ABSTRACT

This document contains an introduction to the Ohio Integrated Technical and Academic Competency (ITAC) and Specialization ITAC; an overview of the drafting industry; a list acknowledging professionals who helped develop the competency list; and the comprehensive list of the professional or occupational competencies deemed essential for graduates to be able to perform proficiently when they graduate from an Ohio specialization workforce development program on drafting. The introduction explains the following: (1) critical academic, employability, and information technology skills have been integrated throughout the list to support the technical skills; (2) the competency profile can be used as the basis for curriculum development in Ohio's secondary, adult, and postsecondary programs; and (3) the specialization competency profile is organized so that it can be clustered or grouped in a modular approach. The overview of the drafting industry describes general duties, some specific tasks, employment opportunities, length of program, type of program (classroom instruction and/or work experience), and types of certificates and/or degrees. The competencies are grouped under broader skills that are, in turn, categorized under these 11 major topics: orientation to the drafting industry; safety in the drafting industry; basic drafting lab skills; geometric constructions; orthographic projections; pictorials; development drawings; dimensioning techniques; machine drawings; residential architecture; and electrical and electronic drawings. Introduction to the Specialization ITAC

Revised 2001

The Ohio Integrated Technical and Academic Competency (ITAC) profiles are developed under the auspices of the Ohio Department of Education and the Ohio State Board of Education. They provide a broad-based educational response to Ohio's need for a skilled workforce. Each Specialization ITAC represents a profile of the professional or occupational competencies deemed essential for a graduate to perform proficiently when he or she graduates from the specialization workforce development programs in Business and Marketing, Industrial and Engineering Systems, Health Occupations, or Family and Consumer Sciences. The Specialization ITAC profile, in conjunction with the competencies identified in the Foundation and Clusters ITACs, provide a career pathway that can lead to employment or further education.

Process and Intent

The integrated competency lists are the result of all encompassing research and review of existing competency profile lists and includes input from industry, labor, professional organizations, professional and industrial representation, and national standards for a specific industry/profession. Representatives from a broad cross-section of Ohio professional organizations, businesses/professions, industry, and labor played a critical role in identifying current and future knowledge and skills for the industry, and defining the vision and scope of the profession/industry. The instructional methods and teaching strategies are the responsibility of the local school system and/or instructor.

Curriculum Applications Using the ITAC Competency Profiles

Each profile includes a comprehensive listing of occupational skill competencies that reflect the job opportunities and skills that are required to work in a specific profession/career pathway. Critical academic, employability and information technology skills have been integrated throughout the list to support the technical skills. These competency profiles will be used as the basis for curriculum development in Ohio's secondary, adult, and post-secondary programs. The specialization competency profiles are organized so that they can be clustered or grouped in a modular approach. Individual curriculum specialists can use the competencies profiles to develop instructional programs based on local needs as determined in conjunction with their local advisory committees. i.e., the specialization cluster academy approach. Final assessments will be designed to accompany each profile list and to accommodate student evaluation by modules.

Overview

Drafting

Drafters translate the ideas and rough sketches of engineers, architects, and scientists into detailed drawings, which enable other workers to manufacture the product or construct the project. Their technical drawings and plans are used by production and construction workers to build everything from manufactured products such as spacecraft or industrial machinery to structures such as office buildings or oil and gas pipelines. Their drawings provide visual guidelines, showing the technical details of the products and structures, specifying dimensions, materials to be used, and procedures and processes to be followed. Drafters fill in technical details, using drawings, rough sketches, specifications, codes, and calculations previously made by engineers, surveyors, architects, or scientists. Their duties may include interpreting directions given to them, making sketches, preparing drawings to scale, and specifying details. They use various drafting tools, engineering practices, and mathematic skills to complete drawings.

Drafters commonly use computer-aided design (CAD) systems. These systems make it easy to prepare many variations of a design and allow it to be viewed from angles not usually available with traditional drafting methods. The computer-aided drafting (CAD) systems employ computer workstations, which create a drawing on a video screen. The drawings are stored electronically so that revisions or duplications can be made easily. These systems also permit drafters to easily and quickly prepare variations of a design. Although this equipment has become easier to operate, CAD is only a tool. Persons who produce technical drawings using CAD still function as a drafter, and need most of the basic knowledge of traditional drafters-relating to drafting skills and standards-as well as CAD skills.

