ABSTRACT

This report presents progress toward school completion of New York City public school students who entered ninth grade in 1997 and were scheduled to graduate on time in 2001. Outcomes are presented for the whole class and by gender, native language, race/ethnicity, and immigrant status. The class of 2001 dropout rate was 20.4 percent, marking the third consecutive year that dropout rates increased. The dropout rate increased for all groups except American Indians/Alaska Natives and increased most among Blacks and Hispanics. The graduation rate increased 1.1 percentage points over the previous year, to 51 percent. The percentage of students continuing into a fifth year of high school declined from 30.8 percent in 2000 to 28.6 percent in 2001. Former English language learners (ELLs) and English proficient students had higher graduation rates than did current ELLs. Significantly more females than males graduated on time. A strong positive relationship existed between expected graduation age and school completion. Almost two-thirds of high school special education students and three-quarters of special education students in Citywide Programs were still enrolled in high school in June 2001. While the percentage of students dropping out increased, the percentage of students meeting graduation requirements also increased. Tables are appended. (SM)

The Class of 2001 Four-Year Longitudinal Report and 2000-2001 Event Dropout Rates

EXECUTIVE SUMMARY

This report presents the progress toward school completion of students who entered the ninth grade in fall of 1997 and were scheduled to graduate on time by summer 2001 after four years of high school. The Class of 2001 is the sixteenth class for which the Division of Assessment and Accountability (DAA) has conducted a four-year longitudinal study. The report presents outcomes for the class as a whole as well as outcomes for specific groups of students categorized by gender, native language, race/ethnicity, and immigrant status.

The dropout rate for the Class of 2001 was 20.4 percent, an increase of 1.1 percentage points over the 19.3 percent rate for the Class of 2000. This marks the third consecutive year that dropout rates have increased after declining rates from 1991 through 1998, and was the highest dropout rate since 1991. The dropout rate increased for all groups of students except American Indians/Alaskan natives. Increases were greatest for Black students (2.2 percent increase) followed by Hispanics (nine-tenths of a percent increase).

Concurrently, the graduation rate for the Class of 2001 increased 1.1 percentage points over the Class of 2000, to 51.0 percent from 49.9 percent. This was the highest on-time graduation rate since 1991, and it followed slowly declining rates through 1996 followed by increasing rates thereafter. At the same time, the percentage of students earning Regents-Endorsed Diplomas and Regents-Endorsed Diplomas with Honors continued to increase; it was 1.6 percentage points higher for the Class of 2001 than that of the Class of 2000 (31.6 percent in 2001 compared to 30.0 in 2000), and 6 percentage points higher than the Class of 1998.

Conversely, the percentage of students continuing into a fifth year of high school declined 2.2 percentage points for the Class of 2001 to 28.6 percent compared to 30.8 percent continuing into a fifth year for the Class of 2000.

Other highlights of the four-year longitudinal study of the Class of 2001 are as follows:

There were 65,727 students in the Class of 2001. Of that total, 14.1 percent, or 9,270 students, were English Language Learners (ELLs). Another 22.9 percent, or 15,060 students, were former ELLs – students who scored above the 40th percentile on the Language Assessment Battery - and 63.0 percent, or 41,397 students, were English speakers.

i

- □ Former ELLs and English proficient students had higher graduation rates (58.6 percent and 52.6 percent respectively) than current ELLs (31.3 percent). Former ELLs and English proficient students also had lower dropout rates (15.4 percent and 19.6 percent respectively) than current ELLs (31.7 percent).
- A total of 21.2 percent, or 13,910 students were recent immigrants. Students who came to our schools in grades 7 and 8 from other countries had a lower dropout rate (17.2 percent) than either immigrants who entered our schools during or after grade 9 (21.3 percent) or non-immigrant students (20.6 percent). At the same time, the graduation rate for students who came to our schools in grades 7 and 8 from other countries (52.4 percent) was higher than that of immigrant students who entered our school system in high school (50.9 percent) and that of non-immigrant students (50.8 percent).
- □ A substantially higher percentage of females (55.9 percent) than males (46.0 percent) graduated on time, continuing a pattern observed over the years.
- There was a strong positive relationship between expected age for grade and school completion. Over three-fourths (80.2 percent) of the students who graduated in four years were the expected age for grade when they entered high school. Only 40.4 percent of the students who dropped out were the expected age when they began their high school careers; 59.6 percent were already overage for grade.
- Results are reported separately for two groups of students in the Special Education Class of 2001. Almost two-thirds (61.4 percent) of high school special education students and three-quarters (75.3 percent) of the special education students in Citywide Programs (District 75) were still enrolled in school as of June 30, 2001. This latter finding is consistent with the goal of Citywide Programs to provide an education to severely handicapped students until age 21.

Event dropout rates are also presented in this report. Event dropout rates represent the number and percentage of students who were first-time dropouts during the 2000-01 school year, regardless of when they entered the school system. The 2000-01 event dropout rate is 7.4 percent, four-tenths of a percentage point higher than the 7.0 percent rate in 1999-2000.

It appears that two trends are developing concurrently: there is an increase in the percentage of students who are dropping out, but there is also an increase in the percentage of students who are meeting the graduation requirements even while these requirements are becoming more rigorous. As a result of these two trends, a smaller proportion of the students are staying in high school for a fifth year.

