IDENTIFIERS *Alberta

ABSTRACT

In February 2001, a survey was conducted to determine satisfaction of stakeholders in Alberta's learning system. Telephone interviews were held with random samples of: parents, high school students, parents of children with severe special needs, parents of students with mild or moderate special needs, the general public, adult learners, and school non-attendees. Approximately 4,000 people were selected for each of these segments, and response rates were high. Survey responses were generally similar to those of the previous year, although when there were differences, the differences tended to reflect increases in satisfaction. Overall satisfaction with Alberta's learning system continued to remain high--similar to the levels reported in 2000. Parents of students with special needs were not generally as satisfied as parents of students in the general school population, but they did think the system offered high quality learning opportunities. The vast majority of parents and high school students agreed that teachers are using appropriate strategies, and are setting appropriate learning expectations and standards. High school students and adult learners thought that the system was preparing them for the employment world. Overall, those who participated in the learning system reported higher satisfaction with receiving value for money than those who did not. Satisfaction that the schools are both safe and caring continued to be high for parents and students. Five appendixes contain the interview instruments, profiles of respondent groups, discussion of ease of access to special needs services, and a table of confidence bounds. (Contains 15 figures and 41 tables.) (SLD)

TABLE OF CONTENTS

1. BACKGROUND AND INTRODUCTION	1
2. METHODOLOGY.....	3
2.1. Questionnaire Design	3
2.2. Sample Design	3
2.2.1. High School Students/Parents of ECS to Grade 12 Children/Parents of Special Needs Children.....	3
2.2.2. General Public (Aged 17+) Regarding the ECS – Grade 12 Learning System	4
2.2.3. General Public (Aged 17+) Regarding the Adult Learning System.....	4
2.3. Data Collection	5
2.3.1. Target Populations.....	5
2.4. Freedom of Information and Protection of Privacy.....	6
2.5. Data Analysis.....	7
2.6. Statistical Reliability	7
SECTION ONE: KEY FINDINGS ACROSS RESPONDENT GROUPS	
3. KEY FINDINGS ACROSS RESPONDENT GROUPS	10
3.1. Goal One: High Quality Learning Opportunities.....	10
3.1.1. Core Measure - Satisfaction with the Quality of Alberta’s Learning System	10
3.1.2. Core Measure – Participation Rate of Albertans Age 17 and Over in Credit and Non- Credit Programs and Courses in the Last Twelve Months.....	12
3.1.3. Overall Percentage of Parents and Public who Agree that Students are Learning What they Need to Know	13
3.1.4. Percentage of Parents and the Public who Agreed that Students are Learning what they Need to Know in Selected Areas.....	14
3.1.5. Parents of Children with Special Needs Agreement that Students are Learning what they Need to Know in Selected Areas.....	15
3.1.6. Percentage of Learners, Parents and the Public Who Agreed/Strongly Agreed that Learners have Ease of Access to Lifelong Learning.....	17
3.1.7. Percentage of Parents and Public Who Agreed That Learning Expectations of Students Are “Too High”, “About Right” or “Too Low”	18
3.1.8. Percentage of Parents of Children with Special Needs who were Satisfied with Services for their Child.....	19

TABLE OF CONTENTS (Cont'd)

3.1.9. Percentage of the Public Who Agree That Alberta’s Learning System as a Whole is Affordable/Within the Means of Most Albertans	22
3.2. Goal Two: Excellence in Learner Achievement	28
3.2.1. Core Measure - Percentage of Parents and High School Students Who Agreed That Teachers Help Improve Student Learning.....	28
3.3. Goal Three: Well Prepared Learners for Lifelong Learning, World of Work and Citizenship	30
3.3.1. Core Measure - Perceptions That Learners Are Prepared for Lifelong Learning, the World of Work, and Citizenship.....	30
3.3.2. Percentage of Parents and Public who were Satisfied with the Opportunity to be Involved In/Are Satisfied with their Involvement in Decisions at Schools in their Community	33
3.4. Goal Five: Highly Responsive and Responsible Ministry	36
3.4.1. Satisfaction of Learners, Employers and Taxpayers with the Value for Money Spent on the Learning System.....	36
3.4.2. Responsiveness of the Education System to the Needs and Expectations of Parents, Students and the Public	38
3.4.3. Parents of Special Needs Children: Perceptions of Their Child’s Individual Program Plan	39
3.4.4. Parents of Special Needs Children who Agree with Child’s Individual Program Plan Goals.....	40
3.4.5. Satisfaction that Schools Provide a Safe and Caring Environment	40
3.4.6. Evaluation of Computers / Computer Skills in Alberta Schools	43
3.4.7. Satisfaction with Access to and Quality of Information on Student Achievement... 44	44
3.4.8. Most Useful Sources of Information about Alberta’s Elementary, Junior and Senior High Schools.....	48
SECTION TWO: OTHER FINDINGS BY RESPONDENT GROUPS	
4. OTHER FINDINGS BY RESPONDENT GROUPS	53
4.1. Parents of Children with Severe and Mild / Moderate Special Needs	53
4.1.1. Incidence of Receiving Various Services to Support Participation in School Program	53
4.1.2. Satisfaction with Specific Services Received to Support School Participation.....	56

