PUB TYPE Numerical/Quantitative Data (110) -- Reports - Descriptive (141)
EDRS PRICE MF01/PC08 Plus Postage.
DESCRIPTORS Accidents; Adolescents; Birth Weight; Births to Single Women; Child Abuse; Child Advocacy; Child Health; Child Welfare; *Children; *Counties; Crime; Delinquency; Demography; Dropout Rate; Early Parenthood; Economic Status; Elementary Secondary Education; Enrollment; Infant Mortality; Infants; Mortality Rate; Poverty; *Social Indicators; State Surveys; Statistical Surveys; Tables (Data); *Trend Analysis; *Well Being; Youth Problems
IDENTIFIERS Arrests; Child Mortality; *Indicators; *Oklahoma

ABSTRACT

This Kids Count Factbook details county and statewide trends in the well-being of Oklahoma's children. The statistical portrait is based on seven indicators or benchmarks of child well-being: (1) low birth weight infants; (2) infant mortality; (3) births to young teens; (4) child abuse and neglect; (5) child and teen death; (6) high school dropouts; and (7) juvenile violent crime arrests. Statewide findings, presented in the factbook's overview, indicate that two of the seven benchmarks (low birth weight infants and child abuse and neglect) worsened compared to data from over a decade ago. Five benchmarks (infant mortality, births to young teens, child death, high school dropouts, and juvenile violent crime arrests) improved over the comparable data. The Factbook then presents current statewide and county data for each of the benchmarks. Each benchmark is defined, state and county trends are presented, and racial differences are noted. The bulk of the Factbook is comprised of county profiles, in which data for each of the indicators are presented graphically. A county benchmark key, tips for data interpretation and use, explanations of methodology and sources, and single tables compiling county data for each indicator conclude the Factbook. (SD)

The State Focus on Early Childhood Care and Education in this 2001 Oklahoma KIDS COUNT Factbook was made possible by support from the partners of Oklahoma Success by 6. Led by the United Way of Metro Oklahoma City and the Oklahoma Institute for Child Advocacy, Oklahoma Success by 6 seeks to ensure that all Oklahoma children are healthy, eager to learn and ready to succeed by the time they enter school.

Oklahoma Success by 6 is made possible by the following partners:

United Way
of Metro Oklahoma City

Lucent Technologies
Bell Labs Innovations

Every Day in Oklahoma

- 131 babies are born
- 8 of the babies are born to children (mothers under age 18)
- 9 of the babies are born without receiving adequate prenatal care
- 9 of the babies are born too small
- 153 incidents of child abuse and/or neglect are investigated
- 43 incidents are confirmed to be child abuse and/or neglect
- 25 children quit high school without graduating
- 86 children are arrested for a crime
- 3 of those are arrested for a violent crime
- At least 2 children will die
- 1 of those will be a baby

The Oklahoma KIDS COUNT Partnership includes

A State Profile

Most picking up this book want to lessen the difficulties faced by many of Oklahoma's children — child abuse and neglect, poverty, violence, crime, teen pregnancy. For many of us public debates and private soul searching have not provided clear answers about where to begin. There are few clear distinctions between causes and consequences. In the pages which follow you will find much to suggest that causes and consequences are inextricably linked. Children born to teen mothers are more likely to repeat the cycle of teen childbearing. Child abuse victims later become abusers. Poor children are more likely to quit high school without graduating, and youth not graduating from high school face lives of poverty.

Oklahoma's very young — infants, toddlers and preschool children — are the focus of this edition of the Oklahoma KIDS COUNT Factbook. With all the issues facing children today, why concentrate on early childhood? Precisely because of the difficulties faced by many of Oklahoma's children — child abuse and neglect, poverty, violence, crime, teen pregnancy. Attending to Oklahoma's youngest holds the promise of Oklahoma's future. A hope of breaking the cycle. A promise of less abuse and neglect, less poverty, less violence, less crime, fewer children having children.

The time is now. There is not one more child to waste. First, we must marshal a serious effort to reduce teen pregnancy, lessen poverty and eliminate child abuse. The rewards will include better care and education for Oklahoma's infants, toddlers and preschool children. Second, we must marshal a serious effort to improve the

care and education of Oklahoma's infants, toddlers and preschool children. The rewards will include fewer Oklahoma children having children, living in poverty or suffering abuse. The problems are complex, but not without promising solutions. Community understanding, *combined with action*, will improve the well-being of today's children and secure a safe, healthy and happy future for tomorrow's.

The Oklahoma KIDS COUNT Partnership, a project of the Oklahoma Institute for Child Advocacy (OICA), uses key strategies to achieve its goal. *First*, KIDS COUNT "counts kids," providing accurate and up-to-date data on the status of Oklahoma's children and youth. *Second*, KIDS COUNT cultivates leadership on behalf of children and youth, giving voice to their needs at the local level. *Third*, KIDS COUNT communicates the needs of children and youth, using extensive public awareness activities.

The Oklahoma KIDS COUNT Factbook uses benchmarks to profile the status of children and youth in our state. Benchmarks are quantifiable measures that, when taken together, help determine child, family and community well-being. The seven benchmarks in this KIDS COUNT Factbook are **low birthweight infants, infant mortality, births to young teens, child abuse & neglect, child death, high school dropouts and juvenile violent crime arrests**. This book, the sixth Oklahoma KIDS COUNT Factbook, shows the interrelatedness of these benchmarks and how they impact each other.

The time is now. There is not one more child to waste. First, we must marshal a serious effort to reduce teen pregnancy, lessen poverty and eliminate child abuse. . . . Second, we must marshal a serious effort to improve the care and education of Oklahoma's infants, toddlers and preschool children.

From an established baseline, OICA is tracking progress, or the lack of progress, for each benchmark over time. Progress requires action. Progress requires using all of this information — and more — to make good decisions about state and community budgets and programs that affect children and youth. Effective programs and policies work together with strong communities and families to improve the benchmarks.

More than one in every four Oklahomans (26.3%) is a child. One in four (23.7%) of those children live in poverty. Today, almost eight hundred eighty thousand (879,367) children live, play and go to school in Oklahoma communities. Most young people in Oklahoma are doing well most of the time.

There is good news. Oklahoma KIDS COUNT reveals that only two of the seven benchmarks tracked worsened when compared to data from a dozen years ago:

- Low birthweight infants
- Child abuse & neglect

Five benchmarks improved over the comparable older data:

- Infant mortality
- Births to young teens
- Child death
- High school dropouts
- Juvenile violent crime arrests

There is bad news. The improved rates obscure the challenges faced by large numbers of young Oklahomans each year. More than two hundred thousand (210,470) Oklahoma children live in poverty. More than fifteen thousand (15,518) are abused or neglected. Almost ten thousand (9,289) quit high school. More than one thousand (1,089) are arrested for murder, rape, aggravated assault or robbery.

Oklahoma

Number of Children (1998): 879,367

Children are 26.3% of the state population

Child Poverty Rate (1997): 23.7%

a state focus on
**Early Childhood Care
and Education**

Oklahoma's very young — infants, toddlers and preschool children — are the focus of this edition of the Oklahoma KIDS COUNT Factbook. Two hundred seventy-five thousand (275,002), or about one-third (31.3%) of Oklahoma's children, are under six years of age. Special attention to early childhood issues is compelled by several factors:

Research increasingly demonstrates that high quality early childhood care and educational experiences are vital to a young child's brain development.

Oklahoma children are increasingly likely to spend at least part of their early years in the care of people other than their parents.

Measures of child well-being indicate problems for Oklahoma's very young children.

Prevention and early intervention are cost effective investments capable of reaping long term benefits.

Research increasingly demonstrates that high quality early childhood care and educational experiences are vital to a young child's brain development.

As recently as two decades ago, scientists believed that by the time babies were born, the structure of their brains was fixed and determined. As more has been learned about how a person's brain develops, it has become understood that the first years of life have a decisive impact on the architecture of a child's brain and the nature and extent of his or her adult capabilities.

Effective brain functioning requires a well organized network to rapidly pass signals from one part of the brain to another. The network is composed of brain cells (neurons) and the connections (synapses) they form to other brain cells. There are roughly 100 billion cells (neurons) in a child's brain at birth – nearly enough to last a lifetime. Each neuron can produce up to 15,000 connections (synapses). Experiences “activate” the synapses and the pathways they form. The majority of synapses are produced during the first three years of life at an astonishing speed.

It is not news that babies thrive on warm, responsive, nurturing care. Science demonstrates that this type of caregiving also plays a vital role in healthy cognitive and emotional development. Early care has a long-lasting impact on how people develop, their ability to learn and their capacity to regulate their own emotions.

Children who are nurtured, protected, provided for, loved and stimulated before birth and early in life can reap large rewards. These fortunate children have healthy cognitive and emotional development capable of cushioning them from life's inevitable problems. They grow older with the ability to recover from serious stress or trauma.