These outcomes would appear to be related to the profound changes that are occurring within our schools. The current administration of the New York City public schools has maintained a systemic focus on rigorous academic standards for all students resulting in an

ii

increase in the four-year graduation rate and higher percentage of students graduating with a Regents-Endorsed diploma. This movement towards a standards-based education system during the past several years has occurred at the same time that the State Education Department has introduced new and more rigorous graduation requirements. Students in the Class of 2001 were required to pass Regents examinations in English and in mathematics and, students entering the ninth grade this past fall (September 2001) will be required to pass Regents examinations in five subject areas (mathematics, English, global history, United States history and government, and science) in order to graduate from high school.

Close attention to the findings of the studies of the Classes over the past several years have led to a number of recommendations for the systemic improvement of our schools. In coordination with efforts to improve attendance and to prevent dropouts, high schools have implemented several instructional initiatives to enable a diverse student population to meet standards and graduation requirements. Depending on assessed needs, academic intervention services to support students include:

- Reduced class size in standards-based English, mathematics, science and/or social studies courses;
- Programs focusing on secondary literacy and numeracy;
- Additional period(s) of instruction in the content areas of English, math, science and/or social studies;
- Stretch courses (more than two terms) in required content areas with additional in-class instructional support;
- Additional instruction before and after school and/or on weekends;
- Individual and small-group tutoring to improve basic skills;
- Summer school programs for students who are failing or are at risk of failing to meet standards;
- Establishment of Young Adult Borough Centers (YABC) for students who are unable to attend high school during regular school hours;
- Increased parent involvement in their children's learning and outreach activities, such as the Chancellor calling parents and encouraging e-mail and letters.

In addition to direct instructional support, the high schools are implementing sustained professional development that provides teachers with strategies, methods, and activities to improve instruction and student success. More specific and sustained focus on the support and encouragement of students who fear they may 'age-out' without ever meeting the new standards could help to keep more of these students in school long enough to meet the new requirements.

iii

ACKNOWLEDGMENTS

This study is a report of the Division of Assessment and Accountability, Office of Systemwide Evaluation and Accountability. Dr. Susan R. Waddington conducted the data analysis on which this report is based under the supervision of Dr. Jan Rosenblum, Manager of the Data Management and Accountability Unit.

I. INTRODUCTION

This report tracks the progress toward school completion of students who entered the ninth grade in fall 1997 and were scheduled to graduate on time in spring 2001 after four years of high school. Designated as the Class of 2001, the report indicates the percentages of students who graduated, dropped out, and were still enrolled in school to attend a fifth year of high school in fall 2001. The Class of 2001 is the sixteenth class to be studied for at least four years using the longitudinal study method.

The report focuses on the four-year outcomes for the entire Class of 2001, as well as outcomes of various student groups, each of which has specific academic needs. These include students with limited English proficiency, known as English language learners (ELLs), and students who were recent immigrants. Four-year outcome data for the individual high schools are presented in Appendix A. To track trends across classes, comparisons of four-year outcome data for the Classes of 1999, 2000, and 2001 are presented in Appendix B. Event dropout rates appear in Appendix C.

Earlier longitudinal studies of New York City high school students, as well national longitudinal studies, have shown that many students remain in high school beyond the traditional four years. Therefore, in order to assess the final outcomes of a full class, each class is studied for an additional three years. The results of the most recent three-year follow-up study, *The Class of 1998 Final Longitudinal Report*, are presented in a separate document.

Definition of the Longitudinal Study Group

The study follows two student cohorts. One is comprised of students in general education classes, including students receiving special education services in resource rooms, related services and consultant teacher services. This cohort is referred to as the Class of 2001. The other is comprised of students in self-contained special education classes. It includes District 75, the citywide special education district which consists of schools that primarily serve students with severe disabling conditions. This cohort is referred to as the Special Education Class of 2001.

General education and resource room, related services and consultant teacher students were assigned to the Class of 2001 based on the year in which they entered grades 9 through 12. More than nine in ten (93.1 percent) of the students in the Class of 2001 joined the cohort as entering ninth-graders during the 1997-98 school year and most had been in the New York City public schools in lower grades. Some entered our school system during grade 9. The remainder transferred into the New York City public schools during high school and became part of the cohort as tenth graders in 1998-99, as eleventh graders in 1999-00, or as twelfth graders in 2000-2001. All of these students would have completed the traditional four-year high school sequence by spring or summer 2001. Students who were discharged to other school systems with confirmation of enrollment were omitted from the cohort. The numbers of these students are reported in Table 1.

Because self-contained special education classes are ungraded, students were assigned to the separate Special Education Class of 2001 based on their age and enrollment in special education programs. Students were included in the Special Education Class of 2001 if they were 14 years old during the 1997-98 school year and were in a self-contained special education class in a CSD school,

high school, or a citywide special education program (District 75). Students were not added to the Special Education Class of 2001 after the initial year because of the ungraded nature of their classes.

Definition of Outcomes

The primary focus of this report is on the number and percent of students graduating on time and dropping out of the New York City public schools. Related to this focus is the task of determining the status of all of the students in the class at the time the students were expected to graduate. Each student in the study group is determined to be in one of four possible categories based on his or her status at the end of the school year.