TABLE OF CONTENTS (Cont'd)

4.2. Parents of Children with Special Needs who Agreed with Allocation of Resources for Students with Special Needs Under the Student Health Initiative	59
4.3. Parents (ECS – Grade 12).....	60
4.3.1. Parental Satisfaction with Information Needed to Access Programs and Services for their Child.....	60
4.4. Adult Learners	61
4.4.1. Type and Location of Education / Training Taken in Past Twelve Months.....	61
4.4.2. Where Education / Training was Taken in Past Twelve Months.....	62

EXECUTIVE SUMMARY

In February 2001, Criterion Research was commissioned by Alberta Learning to conduct satisfaction surveys with stakeholders in Alberta's learning system. Telephone interviews were conducted with random samples of parents (ECS – Grade 12), high school students, parents of children with severe special needs, parents of children with mild/moderate special needs, the general public, and adult learners and non-attendees. Key results from these surveys provide data for performance measures in Alberta Learning's business plan, and will be reported in the Ministry's 2001 Annual Report.

MAIN FINDINGS

Of the 89 measures presented in the Key Findings Across Respondent Groups section, regarding the performance measures for the business plan goals, the majority have remained similar to results from research conducted in 2000. Where there were differences compared to 2000, those differences tended to be positive increases in agreement/satisfaction.

Table A: 2001 Results Compared to 2000 Results by Business Plan Goals

Business Plan Goals	Number of Measures Where Results...		
	Increased*	Remained the same*	Decreased*
High quality learning opportunities	5	26	4
Excellence in learner achievement	-	7	-
Well prepared learners for lifelong learning, world of work and citizenship	6	9	1
Highly responsive and responsible Ministry	6	25	-
Totals (out of 89 measures)	17	67	5

**Comparisons are based on the margin of error for each measure determined by the sample size for the appropriate respondent group and the percentage difference between the 2000 and 2001 research results where questions were asked in each year. The measure of statistically significant differences over time did not fall within the scope and requirements of this project.*

Those measures which received the greatest increases in satisfaction/agreement from 2000 to 2001 were:

- General public (re K-12 education) agreement that high school students are prepared for the rights and responsibilities of citizenship (41% vs 48%).
- General public (re K-12 education) satisfaction with the information received about how money is spent by the Provincial Government on all schools (34% vs 41%).
- General public (re K-12 education) satisfaction with the value for money they are receiving for money spent on schools in their community (54% vs 60%).
- Adult Albertans (aged 17 years or older) that have not taken any education or training in the past twelve months in Alberta (hereafter referred to as "Non-attendees"):

Agreement that adult learners are prepared for the rights and responsibilities of citizenship (61% vs 67%).

- General public (K-12 education) agreement that high school students are prepared to enter post-secondary education and training (55% vs 60%).

Those measures which received the greatest decreases in satisfaction/agreement from 2000 to 2001 were:

- Parents of children with severe special needs: Satisfaction with the appropriateness of the types of services their child receives. (80% vs 74%).
- Parents of ECS – Grade 12 children: Agreement that students are learning what they need to know in the area of technology skills (75% vs 70%).

The following are key findings within each of the respondent groups.

Satisfaction with Alberta's Learning System

- Satisfaction with Alberta's ECS – Grade 12 learning system continued to remain high and similar to the levels indicated in 2000 for parents (ECS – Grade 12), high school students and the public.