Children who are exposed to violence, nicotine, drugs or alcohol before birth or who are abandoned, abused, traumatized, deprived or neglected early in life can pay a high price. These children start at a severe disadvantage. Their brain cells (neurons) can be destroyed, connections (synapses) reduced, emotional control and neurological development undermined, and in some cases, brain function impaired.

There is mounting scientific evidence that an individual's capabilities are not fixed at birth and the human brain has a remarkable capacity to

change. Parents, friends, caregivers, teachers, doctors and service providers have ample opportunity to facilitate healthy growth and development — or help compensate for problems — with carefully timed, intensive interventions, especially during the first few years when the brain's ability to change and compensate is exceptional.

A good start for Oklahoma's youngest will be ineffective if purchased at the expense of their older brothers and sisters. While quality early childhood experiences provide the crucial foundation necessary to create a healthy human being, they are not enough. Growth is a lifelong venture requiring continuing support, protection and nurturing of school-age children and adolescents if each young Oklahoman is to reach his or her optimal development.

Children who are nurtured, protected, provided for, loved and stimulated before birth and early in life can reap large rewards.

Early Brain Development: The Science

Brain development is fast, early and permanent.

The process of brain development is energy intensive. The majority of neurons are born in utero, making the first and most important development stage to occur during pregnancy.

The most active brain development period is early childhood. In contrast to body growth which continues into adulthood, brain growth is about 90% adult size by age four.

Opportunities missed early cannot be recaptured — problems resulting from deficiencies in utero, infancy and toddlerhood cannot be fixed in kindergarten.

Brain development is influenced by a child's early experiences.

Experience alters the brain. A child's brain develops and organizes in response to his or her experiences during the first days, weeks, months and years of life — interacting with the environment, reacting to stimuli, taking in information, processing or storing it.

Functionality is compromised if appropriate and rich experiences are withheld during key stages of brain development.

Early childhood experiences provide the organizing template for the rest of life.

All the structures that allow the complex functioning in adult life are put in place in early childhood.

The root care template for all relationships comes from original attachments with primary caregivers. Relationships and social-emotional development are the glue which provide the foundation for a healthy family, community and society.

The Governor's Task Force on Early Childhood Education: Report and Recommendations for Oklahoma Infants, Toddlers and Preschool Children (from Birth through Age Four) and their Families December 13, 2000

It costs less to pay the tuition at a public college than it does to enroll a four-year-old in full-time child care.

As indicated in its recently released report, the *Governor's Task Force* discovered a child care system in Oklahoma often providing poor to mediocre care, maintaining long waiting lists for young children, plagued with high staff turnover, and unaffordable to most families. It costs less to pay the tuition at a public college than it does to enroll a four-year-old in full-time child care. The *Governor's Task Force* determined that improvements in the quality and affordability of child care would have a significant and long-lasting impact on a child's life and Oklahoma's future.

Oklahoma children are increasingly likely to spend at least part of their early years in the care of people other than their parents.

Two decades ago the majority of Oklahoma infants, toddlers and preschool children had a parent at home; not so today. Now, two-parent households increasingly need a second income to support the family. The increased participation of Oklahoma women in the workforce is further fueled by the growing number of single-parent families headed by women and new welfare requirements which compel attendance at work or training. Currently, three out of five mothers with children younger than six are in the workforce.

With the increasing number of people in the workforce, a majority of Oklahoma's children are now spending at least part of their early years in the care of people other than their parents. Such changes accelerate the need for quality, affordable and available child care.

Charged with undertaking a comprehensive assessment of Oklahoma's early childhood system, the *Governor's Task Force on Early Childhood Education* maintained an ambitious schedule of meetings and investigation during the summer and fall of 2000.

Measures of child well-being indicate problems for Oklahoma's very young children.

Many of the key indicators of young child well-being tracked by KIDS COUNT paint a grim picture for Oklahoma infants, toddlers and preschool children. An average of almost 3,500 (3,457) babies a year are born too small. Almost 400 (389) a year die before their first birthday. More than forty percent (40.6%) of the victims of child abuse are under age six, with children that young making up more than three-quarters (78.4%) of the deaths attributable to child abuse or neglect.

During its comprehensive assessment of Oklahoma's early childhood system, the *Governor's Task Force* discovered several Oklahoma trends which made healthy development more difficult for Oklahoma's youngest:

- an increase in the number of families headed by a single parent (resulting from rising divorce rates and increasing births to unmarried mothers)
- an increase in the number of children not living with either parent (resulting from children being raised by other relatives, growth in foster care placements and incarceration of the child's parent)
- a decrease in the amount of time parents spend with their child (caused by increased hours at work and increased participation of mothers in the workforce)

... a substantial number of young Oklahoma children were exposed by poverty to risks which can impede early brain development.

Oklahoma leads the nation in worsening poverty among its youngest children. The *Governor's Task Force* noted that a substantial number of young Oklahoma children were exposed by poverty to risks which can impede early brain development (inadequate nutrition, exposure to environmental toxins, trauma and abuse, poor quality daily care, and poor health care). The concerns of the *Governor's Task Force* were substantiated by its discovery that statewide, about one-fourth of incoming kindergarten children were not ready to begin school. Many individual schools reported much higher rates.

For the first time, Oklahoma KIDS COUNT ranks Oklahoma's 77 counties based on seven indicators related to early childhood care and education:

Population of Young Children (1998)
identifying counties with the largest numbers of infants, toddlers and preschool children (birth through age five)

Immunizations Completed by Age Two (1995)
measuring the provision of preventive health services to infants and toddlers in the community

Elevated Lead-based Poisoning Tests (1994 - 1997)
measuring community environmental hazards dangerous to young children

Births to Mothers Under Age 20 (1998)
counting children born into the community less likely to have adequate emotional and financial resources

Inadequate Prenatal Care (1998)
counting pregnancies in the community likely to result in health problems for the babies

Child Care Availability (2000)
measuring the availability of licensed child care in the community for children under age six with working parents

Young Child Poverty Rates (1997, estimates)
a measure of the presence of very poor infants, toddlers and preschool children in the community

Taken together, these indicators provide a comprehensive picture of a county's early childhood status in a manner which can be ranked, updated and tracked from year to year. Each county is ranked on each of the seven indicators. All measures were given the same weight, making no attempt to judge relative importance. The seven individual county rankings are totaled into an *Early Childhood County Index* in which the higher the number, the more improvement the county needs to achieve in order to provide the best start for its youngest citizens.

Birth outcomes in large cities are not as good as those elsewhere. A recent national KIDS COUNT Special Report, *The Right Start*, assessed the conditions of babies and their families in America's largest cities finding that both of Oklahoma's largest cities, Oklahoma City and Tulsa, follow this inauspicious national trend.

Compared to Oklahoma as a whole (62.5%), a smaller proportion of the births in Oklahoma City (61.0%) and Tulsa (57.5%) were classified as healthy (based on birthweight, APGAR score, prenatal care

received and length of gestation). Births in Oklahoma City and Tulsa were less healthy than the average for the nation's fifty largest cities (61.6%).

The percent of births classified as at risk based on the mother's characteristics (under age twenty, unmarried, less than twelve years of education) in both Oklahoma City (9.1%) and Tulsa (8.8%) was worse (higher) than the average for the nation's fifty largest cities (8.6%) and worse (higher) than the comparable percent for Oklahoma as a whole (8.0%).

Early Childhood Status

State Data	1998	275,002
Child Population < 6	1995	76.0%
Immunizations by Age 2	1994-97	382/1000
Lead-based Poisoning	1998	16.5/1000
Births to Mothers < 20	1998	6.2%
Inadequate Prenatal Care	2000	0.579
Child Care Availability	1997	29.0%
Poverty - Children < 5		

7	Denver
17	Illinois

County Rankings

Factors:
 Population under age 6, Immunizations completed by age 2, Rate of elevated lead poisoning tests, Proportion of births to mothers under age 20, Inadequate prenatal care, Availability of child care, Rate of poverty among children under age 5

Prevention and early intervention are cost effective investments capable of reaping long term benefits.

In undertaking its assessment of early childhood, the *Governor's Task Force* looked both within and outside Oklahoma borders to identify effective ideas and approaches for improving Oklahoma's early childhood care and education system. The *Governor's Task Force* documented that high quality care and education resulted in positive, long lasting results, particularly among low-income children.

The *Governor's Task Force* concluded that prevention and early intervention strategies were cost effective and held great promise, reducing the need for

Success requires that parents are acknowledged as their child's first and most important teacher and that parents have access to whatever they need to make the most of each child's unique opportunities to develop.

remediation, treatment or crisis intervention in later years. For example, the benchmark respected High/Scope Perry Preschool Project demonstrated that quality preschool programs decreased the need for special schooling, increased employment, reduced welfare dependence, decreased crime, and more ... all saving taxpayer dollars at the rate of \$7.16 for every public dollar invested in quality preschool services.

