IDENTIFIERS Census 2000; *Emergency Shelters

ABSTRACT

This report presents tabulations from Census 2000 data on people enumerated at emergency and transitional shelters. This includes shelters for people experiencing homelessness; shelters for children who are runaways, neglected, or without conventional housing; transitional shelters for people without conventional housing; and hotels and motels used to provide shelter for people without conventional housing. The report provides data on the following issues: who the people are without conventional housing in Census 2000; how people experiencing homelessness are included in Census 2000; to what extent the service-based enumeration operation provides a count of the population experiencing homelessness or of the population using services; important issues to consider when reviewing the population data for emergency and transitional shelters; Census 2000 data on the emergency and transitional shelter population; characteristics of the population in emergency and transitional shelters in Census 2000; and information for counties and census tracts on the population in emergency and transitional shelters that is available on the Internet. Emergency and Transitional Shelter Population: 2000

For Census 2000, the U.S. Census Bureau developed separate operations to enumerate people living in housing units and people living in group quarters. Locations classified as group quarters include such places as college dormitories, correctional facilities, nursing homes, group homes, military quarters, halfway houses, and emergency and transitional shelters.¹ This report presents tabulations on people enumerated at emergency and transitional shelters – that is, at emergency shelters for people experiencing homelessness; shelters for children who are runaways, neglected, or without conventional housing; transitional shelters for people without conventional housing;² and hotels and motels used to provide shelter for people without conventional housing. It does not include people enumerated at shelters for abused women (or shelters against domestic violence), transitional housing, and permanent supportive housing.

It is important to stress that these figures **do not** constitute and should not be construed as a count of people without conventional housing. Nor do they provide a complete tabulation of service users at the canvassed sites. The Census Bureau's intent was to improve coverage of difficult to enumerate populations, including people without conventional housing. Although we made a determined effort to enumerate people residing in a variety of shelters, for reasons set out below, we cannot be certain that all places were covered or that all people normally using shelters were included in the shelter counts. Nor can our coverage of targeted outdoor locations be considered to have been exhaustive due to the difficulties in mapping such temporary and elusive sites. Consequently, while the Census Bureau mounted extensive operations to obtain a comprehensive enumeration of this population, we will not be producing a separate tabulation of the population without conventional housing.

WHO ARE PEOPLE WITHOUT CONVENTIONAL HOUSING IN CENSUS 2000?

For the 1990 Census, the Census Bureau conducted the special census operation, "Shelter and Street Night (S-Night)." This operation was designed to enumerate people at emergency shelters; shelters for runaway, neglected, and homeless youth; shelters for abused women; and at pre-identified visible in street locations. Upon release of the data from

S-Night, the Census Bureau found there was confusion and misinterpretation of the results from this operation. Although the Census Bureau described the limitations of these data and issued cautions that these data should not be used as a count of people experiencing homelessness, census stakeholders and data users voiced concern about the meaning and the appropriate use of these data. As part of the planning for Census 2000, the Census Bureau emphasized to data users that Census 2000 would not be producing a count of the population experiencing homelessness at any geographic level and to consider the limitations of these data, as shown in this report.

In an attempt to describe clearly that Census 2000 would not be producing a count of the population experiencing homelessness, the Census Bureau adopted the terminology, "people without conventional housing." People without conventional housing are defined as the population who may be missed in the traditional enumeration of housing units and group quarters. Because of the difficulty in enumerating this population, special enumeration procedures were developed with the goal of providing people an opportunity to be included in Census 2000. The Census Bureau cautions data users that any attempt to use the results from these specialized operations as a measure of the number of people experiencing homelessness would be inaccurate.

INCLUDING PEOPLE EXPERIENCING HOMELESSNESS IN CENSUS 2000

People experiencing homelessness are included in a variety of living arrangements enumerated in Census 2000. These include:

- Housing units containing people living doubled up with other families or friends.
- Housing units identified by completing a Be Counted³ questionnaire and providing the address of a friend or relative as their usual place of residence.
- Foster care serving children.
- Emergency and transitional shelters.
- Halfway houses, jails, group homes, worker dormitories, and targeted nonsheltered outdoor locations.

¹For a complete description of the type of group quarters included in Census 2000, refer to *Technical Documentation, Summary File 1, 2000 Census of Population and Housing, SF1/01(RV)*, U.S. Census Bureau, Washington, DC, www.census.gov/prod/cen2000/doc/sf1.pdf.