High Quality Learning Opportunities

- Parents of ECS - Grade 12 students, high school students and adult learners reported the highest overall satisfaction. The majority of parents and the public felt that students were learning what they need to know.
- Even though the majority of parents of children with special needs agreed, lower proportions compared to parents and high school students agreed that students are learning what they need to know.
- Parents of special needs children were satisfied with the various elements regarding the special needs services that their children receive. Parents of children with severe special needs indicated higher satisfaction in the areas of service provision, effectiveness, efficiency and relevance elements than parents of children with mild/moderate special needs.
- Similar to the 2000 research, roughly one in three adults over the age of 17 reported accessing adult learning education or training within the last 12 months.

Excellence in Learner Achievement

- The vast majority of parents (ECS – Grade 12) and high school students agreed that teachers are using appropriate strategies and are setting appropriate learning expectations and standards.
- As with parents and high school students, parents of children with special needs also agreed that teachers use methods that help their children learn.

Well Prepared Learners for Lifelong Learning, the World of Work and Citizenship

- High school students, compared to parents and the general public, strongly agreed that students are prepared for post-secondary training and citizenship.
- Adult learners and non-attendees (those aged 17 or older who have not taken education or training in Alberta's adult learning system in the past 12 months) strongly agreed that adult learners have the appropriate combination of skills and knowledge for lifelong learning, the workforce and the rights and responsibilities of citizenship.

Highly Responsive and Responsible Ministry

- Those who participated in the learning system reported higher satisfaction with receiving value for money spent than those who did not. Whether for schools in their community or for adult learning institutions, parents and adult learners were more satisfied than the public and non-attendees with receiving value for money spent on the learning system. Increased participation rates of each respondent group will likely lead to increased satisfaction with receiving value for money spent and other performance measures.
- Regarding information about how money is spent by the local school and the local school board, parents (ECS – Grade 12) reported higher satisfaction than the general public with both the access to and the information itself. Lower proportions of each respondent group were satisfied with the access to the information and the information itself regarding how the provincial government spends money on schools in their community.
- Most respondent groups were satisfied with the responsiveness of the education system to their needs and expectations. High school students, parents (ECS – Grade 12) and parents of special needs children provided the highest satisfaction ratings.
- Satisfaction that schools are both safe and caring continued to be high for both parents and students.

1. BACKGROUND AND INTRODUCTION

In February, 2001, Criterion Research Corp. (Alberta) was commissioned by Alberta Learning, Performance Measurement and Reporting Branch, to conduct an evaluation of client satisfaction with the learning system in Alberta.

Alberta Learning's three-year business plan, 2000/2001 – 2002/2003, was released in February 2000 and presents its vision, mission, core businesses, goals, strategies and performance measures. Achievement of Alberta Learning's five goals will ensure that Alberta's Learning system:

- provides quality programs that are responsive, flexible, accessible, relevant and affordable;
- enables learners to demonstrate high standards;
- prepares learners for lifelong learning, work and citizenship;
- develops and maintains effective relationships with partners; and
- operates responsively and responsibly.

Performance measures are used to assess and report on the progress of each of Alberta Learning's business plan goals, with the satisfaction of Albertans on selected aspects of the learning system forming a significant portion of these measures.

Therefore, research was conducted among key respondent groups in Alberta's learning system in order to measure and report on satisfaction with learning in the province:

- Parents of Children with Severe Special Needs
- Parents of Children with Mild/Moderate Special Needs
- Parents of ECS to Grade 12 Students
- High School Students
- Adult Learners (those who *have* taken any education or training in the adult learning system within the past 12 months)
- Adult Non-attendees (those who *have not* taken any education or training in the adult learning system within the past 12 months)
- The General Public

Specific objectives of the research were to:

- Identify areas of strength/areas needing improvement in order to assist Alberta Learning in serving their clientele more effectively and efficiently
- Indicate the degree of consensus or disagreement among the various respondent groups
- Provide insight as to the reasons for respondent satisfaction or dissatisfaction
- Determine where there have been shifts in satisfaction from previous years
- Serve the needs of a more open and accountable learning system

This report highlights the findings of this research. Detailed data tables of the results can be found under separate cover.