Employers include engineering and architectural firms, construction companies, and government agencies. Drafters may advance to positions requiring more skill and experience such as technical assistant, illustrator, senior drafter, designer, or supervisor. Over 35 percent of all drafters work in engineering and architectural service firms that design construction projects or do other engineering work on a contract basis for organizations in other industries. Another 29 percent work in durable goods manufacturing industries, such as machinery, electrical equipment, and fabricated metals. The remainder are employed primarily in the construction; communications, utilities, and personnel supply service industries, or are self-employed.

Widespread use of computer-aided design techniques increases the demand for more highly skilled applicants. Opportunities will be best for those trained in the use of computer-aided drafting systems and electronic drafting equipment. Students should take courses in mathematics, science, computer technology, design, or computer graphics, and any high school drafting courses available. Mechanical and visual aptitude is also important. Drafters should be able to sketch three-dimensional objects, and do detailed work accurately and neatly. Artistic ability is helpful in some specialized fields, as is knowledge of manufacturing and construction methods. Drafters have the opportunity to see a project evolve from an idea to a completed product.

26.00.00.0 Drafting

26.01.00.0 Orientation to the Drafting Industry

26.01.01.0	Define the industry
26.01.01.01	Present an overview of the drafting profession
26.01.01.02	Identify the professional and/or trade associations related to the drafting profession
26.01.01.03	Identify American National Standards Institute, Inc. (ANSI), International Standards Organization (ISO)
	standards and terminology, American Design Drafting Association (ADDA), and other professional
	associations
26.01.01.04	Identify areas of specialization and related occupations within the drafting profession
26.01.01.05	Identify the employment opportunities in the drafting profession
26.01.02.0	Determine skills needed to work in the industry
	Match drafting occupational job titles with qualifications and responsibilities

26.01.02.03 Describe the kinds of work techniques, processes and procedures a typical drafter might be called on to

EPA)

26.02.00.0 Safety in the Drafting Industry

perform

26.02.01.0	Practice Lab Safety
26.02.01.01	Name the agencies that provide safety regulations for the profession (i.e., OSHA,
26.02.01.02	Describe the safety procedures as outlined on MSDS
26 02 01 03	Identify consequences of disregarding safety rules

26.01.02.02 Identify education and training required to work in the various drafting careers

26.02.01.04 Identify location of classroom fire extinguishers and fire exits from the building 26.02.01.05 Demonstrate knowledge of appropriate actions to take in response to given emergencies 26.02.01.06 Lift/transport objects and materials in accordance with established safety practices

26.02.02.0 Protect workers from ergonomic injuries

26.02.02.01 Identify cause and effect of work practices to prevent ergonomics injuries 26.02.02.02 Maintain work practices to prevent eye damage 26.02.02.03 Maintain posture to prevent injuries

26.03.00.0 Basic Drafting Lab Skills

26.03.01.0 Follow drafting room procedures

26.03.01.01 Identify drafting terminology
26.03.01.02 Perform storage and retrieval (e.g., backup and archival methods)

26.03.02.0 Use Tools and Equipment

26.03.02.01 Select proper drawing methods, media, and equipment to complete a given project 26.03.02.02 Demonstrate proper use and care of drawing equipment 26.03.02.03 Produce copies 26.03.02.04 Use data translation techniques (e.g., Drawing Exchange Files [DXF])

26.03.03.0 Demonstrate basic drawing skills

26.03.03.01 Layout drawings 26.03.03.02 Construct borders and information blocks 26.03.03.03 Construct freehand sketches 26.03.03.04 Read and transfer measurements (i.e., English and metric) 26.03.03.05 Letter freehand (letters and numerals) 26.03.03.05 Letter freenand (letters and numerals)
26.03.03.06 Add and edit text
26.03.03.07 Demonstrate line techniques (e.g., weights, types and uniformity)
26.03.03.08 Construct reproducible drawings
26.03.03.09 Perform basic geometric construction (e.g., line dividing, angles, tangents, polygons, arcs)
26.03.03.10 Identify and use various annotation methods per ANSI Standards (i.e., notes and dimensions)
26.03.03.11 Setup/plot drawings and details to proper scales

