ABSTRACT

This project prepared students for the Ph.D. degree awarded by the Department of Special Education and Rehabilitation at Utah State University. The project's goals were to: (1) further develop and implement the early childhood special education doctoral emphasis area, with a focus on research and personnel preparation; and, (2) prepare up to 15 new special education leaders, of whom at least 30% were expected to represent populations of students who are underrepresented in higher education, including members of diverse cultures and individuals with disabilities. During the project period (9/1/1993 to 8/31/1999), the program developed innovative features that included a transdisciplinary teaching and supervision experience that was favorably evaluated by students and external evaluators. During the course of the project, 10 doctoral students received financial support and 5 others enrolled in the program were supported from other sources. Of the 15 total students, 2 (project-supported) have disabilities. Five, one of whom received project support, are members of minority cultures; only two of these are U.S. citizens. Eight students, five of whom received project support, completed the program and were awarded the Ph.D. All are employed in institutions of higher education. Examples of the students' high levels of achievement while enrolled in the program include their collective total of 33 conference presentations, 9 papers published in refereed journals, 10 non-refereed publications, 4 externally funded projects awarded to 2 different students, and the recognition of one student as the College of Education's Outstanding Teaching Assistant. This report includes a summary of the Leadership Preparation in Early Childhood Special Education doctoral coursework, a list of graduates' dissertation topics, lists of students' publications and presentations, and a list of grants authored or co-authored by students while enrolled in the program. A Program to Prepare Doctoral Level Special Educators with an Early Childhood Emphasis Area

Project Summary

This Project prepared students for the Ph.D. degree awarded by the Department of Special Education and Rehabilitation at Utah State University. The Project's goals were to (1) further develop and implement the early childhood special education doctoral emphasis area, with a focus on research and personnel preparation, and (2) prepare up to 15 new special education leaders; at least 30% were expected to represent populations of students who are under-represented in higher education, including members of diverse cultures and individuals with disabilities. During the Project period (09/01/1993-08/31/1999), the program developed innovative features that included a transdisciplinary teaching and supervision experience that was favorably evaluated by students and external evaluators. During the course of the Project, ten doctoral students received financial support and five others enrolled in the program were supported from other sources. Of the 15 total students, two (Project-supported) have disabilities. Five, one of whom received Project support, are members of minority cultures; only two of these are U.S. citizens. Eight students, five of whom received Project support, completed the program and were awarded the Ph.D.. All are employed in institutions of higher education. One who continues to be enrolled is expected to graduate during the 1999-2000 academic year. One transferred and is enrolled in a special education doctoral program in another state. Five students left the program, two to return to special education teaching positions in local school districts.

Examples of the students' high levels of achievement while enrolled in the program include their collective total of 33 conference presentations, 9 papers published in refereed journals, 10 non-refereed publications, 4 externally funded projects awarded to 2 different students, and the recognition of one student as the College of Education's Outstanding Teaching Assistant.

Accomplishment of Project Goals and Objectives

Objective 1: Recruit and admit up to five qualified doctoral students per year into this specialty program, with a priority on students from diverse cultures and those under represented in leadership positions.

The Project proposed to admit up to 5 qualified applicants per year, with a priority on students from diverse cultures. The range of new students admitted each year was from 0 to 3. Fifteen total students were admitted into the early childhood special education program, 10 of whom received Project support. Eight have graduated, one is still enrolled, and one is enrolled at another university.

Two students who participated in the program have disabilities and five are members of cultures under represented in higher education. Three of these five are citizens of foreign countries who received no Project support. Of these five, four are employed in institutions of higher education in the United States and one is still enrolled in the doctoral program.

Procedures to recruit students included advertisements in national journals (Exceptional Children, Teaching Exceptional Children, Topics in Early Childhood Special Education), newsletters of national professional organizations (e.g., American Association on Mental Retardation News and Notes, Division for Early Childhood of the Council for Exceptional Children's Communicator), state newsletters (Utah! AAMR and The Special Educator) and campus student newspapers (Utah State University's The Statesman and newspapers at the University of Utah and Brigham Young University). The number of responses to inquiries for information about the program ranged across Project years from 4 to 17.

Objective 2: Develop, deliver, and evaluate courses, seminars, and internship experiences in which students acquire competencies in (a) early childhood special education, to include family-centered service, transdisciplinary services, and interventions in the least restrictive environment; (b) personnel preparation including instruction and practicum

supervision; (c) research; (d) general special education; (e) scholarship; (f) professional dissemination; and (g) grant writing.

The Project developed, delivered, and evaluated courses, seminars, and internship experiences. The courses are described in Table 1; Table 4, later in this report, addresses evaluation. The Project supported the development and/or delivery of three early childhood special education courses. One was an experience in transdisciplinary intervention. Two students participated with faculty from four other professional disciplines in teaching the undergraduate transdisciplinary course and practicum, and four in evaluating its components, all under the supervision of the Project Director. Also, as part of experiences designed to promote the acquisition of competence in personnel preparation, students participated in one or more of the following activities: (a) teaching undergraduate courses, (b) supervision of student teachers and/or practicum students, (c) the development and delivery of courses via distance education, and (d) the development, delivery and evaluation of courses in naturalistic instruction offered through the University's Extension services. The latter provided cross cultural experience, as the course was offered to members of the Ute Tribal Head Start program and the Bear River Head Start programs, respectively.