More recently, the Abecedarian Project demonstrated similarly impressive results through a carefully controlled study comparing infants from low-income families who received early intervention in a high quality child care setting with infants who did not. Both groups were assured adequate nutrition, supportive social services and access to primary health care services. The Abecedarian children each received individualized educational activities consisting of "games" that were incorporated into his or her day. By following the children's progress through age 21, the Abecedarian Project found that high-quality, intensive, sustained, multi-faceted early intervention programs improve the course of intellectual development in young children. Documented positive effects included higher IQ and cognitive performance, improved language, fewer instances of grade retention, decreased need for special education, higher reading and math achievement scores, higher levels of formal education, delayed parenthood, and, for teen mothers, higher rates of post-high school education. Impressive savings would flow to taxpayers if the results of the Abecedarian Project were only partially realized in Oklahoma.

Ensuring that Oklahoma children have the best start possible requires understanding the value of and investing in family support, preschool and early intervention programs, child care and health care. Family support helps families provide a nurturing home environment. Success requires that parents are acknowledged as their child's first and most important teacher and that parents have access to whatever they need to make the most of each child's unique opportunities to develop. Preschool and early intervention programs provide developmental support to help prepare children for school and assure that children start school ready to learn. Children who are low-income, socially vulnerable and have developmental delays benefit greatly from such developmental support. Child care must be of high quality, and safe and affordable, providing developmentally-appropriate care while parents are at work or away from home. Health care coverage and access to primary and preventive services, physical activity, and nutrition are necessary to develop and maintain healthy minds and bodies.

Oklahoma has made a good start by implementing innovative programs and making significant investments in the early care and education of Oklahoma children. However, the *Governor's Task Force* found that Oklahoma's creativity and concern were being stymied by the absence of a comprehensive, coordinated policy structure focusing on families and communities.

The recently released *Governor's Task Force* report advocated four key strategies (accompanied in the report by numerous detailed recommendations). This long-term early childhood initiative is designed to achieve their vision that *all Oklahoma children will be healthy, eager to learn, and ready to succeed by the time they enter school.*

Implementation of the *Governor's Task Force* strategies promises the right start for Oklahoma's infants, toddlers and preschool children. To take such action will maximize the benefits of Oklahoma's current and future investments in family support, preschool and early intervention programs, child care and health care. To do otherwise will neglect Oklahoma's youngest and Oklahoma's future.

Health care coverage and access to primary and preventive services, physical activity, and nutrition are necessary to develop and maintain healthy minds and bodies.

Strategy One:

Enact a strong *public policy* promoting early childhood care and education

Strategy Two:

Create a statewide public-private early childhood *partnership*

Strategy Three:

Implement a comprehensive *public engagement* campaign

Strategy Four:

Mobilize *communities* to provide environments that support children and families

Low Birthweight Infants

Each year nearly thirty-five hundred Oklahoma babies (3,457 average annual) are born too small (weighing less than 5 1/2 pounds).

A disquieting and increasing number of these low-weight infants (586 average annual) are born very, very tiny (weighing less than 3 pounds, 5 ounces).

During the most recent three-year period (1996 - 1998) the proportion of Oklahoma babies born too small slowly and steadily continued to worsen (increasing from 7.1% to 7.2% of all births) when compared to the three year period just one year earlier (1995 - 1997). Comparable rates also worsened during the year in most (44 of 77) of Oklahoma's counties.

This trend has continued for years. A higher proportion of Oklahoma babies (7.2% of all births) are born too small today as compared to the population born in the mid-1980's (6.4% of all births), with such rates also worsening in the majority (43 of 77) of Oklahoma's counties during the same period.

The rates of low birthweight births in the majority of Oklahoma counties (40 of 77) were worse than the average county rate (6.8% of all county births). The highest and worst low birthweight rate (10.4% of all county births) is found in Cimarron County; the lowest and best (2.2% of all county births) is in Grant County during this most recent period.

The low birthweight rate for African American infants (12.5% of all African American births) continues to nearly double the rate for White infants (6.7% of all White births). By race, the best low birthweight rate is recorded for American Indian infants (6.3% of all American Indian births). Hispanic mothers, who may be of any race, have an even lower rate of babies born too small (6.0% of all Hispanic births).

While early prenatal care is known to improve these rates, over one-third (35.8%) of Oklahoma's babies were born to mothers who failed to receive the recommended level of prenatal care during the most recent three-year period reported.

Ranking near the middle of all the states, Oklahoma's rate of low birthweight infants is average relative to other parts of the country. Oklahoma's rank among the fifty states improved from 24th to 21st during the most recent year (1997) measured.

Impact on early childhood and Oklahoma's future

» *Low birthweight is a predictor of early childhood problems. Some die.* Almost 60 percent of the infant deaths each year result directly from low birthweight. In Oklahoma seven out of 10 infants who die in the first month of life are low-weight babies. Of those who live, one in four will experience serious health and developmental problems — dyslexia, hyperactivity, blindness, deafness, chronic respiratory problems, mental retardation, mental illness, cerebral palsy, and more.

Babies Weighing Under 5 1/2 Pounds

Oklahoma, 1998.

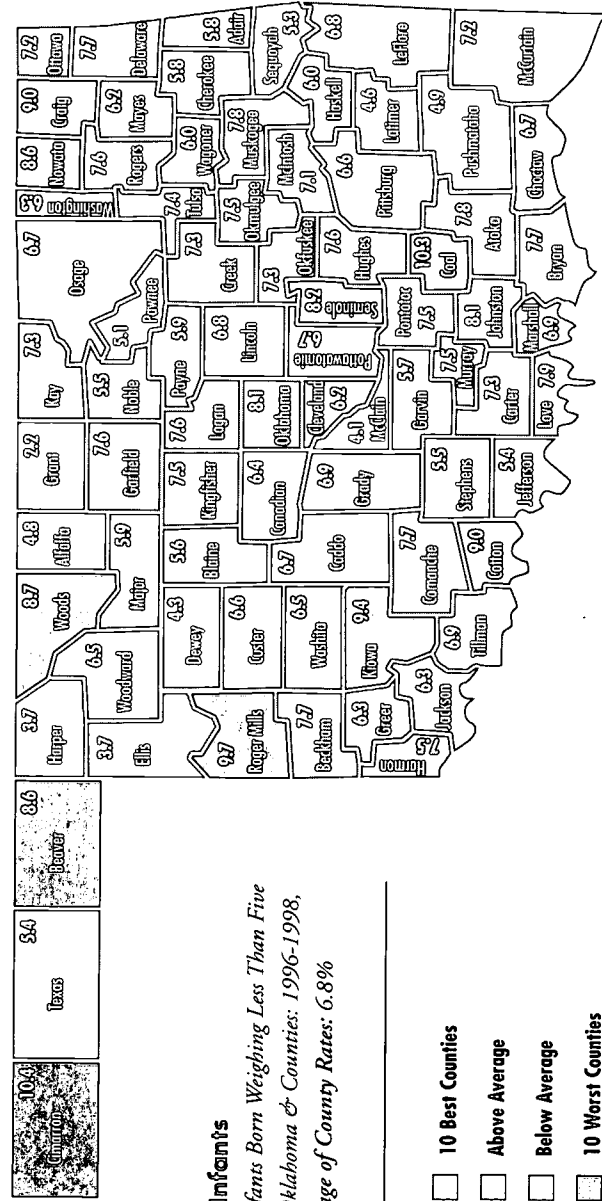

By Race and Ethnicity

» **Low birthweight is expensive and preventable.** The health costs over the lifetime of one low birthweight infant can reach more than \$500,000, while prenatal care (which is likely to prevent low birthweight) can cost as little as \$750.

» **The lower the birthweight, the greater the harm.** Twenty percent of *very tiny* (less than 3 pounds, 5 ounces) babies experience cerebral palsy or other forms of brain injury. Fifty percent of *very tiny* (less than 3 pounds, 5 ounces) babies later enroll in special education.

» **The first and most important period of infant brain development occurs during pregnancy, requiring a focus on prenatal care and education.** Infants are at risk of being born too small if their mothers are poor, are adolescents, smoke during pregnancy, drink alcohol or take drugs during pregnancy, or fail to receive adequate prenatal care. Caring about young children requires caring about their mothers by providing them with education and adequate nutrition, reducing teen births, ensuring appropriate health care, reducing poverty, changing behavior during pregnancy to reduce

smoking, drinking and drug use, and providing a greater number of expectant mothers with adequate prenatal care.

More than forty-three percent (1,498 per year or 43.3%) of the infants weighing less than five and one-half pounds at birth were born to mothers who live in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together account for about forty percent (40.3%) of Oklahoma's births.

