ABSTRACT

This study was undertaken to respond to a specific inquiry from the Center for Psychological Studies of Nova Southeastern University (Florida) about the satisfaction of Master's-level and Doctoral-level students with the University's faculty and programs. The population consisted of all students enrolled in these programs in the fall term of 1999, and there was sufficient evidence to conclude that the survey respondents were generally representative of the student body. The respondents expressed a high level of satisfaction with the competence of the faculty with a modal response of 5 (scale of 1 through 5) for students at both graduate study levels. Master's-level respondents, who included distance education students, had a satisfaction level of 4 with access to full-time faculty, but Doctoral students, who were all campus-based, gave a modal response of 5. Doctoral students were somewhat more satisfied with the University's administration (modal response of 3) than were Master's degree students. Perhaps the most extreme difference between the two groups' responses to was level of satisfaction with financial aid services. Doctoral-level students offered a modal response of 1 for satisfaction, while Master's level students offered a modal response of 4. Identification of areas in which these two groups of students are not in agreement about the University's faculty and programs may help in future program planning and faculty development. (Contains 40 tables and 14 references.) (SLD)

August 2000

EXECUTIVE SUMMARY

In an effort to satisfy Institutional Effectiveness reporting requirements for the Southern Association of Colleges and Schools and to also support guided planning efforts, Nova Southeastern University's Office of Research and Planning has engaged in a series of activities that addressed student satisfaction with academic resources and services. This process was attempted on a large scale in 1996 and again in 1999. The purpose of this study was to respond to a specific information request from the Center for Psychological Studies, presenting survey results from the Fall Term 1999 effort by degree level: Master's-level students and Doctoral-level students.

The population for the October-November 1999 survey consisted of all students enrolled during Fall Term. Research and Planning established formal tracking procedures and it was largely judged that the responding sample associated with the Fall Term 1999 survey was representative of the population. Further efforts were made in this report to examine the representation of survey respondents from the Center for Psychological Studies as compared to the collective study body in the Center. There was sufficient evidence to conclude that survey respondents from the Center for Psychological Studies were generally representative of the study body enrolled during Fall Term 1999.

Among the most important outcomes of this study, it was observed that respondents from the Center for Psychological Studies indicated a high level of satisfaction with the *Competency of the Faculty*, with a modal response of 5 for both Master's-level students and Doctoral-level students. There was a degree of difference between respondents from the two degree levels, however, in regard to agreement with *Access to full-time faculty, either through direct contact or other means*:

- For Master's-level respondents, which included distance education students enrolled at sites throughout Florida, the modal response was 4.
- However, for Doctoral-level respondents, who are all campus-based, the modal response was 5.

Differences between respondents from the two degree levels were also evident in regard to the advisement process. In regard to the statement, *Process for assigning students to advisors*,

Doctoral-level respondents offered a modal response of 2 and Master's-level respondents offered a modal response of 3. In contrast, Doctoral-level respondents generally offered more positive ratings on statements related to *Administration* than Master's-level respondents.

Differences were also evident in regard to responses to statements associated with *Library and Information Services*. For all three statements specifically referencing *Computing Resources and Information Technology*, Doctoral-level students offered a modal rating of 4 and Master's-level students offered a modal rating of 3.

Perhaps the most extreme difference between the two groups was found in response to the *Student Services* statement that asked for judgment of *Financial aid services*. Doctoral-level students offered a modal response of 1 (Mean = 2.3 and Median = 2) and Master's-level students offered a modal response of 4 (Mean = 3.1 and Median = 3).

Differences in terms of library use were also evident. Approximately 20 percent of Master's-level students used the University's libraries or library provided services 1 or more times per week, but 50 percent indicated that they used other libraries 1 or more times per week. In contrast, approximately 65 percent of Doctoral-level students used the University's libraries or library provided services 1 or more times per week, and less than 20 percent indicated that they used other libraries 1 or more times per week.

Although there are known differences (age and place of class attendance) in the Center for Psychological Studies between Doctoral-level students and Master's-level students, there are also some important areas where these two groups of students are not in agreement in terms of satisfaction with a broad array of experiences and services at the University and it may be useful for appropriate personnel and faculty to examine these differences. As appropriate, the Center may also find it useful to use this report when preparing for their contribution to the University's overall Institutional Effectiveness process, as required by the Commission on Colleges of the Southern Association of Colleges and Schools.