Objective 3: Evaluate each student's competencies as they progress through the program. All students satisfactorily completed those courses in which they enrolled, as evaluated by course instructors. The eight graduates completed other program requirements. These included passing a comprehensive examination, presentation of a scholarly paper at a professional conference, a written review of literature, submission of an article for publication in a refereed journal, and writing a grant proposal. The titles of their dissertations are listed in Table 2 below. Table 3 shows other evidence of scholarly productivity including published journal articles resulting from their work at Utah State University, professional presentations, and students' funded grants. This is a

Funded Grants Authored or Co-authored by Students While Enrolled in Program

Rowland, C. & Rule, S. <u>Collaborative early childhood special education program through distance education</u>. Utah State Office of Education. Funded October 1, 1995-September 30, 1997. Total award \$138,249.

Rowland, C. & Rule, S. <u>Access through technology to a teacher certification program</u>. Utah Higher Education Technology Initiative, Utah System of Higher Education. Funded March 1995-August 1996. Total award \$128,198.

Rowland, C. & Rule, S. <u>Preparation of rural personnel to serve young children with disabilities and their families</u>. Grant #H029Q50031, U.S. Department of Special Education, Office of Special Education and Rehabilitative Services. Funded September 1995-August 1999. Cumulative total award \$320,562.

Rule, S. & Tso, M. <u>Using constant time delay to teach preventative safety skills to preschoolers with disabilities</u>. Grant #H023B70068, U.S. Department of Special Education, Office of Special Education and Rehabilitative Services. Funded September 1997-August 1998. Cumulative total award \$18,323.

Students also formulated personal objectives to be achieved through non-credit internships in which they participated each quarter until they initiated dissertation research.

When students participated with the Project Director in internships, they met together weekly or biweekly to discuss internship progress. Their internship experiences ranged from participation with other students and faculty in research to participation in course instruction and product development and evaluation. The research topics included a study of the functional relationship between young children's engagement in activities and their acquisition of language, an investigation of early reading competence, and a comparison of the application of different systems to measure teachers' use of incidental teaching.

Each student completed a quarterly evaluation of his or her progress toward completing these objectives. Their self evaluations indicated that they perceived themselves as increasing in competence, particularly in the areas of research and personnel preparation.

Three of the five students who discontinued their doctoral studies left during or after the first quarter of study. One left after one year to return to teaching in preschool special education and one after one year for personal reasons.

Objective 4: Revise the program to meet the stated goals as determined by program evaluations. This objective addresses program revision. Every course was evaluated each quarter that it was delivered by all students enrolled, as required by University policy. Table 4 below shows the results of seminars taught by the Project Director. The results of these evaluations were communicated to the instructor and to the department head, who reviewed the evaluations with instructors.

Table 4. Evaluation of courses

Course Title and Term Offered	Mean Rating of Course Quality 1=low 6=high	Mean Rating of Instructor Effectiveness 1=low 6=high	Sample Comments
Family Issues in Early Childhood Special Education Spring 1994	5.3	5.3	Topics relevant Course demanding Variety of materials and references used
Family Issues in Early Childhood Special Education Spring 1998	6	6	Good readings and presenters Hard to lead discussion due to small sized class
Research Seminar in Early Childhood Special Education Spring 1995	4.8	5.0	Good readings Helpful feedback
Research Seminar in Early Childhood Special Education Spring 1997	4.9	5.0	Useful topics Guest expert helpful

In addition to the University evaluation, students completed a more specific evaluation of each of the Project-supported early childhood special education courses in order to provide to instructors detailed feedback about content and delivery. As an example of results, students' evaluations of the research seminar in early childhood special education conducted during Spring Quarter, 1995, suggested that the number of readings be curtailed. This suggestion was implemented in subsequent offerings of the course. The improvements in course ratings suggested that the students' feedback was helpful and that the instructor used it to make revisions.

In addition to students' evaluations, the transdisciplinary course and practicum was evaluated by external evaluators, in 1994 by Jeanette McCollum, University of Illinois, and in

May 1995, Peggy Rosin, of the Waisman Center, University of Wisconsin, Madison. Their evaluations were complimentary, including statements such as "The students also are deriving enormous benefit from the experience, and clearly are learning all sorts of skills and attitudes that would be difficult for them to acquire anywhere else within their university program" (McCollum, personal communication, April 1, 1994). They also made several suggestions about issues of breadth and depth of learning, fostering students' self reflection, and communication processes. Ms. Rosin provided additional teaching materials that are currently in use by the doctoral students now involved in course and practicum delivery.