²Includes shelters providing a maximum stay for clients of up to 2 years and offering support services to promote self-sufficiency and to help clients obtain permanent housing.

³Be Counted questionnaires were blank questionnaires distributed at locations throughout the community. If someone believed that he/she had not been included in the census, he/she could complete a questionnaire and mail it back. Respondents were asked to provide the address of their usual place of residence. If respondents did not consider themselves to have an address on April 1, 2000, they were directed to mark the "No address on April 1, 2000" box on the form and were included in the population totals for that geographic area.

As mentioned above, the Census Bureau is not producing a separate tabulation of those without conventional housing. The Census 2000 questionnaire included questions to determine who was staying at a particular location, but it did not include questions to determine if a person at that location was experiencing homelessness. Nonetheless, every effort was made to reach people experiencing homelessness so that they would be included in the overall Census count. The Service-Based Enumeration (SBE) operation was a major part of these efforts.

THE SERVICE-BASED ENUMERATION OPERATION DOES NOT PROVIDE A COUNT OF THE POPULATION EXPERIENCING HOMELESSNESS OR OF THE POPULATION USING SERVICES.

As part of the group quarters enumeration, the Census Bureau developed a specialized operation to enumerate people at selected service locations that serve people without conventional housing. The Service-Based Enumeration (SBE) operation was conducted from March 27 to March 29, 2000, at shelters, soup kitchens, regularly scheduled mobile food vans, and targeted nonsheltered outdoor locations. (The SBE operation is described in the shaded box.) The SBE operation was designed to directly approach people using services because they may be missed in the traditional enumeration of housing units and group quarters. However, while it was important to implement the SBE operation, it is important to understand that the results from the SBE operation do not provide a count of the population experiencing homelessness. Nor do those results provide a count of the population

who used services in 2000 at any geographic level. The reasons are outlined below:

- A one-time count of the population at these locations does not reflect the dynamic and changing conditions of homelessness. Different results for the population experiencing homelessness are obtained when an enumeration occurs only once as opposed to when homelessness is measured over time.
- The number of people experiencing homelessness varies by the definitions that are used to measure the population. At the federal and local levels, there are differences in how people experiencing homelessness are defined. Census Bureau officials and other experts generally agree that producing a count of the population experiencing homelessness would require detailed survey methods that are specifically targeted to that population. In addition, a generally agreed upon definition of which population groups to include in the total would need to be established. For example, some of these population groups may include shelter users only; people experiencing homelessness on a single night, weekly, or monthly; and people using other services. Moreover, regional differences impact how the population experiencing homelessness is defined. These differences include, for example, weather conditions, administrative/bureaucratic practices, police practices, availability of shelters, length of stays, and different definitions of living arrangements.

OVERVIEW OF THE SERVICE-BASED ENUMERATION (SBE) OPERATION IN CENSUS 2000

On Monday, March 27, 2000, census enumerators counted people at shelters. All clients were asked the basic 100-percent population items and a sample of clients (one-in-six) were asked additional questions. The types of shelters enumerated were:

1. Emergency shelters (with sleeping facilities) for people without conventional (public and private; permanent and temporary) housing.
2. Shelters with temporary lodging for children who are runaways, neglected, or without conventional housing.
3. Shelters for abused women and their children.
4. Transitional shelters for people without conventional housing.

5. Hotels and motels used to provide shelter for people without conventional housing.

On Tuesday, March 28, 2000, census enumerators counted people at soup kitchens and mobile food vans that operated on a regular schedule. At both soup kitchens and regularly scheduled mobile food vans, enumerators conducted personal interviews with the clients, collected information on the 100-percent basic population questions of all clients, and collected information on additional population characteristics of a sample (one-in-six) of the population at soup kitchens only.

On Wednesday, March 29, 2000, the Census Bureau enumerated people at targeted nonsheltered outdoor locations by personal interview and collected information on only the basic 100-percent population items.