- *Dropouts*: These are students who have left the school system without enrolling in another education program that leads either to a high school diploma or prepares the student for the Test of General Educational Development leading to a general equivalency diploma (GED).
 - Students are identified as dropouts during the school year if, after a period of non-attendance (generally, at least one month) and subsequent search by the Bureau of Attendance, the student does not return to school. According to State Education Department regulations, students who turn 17 during the school year must be maintained on register until the end of the school year, at which time the student can be discharged as a dropout.
- Graduates and Other School Completers: These are students who have received a high school diploma, GED, or special education certificate by August 2001. Graduates are identified by the type of diploma received: local high school diploma, Regents-Endorsed diploma, Regents-Endorsed diploma with Honors, or special education diploma.
- Discharges, Transfers, and Students Leaving the School System: These are students who left the school system primarily to enroll in another educational program or setting. This includes students who enrolled in a local private or parochial school, enrolled in a school outside of New York City, or entered a non-Board of Education GED preparation program. Students who aged out of the school system, i.e., reached the age of 21, and students who died prior to completing high school, are also counted in this category. Students in this category are identified as "discharged" to avoid confusion with high school transfers within the New York City public schools. Students may be discharged from the school system only after a request for the student's records (or other official documentation) has been received or there is a confirmed admission to the new educational setting.

Students who are discharged from the school system no longer attend the New York City public schools. As such, it is inappropriate to hold schools accountable for these students, and they are not included in the final statistics for the study group. The National Center for Education Statistics has conducted national studies of discharged students to estimate their school completion status. These studies have indicated that discharged students graduate and drop out at rates similar to those for students who remain in a given school system. In fact, these studies have suggested that the graduation rates of discharged students may even be higher.

• Students Still Enrolled in the School System: These are students who were still on register and scheduled to continue into a fifth year of high school in fall 2001.

Event Dropout Rates: 2000-2001

In addition to the Class of 2001 longitudinal data, this report also presents event dropout rates. The event dropout rate represents the number of students who dropped out of high school during the 2000-2001 school year regardless of when they entered the school system. Students are counted as dropouts if they left school by the end of the 2000-2001 school year without re-enrolling in another educational setting leading to a high school diploma or GED. Only students who were first-time dropouts during the 2000-2001 school year are counted. The counts address all students in schools, including students in self-contained special education classes. Results reflect updates from the Discharge Verification Report (DVR) system, an online system that allows schools to revise discharge information based on documented evidence. Individual school event dropout rates as well as citywide and superintendency rates are reported in Appendix C.

II. THE CLASS OF 2001

How many students are in the Class of 2001?

- During the dates covered by the study (the 1997-98 through the 2000-2001 school years), the New York City public schools served 79,828 students in the cohort (see Table 1). This included the base population of 74,285 students who entered ninth grade in 1997-98 and 5,543 students admitted to the class in subsequent years. Over the four-year period, 14,101 (17.7 percent) were discharged prior to the expected graduation date of summer 2001. Almost all of these students left the city and entered another school system.
- After adding admissions in grades 10, 11, and 12 and removing students who transferred to other school systems, there were 65,727 students in the Class of 2001.

Who are the students in the Class of 2001?

The 65,727 students in the Class of 2001 had the following characteristics:

- The Class of 2001 contained a slightly higher proportion of females than males (50.5 percent females and 49.5 percent males).
- 35.8 percent of the students in the Class of 2001 were Black, 34.0 percent were Hispanic, 16.6 percent were White, and 13.3 percent were Asian. Less that one percent of the students were of American Indian/Alaskan Native backgrounds.
- 14.1 percent (9,270 students) were English language learners (ELLs), students entitled to bilingual or English-as-a-second-language (ESL) services. 22.9 percent (15,060 students) were former ELLs, students who scored above the 40th percentile on the Language Assessment Battery.
- 21.2 percent (13,910) of the students in the Class of 2001 were recent immigrants to the United States. These students came from more than 140 different countries. Of these recent immigrants, 46.2 percent (6,431 students) entered the country in either grade 7 or grade 8. The remainder, 53.8 percent (7,479 students), entered the country sometime during or after grade 9.

Table 1

Grade and Year of Admission to, or Transfer from, the Class of 2001

Grade and Year	Base Population	Admissions	(Transfers and Discharges*)	Total Students in Class
9th Grade, 1997-1998	74,285**		2,340	71,945
10th Grade, 1998-1999		3,915	3,912	71,948
11th Grade, 1999-2000		1,291	4,135	69,104
12th Grade, 2000-2001		337	3,714	65,727
Total	74,285**	5,543	14,101	65,727+

^{*} Number of students discharged, primarily to other school systems, during the indicated school year.

^{**} Number of students on register in grade 9 who were not held over from the previous school year. Includes students who were admitted to the school system during the 1996-97 school year.

⁺ This is the student cohort used for calculating outcomes.

III. OUTCOMES FOR THE CLASS OF 2001

What were the school completion outcomes for the Class of 2001?