Infant Mortality

Each year nearly four hundred babies born in Oklahoma (389 average annual) do not live to see their first birthday.

On the average at least one Oklahoma infant dies every day.

The rate of Oklahoma infants who die in their first year of life worsened slightly during the most recent three years (1996 - 1998) when compared to the three-year period just one year earlier (1995 - 1997). Oklahoma infant death rates worsened from 8.0 to 8.1 deaths per 1,000 live births, with comparable rates also worsening in less than half (35 of 77) of Oklahoma's counties.

Despite the recent slight increase, infant death rates have declined substantially over the past dozen years. Today, proportionately fewer Oklahoma babies (8.1 per 1,000 live births) die in their first year of life than did in the mid-1980's (10.5 per 1,000 live births), with such rates also improving in the large majority (55 of 77) of Oklahoma counties during the same period.

The rate of infant death in the majority of Oklahoma counties (43 of 77) was better than the average county rate (8.0 per 1,000 live births).

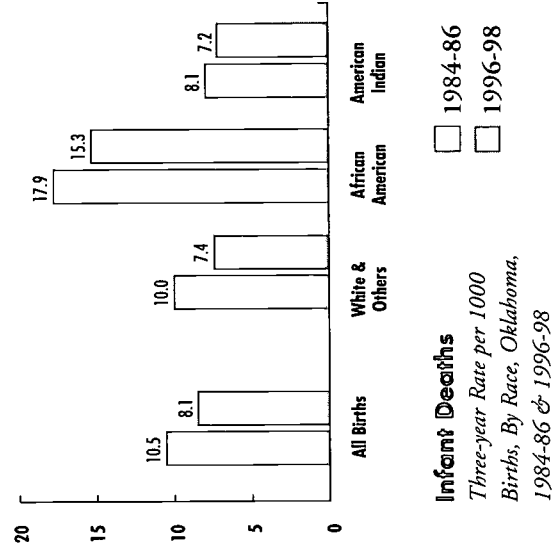

During this most recent period, the highest and worst infant death rate (32.3 per 1,000 live births) is found in Roger Mills County; the lowest and best (0.0 per 1,000 live births) is found in six Oklahoma counties (Major, Grant, Cimarron, Ellis, Washita and Greer).

Infant death rates have improved for all races since the mid-1980's. However, the most recent death rate for African American infants (15.3 per 1,000 African American births) remains more than twice as high as the comparable rate for White infants (7.4 per 1,000 White births). The lowest death rate is recorded for American Indian infants (7.2 per 1,000 American Indian births).

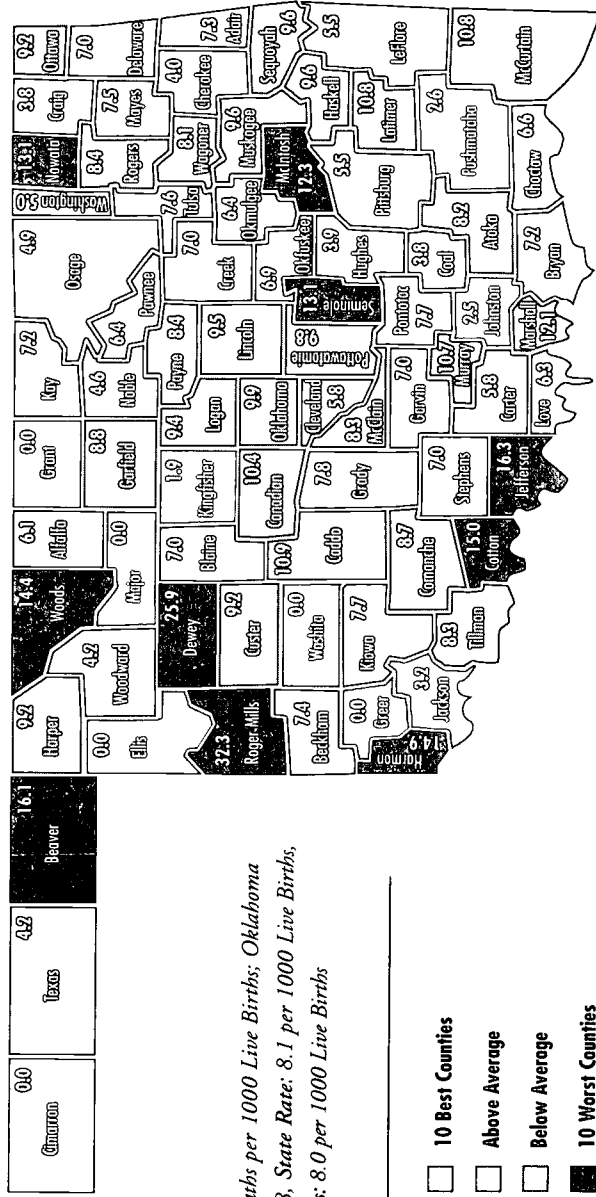

Ranking in the bottom half of all the states, Oklahoma's rate of infant death is only fair relative to other parts of the country. Even so, Oklahoma's rank among the fifty states improved from 39th to 30th during the most recent year (1997) in which states were compared.

Impact on early childhood and Oklahoma's future

- » *Infant death typically results directly from inadequate early care.* Causes of death include poverty, inadequate living conditions, abuse, neglect, preventable injuries, accidents and infections.
- » *The infant mortality rate is an indicator of a community's overall quality of life.* The rate reflects the effectiveness of educational, economic, social and health care measures.

» *Reducing the number of infant deaths requires a focus on early childhood care.* Lowering infant mortality rates requires providing education on topics such as ways to reduce the risk of Sudden Infant Death Syndrome (SIDS), ensuring adequate nutrition, reducing teen births, providing appropriate health care, reducing poverty, lowering child abuse rates, changing behavior during pregnancy to reduce smoking, drinking and drug use, and providing a greater number of expectant mothers with adequate prenatal care.

Nearly forty-four percent (169 per year or 43.4%) of the infant deaths occurred in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together account for about forty percent (40.3%) of Oklahoma's births and are populated with just under forty percent (38.2%) of Oklahoma's infants.

Births To Young Teens

For the most recent three year period, an average of nearly eight thousand (7,981) babies were born to Oklahoma females under the age of twenty. Each year about five thousand (5,086) of those babies were born to teen mothers ages 18 and 19. Nearly three thousand (2,895) Oklahoma school-age girls (age 17 and under) had babies. One hundred thirty-five of those school age girls were between ten and fourteen years of age.

On the average, every three hours an Oklahoma child (age 17 or younger) becomes a mother.

The rate of births to Oklahoma young teens continued its modest decline (from 37.0 to 35.9 births per 1,000 girls ages 15 through 17) during the most recent three years (1996-1998) when compared to the three-year period just one year earlier (1995-1997). Birth rates for that age group showed some improvement in most Oklahoma counties (43 of 77) during the same period.

The progress made in decreasing the high Oklahoma birth rate to young teens of the mid-1980's (from 43.9 to 35.9 births per 1,000 girls ages 15 through 17) has been evident at the county level where such rates also improved in nearly every (69 of 77) Oklahoma county during the same period of time.

The rates of births to young teens in the majority of Oklahoma counties (42 of 77) were worse than

Impact on early childhood and Oklahoma's future

- » *Improving early childhood requires Oklahoma to reduce teen pregnancy.* The cycles of generational poverty prevent too many children from receiving the physical, emotional, and mental nurturing necessary during their early developmental years. Children born to teen mothers are more likely to repeat the cycle of teen childbearing, to be born too small, to have lifelong developmental and health problems, to have lower cognitive functioning, to do poorly in school, and to exhibit problem behavior.
- » *Young mothers are the most at-risk for being poor parents and face bleak futures along with their children.* Each young mother is more likely to be poor, to be a victim of physical violence, to

the average county rate (34.9 births per 1,000 girls ages 15 through 17). During this most recent period, the highest and worst rate (79.6 births per 1,000 girls ages 15 through 17) is found in Harmon County; the lowest and best (8.3 births per 1,000 girls ages 15 through 17) is in Dewey County.

The large majority (67.9%, including Other) of Oklahoma's young teen mothers are White. However, while non-White teenage girls comprise only about one-fifth (21.6%) of the teenage girl population, they account for almost one-third (32.1%) of the teenage girls giving birth in Oklahoma.

Oklahoma's teen childbearing rate was substantially above other states in 1980, but by 1997, the gap had narrowed. Even so, Oklahoma's young teen childbearing ranking relative to other states is poor, with more than two-thirds (37 states) having a teen (age 15 through 17) birth rate lower than Oklahoma during the most recent year (1997) compared.