- Other service locations, such as drop-in centers, street outreach teams, and health care facilities were not included as service locations in the SBE operation. Any estimate of the delivery and use of services targeted to people experiencing homelessness would need to include additional service locations in the universe. The Census Bureau limited its universe to services that would provide the most opportunities for reaching people at "their usual living quarters." Soup kitchens and regularly scheduled mobile food vans were added to the universe to reach people who may not use shelters or who may not complete the census questionnaire at their household address.
- People counted at soup kitchens and regularly scheduled mobile food vans who reported they had a usual home elsewhere were tabulated at the address of their usual residence and not at the service location. Thus, the soup kitchen and mobile food van results do not reflect the total number of people who used the service on the day of the enumeration, let alone those who used them in the course of a week. It would be incorrect to use the number of people tabulated at the soup kitchens and mobile food vans as a measure of the number of people using these services in a community.
- People enumerated at both shelters and targeted nonsheltered outdoor locations were tabulated at the physical location of the shelter or at the outdoor location. The shelter tabulations reflect the location of the shelter and not necessarily the place from which they received the service.
- People without conventional housing who were at outside locations other than the targeted nonsheltered outdoor locations⁴ identified for the census were not included in this operation. The Census 2000 outdoor definition excluded both mobile and transient locations used by people experiencing homelessness that changed by the hour and between day and night, and excluded abandoned buildings.
- In Census 2000 standard data products, the population enumerated in the SBE operation (as described in the

shaded box) is being tabulated in the data category called "Other noninstitutional group quarters."⁵ The service locations included in the SBE operation will not be tabulated separately by type of service location in these standard data products.

IMPORTANT ISSUES TO CONSIDER WHEN REVIEWING THE POPULATION DATA FOR EMERGENCY AND TRANSITIONAL SHELTERS

When reviewing data from the emergency and transitional shelter enumeration, the Census Bureau encourages data users not to use it as a count of the population experiencing homelessness and to consider the following limitations:

- Comparisons of the shelter results with other independent data sources indicate that the number of people counted in shelters differs from the number of shelter beds in some communities. This may be due to a number of reasons. For instance, shelters may not have been operating at capacity on the day of the enumeration, people may not have been included in the enumeration, people may have been fearful of participating in the census and avoided the shelter on the day of the enumeration, more people may have been present on the day of the enumeration in order to participate in the census, and in some cases the use of shelter beds varies by season in many communities.
- Census 2000 included only emergency and transitional shelters that were open on Monday, March 27, 2000. If the shelter was not open on this date, it was not included in the census universe as an eligible service location for census purposes. The population in transitional housing and permanent supportive housing was counted in the housing unit tabulations and is not included in the counts shown for "emergency and transitional shelters."
- The population in emergency and transitional shelters represents the results of a one-night enumeration and does not reflect shelter usage over time. A one-night enumeration provides only a "snap shot" of the population using the shelters on that night and includes only the people who were able to get into the shelter on that night. It does not include people who were turned away on the day of the enumeration. To fully understand the dynamics of shelter usage, multiple enumerations over time are needed

⁴Targeted nonsheltered outdoor locations were geographically identifiable outdoor locations open to the elements where there was evidence that people who did not usually receive services at soup kitchens, shelters, and mobile food vans might be living in March 2000 without paying to stay there. Sites had to have a specific location description that allowed a census enumeration team to locate the site; for example, "the Brooklyn Bridge at the corner of Bristol Drive" or "the 7000 block of Taylor Street behind the old warehouse." The following were excluded: pay-for-use campgrounds, drop-in centers, post offices, hospital emergency rooms, and commercial sites, such as all-night theaters and all-night diners.

⁵The "Other noninstitutional group quarters" category at the census tract level includes residential care facilities providing protective oversight, staff dormitories for nurses and interns at military and general hospitals, soup kitchens and regularly scheduled mobile food vans if no usual home elsewhere was reported, shelters for abused women, and targeted nonsheltered outdoor locations.

to account for different shelter users, seasonal variations in shelter usage, local decisions that impact when shelter services are available, and shelter guidelines that determine how long someone can stay at a shelter.

- Shelter results are tabulated in the jurisdiction where the shelter facility is physically located. Some jurisdictions have people experiencing homelessness, but use a shelter in another jurisdiction. When this happens, they are tabulated in the jurisdiction where the shelter is located.
- People staying in transitional housing targeted to people experiencing homelessness, and not in a shelter environment, were included in the housing unit tabulations and cannot be identified as living in transitional housing for people experiencing homelessness.
- People staying in permanent housing for people experiencing homelessness were included in the housing unit tabulations, and cannot be identified as living in housing funded by programs to end homelessness.
- Some shelters may have been open on Monday, March 27, but were not included on the census shelter list. This could happen if the shelter was not identified on the list of shelters developed by the Census Bureau in consultation with local experts, or the shelter was open on that day, but was incorrectly classified as being closed.
- Weather conditions can greatly impact the usage of shelters on any particular night. Typical shelter usage patterns and levels could be skewed if unusually good or poor weather conditions existed on the day of the enumeration.
- Some people in shelters may have been fearful of participating in the shelter enumeration and either avoided the enumeration or avoided the shelter entirely, thus reducing the number of people who normally would have been present at the shelter.
- By design, shelters for abused women (or shelters against domestic violence) were excluded in the emergency and transitional shelters category for tabulation purposes. This decision was made because of the extremely confidential nature of these facilities' locations. Their residents are, however, included in the total census counts.
- In this report, data are not shown separately for metropolitan areas and places of 100,000 or more population if they had fewer than 100 people in emergency and transitional shelters. As noted earlier, people enumerated in shelters are tabulated where the shelter is physically located.