The overall results for the Class of 2001 indicate that, compared to the Class of 2000, both the percentage of dropouts and the four-year graduation rate increased, and the percentage of students who remained in high school for a fifth year decreased. The following are the specific outcomes for the Class of 2001 (see Figure 1):

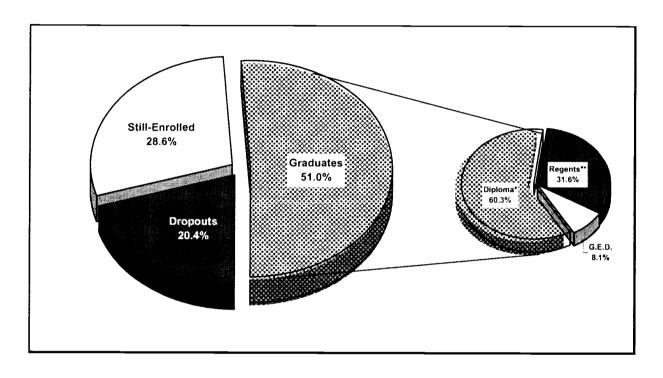

- The four-year dropout rate for the Class of 2001 was 20.4 percent. This is 1.1 percentage points higher than the comparable rate for the Class of 2000 (19.3 percent). Dropout rates increased slightly for all students except American Indians/Alaskan Natives (who were less than one percent of the Class). Black students' dropout rate increased the most (2.2 percentage points).
- The four-year graduation rate for the Class of 2001 was 51 percent. This is also 1.1
 percentage points higher than the comparable rate for the Class of 2000 (49.9 percent) and
 the highest cohort graduation rate since 1991.
- A total of 28.6 percent of the Class of 2001 was still enrolled in school and scheduled to enter
 a fifth year of high school in September 2001. This was a decline of 2.2 percentage points
 over the comparable rate for the Class of 2000 (30.8 percent) and the lowest percent since
 1991.

Table 2 presents the status of the Class of 2001 for each of the four years of the study. It indicates that of the 13,392 students who dropped out, 1,198 did so after two years in high school, 4,095 did so after three years in high school, and 7,856 did so after four years. Follow-up analyses of the progress of these students during those years indicated that many failed to accrue the course credits needed for promotion and graduation.

Table 3 presents the types of diplomas earned by Class of 2001 graduates. The percentage of graduates awarded Regents-Endorsed Diplomas and Regents-Endorsed Diplomas with Honors was 31.6 percent for the Class of 2001. This continues an upward trend that has existed since 1996. This is an important finding in light of the new state graduation regulations that required the Class of 2001 to pass Regents examinations in English and in mathematics to earn a diploma. (See Appendix D for diploma requirements.)

Figure 1
Outcomes for the Class of 2001
(N=65,727)

^{*}Includes local diplomas, special education diplomas, and certificates.

^{**}Includes Regents-Endorsed and Regents-Endorsed with Honors diplomas.

•

IV. OUTCOMES BY VARIOUS STUDENT GROUPS IN THE CLASS OF 2001

What are the outcomes for the Class of 2001 by gender?

A substantially greater percentage of females (55.9 percent) than males (46.0 percent) graduated on time (see Figure 2). The dropout rate of males was 4.8 percentage points higher than that of females (22.8 percent compared to 18.0 percent). Also, a substantially higher percentage of males (31.2 percent) were still enrolled and entering a fifth year of high school compared to 26.1 percent of females. These findings are similar to the Class of 2000.

What are the outcomes for the Class of 2001 by age for grade on entry to high school?

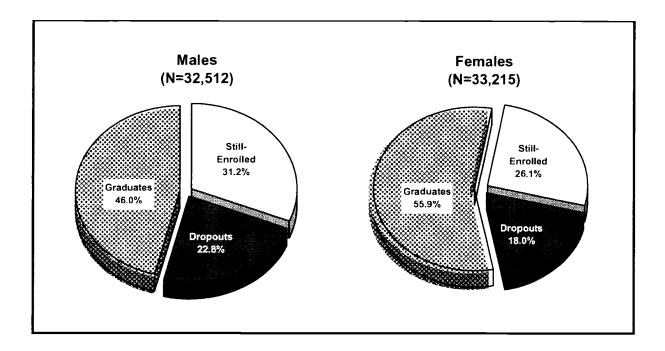

Many students who entered the cohort in grade 9 were already over age for grade. This may be due to previous retention in our schools or because the students were over age when they first entered a New York City public school. Figure 3 indicates the percentage of students in each outcome category who were either the expected age for grade or were over age when they entered high school. As the results show, 80.2 percent of the students who graduated in four years were the expected age for grade when they entered grade 9. On the other hand, 40.4 percent of the students who became dropouts were the expected age when they entered Grade 9, and 59.6 percent were already over age for the grade. The respective percentages for the still-enrolled students are more similar to those for the graduates than the dropouts. Since the age-for-grade factor has a strong positive relationship with school completion, it is expected that a high percentage of the still-enrolled students will earn a degree in the fifth, sixth, and seventh years of high school. The Class of 1998 Final Longitudinal Report: A Three-Year Follow-up Study demonstrates that significant numbers of students who enter a fifth or sixth year of high school subsequently graduate.

What are the outcomes for the Class of 2001 by student ethnic/racial background?