**Births to Mothers
Ages 15-17**

Oklahoma, By Race 1996-98

have another child before reaching adulthood, to drop out of school, to have unsteady employment, to be on public assistance at some point in her life, to be less skilled, and to experience marital instability compared to peers who delay childbearing until age twenty or later.

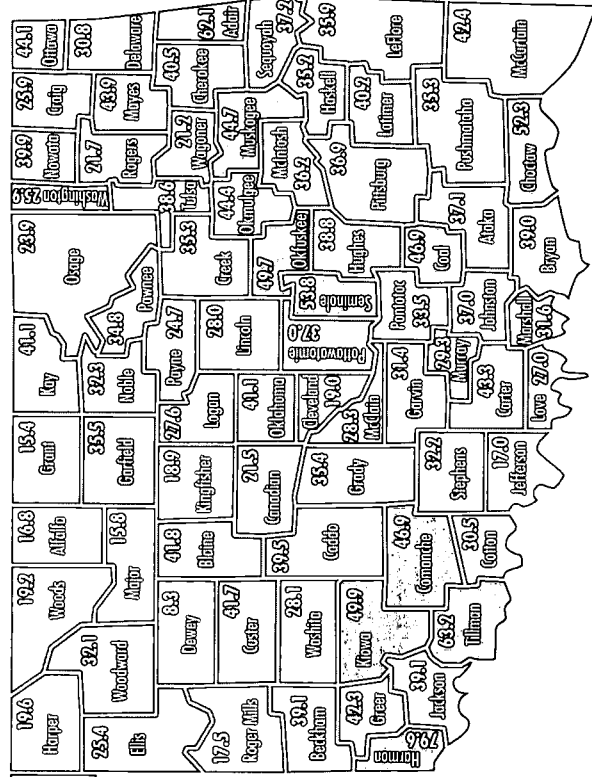

- » *Education and reading is one key to reducing teen births and improving the lives of young children.* Poor literacy skills, poor progress in school and academic failure are good predictors of early childbearing. Children who don't read well

are at risk for early pregnancy and early parenting. There is a relationship between how much a child has been read to and how well they learn to read. Only half of infants and toddlers are routinely read to by their parents.

- » *Communities and families can work together to reduce teen births.* Being connected with community, school and family decreases the risk of teen pregnancy and birth. School success, involvement in activities during non-school hours and opportunities to develop decision-making and

problem-solving skills join to prevent premature pregnancy and birth. Having positive options, aspirations for the future and goals for education and training beyond high school help young men and women make good choices and avoid becoming teen parents. Having healthy family communication and positive peer and adult role models decrease the likelihood that children will have children.

Child Abuse & Neglect

For the most recent three-year period (Fiscal Years 1997 - 1999) an average annual of more than fifty-five thousand (55,711) situations were investigated by the Oklahoma Department of Human Services (DHS) as possible abuse and/or neglect of one or more children.

During this period DHS confirmed a near record-high number of those allegations. On average more than fifteen thousand (15,518) of the incidents investigated each year were found to be actual abuse and/or neglect.

In Oklahoma, approximately every thirty-four minutes a child is a victim of confirmed abuse and/or neglect.

During the most recent three-year period (Fiscal Years 1997 - 1999), the rate of confirmed child abuse and/or neglect in Oklahoma continued to rise when compared to the three-year period just one year earlier (Fiscal Years 1996 - 1998).

Oklahoma abuse and neglect rates moved from 15.9 to 17.7 confirmations per 1,000 children in the state, with comparable rates also worsening in the large majority (62 of 77) of Oklahoma's counties.

Child abuse and neglect is maintaining its record high rates. Today, Oklahoma's rate of confirmed child abuse and/or neglect (17.7 confirmations per 1,000 children) is close to double what it was in the mid-1980's (9.0 confirmations per 1,000 children). Such rates also worsened in almost every (71 of 77) Oklahoma county during the same period.

Impact on early childhood and Oklahoma's future

- » *Child abuse and neglect hurts and kills Oklahoma infants, toddlers and preschool children.* During the most recent three-year period (FY 1997 - 1999), more than forty percent (40.6%) of the victims of child abuse were not yet six years of age. Oklahoma's youngest abuse victims are more likely to die. More than three-quarters (78.4%) of the deaths attributable to child abuse or neglect during this time were children under six years old. An Oklahoma child dying as a result of abuse or neglect is most frequently an infant.

The rates of confirmed child abuse and/or neglect in the majority of Oklahoma counties (45 of 77) were better than the average county rate (18.7 confirmations per 1,000 children in the county).

During this most recent period, the highest and worst proportion of children confirmed to be victims of child abuse and/or neglect (42.9 per 1,000) is found in Pushmataha County; the lowest and best (6.0 per 1,000) is in Beaver County.

A total of forty-seven Oklahoma children died from child abuse and/or neglect during FY 1999. Among the dead were nineteen girls and twenty-eight boys of all races. Twenty were less than one year of age; fifteen were toddlers (ages one through three). The dead also included school age children ranging from preschoolers to children old enough to be in high school. The oldest known to have died at the hands of their caretakers this year were four fifteen and sixteen year old girls. One was the victim of neglect. Three died from abuse.

The large majority (66.4%) of confirmations of abuse and/or neglect in Oklahoma involve children who are White. However, while non-White children comprise only about one-fifth (21.7%) of the child population, they account for a greater proportion (37.4%, excluding Hispanics and unknown) of the confirmed child abuse and/or neglect incidents. Hispanic children, recorded as a nationality rather than a race, comprise just over five percent (5.5%) of Oklahoma's child population. A lower proportion of confirmed abuse and/or neglect in Oklahoma (3.0%) involved children counted as Hispanic.

Child Abuse & Neglect Confirmations

By Race of Child,
Oklahoma, FY 1997-1999

Child & Teen Death

About nine Oklahoma children and youth from the ages of 1 through 19 die every week. During the most recent three-year period an average of four hundred forty-four died each year. Just under half (47.5% or 211) of these annual child deaths are children from the ages of 1 through 14; the remainder are teenagers (ages 15 through 19).

The average annual rate of death among Oklahoma children from the ages of 1 through 14 improved slightly (from 33.2 to 31.3 per 100,000) during the most recent three-year period (1996 - 1998) when compared to the three-year period just one year earlier (1995 - 1997). In a majority of Oklahoma counties (45 of 77) child death rates stayed the same or improved during the year.

A lower rate (31.3 per 100,000) of children from the ages of 1 through 14 die currently than did in the mid-1980's (41.5 per 100,000), with such rates also improving or staying the same in the large majority (51 of 77) of Oklahoma's counties during the same period.

The rates of death for children from the ages of 1 through 14 in the majority of Oklahoma counties (46 of 77) were better than the average county rate (31.8 per 100,000 children age 1 through 14 in the country). During this most recent period, the highest and worst rate of child death (193.9 per 100,000 children age 1 through 14 in the county) is found in Dewey County; the lowest and best (0.0 per 100,000) is found in nine Oklahoma counties (Roger Mills, Johnston,

Woods, Harmon, Major, Ellis, Marshall, Beaver and Nowata).

More than half (52.2%) of the child and teen deaths during the most recent three year period were accidental. Oklahoma children and teens are less likely to die of diseases (26.4%) or violence (21.4%).

Violence among non-white children and teens is more common with well over one-third (37.1%) of all such African American deaths and well over one-fourth (28.6%) of all such American Indian deaths resulting from violence. A young African American is more than twice as likely to die of violence in Oklahoma than his or her White peer (17.9%).

Oklahoma's young people kill themselves at a rate almost twice the national average. The number of young people committing suicide continues to increase with an average of forty Oklahoma victims under age 20 each year (1996 - 1998). While most are older White male adolescents, recent Oklahoma suicides have victimized all races, both sexes and children as young as ten.

Even with the improvement in death rates since the 1980's, Oklahoma's ranking relative to other states for the most recent year compared (1997) remains among the worst (44th in child death) in the nation.

Impact on early childhood and Oklahoma's future

- » *Infants, toddlers and preschool children make up a large portion of child deaths in Oklahoma.* During the most recent three-year period (1996-1998), almost forty-five percent (44.2%) of all child deaths (ages 1 through 14) were not yet six years of age. More than half (53.1%) of Oklahoma's youngest were victims of accidental death.
- » *Disquieting trends.* Over the last several decades, the leading causes of death for children and teens have changed from natural causes, such as illness and birth defects, to injury and violence. Children increasingly imitate the violence they observe on

Deaths Among Children & Teens
Three-year Percent, By Cause, By Race, Oklahoma 1996-1998

Disease
 Accident
 Violence

Impact on early childhood and Oklahoma's future

» *Preventing youth from dropping out of high school begins before kindergarten.* Children from families whose parents never completed high school, or started the family as teens themselves, are more likely to drop out than their peers. Poor literacy skills, poor progress in school and academic failure push young people out of school. If a child can't read well by the end of third grade, their entire school experience is at risk. There is a relationship between how much a child has been read to and how well they learn to read. Only half of infants and toddlers are routinely read to by their parents.