Objective 5: Implement the evaluation plan, including monitoring of program graduates' professional activities, contributions, and impact in special education. Nine activities are listed on the Evaluation Plan. The first six, which address student recruitment and progress, evaluation of faculty, and program evaluation, have already been discussed. The seventh activity was to monitor the placements of graduates. This was accomplished through survey and personal contact. Program graduates are employed respectively as faculty at the University of Toledo, the University of Idaho, the Inter-American University in Guayama, P.R., the University of Illinois, Eastern Washington University, Chadron State College, and Utah State University. One is employed in an institutional research position at the University of South Florida.

The eighth area of evaluation is the allocation of program resources. This was an undertaking of the faculty and students. The allocation of resources, space and equipment both by the Department and the University-affiliated Center for Persons with Disabilities was adequate to support students in their completion of the program.

14

The final area of evaluation was the allocation of Project resources and the adequacy of Project management. The Project Director monitored monthly financial reports. The Project had unexpended resources that were intended to support student stipends. An insufficient number of qualified applicants were found to award stipends the fifth year of the project and during the one year no-cost extension period. The extension did, however, provide the support necessary to enable currently enrolled students to complete their programs and to graduate.

Impact of the Leadership Project on the Development of Special Education Personnel

This Project had a significant impact upon the field. All of the Project-supported graduates are engaged in the preparation of personnel who will serve children with disabilities. Subsequent to their graduation, three have been successful in obtaining external funding to expand their preservice and inservice education of teachers, paraeducators, and related service personnel who will serve children with disabilities. Another is developing an early childhood special education program to be offered for the first time at the University where she is employed. These graduates continue to be active in scholarship, both in publication and presentations at professional meetings. Two have already achieved tenure at their respective institutions, suggesting that they will continue their contributions to the field.

The Project was successful in supporting individuals who are under-represented in higher education. One who has a disability and is a member of a Hispanic culture has developed a program that prepares special education teachers, all of whom are Hispanic. Another who has a disability continues to be enrolled in a special education doctoral program.

Finally, the influence of the Project in preparing leadership personnel extends beyond the students who received financial support. The Project permitted the offering of coursework in an emphasis area in early childhood special education. Five students not supported by the Project

15

participated in this coursework. The three who have graduated continue to engage in personnel preparation, development and evaluation of culturally and linguistically appropriate curriculum materials, and institutional research. Had the Project-supported program not existed, these students would not be contributing to the field of special education as they presently are.

Viewed in terms of cost effectiveness, the Project's cost to the federal government was \$53,195 per graduate, including those who did not receive financial support and would not have had access to this preparation had the Project not provided financial support to develop and conduct the program. If each of the 8 graduates who is engaged in preservice personnel preparation were responsible for teaching only 40 students per year and each taught only 10 years, the federal cost per additional student thus prepared would be only \$16.62. Thus, when one assesses the "trickle down" effect of the leadership grant, using extremely conservative assumptions to estimate graduates' impact – that (a) t only those now conducting preservice education will ever do so and (b) that they teach only 1 or 2 courses per year thus reaching only 40 students per year, and (c) that none of their many other scholarly contributions have monetary value—the Project will, over time, influence many special educators at a very low cost per special educator. It is likely that this estimated effect has already been achieved through the cumulative efforts of those students who graduated in the first few years of the program.

Table $\frac{5}{6}$ Evaluation Plan

ACTIVITY	EVALUATOR	METHOD	PURPOSE
Evaluate success of recruitment activity.	Project Director.	Examine number of students enrolled, number from populations traditionally underrepresented in leadership programs.	To assure that Project supports at least 5 students annually and that 30% are from diverse populations.
Monitor student acquisition and application of knowledge in courses.	Course instructor.	Grades, assignments, exams.	To provide information on adequacy of coursework, needed course revision.
3. Assess student application of competencies in internships.	Internship supervisors.	Direct observation.	To provide information on performance of students, adjust support as necessary.
4. Evaluate student produced products (dissertation, lit. review, presentation, journal article).	Student doctoral committee members.	Evaluation, feedback by each member.	To assure student can write, conduct research, communicate with professional community.
5. Evaluate quality of faculty to assure competent teaching and supervision.	Department chair, students.	Faculty meet criteria for chairing doctoral committees, student course evaluations.	To provide feedback to faculty to assist in revision of instructional, supervisory methods.
6. Evaluate program.	Project Director, faculty, students, graduates, external evaluator.	Faculty review progress of students; students and graduates review program, submit feedback via questionnaire; external evaluator reviews curricula and evaluation data, observes internship sites, provides feedback.	To assure appropriate quality and quantity of preparation activities.
7. Monitor placements and contributions of graduates to assure fill positions in areas of need; assess adequacy of on-the-job performance, contribution to research and personal preparation.	Project Director, employers.	Obtain job titles, submit performance questionnaires to graduates and their employers; conduct telephone follow-up as necessary.	To assure students obtain jobs for which they were prepared, perform well in positions, and conduct research and personnel preparation in early childhood special education.
8. Assess allocation of resources (program).	Department chair, faculty, students.	Examine program support (budgets, space allocation, equipment), indicate weaknesses via questionnaire.	To assure ongoing resources to provide quality preparation.
9. Assess allocation of resources and adequacy of Project management.	Project Director.	Examine monthly reports.	To assure completion of Project activities per Timeline and within budget.