Figure 4 reports the four-year school-completion outcomes for each ethnic/racial group. As observed for earlier cohorts, White and Asian students had the highest four-year graduation rates (71.6 percent and 68.7 percent respectively) and the lowest dropout rates (11.9 percent and 11.3 percent respectively). Conversely, Hispanic students had the lowest graduation rate (41.3 percent) and the highest dropout rate (25.9 percent). The graduation rate for Black students was 44.3 percent with a dropout rate of 22.6 percent, and the graduation rate for American Indians/Alaskan Natives was 45.1 percent with a dropout rate of 17.4 percent. Only 16.4 percent of Whites and 20.0 percent of Asians were still enrolled for a fifth year. The still-enrolled rates for Hispanics, Blacks, and American Indians/Alaskan Natives were 32.9 percent, 33.1 percent, and 37.4 percent respectively. Table 4 provides comparisons by ethnic group for the Classes of 1998 to 2001.

Data Include August 2001 Graduates and DVR Updates

Note: Percentages may not add to 100% due to rounding.

Table 4

Four-Year Outcomes for Ethnic/Racial Populations and the Combined Population in the Classes of 1998 to 2001

Ethnic/Racial Groups	Graduates	Percentage of: Dropouts	Still Enrolled
American Indian			
1998	43.8	17.4	38.8
1999	45.0	18.3	36.7
2000	48.2	23.0	28.8
2001	45.1	17.4	37.4
Asian			
1998	68.1	9.0	22.9
1999	67.5	10.0	22.5
2000	67.4	11.1	21.5
2001	68.7	11.3	20.0
Hispanic			
1998	39.6	20.0	40.4
1999	40.2	22.4	37.5
2000	39.4	25.0	35.6
2001	41.3	25.9	32.9
Black			
1998	44.2	16.1	39.8
1999	44.4	18.6	37.0
2000	44.4	20.4	35.2
2001	44.3	22.6	33.1
White			
1998	71.7	9.9	18.4
1999	71.3	10.4	18.4
2000	71.3	11.3	17.4
2001	71.6	11.9	16.4
Combined Student Popul	lation		
1998	49.7	15.6	34.6
1999	50.1	17.5	32.4
2000	49.9	19.3	30.8
2001	51.0	20.4	28.6

For the Class of 2001, the dropout rate increased for all ethnic groups except American Indian/Alaskan Native, which experienced a decrease of 5.6 percentage points. The largest increase was for Black students, 2.2 percentage points. The increases for Hispanics, Whites, and Asians were each less than one percentage point. Two groups demonstrated increases in graduation rates: Asian and Hispanic graduation rates increased 1.3 and 1.9 percentage points respectively. American Indian/Alaskan Native graduation rate declined 3.1 percentage points and Black and White graduation rates remained virtually the same as that of the previous year. In addition, all groups experienced declines in the percentages of students who were still enrolled for a fifth year of high school, except the American Indian/Alaskan Native students whose fifth-year enrollment rate increased 8.6 percentage points from that of the Class of 2000. The relatively large fluctuations in the year-to-year statistics for this last group are undoubtedly related to the very small proportion of these students systemwide.

What are the outcomes for students in the Class of 2001 who were English Language Learners?

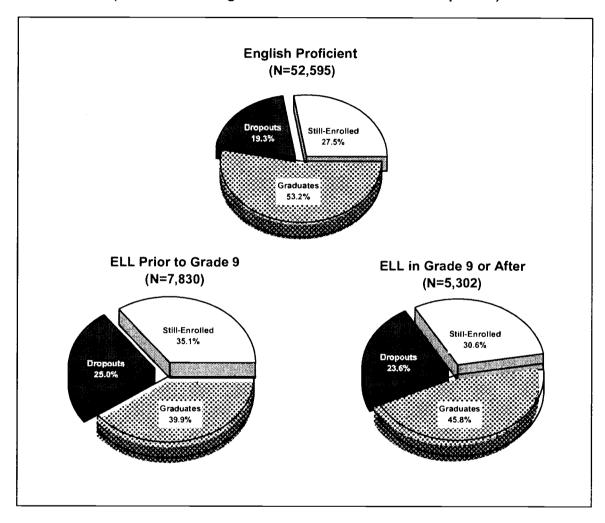

As reported earlier in this report, 9,270 (14.1 percent) of the students in the Class of 2001 were ELLs, and 15,060 (22.9 percent) were former ELLs. (Former ELLs are students who tested out of a bilingual or free-standing English as-a-second language programs.) These students spent at least part of their high school careers in bilingual or free-standing English-as-a-second-language programs.

Overall, the school completion outcomes of current ELL students fall short of those for English proficient and former ELL students (see Figure 5). Current ELL groups had lower four-year graduation rates and higher dropout rates than did the other students. However, current ELL students were still enrolled at a higher rate suggesting that the gap in school completion outcomes between current ELL students, former ELL students, and English proficient students may be reduced when the final statistics for the Class of 2001 are reported in the three-year follow-up study. This reduction in disparity has been observed consistently in three-year follow-up studies, including that for the Class of 1998.

The above findings indicate that meeting the educational needs of ELL students is a challenge for our schools. Many must take extra non-credit bearing English-as-a-second-language courses each term to boost their English language proficiency. However, it is important to keep in mind that, as explained above, the differences in outcomes for these groups may well be reduced as the still-enrolled students complete high school over the next three years.

Figure 5
Four-Year Outcomes for the Class of 2001 by ELL Status
(Data Include August 2001 Graduates and DVR Updates)

Note: Students discharged from the school system are not included in these analyses.

What are the outcomes for students in the Class of 2001 who were recent immigrants?