26.03.04.0 Apply mathematical skills

26.03.04.01 Apply basic mathematical principles (e.g., geometric, algebra, trigonometry) 26.03.04.02 Apply geometric formulas (e.g., volume, area, and rate solutions)

26.03.05.0 Demonstrate CAD skills

26.03.05.01 Perform drawing setup to applicable standards (e.g., settings, layers, line types and widths)
26.03.05.02 Identify use, view, display commands (e.g., zoom, pan, viewpoints)
26.03.05.03 Create, edit and retrieve component/symbol libraries (e.g., groups, blocks, symbols, third-party libraries)
26.03.05.04 Use methods of sharing drawings (e.g., team projects, external references)
26.03.05.05 Describe multiple coordinate systems (e.g., absolute, relative, user coordinate system)
26.03.05.06 Develop 3-D dimensional models (e.g., wire frame and solid modeling)
26.03.05.07 Create orthographic views from 3-D models

26.04.00.0 Geometric Constructions 26.04.01.0 Apply basic measurement systems 26.04.01.01 Measure using fractions 26.04.01.02 Measure using decimals 26.04.01.03 Measure using metric units 26.04.01.04 Convert fractions, decimals, and metric measurements 26.04.02.0 Apply geometric construction techniques 26.04.02.01 Construct straight lines 26.04.02.02 Construct angles 26.04.02.03 Construct plane figures and shapes 26.04.02.04 Construct circles and arcs 26.05.00.0 Orthographic Projections 26.05.01.0 Determine the appropriate views of given objects (i.e., top, front, sides) 26.05.01.01 Determine proper orientation of object 26.05.01.02 Select proper view(s) 26.05.02.0 Construct, sketch and/or draw views of given objects showing visible and hidden features per ANSI Standards 26.05.02.01 Illustrate proper views including special views (i.e., section and auxiliary views) 26.05.02.02 Use ANSI Standards to evaluate appropriate placement of views 26.05.03.0 Draw auxiliary views 26.05.03.01 Construct primary/secondary auxiliary views (e.g., incline planes, curved surfaces, true length, true angles, true distance, true shape) 26.05.03.02 Determine auxiliary view placement 26.06.00.0 Pictorials 26.06.01.0 Sketch pictorial views 26.06.01.01 Sketch oblique view 26.06.01.02 Sketch perspective view 26.06.01.03 Sketch isometric view 26.06.02.0 Construct pictorial drawings 26.06.02.01 Construct oblique view 26.06.02.02 Construct perspective view 26.06.02.03 Construct isometric view 26.07.00.0 Development Drawings 26.07.01.0 Construct development drawings 26.07.01.01 Determine transition sizes and shapes 26.07.01.02 Construct drawings (e.g. transitions, cone, elbow, prism, cylinder) 26.07.02.0 Construct development models from development drawings 26.07.02.01 Layout models on media from drawings 26.07.02.02 Assemble models 26.08.00.0 Dimensioning Techniques 26.08.01.0 Demonstrate dimensioning techniques 26.08.01.01 Apply dimensioning rules per ANSI Standards 26.08.01.02 Determine/select appropriate dimensioning systems (e.g., fractional, decimal, metric) 26.08.01.03 Select/set/draw appropriate dimension features (i.e., arrowhead, text sizes, extension lines) 26.08.01.04 Draw/select appropriate dimensioning practices (e.g., conventional, tabular, datum, ordinate, aligned, rectangular coordinate, polar systems) 26.08.01.05 Apply geometric tolerances (e.g., true position, form, material conditions, datum points, reference 26.08.01.06 Identify/apply symbols for surface and texture control 26.08.01.07 Add notes to drawing (e.g., general, keynotes, revisions) 26.08.02.0 Apply tolerances 26.08.02.01 Interpret tolerance dimensions 26.08.02.02 Calculate tolerances