INTRODUCTION

Background

In an effort to satisfy Institutional Effectiveness reporting requirements for the Southern Association of Colleges and Schools and to also support guided planning efforts, Nova Southeastern University's Office of Research and Planning has engaged in a series of activities that addressed student satisfaction with academic resources and services¹. The general process for these many 1996 reports was largely replicated in 1999 and the results of this more recent process were reported in *Fall Term 1999 Nova Southeastern University Students Respond to a Broad-Based Satisfaction Survey* (2000).

Purpose of This Study

Collapsed statistics for *Fall Term 1999 Nova Southeastern University Students Respond to a Broad-Based Satisfaction Survey* (2000) were provided to the general University community and breakout statistics by academic center were provided to selected University administrators. The purpose of this current study was to respond to a specific information request from the Center for Psychological Studies, presenting survey results by degree level: Master's-level students and Doctoral-level students.

e

- 96-23 *July 1, 1995, to June 30, 1996, Graduates of the James M. Farquhar Center for Undergraduate Studies at Nova Southeastern University Offer Judgment on Their University Experience.*

METHODOLOGY

The population for the October-November 1999 survey consisted of all students enrolled during Fall Term. Research and Planning established contact with all academic centers and formal tracking procedures were used to gain a sense of the responding sample and its representation of the Fall Term 1999 student body. It was largely judged that the responding sample associated with *Fall Term 1999 Nova Southeastern University Students Respond to a Broad-Based Satisfaction Survey* (2000) was representative of the population.

Collapsed and breakout (Master's-level and Doctoral-level) demographic statistics about survey respondents are presented in Tables 1 to 4, addressing areas such as: degree level, gender, race/ethnicity, and age. In view of the Center for Psychological Studies and the representation of Fall Term 1999 survey respondents from this academic center:

- Students in the Center for Psychological Studies represented approximately 5 percent of all students enrolled during Fall Term 1999 and approximately 6 percent of the responding sample.
- Approximately 75 percent of all 1998/1999 academic year graduates from the Center for Psychological Studies were female and females represented approximately 79 percent of all Fall Term 1999 survey respondents from the Center for Psychological Studies.
- The median age of all 1998/1999 academic year graduates from the Center for Psychological Studies was 31 years and the median age of all Fall Term 1999 survey respondents from the Center for Psychological Studies was 29 years.

Otherwise, survey distribution and tracking procedures were followed closely by center personnel and there is sufficient evidence to conclude that survey respondents from the Center for Psychological Studies were generally representative of the study body enrolled during Fall Term 1999.

RESULTS

Most survey statements were gained by tracking language from the *Criteria for Accreditation* (1998) and focused on issues such as *Faculty* (Tables 5.A to 5.C), *Academic Program* (Tables 6.A to 6.C), *Administration* (Table 7.A to 7.C), *Library and Information Services* (Tables 8.A to 8.C), and *Student Services* (Table 9.A to 9.C). A summary response was also prepared in response to the statement *Overall quality of this academic program* (Table 10).

Regarding survey statements that focused on the University's faculty, respondents from the Center for Psychological Studies indicated a high degree of satisfaction with the *Competency of the Faculty*, with a modal response of 5 for both Master's-level students and Doctoral-level students. There was a degree of difference between respondents from the two degree levels, however, in regard to agreement with *Access to full-time faculty, either through direct contact or other means*:

- For Master's-level respondents, which included distance education students enrolled at sites throughout Florida, the modal response was 4.
- However, for Doctoral-level respondents, who are all campus-based, the modal response was 5.

Differences between respondents from the two degree levels were also evident in regard to the advisement process. In regard to the statement, *Process for assigning students to advisors*, Doctoral-level respondents offered a modal response of 2 and Master's-level respondents offered a modal response of 3. In contrast, Doctoral-level respondents generally offered more positive ratings on statements related to *Administration* than Master's-level respondents.

Differences were also evident in regard to responses to statements associated with *Library and Information Services*. For all three statements specifically referencing *Computing Resources and Information Technology*, Doctoral-level students offered a modal rating of 4 and Master's-level students offered a modal rating of 3.