Students are designated as recent immigrants for a given school year if they had entered a United States school system, excluding Puerto Rico and all U.S. trusts and territories, for the first time within the previous three years.

In the Class of 2001, 21.2 percent (or 13,910 students) were identified as recent immigrants. Students who are recent immigrants can be divided into two groups. The first, 46.2 percent of recent immigrants, is comprised of students who first entered New York City public middle schools. The remaining 53.8 percent entered the Class of 2001 in grade 9 or after. It is important to note that although many immigrants are ELL students, ELLs may be either immigrants or non-immigrants.

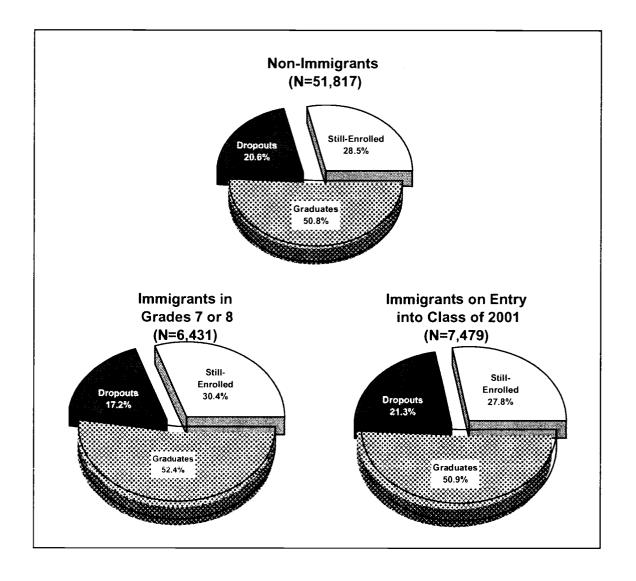

The outcomes for the students in the Class of 2001 by immigrant status are reported in Figure 6. The results indicate that as a group, immigrants come to our schools relatively prepared to succeed in high school. Students who were recent immigrants to our schools in grades 7 and 8 had a dropout rate of 17.2 percent, lower than the 20.4 percent dropout rate for all students citywide. The dropout rate for students who immigrated to the country during high school was 21.3 percent, and 20.6 percent for non-immigrants. The graduation rates for students who immigrated in grade 7 and 8 (52.4 percent) was higher than for students who were immigrants when they entered the Class of 2001 in grades 9-12 (50.9 percent), and higher than for non-immigrant students (50.8 percent).

What are the outcomes for students in the Class of 2001, by the type of school they attended?

The high schools that students attend can be categorized into six basic types. The Specialized High Schools—the three science high schools and La Guardia High School—require students to pass special entrance examinations. The Vocational/Technical High Schools offer programs that prepare students for jobs in a vocational or technical area, or for college. The zoned Academic/Comprehensive High Schools, many of which have special programs with various admission requirements, are required to accept all students who wish to attend and live in the school's zone. There are two types of alternative high schools: Articulated Alternative High Schools that accept ninth graders, and Transfer Alternative High Schools that accept students as transfers from other high schools. Both types of Alternative High Schools provide smaller settings that emphasize academic and personal support. Retrieval/GED programs offer smaller settings designed for students with special problems, e.g., substance abuse and criminal activity, many of which place these students at risk of dropping out. These programs provide individualized academic and personal assistance to their students so they can return to their high schools or prepare for the GED.

Figure 6
Outcomes for the Class of 2001 by Immigrant Status
(Data Include August 2001 Graduates and DVR Updates)

As Figure 7 indicates, there was wide variation in the four-year outcomes for students by school type. Students in Specialized High Schools had the highest on-time graduation rate (94.0 percent) and the lowest dropout rate (six-tenths of a percent). Students in Retrieval/GED programs had the highest dropout rate (54.0 percent), and students in Transfer Alternative High Schools had the highest still-enrolled rate (57.9 percent).

What are the trends across classes?

Table 5 shows that the dropout rate decreased each year from 1991 through 1998. The increases observed for the Classes of 1999 and 2000 continued for the Class of 2001. At the same time, the graduation rate decreased from the Class of 1992 to its lowest level in 1995, leveled off from 1995 to 1997, and then increased steadily, reaching its highest level (51 percent) in 2001. The percentage of students still enrolled in high school increased from 30.2 percent for the Class of 1992 to 35.7 percent for the Class of 1997 and then declined steadily for the following Classes, reaching nearly as low for the Class of 2001 (28.6 percent) as for the Class of 1991 (28.5 percent).

What are the outcomes for the Special Education Class of 2001?

Students in the Special Education Class of 2001 were 14 years old during the 1997-98 school year and enrolled in a citywide special education school or self-contained class in a middle school or high school. Due to the different nature of the programs, results for the Special Education Class of 2001 are reported separately for students in citywide programs (District 75) and high school self-contained classes. After excluding 494 students in citywide special education programs who were discharged to other school systems, 1,238 students were identified as members of that group. After excluding 1,052 students in high school self-contained classes who were discharged to other school systems, 4,489 students were identified as members of that group. The results for the Special Education Class of 2001, reported in Figure 8, indicate the following:

- The dropout rate for students in District 75 citywide programs was 22.4 percent, and the dropout rate for special education students in self-contained classes was 29.8 (See Figure 8). The dropout rate for students in citywide programs increased by 4.9 percentage points over the Class of 2000. The dropout rate for students in self-contained classes increased by 1.9 percentage points over the Class of 2000. Both are sizeable increases.
- The four-year graduation rate for District 75 citywide programs also increased, from 1.7 percent for the Class of 2000 to 2.3 percent for the Class of 2001. Similarly, the four-year graduation rate for special education students in self-contained classes increased to 8.7 percent, 1.3 percentage points higher than that reported for the Class of 2000.
- About two-thirds (61.4 percent) of the high school special education students in self-contained classrooms and three-quarters (75.3 percent) of the students in District 75 citywide programs were identified as still enrolled in school as of June 30, 2001.