26.08.02.03 Dimension fit tolerances of mating parts (e.g., clearance, interference)

26.08.02.04 Assign tolerances to mating parts using standard fit tables

26.09.00.0	Machine Drawings
26.09.01.01 26.09.01.02	Identify shop processes Identify machining operations Identify manufacturing processes Identify manufacturing processes Identify types of parts to be detailed (i.e., cast, machined, forged, sheet metal, welded, extruded, vacuum formed, stamped, molded)
26.09.01.04 26.09.01.05	Identify types of material Identify welds and symbols
26.09.02.01	Identify fasteners and springs Identify screw-threads Identify common fasteners (i.e., pop rivet, solid rivet, nuts, bolts, screws, washers, retainers, pins, keys)K Identify springs
26.09.03.01 26.09.03.02 26.09.03.03 26.09.03.04 26.09.03.05 26.09.03.06 26.09.03.07 26.09.03.08 26.09.03.09	Draw details Identify manufacturing possesses required Identify materials Detail parts including appropriate notes and dimensioning Draw assemblies Produce assembly drawings Develop parts list/bill of materials Identify details with parts list (e.g., apply callouts, label parts) Draw/add fasteners Draw exploded assemblies Draw sectioned assemblies
26.09.04.01 26.09.04.02 26.09.04.03 26.09.04.04	Identify basic pneumatic/hydraulic drawings Identify symbols for fittings in written descriptions Identify symbols in single-line drawings Identify pipe fittings in double-line drawings (i.e., welding, threaded) Identify piping isometric drawings Identify hydraulic/pneumatic systems
26.09.05.01 26.09.05.02 26.09.05.03 26.09.05.04	Identify cam and gear drawings Identify different types of gears Identify gear ratios and formulas Determine gear rotation Identify types of cam Identify different types of power transmission (i.e., gears, belts, sprockets)
26.09.06.01 26.09.06.02 26.09.06.03 26.09.06.04 26.09.06.05 26.09.06.06	Create design Identify design constraints Draw a design layout Determine materials Determine ranges of motion of moving parts to ensure clearance Apply reference information (i.e., bearings, gears, fittings, retainers, pulleys) Determine tolerances, allowances and fits Determine method of assembly (i.e., thread callout, fasteners)
26.10.00.0	Residential Architecture
26.10.01.01 26.10.01.02 26.10.01.03	Draw floor plan from preliminary sketch Draw floor plan(s) to appropriate scale Dimension plan with annotations Prepare door, window schedules Identify need for building codes and references
26.10.02.01	Draw foundation plan Draw foundation plan(s) to appropriate scale Dimension plans with appropriate annotation (i.e., footing size, floor framing)
26.10.03.01 26.10.03.02	Draw elevations Draw exterior elevations (all sides) Dimension elevation drawings Note various materials by name
26.10.04.01 26.10.04.02 26.10.04.03 26.10.04.04	Draw sections and details Determine drawing scale Draw typical wall section Draw longitudinal and/or cross section Draw stairway section Draw typical cabinet elevations

26.10.05.01 26.10.05.02 26.10.05.03	Draw electrical, plumbing, and HVAC plans Draw electrical plan locating receptacle, switch, and lighting outlets Draw plumbing plan showing drain vent system Draw isometric drawings of building draw/vent system Draw HVAC plan locating HVAC diffusers, outlets, equipment
26.10.06.01 26.10.06.02 26.10.06.03 26.10.06.04	Design a residential structure Construct floor plan Construct a foundation plan Construct elevations Construct typical wall section and detail Construct roof plan
26.10.07.01 26.10.07.02	Interpret Site Plan Identify topographical and existing features of area(s) (i.e., property lines, utilities, streets) Identify parcel map Identify existing land survey plat
26.11.00.0	Electrical and Electronic Drawings
26.11.01.01 26.11.01.02 26.11.01.03	Develop electrical drawings Identify components and symbols Identify connections Draw components according to engineer's sketch Draw a wiring schematic
26.11.02.01 26.11.02.02 26.11.02.03	Develop electronic drawings Identify components and symbols Identify connections Draw components according to engineer's sketch