These and other factors unique to local areas must be considered when assessing the census results of the population enumerated in emergency and transitional shelters.

CENSUS 2000 DATA ON THE EMERGENCY AND TRANSITIONAL SHELTER POPULATION

This report presents population data for people enumerated at emergency and transitional shelters on March 27, 2000. As used here, the category "emergency and transitional shelters" includes people enumerated at emergency shelters (with sleeping facilities); shelters for children who are runaways, neglected, or without conventional housing; transitional shelters for people without conventional housing; and hotels and motels used to provide shelter for people without conventional housing. This report does not include data for the population counted in shelters for abused women (or shelters against domestic violence).

This report presents basic demographic data from Census 2000 for the population enumerated in emergency and transitional shelters, including age (under 18 years and 18 years and over), sex, race, and Hispanic or Latino origin. Table 1 shows the total number and percent distribution of people in emergency and transitional shelters for the United States, regions, states, and Puerto Rico. Table 2 shows the number in emergency and transitional shelters by sex and age for the United States, regions, states, and Puerto Rico. Table 3 shows the number in emergency and transitional shelters by sex, age, race, and Hispanic or Latino origin for the United States. Table 4 shows data for metropolitan areas in the United States and in Puerto Rico that each have 100 or more people in emergency and transitional shelters, and Table 5 shows corresponding data for places of 100,000 or more population in the United States and in Puerto Rico. Metropolitan areas and places of 100,000 or more population are not included if they had fewer than 100 people in emergency and transitional shelters.

CHARACTERISTICS OF THE POPULATION IN EMERGENCY AND TRANSITIONAL SHELTERS IN CENSUS 2000

This brief overview of population characteristics is for the 170,706 people who were tabulated in emergency and transitional shelters in Census 2000.⁶ For reasons discussed earlier, the tabulated population in emergency and transitional shelters is not representative of, and should not be construed to be, the total population without conventional housing, nor is it representative of the entire population that could be defined as living in emergency and transitional shelters.

⁶This number is for the United States and does not include Puerto Rico.

Table 1.

Source: U.S. Census Bureau, 1990 Census of Population, *General Population Characteristics* (1990 CP-1); and Census 2000, unpublished tabulations.

Most of the population in emergency and transitional shelters was in the Northeast and the South.

The proportion of the emergency and transitional shelter population in Census 2000 ranged from 31 percent in the Northeast to 17 percent in the Midwest (Table 1).⁷ The West and the South were intermediate at 28 percent and 25 percent, respectively.

Most of the population in emergency and transitional shelters was male.

In 2000, 61 percent of the emergency and transitional shelter population was male, and thus only 39 percent was female

⁷The Northeast region includes Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont. The South includes Alabama, Arkansas, Delaware, the District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. The West includes Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming. The Midwest includes Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

(Figure 1). The proportion male varied somewhat among regions, ranging from 65 percent in the South to 57 percent in the Northeast.

Adults accounted for the large majority of the population in emergency and transitional shelters.

People 18 years and over represented 74 percent of the emergency and transitional population in 2000 (Figure 2). The proportion ranged from 77 percent in the South to 70 percent in the Northeast.

The proportion male in the emergency and transitional shelter population differed by age. The proportion male was 51 percent for those under 18 years and 65 percent for those 18 years and over.

The proportion male among the emergency and transitional shelter population under 18 years was nearly identical in all regions: 51 percent or 52 percent. The proportion male among those 18 years and over varied, ranging from 69 percent in the South to 60 percent in the Northeast.

Source: U.S. Census Bureau, Census 2000, unpublished tabulations.

Most people in emergency and transitional shelters reported White alone or Black or African American alone as their race.