Figure 7
Four-Year Outcomes for the Class of 2001 by School Type

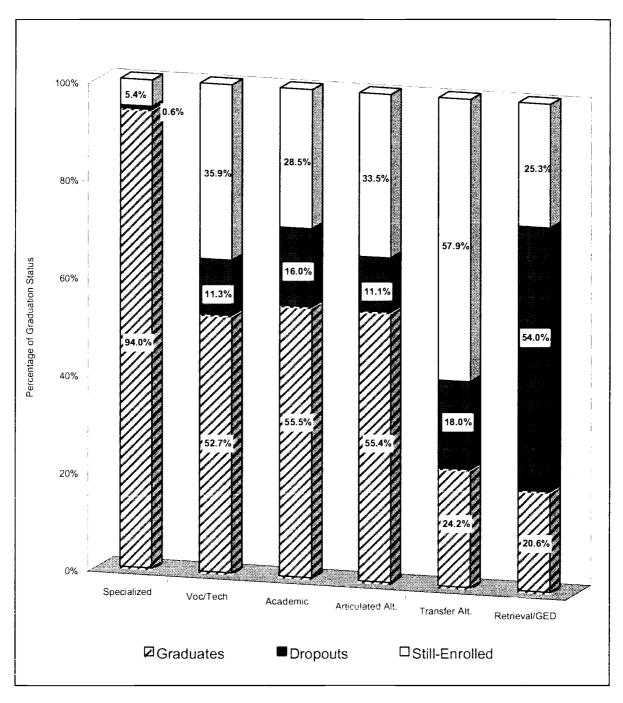

Table 5

Comparison of Four-Year Outcomes for the Classes of 1991 to 2001

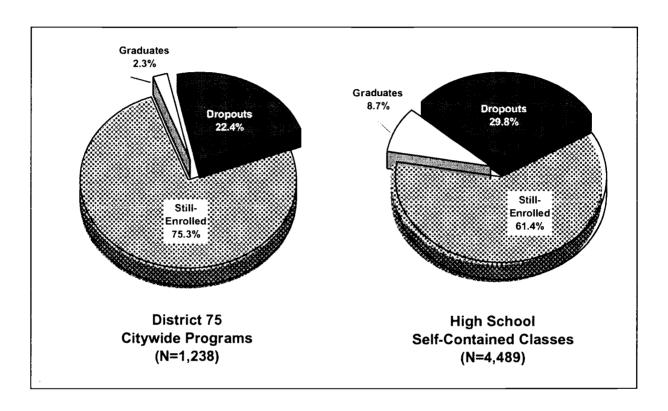

Class of:	Dropouts	Graduates	Still-Enrolled	Total N
1991	20.5	51.0	28.5	59,228
1992	19.1	50.7	30.2	60,161
1993	18.4	49.7	31.9	61,359
1994	18.3	50.7	31.0	63,159
1995	18.1	48.2	33.7	65,254
1996	16.4	48.3	35.3	66,536
1997	15.9	48.4	35.7	66,703
1998	15.6	49.7	34.6	63,803
1999	17.5	50.1	32.4	65,748
2000	19.3	49.9	30.8	67,072
2001	20.4	51.0	28.6	65,727

Note: Students who were discharged from the school system are not in the above results.

Data include August graduates.

Figure 8
Outcomes for the Special Education Class of 2001
for Citywide Programs and High School Self-Contained Classes

Note: Percentages may not add up to 100% due to rounding.

Note: Data do not include students who were discharged from the school system.

That such large percentages of special education students are still enrolled after four years is not surprising. Many special education students are in programs designed to provide services until students are 21 years old. At that time, many of these students are expected to participate in adult programs for former special education students.

What are the trends in event dropout rates across classes?

The event dropout rate represents the number of students who dropped out of high school for the first time during the 2000-01 school year, regardless of when they entered the system. Students are counted as dropouts if they left school by the end of the 2000-01 school year without re-enrolling in another educational setting leading to a high school diploma or GED. Only students who were first-time dropouts during the 2000-01 school year are counted in this analysis. The counts include all students in the schools, including students in self-contained special education classes. Results reflect updates from the Discharge Verification Roster (DVR), which is used to verify the status of all students discharged from the school system. Individual school event dropout rates as well as citywide and superintendency rates appear in Appendix C.

As noted in Table 6, event dropout rates have increased each year since 1997. In conjunction with increasing cohort dropout rates, these data continue to be cause for concern.