High School Dropouts

During the most recent three-year period (School Years 1996/97 - 1998/99) an annual average of more than eleven thousand (11,286) young Oklahomans quit school without graduating. Over nine thousand (9,289) of those dropping out were ages 18 or younger.

Nearly one of every five students in Oklahoma who starts high school as a freshman does not earn a high school diploma. Compared to any other grade, the largest numbers leave school during the ninth grade.

Even though the rate of children leaving school without graduating improved slightly (from 5.5% to 5.4%) during the most recent three-year period when compared to the three-year period just one year earlier, the average number of Oklahoma children (under age 19) dropping out of high school (grades 9 through 12) each year is virtually the same. The dropout rates improved in a little more than half (40 of 77) of Oklahoma's counties during the same period.

Oklahoma's high school dropout rate (5.4%) during the most recent three-year period is slightly better, but remains close, to that of the comparison three-year period (5.5% for School Years 1994/95 - 1996/97). Such rates also improved in a small majority (41 of 77) of Oklahoma's counties during the same period.

The dropout rates were worse than the average county rate (4.3%) in most of Oklahoma's counties (42 of 77). During this most recent period, the highest and worst rate of children leaving school without graduating (7.6%) is found in Hughes County; the lowest and best (0.8%) is in Dewey County.

During School Year 1998/99 the proportion of high school dropouts who were girls (45.1%) and the proportion who were boys (54.9%) did not change from the prior year.

During the most recent year on record (School Year 1998/99) the large majority (61.0%) of children failing to finish high school are White. However, while non-White children comprise only about one-fifth (21.7%) of the child population, they account for about one-third (33.4%) excluding Hispanics) of the high school dropouts. Hispanic children, recorded as a nationality rather than a race, comprise just over five percent (5.5%) of Oklahoma's child population. A slightly higher proportion of Oklahoma dropouts (8.5%) are counted as Hispanic.

During the most recent year for which comparison data is available (1997), Oklahoma remained at about the middle of all states (29th) in the percent of teens who are high school dropouts (9.0% of those ages 16 through 19).

Students Quitting High School Without Graduating

All Ages, By Race, Oklahoma School Year 1998-1999

Juvenile Violent Crime Arrests

In 1998, juveniles accounted for just under one-fifth (18.5%) of all persons arrested for all Oklahoma crimes.

During the most recent three-year period (1997 - 1999) more than a thousand (1,089) Oklahoma youths from the ages of 10 through 17 were arrested each year for committing violent crimes. Each year an average of twenty-six were arrested for murder, three for manslaughter, 60 for forcible rape, 268 for robbery and 732 for aggravated assault.

During these three years the overwhelming majority of youth arrested for violent crimes in Oklahoma were male (83.8%).

During the most recent three-year period (1997 - 1999), the proportion of Oklahoma youths from the ages of 10 through 17 arrested for violent crimes continued to decrease when compared to the three-year period just one year earlier (1996 - 1998). Oklahoma violent crime arrest rates for this age group moved from 297.9 to 271.4 per 100,000 youth, with comparable rates staying the same or improving in most (56 of 77) of Oklahoma's counties.

The current proportion of Oklahoma youths from the ages of 10 through 17 arrested for violent crimes continues to improve from the record highs recorded during the 1990's. The rate of arrest for these youth (271.4 arrests per 100,000 youth) during the most recent three-year period (1997 - 1999) is substantially improved over that of the comparison three-year period (334.1 arrests

per 100,000 youth for 1990 - 1992). Comparable rates also improved or remained the same during the same period in just under half (36 of 77) of Oklahoma's counties.

The current juvenile violent crime arrest rate is better than the average county rate (161.2 arrests per 100,000 youth) in most of Oklahoma's counties (45 of 77). During this most recent period, the highest and worst rate of youths from the ages of 10 through 17 (568.3 arrests per 100,000 youth) arrested for violent crimes is found in Tulsa County. The lowest and best rates (0.0 arrests per 100,000 youth) are in seven Oklahoma counties (Alfalfa, Beaver, Ellis, Grant, Harper, Love and Roger Mills).

While non-White children comprise only about one-fifth (21.7%) of the child population, they accounted for nearly half (44.1%) of the violent crime arrests of children under age 18 during the most recent three-year period. Hispanic children, recorded as a nationality rather than a race, comprise just over five percent (5.5%) of Oklahoma's child population. A similar proportion of the juvenile violent crime arrests in Oklahoma (5.7%) are arrests of Hispanic youth.

Based on the latest figures available, Oklahoma's 1997 rate (289 per 100,000 youths ages 10 through 17) of arresting young people for violent crimes continued to remain well below the corresponding national violent crime arrest rate (412 per 100,000 youths ages 10 through 17).

Impact on early childhood and Oklahoma's future

» *Juvenile crime prevention begins in early childhood.* Experts blame the rise in juvenile crime on the failure of families, schools, and communities to recognize early warning signs. Being connected with community, school and family decreases the risk of later violence, death and crime. Denying an at-risk child access to a quality child development program may multiply by five times the risk that he or she will be a chronic law-breaker as an adult. Children enrolled in public-funded Child-Parent Centers had their risk of being arrested for juvenile crimes cut in half. Children receiving care in high quality

Hispanic youth may be of any race and comprise 5.5% of the 1997-1999 juvenile violent crime arrests

Juvenile Violent Crime Arrests Under Age 18, By Race Oklahoma, 1997-1999

centers as infants and toddlers were only half as likely to have serious behavioral problems upon entering kindergarten. Impressionable young children are numbed to the real effects of violence by viewing over 10,000 murders, rapes and aggravated assaults each year on television. Children imitate the violence watched on television in their own homes.

» *Early childhood problems are a predictor of future crime.* Children at higher risk for involvement in violence and crime include boys born to teen mothers, children from families whose parents never completed high school and young people

doing poorly in school. Victims of child abuse and neglect are more likely than others to later be arrested for delinquent behavior, adult criminality, crimes of violence and prostitution. Girls who are abused and neglected in childhood are seventy-seven percent more likely to be arrested as juveniles. A young poor child is more likely than a non-poor one to be a current victim and a later perpetrator of violent crime.

» *Disquieting trends.* The number of juveniles arrested for carrying or being in the possession of a weapon is on the rise in Oklahoma. Juvenile drug possession arrests have tripled in the past decade.

Juvenile arrests for violent crimes are outpacing juvenile arrests for non-violent crimes. Police in Oklahoma are increasingly likely to refer juvenile violators to criminal or adult court.

» *Fight Crime – Invest in Kids.* Good educational child care is one of the most powerful weapons against crime. Poor quality child care multiplies the risk that a child will grow up to be a threat to society. Nine out of ten police chiefs say crime would be greatly reduced by expanding educational child care programs and after-school programs. Failure to invest now will result in paying far more later in crime, welfare and other costs.

Juvenile Violent Crime Arrests

Three-year Rate of Violent Crime Arrests per 100,000 Youths Age 10 through 17; Oklahoma & Counties: 1997-1999, State Rate: 271.4 per 100,000 youth, Average of County Rates: 161.2 per 100,000 youth

Well over half (621.2 per year or 57.0%) of the violent crime arrests of youths from the age of 10 through 17 were in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated with only one-third (32.6%) of all youths age 10 through 17.

Understanding the Data

County Benchmark Key A Comprehensive Guide to Understanding Benchmark Data

The county is ranked on the combined early childhood indicators to allow you to compare this county with other counties. 1 is the best ranking; 77 is the worst ranking.

Seven new indicators profile the early childhood status of the counties' infants, toddlers and preschool children. See *Methodology and Sources* for a detailed explanation of each indicator.

Recent data for each new indicator presents a rate for the most recent year available. Each item specifies the recent rate and the period in which it was collected.