Perhaps the most extreme difference between the two groups was found in response to the *Student Services* statement that asked for judgment of *Financial aid services*. Doctoral-level students offered a modal response of 1 (Mean = 2.3 and Median = 2) and Master's-level students offered a modal response of 4 (Mean = 3.1 and Median = 3).

There was, however, a degree of parity between the two groups of students in regard to their collective reason(s) for attending the University, with two responses in common among the three leading responses. In rank order, the three leading responses were:

Master's-Level		Doctoral-Level	
Rank Order	Response	Rank Order	Response
1	Convenience	1	Type of programs available
2	Type of programs available	2	Location
3	Academic reputation	3	Academic reputation

Differences in terms of library use, however, were quite evident. Approximately 20 percent of Master's-level students used the University's libraries or library provided services 1 or more

times per week, but 50 percent indicated that they used other libraries 1 or more times per week. In contrast, approximately 65 percent of Doctoral-level students used the University's libraries or library provided services 1 or more times per week, and less than 20 percent indicated that they used other libraries 1 or more times per week.

There were also differences between the two groups in terms of technology-based media experienced in courses. Approximately 44 percent of all Doctoral-level respondents indicated that they used electronic mail in courses and 23 percent indicated use of the World Wide Web. In contrast, approximately 17 percent of all Master's-level respondents indicated that they used electronic mail in courses and 14 percent indicated use of the World Wide Web.

SUMMARY

When viewing the results of this study, it may be useful to recall that there are clear differences in the Center for Psychological Studies between Master's-level students and Doctoral-level students on a few key demographic issues:

- In contrast to the possible norm at other institutions, Doctoral-level students in the Center for Psychological Studies are younger than their Master's-level counterparts:
 - Doctoral-level respondents Mean Age = 27.0 Years and SD = 5.4
 - Master's-level respondents Mean Age = 34.4 Years and SD = 10.8

This difference in age was also confirmed in an *ad hoc* analysis of recent graduates from the Center for Psychological Studies:

- Doctoral-level 98/99 graduates . . . Mean Age = 31.1 Years and SD = 4.9
 - Master's-level 98/99 graduates Mean Age = 35.3 Years and SD = 9.5
- There are also major differences in terms of place of instruction for the two groups of students.
 - By program design, all Doctoral-level respondents attended class on the University's Davie Campus in Broward County.
 - The Master's-level program, however, is offered to both campus-based students and distance education students. For this study, approximately 55 percent of all Master's-level respondents attended class in either Broward County (45 percent) or Miami-Dade County (10 percent) and the remaining 45 percent attended class at other locations throughout Florida.

Regardless of any demographic or other differences between Master's-level students and Doctoral-level students in the Center for Psychological Studies, there are some important areas where these two groups of students are not in agreement in terms of satisfaction with a broad array of experiences and services at the University and it may be useful for appropriate personnel and faculty to examine these differences.

Continuing with Research and Planning's preparation of specialized reports² that focused on key issues in the Center for Psychological Studies, this report should also offer faculty and administrators a sense of student satisfaction with the University. As appropriate, the Center may also find it useful to use this report when preparing for their contribution to the University's overall Institutional Effectiveness process, as required by the Commission on Colleges of the Southern Association of Colleges and Schools (*Criteria for Accreditation*; 1998, pp. 19-22).

² Research and Planning prepared the following reports that focused on the Center for Psychological Studies and the use of distance education in this academic center:

98-12 *An Analysis of Final Grades for Selected Courses in the Center for Psychological Studies: Differences Between On-Campus Students and Off-Campus Students.*

99-09 *Matriculation Status of Fall Term 1993 Center for Psychological Studies Students by the Beginning of Fall Term 1998: Campus-Based Students and Distance Education Students by Site.*

REPRODUCTION RELEASE

(Specific Document)

I. DOCUMENT IDENTIFICATION:

Title: Responses by Students in the Center for Psychological Studies to a Fall Term 1998 Satisfaction Survey: Master's Level Students and Doctoral-Level Students	
Author(s): Dr. Thomas W. MacFarland	
Corporate Source: Nova Southeastern University	Publication Date: August 2000

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

2A

Level 2A

The sample sticker shown below will be affixed to all Level 2B documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

2B

Level 2B

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)