Table 6

Event Dropout Rates for the Last Six School Years

	Register	Dropouts	Event Dropout Rate
2000-2001	301,271	22,323	7.4
1999-2000	297,932	20,868	7.0
1998-1999	304,589	20,416	6.7
1997-1998	309,807	16,226	5.2
1996-1997	306,554	15,418	5.0
1995-1996	306,709	16,475	5.4

Note: Students who were discharged from the school system are not included in the above results.

Data include August graduates.

V. CONCLUSIONS AND RECOMMENDATIONS

From 1991 through 1998 the dropout rate declined; it then increased from 1999 through 2001. The recent pattern of increasing dropout rates held true to varying extents for all ethnic/racial groups except American Indian/Alaskan Natives. As in past years, students who were already over age for grade when they entered grade 9 were far more likely to become dropouts than were students who were the expected age for grade. ELL students were more likely to become dropouts than were non-ELL students. The dropout rate for males was higher than that for females in the population.

During the same 11-year period, the four-year graduation rate followed a similar pattern. It declined through 1995, and then leveled off for two years before beginning a steady increase through the Class of 2001. In this case, the past year's pattern of increase held for Asians, Hispanics, and Whites in the population while the rate for Blacks held steady and the rate for American Indians/Alaskan Natives decreased. ELLs had lower graduation rates than non-ELLs, but they also were still enrolled at a higher rate than non-ELLs. In fact, the percentage of students still enrolled in high school for a fifth year increased through the Class of 1997 and then declined through the Class of 2001 with the exception of ELLs and American Indian Alaskan Natives. These two groups continued to enroll for a fifth year in increasing percentages.

It appears that two trends are developing concurrently: there is an increase in the percentage of students who are dropping out, but there is also an increase in the percentage of students who are meeting the graduation requirements even while these requirements are becoming more rigorous. As a result of these two trends, a smaller proportion of the students are staying in high school for a fifth year.

These outcomes appear to be related to the profound changes that are occurring within our schools. The current administration of the New York City public schools has maintained a systemic focus on rigorous academic standards for all students. The movement in the city towards a standards-based education system during the past several years has occurred at the same time that the State Education Department has introduced new and more rigorous graduation requirements. Students in the Class of 2001 were required to pass Regents examinations in English and in mathematics and, students entering the ninth grade this past fall (September, 2001) will be required to pass Regents examinations in five subject areas (mathematics, English, global history, United States history and government, and science) in order to graduate from high school.

Close attention to the findings of the studies of the Classes over the past several years have led to a number of recommendations for the systemic improvement of our schools. In coordination with efforts to improve attendance and to prevent dropouts, high schools have implemented several instructional initiatives to enable a diverse student population to meet standards and graduation requirements. Depending on assessed needs, academic intervention services to support students include:

- Reduced class size in standards-based English, mathematics, science and/or social studies courses;
- Programs focusing on secondary literacy and numeracy;
- Additional period(s) of instruction in the content areas of English, math, science and/or social studies;
- Stretch courses (more than two terms) in required content areas with additional in-class instructional support;
- Additional instruction before and after school and/or on weekends;
- Individual and small-group tutoring to improve basic skills;
- Summer school programs for students who are failing or are at risk of failing to meet standards;
- Establishment of Young Adult Borough Centers (YABC) for students who are unable to attend high school during regular school hours;
- Increased parent involvement in their children's learning and outreach activities, such as the Chancellor calling parents and encouraging e-mail and letters.

In addition to direct instructional support, the high schools are implementing sustained professional development that provides teachers with strategies, methods, and activities to improve instruction and student success. More specific and sustained focus on the support and encouragement of students who fear they may 'age-out' without ever meeting the new standards could help to keep more of these students in school long enough to meet the new requirements.

APPENDIX A

SCHOOL-LEVEL ANALYSES FOR THE CLASS OF 2001

Number of Students Percent of Students

NOTE: In the following summary tables, school completion outcomes for schools with fewer than 20 students are not presented. These outcomes are presented in superintendency and city totals. As a result, the totals are larger than the sum of the school-level data.

APPENDIX B

SCHOOL-LEVEL OUTCOMES FOR THE CLASSES OF 1999, 2000, AND 2001

> Number of Students Percent of Students

NOTE: In the following summary tables, school completion outcomes for schools with fewer than 20 students are not presented. These outcomes are presented in superintendency and city totals. As a result, the totals are larger than the sum of the school-level

APPENDIX C

2000-01 EVENT DROPOUT RATES

FROM: The Class of 2001: Four-Year Longitudinal Report and 99-00 Event Dropout Rates, published by the Division of Assessment and Accountability of the Board of Education of the City of New York.

The event dropout rate represents the number of students who dropped out of high school during the 2000-01 school year, regardless of when they entered the system. Students are counted as dropouts if they left school by the end of the 2000-01 school year without reenrolling in another educational setting leading to a high school diploma or GED. Only students who were first-time dropouts during the 2000-01 school year are counted in this analysis. The counts include all students in the schools, including students in self-contained special education classes. Results reflect updates from the Discharge Verification Roster (DVR), which verifies the status of all students discharged from the school system. Individual school event dropout rates as well as citywide and superintendency rates appear in Appendix C.

Number of Students Percent of Students

NOTE: In the following summary tables, school completion outcomes for schools with fewer than 20 students are not presented. These outcomes are presented in superintendency and city totals. As a result, the totals are larger than the sum of the school-level data.