In 2000, 41 percent of the emergency and transitional shelter population reported White alone as their race, and 40 percent reported Black or African American alone (Figure 3).⁸ An additional 9.3 percent reported Some other race alone,⁹ 2.4 percent reported American Indian and Alaska Native alone, 2.3 percent reported Asian alone, and 0.3 percent reported Native Hawaiian and Other Pacific Islander alone. The remaining 4.5 percent of the emergency and transitional shelter population reported Two or more races (i.e., they reported two or more of the six race categories listed above).

People who reported they were of Hispanic or Latino origin (who may be of any race) represented 20 percent of the emergency and transitional shelter population. People who reported that they were White alone, not Hispanic or Latino, represented 33 percent of this population.

INFORMATION FOR COUNTIES AND CENSUS TRACTS ON THE POPULATION IN EMERGENCY AND TRANSITIONAL SHELTERS IS AVAILABLE ON THE INTERNET.

For information on the population in selected group quarters for the counties with 100 or more people in emergency and transitional shelters, and census tracts with 100 or more people in emergency and transitional shelters, and for Puerto Rico, see the Census Bureau's Internet site www.census.gov.

FOR MORE INFORMATION

For information on confidentiality protection, nonsampling error, and definitions, also see www.census.gov/prod/cen2000/doc/sf1.pdf or contact our Customer Services Center at 301-763-INFO (4636). For more information about Census 2000, including data products, call Customer Services Center at 301-763-INFO (4636) or e-mail webmaster@census.gov. Copies of this report are available from the Government Printing Office, Washington, DC 20402. Questions about this report may be addressed to Annetta C. Smith or Denise I. Smith, Population Division, U.S. Census Bureau, Washington, DC 20233 or to the e-mail address pop@census.gov.

⁸People who indicated only one race when responding to the question on race are referred to as the race *alone* population, or the group who reported *only one* race. For a detailed discussion on race reporting, see Grieco, Elizabeth M. and Rachel Cassidy, 2001, *Overview of Race and Hispanic Origin: 2000*, Census 2000 Brief, C2KBR/01-1, U.S. Census Bureau, Washington, DC, www.census.gov/prod/2001pubs/c2kbr01-1.pdf.

⁹In 2000, 97 percent of individuals of Some other race alone in the United States were of Hispanic or Latino origin. See Grieco and Cassidy, *ibid*.

Puerto Rico	586	209	337
San Juan—Caguas—Arecibo, PR CMSA	465	157	308

Note: The Office of Management and Budget (OMB) defines metropolitan areas for purposes of collecting, tabulating, and publishing federal data. Metropolitan area definitions result from applying published standards to Census Bureau data. As of the June 30, 1999, OMB announcement, there were 258 Metropolitan Statistical Areas (MSAs) and 18 Consolidated Metropolitan Statistical Areas (CMSAs) comprised of 73 Primary Metropolitan Statistical Areas (PMSAs) in the United States. In addition, there were three MSAs, one CMSA, and three PMSAs in Puerto Rico. Data are shown in this table for the 163 MSAs and CMSAs with 100 or more people in emergency and transitional shelters.

Note: Areas with less than 100 people in emergency and transitional shelters are not separately identified.

San Juan zona urbana ¹	159	35	124

¹Census 2000 showed 245 places in the United States with 100,000 or more population. They included 238 incorporated places (232 cities, 1 municipality, and 1 town), 4 city-county consolidations with the county name included as part of the place name (Athens-Clarke County, GA; Augusta-Richmond County, GA; Lexington-Fayette, KY; and Nashville-Davidson, TN), and 7 census designated places (CDPs). CDPs are delineated for the decennial census and comprise densely settled concentrations of population that are identifiable by name, but which are not legally incorporated places. One of these CDPs is Arlington CDP, VA, which is coextensive with Arlington County. In Puerto Rico, there are four places with 100,000 or more population, all of which are CDPs identified as zonas urbanas. There are no incorporated places in Hawaii or Puerto Rico. The five boroughs of New York city are coextensive with the five counties that constitute New York city: Bronx borough (Bronx County), Brooklyn borough (Kings County), Manhattan borough (New York County), Queens borough (Queens County), and Staten Island borough (Richmond County). This table shows 154 places in the United States and one place in Puerto Rico with 100 or more people in emergency and transitional shelters.

Note: Areas with less than 100 people in emergency and transitional shelters are not separately identified.
