, robbery, or aggravated assault) to all children ages 10 through 17 and is reported as a rate per 100,000 youths. The data compares juvenile violent crime rates for two one-year periods (1980 and 1997). Base child population data for the state and counties is the 1980 Census population. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1997 and adjusted

by the State Data Center to arrive at a 1997 estimate of the number of children from the ages of 10 through 17. Increases in the number of arrests may reflect increases in juvenile crime, changes in police activity and changes in public policy. While policies and practices regarding juvenile arrests may vary from county to county and city to city, it is widely believed that the policies are more consistent for violent crimes than for less serious crimes. Data collected counts juveniles by age or by race, but age and race cannot be compared. Race is reported as White, Black, Indian, and Asian. There is no provision for reporting other races. Hispanic Origin is counted separately and as an ethnicity, not as a race. Oklahoma KIDS COUNT reports juvenile violent crime arrest data on a state and county basis. Several counties reported no juvenile violent crime arrests in the years included in the Oklahoma KIDS COUNT Factbook.

Source: Arrest data provided by the Oklahoma State Bureau of Investigation (OSBI); Oklahoma City, Oklahoma. Population data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce, using U.S. Bureau of the Census, *Census of the Population and Housing 1980, Summary Tape File 1A*; U.S. Bureau of the Census, *Census of the Population and Housing 1990, Summary Tape File 1A*; and U.S. Bureau of the Census, Population Estimates Branch, 1997.