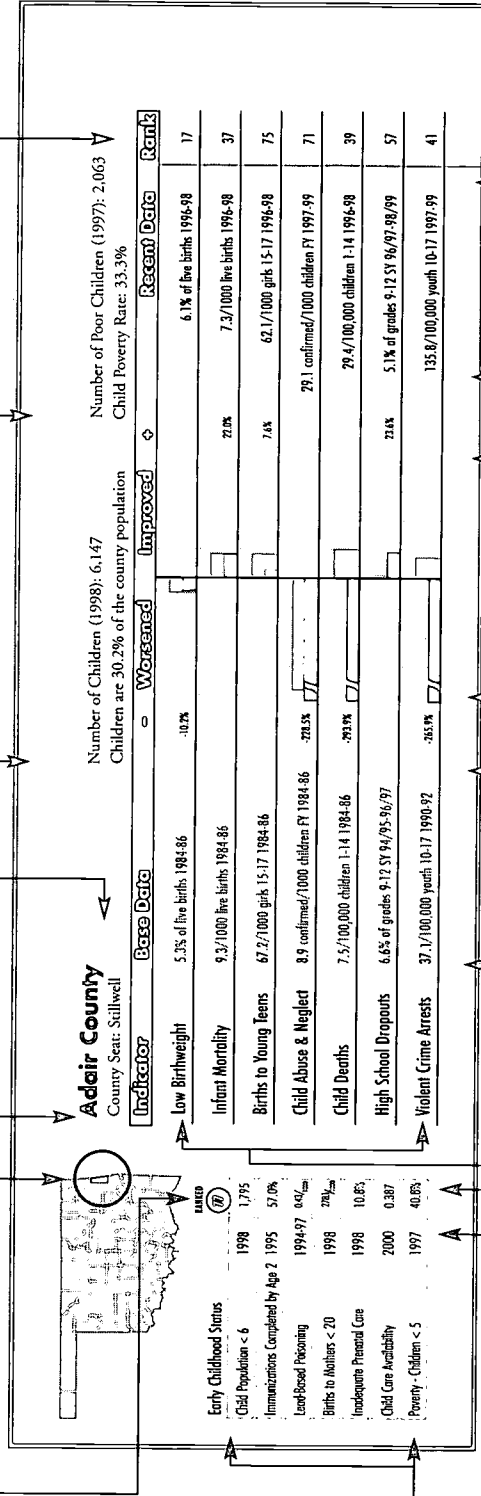

The seven indicators tracked by KIDS COUNT profile the status of children and youth in Oklahoma. See *Methodology and Sources* for a detailed explanation of each indicator. For example, High School Dropouts only count youth under age 19.

The map of Oklahoma has the location of the county highlighted.

The county name and county seat are along the top of each benchmark chart.

The numbers, percentages and poverty rate of children in the county are here.

The county is ranked on each indicator to allow you to compare this county with other counties. 1 is the best ranking; 77 is the worst ranking.

Recent data for each indicator presents a rate for the most recent three years. Each item specifies the recent rate and period in which it was collected.

The bar chart shows the percent change between the base data and the recent data for each indicator. If the bar goes to the left of center, the county rate has worsened. If the bar goes to the right of center, the county rate has improved. The lighter colored wider bar behind the bar chart is the state rate for that indicator and allows you to compare the county with the state as a whole.

Base data for each indicator presents a rate for a previous three year period when data comparable to that measured currently was available. Each item specifies the base rate and period in which it was collected.

Tips for Data Interpretation & Use

Understand What is Being Measured:

It is important to understand what is being measured and how. Several types of data information are available for each benchmark: numbers, average annual numbers, county and state rates, percentage change between years, base and recent data, and county rankings. A “key” directing the reader to the various types of data information is presented at the beginning of this Understanding the Data section. The Methodology and Sources later in this section details what each benchmark means, what data is included and where it is from.

Each county benchmark and the rate of change calculated for each county benchmark is rounded for presentation on the county pages. The rounding may cause the results to vary from the rates which might be calculated from the rounded numbers appearing on each county page.

Beware of Small Numbers:

County populations vary significantly. Such variations should be considered when interpreting the differences among counties. Be aware that small counties may have a small number of events (e.g., child deaths, arrests for violent crimes) which can cause rates to vary considerably from year to year without reflecting real change. For this reason, the benchmarks use three-year averages to improve the reliability of rate comparisons.

Low rates may appear in counties with large populations. Relying solely on rates, without considering the numbers involved, may result in overlooking locations which have large numbers of suffering children.

Remember the Uses and Limits of Data:

Benchmarks provide important baseline information. Effective use of benchmarks requires them to be understood in a broad context. They provide one way to look at how children are doing in a county or state.

Benchmarks can provide the starting place to initiate dialogue with others who share your interest. There are many important perspectives required to piece together a complete picture. Collect additional data and viewpoints to flesh out the most useful view of child well-being in your own area.

Methodology and Sources

Data and information used in this Oklahoma KIDS COUNT Factbook came from a wide variety of sources in Oklahoma and around the nation. This section identifies the sources for the information found in this document and the method used for computations where applicable.

There is no agreement about the specific terminology or the number of categories which should be used to classify race and ethnicity. The categories listed in this report are the categories in the sources relied upon for information. At times different sources will use different categories to report racial characteristics. Some indicators were not available by race at all. This makes it difficult to look across the indicators by race. Persons within each race or ethnic group are encouraged to re-title or refer to the data in a manner which reflects their preferences.

Extreme caution should be used when reviewing, using and comparing data related to Hispanic populations. Some agencies count Hispanic children as a race and others consider Hispanic to be a nationality whose children can be any race (White, African American, Native American, and so on). Of those counting Hispanic children as a nationality, only a few maintain statistics on the proportion of children who are Hispanic.

As a result, when Hispanic is considered to be a race, data may appear as follows:

White	70.0%
Native American	10.0%
American Indian	10.0%
Hispanic	5.0%
Asian	2.0%
Other	3.0%
TOTAL	100.0%

When Hispanic is considered to be a nationality, data may appear as follows:

Asian	2.0%	non-Hispanic	95.0%
Other	4.0%	Hispanic	5.0%
White	72.0%	TOTAL	100.0%
Native American	11.0%		
American Indian	11.0%		

Child Population is the total resident population under age 18 including dependents of Armed Forces personnel stationed in the area. Child population data for 1980 and 1990 for the state and counties are counts from the 1980 and 1990 Census. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1998.

SOURCE: U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 1A and 2B and U.S.

Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A and Summary Tape File 2B. Current population data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 1A; U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A; and U.S. Bureau of the Census, Population Estimates Branch, 1998.

Early Childhood County Index combines the ranks of seven individual indicators for each county to assess the relative improvement the county needs to achieve in order to provide the best start for its youngest citizens. All indicators were given the same weight, making no attempt to judge relative importance. Taken together, these indicators provide a comprehensive picture of a county's early childhood status in a manner which can be ranked, updated and tracked from year to year. Individual rankings are based on the following seven indicators related to early childhood care and education:

Population of Young Children Birth Through Age Five (1998) — identifying counties with the largest numbers of infants, toddlers and preschool children

SOURCE: Data provided by Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Population Estimates Branch, 1998.

Required Immunizations Which Have Been Completed by Age Two (1995) — measuring the provision of preventive health services to infants and toddlers in the community

SOURCE: Data provided by PLUTO, Oklahoma State Department of Health (OSDH): Oklahoma City, Oklahoma. [NOTE: Counties without local health departments were assigned the state immunization rate for comparison purposes].

Elevated Lead-based Poisoning Tests per 1,000 Tests Administered (1994 - 1997) — measuring community environmental hazards dangerous to young children

SOURCE: Data provided by Family Health Services, Oklahoma State Department of Health (OSDH): Oklahoma City, Oklahoma.

Births to Mothers Under Age 20 per 1000 Live Births (1998) — counting children born into the community less likely to have adequate emotional and financial resources

SOURCE: Data provided by Family Health Service, Oklahoma State Department of Health (OSDH): Oklahoma City, Oklahoma.

Inadequate (late, little or no) Prenatal Care (1998) — counting pregnancies in the community likely to result in health problems for the babies

SOURCE: Data provided by Family Health Service, Oklahoma State Department of Health (OSDH): Oklahoma City, Oklahoma.

Licensed Child Care Slots per Child Under Age 6 with Working Parents (2nd Quarter, 2000) — measuring the availability of licensed child care in the community

SOURCE: Data provided by Planning and Research Unit, Office of Finance, Department of Human Services (DHS): Oklahoma City, Oklahoma.

Poverty Among Children Under Age Five (1997, estimates) — a measure of the presence of very poor infants, toddlers and preschool children in the community

SOURCE: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Small Area Income and Poverty Estimates Program: State and County Income and Poverty Estimates - 1996 and U.S. Bureau of the Census, Small Area Income and Poverty Estimates Program: State and County Income and Poverty Estimates - 1997. [NOTE: 1997 poverty for children under age five was estimated by applying the percent difference between 1996 poverty among those under 18 and under age five to the 1997 poverty under age 18 in each county.]

Children in Poverty counts the related children under age 18 who live in families with incomes below the U.S. poverty threshold (poverty income guidelines). Related children are the children related to the “family head” by birth, marriage or adoption and include relatives such as nieces and nephews. Children under age 18 who do not live in a household where they are related to the head of the household are not included in this analysis. The Poverty Income Guidelines, as defined by the U.S. Office of

Management and Budget, are based upon the amount of money that is required to purchase a nutritionally adequate diet. A family is classified as poor if its income falls below this minimum standard. Data counts poor children calculated as a percent of all children.

SOURCE: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Small Area Income and Poverty Estimates Program: State and County Income and Poverty Estimates - 1997.

Low Birthweight Infants are live births weighing under 5.5 pounds (2,500 grams). **Very Low Birthweight Infants** are live births weighing under 3 pounds, five ounces (1,500 grams). The data is reported by place of mother's residence, not place of birth. Births count both the total resident live births and the low-weight births and compare two three-year periods (1984 through 1986 and 1996 through 1998), resulting in a three-year rate. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for White. Beginning in 1989, the “race of child” was redefined to reflect the mother's race. State totals may vary from the total of all the counties since state totals may include births for which the county of residence was unknown. Beginning in 1998, information on the ethnicity of the mother allows display of low birthweight rates for the Hispanic population. **Level of Prenatal Care** addresses the timing and amount of medical care and monitoring an expectant mother receives. Levels of care include: adequate (the recommended level of care beginning in the first trimester with ten or more visits),

intermediate (care beginning in the first trimester with four through nine visits OR care beginning in the second trimester with four or more visits), early (care beginning in the first trimester), late (care beginning in the third trimester with one or more visits), little (care beginning in the first or second trimester with one through three visits), and no care. Rates are calculated as percentages of all live births. Births count both the total resident live births and the level of care for the three-year period from 1996 through 1998, resulting in a three-year rate.

SOURCE: Data provided by Family Health Service, Oklahoma State Department of Health (OSDH); Oklahoma City, Oklahoma.

Infant Mortality is death occurring to an infant under 1 year of age. The data is reported by place of mother's residence, not place of birth or death. Rates are calculated per 1,000 live births. The data counts the total resident live births and the deaths for two three-year periods (1984 through 1986 and 1996 through 1998), resulting in a three-year rate. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for White. Beginning in 1989, the "race of child" was redefined to reflect the mother's race. State totals may vary from the total of all the counties since state totals may include births for which the county of residence was unknown.

SOURCE: Birth and mortality data provided by Family Health Service, Oklahoma State Department of Health(OSDH); Oklahoma City, Oklahoma.

Births to Young Teens are live births which occur to mothers ages 15 through 17. The data is reported by place of mother's residence, not place of birth. Births count the total resident live births to mothers in this age group for two three-year periods (1984 through 1986 and 1996 through 1998). Rates are displayed as births per 1,000 females between ages 15 through 17. Base female teen population data for the state and counties is the midpoint between the 1980 and 1990 Census populations. Current population for the state is estimated by the U.S. Bureau of the Census and adjusted by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce to arrive at 1996 through 1998 estimates of females between the ages of 15 through 17 for the state and each county, resulting in three-year rates. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for White. Beginning in 1989, the "race of child" was redefined to reflect the mother's race. State totals may vary from the total of all the counties since state totals may include births for which the county of residence was unknown.

SOURCE: Birth data provided by Family Health Service, Oklahoma State Department of Health (OSDH); Oklahoma City, Oklahoma; Population data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 1A; U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A; U.S. Bureau of the Census, Population Estimates Branch, 1996; U.S. Bureau of the Census, Population Estimates Branch, 1997; and U.S. Bureau of the Census, Population Estimates Branch, 1998.

Child Abuse and Neglect means harm or threatened harm to a child's health or welfare by a person responsible for the child's health or welfare. Abuse includes sexual abuse, sexual exploitation or non-accidental physical or mental injury. Sexual Abuse includes rape, incest and lewd or indecent acts or proposals by a person responsible for the child's welfare. Sexual Exploitation includes a person responsible for the child's welfare allowing or encouraging a child to engage in prostitution or pornography or engaging in child pornography. Neglect means failing to provide adequate food, clothing, shelter or medical care. 10 O. Supp. 2000 § 7102. Data includes reports of suspected abuse or neglect for which there were formal investigations and, of those, the number for which abuse or neglect was confirmed. The data compares child abuse and neglect confirmations for two three-year periods (Fiscal Years 1984 through 1986 and Fiscal Years 1997 through 1999). Rates are displayed as confirmations per 1,000 children (under age 18). Base child population data for the state and counties is the midpoint between the 1980 and 1990 Census populations. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1996, 1997 and 1998. Race is reported as White, Black, Indian, Hispanic, Asian and Other/Unknown. Hispanic children, for the purposes of this data, are counted as races, rather than as ethnic groups preventing precise racial comparisons between this data and other data in the Oklahoma KIDS COUNT Factbook.

SOURCE: Child abuse and neglect data provided by the Division of Child Welfare, Oklahoma Department of Human Services (DHS); Oklahoma City, Oklahoma. Population data provided by the Oklahoma State Data Center, Planning and Research Division,

Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 1A; U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A; U.S. Bureau of the Census, Population Estimates Branch, 1996; U.S. Bureau of the Census, Population Estimates Branch, 1997; and U.S. Bureau of the Census, Population Estimates Branch, 1998.

Child Deaths are the number of deaths of children from ages 1 through 14. **Teen Deaths** are the number of deaths of youth from ages 15 through 19. The data is reported by place of residence, not place of death. The data counts deaths from all causes. The data compares the death rates for two three-year periods (1984 through 1986 and 1996 through 1998), resulting in three-year rates. Rates are displayed as deaths per 100,000 children from ages 1 through 14 and deaths per 100,000 teens from ages 15 through 19. Base child population data for the state and counties is the midpoint between the 1980 and 1990 Census populations. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1996, 1997 and 1998 and adjusted by the State Data Center to arrive at a current estimate of the number of children from the ages of 1 through 14. Current teen population data for the state is estimated by the U.S. Bureau of the Census for 1996, 1997 and 1998 and adjusted by the State Data Center to arrive at a current estimate of the number of teens from the ages of 15 through 19. State totals may vary from the total of all the counties since state totals may include deaths for which the county of residence was unknown. **Cause of Death** measures the percent of deaths that are

caused by diseases, accidents and violence. By definition, deaths by violence include murder, suicide and deaths that occur during legal interventions. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for White.

SOURCE: Death data provided by Family Health Service, Oklahoma State Department of Health (OSDH); Oklahoma City, Oklahoma. Population data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 1A; U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A; U.S. Bureau of the Census, Population Estimates Branch, 1996; U.S. Bureau of the Census, Population Estimates Branch, 1997; and U.S. Bureau of the Census, Population Estimates Branch, 1998.

High School Dropouts count youths of any age who quit school without graduating. The data presents the number of high school drop-outs for a three-year period (School Year 1996/97 through 1998/99). The data also presents the total number of high school drop-outs who are under the age of 19. **High School Dropout Rates** compare number of high school drop-outs under age 19 to the enrollment in grades 9 through 12. School officials in Oklahoma are required to notify the State Department of Education of the name, address, race and age of any pupil dropping out of school. 70 O.Supp. 1996 § 35e(A). Race is reported as White, Black, Indian, Asian and Hispanic. There is no provision for reporting other races. Hispanic children, for the purposes of this data,

are counted as a race, rather than an ethnic group preventing precise racial comparisons between this data and other data in the Oklahoma KIDS COUNT Factbook.

SOURCE: Data provided by the Office of Accountability, Education Oversight Board; Oklahoma City, Oklahoma.

Juvenile Violent Crime Arrests count arrests of youth from the ages of 10 through 17 for violent offenses (homicide, forcible rape, robbery, or aggravated assault). The annual arrest figures include all arrests for violent offenses during the year, including repeated arrests of the same individual for different offenses. Rates compare the number of arrests of youth ages 10 through 17 for violent offenses (homicide, forcible rape, robbery, or aggravated assault) to all children ages 10 through 17 and is reported as a rate per 100,000 youths. The data compares juvenile violent crime rates for two three-year periods (1990 through 1992 and 1997 through 1999). Base child population data for the state and counties is the 1990 Census population. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1997 and 1998 and adjusted by the State Data Center to arrive at an estimate of the number of children from the ages of 10 through 17.

Increases in the number of arrests may reflect increases in juvenile crime, changes in police activity and changes in public policy. While policies and practices regarding juvenile arrests may vary from county to county and city to city, it is widely believed that the policies are more consistent for violent crimes than for less serious crimes. Data collected counts juveniles by age or by

race, but age and race cannot be compared. Race is reported as White, Black, Indian, and Asian. There is no provision for reporting other races. Hispanic Origin is counted separately and as an ethnicity, not as a race. Oklahoma KIDS COUNT reports juvenile violent crime arrest data on a state and county basis. Several counties reported no juvenile violent crime arrests in the years included in the Oklahoma KIDS COUNT Factbook.

SOURCE: Arrest data provided by the Oklahoma State Bureau of Investigation (OSBI); Oklahoma City, Oklahoma. Population data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A; U.S. Bureau of the Census, Population Estimates Branch, 1997; and U.S. Bureau of the Census, Population Estimates Branch, 1998.