2. METHODOLOGY

2.1. QUESTIONNAIRE DESIGN

The survey instruments for each respondent group were prepared by Alberta Learning, Performance Measurement and Reporting Branch, for Criterion Research. With the exception of specific modifications and additions, the same survey instruments were used as in previous years. Each questionnaire was pre-tested to ensure suitability of language, flow and length.

Copies of the final questionnaires can be found in Appendix A.

2.2. SAMPLE DESIGN

2.2.1. High School Students/Parents of ECS to Grade 12 Children/Parents of Special Needs Children

Lists of 4,000 randomly generated student names were provided by Alberta Learning for each of the parents and high school student surveys. Each list included names and addresses, with phone numbers also included for about 96% of listings. Upon receiving the lists, Criterion Research conducted a search for the telephone numbers of those listings without telephone numbers.

Difficulties were encountered during fielding with contacting parents of special needs children who actually had a special needs child. Twenty-one percent (21%) of parents of children with severe special needs and 44% of parents of children with mild/moderate special needs indicated that there wasn't a special needs child in the household.

Criterion ensured compliance with the Freedom of Information and Privacy Act by removing the names and addresses of the listing prior to loading the lists onto our Computer Assisted Telephone Interviewing System (CATI). The original, complete sample lists were securely stored throughout the course of the study. Access to the original lists was restricted to only key personnel, all of whom signed confidentiality agreements.

Consistent with previous years, quotas were established to ensure representative proportions of respondents by student grade and location. Location quotas were based on the distribution, by census division, of the addresses provided on each of the original lists of 4,000 names. Quotas based on the grade level of the student were also imposed. A detailed description of the quotas used can be found in Appendix B.

2.2.2. General Public (Aged 17+) Regarding the ECS – Grade 12 Learning System

All members of the general public included in the sample answered a series of questions about the ECS – Grade 12 learning system.

2.2.3. General Public (Aged 17+) Regarding the Adult Learning System

The survey of the general public, regarding the adult learning system, addressed two specific subgroups:

- Adult Learners (Those who have taken some education or training in the last 12 months)
- Adult Non-attendees (Those who have not taken any education or training in the last 12 months)

Telephone numbers for the general public/adult learners surveys were randomly drawn from the most recent telephone directories across Alberta. A random digit dialing method, where the last digit in the telephone number is increased by one, was employed to ensure that households with recent listings and unpublished numbers were included in the sample frame.

Quotas were established to ensure the interviews were representative of location, age and gender. A detailed description of the quotas used can be found in Appendix B.

2.3. DATA COLLECTION

All data for this research was collected using the telephone interview methodology. Interviews were conducted from Criterion's office in Edmonton, Alberta.

Prior to commencement of data collection, all interviewers and supervisors were thoroughly trained and briefed on the project requirements. The interviewing was monitored in progress, as well as 15% of completed interviews were verified.

A maximum of ten call attempts were made to each listing prior to excluding it from the sample base in order to maximize the representativeness of the sample. Busy numbers were scheduled for callback after ten minutes. For those numbers where either an answering machine picked up or there was no answer, the call back was scheduled at a different time the following day. Detailed records were maintained on the outcome of each call attempt, and the final summaries of these records can be found in Appendix B.

Interviewing occurred between March 15 and May 2, 2001.

2.3.1. Target Populations

The total number of random telephone interviews conducted, and the target respondent per respondent group were:

- 800 interviews among parents of children with severe special needs
- 690 interviews among parents of children with mild/moderate special needs
- 800 interviews among parents of ECS to Grade 12 students
- 800 interviews among high school students in Grades 10 to 12. For those respondents aged 16 years or younger, permission was first obtained from the students' parent or guardian.
- 1,000 interviews among adult learners. These respondents were defined as those aged 17 years or older that have taken any education or training in the past twelve months in Alberta.
- 2,000 interviews among the general public, or those aged 17 years or older regarding the ECS – Grade 12 learning system.
- 2,000 interviews among adult non-attendees, or those aged 17 years or older who have not taken any education or training in Alberta in the past twelve months.

2.4. FREEDOM OF INFORMATION AND PROTECTION OF PRIVACY

Every effort to protect the personal privacy of individuals whose personal information was accessible to Criterion was made during the research process. All of Criterion's employees, upon hiring, have signed confidentiality forms. Key staff members, or those that may have had access to the personal information, also signed confidentiality agreements provided by Alberta Learning.

All lists supplied by the client were not utilized for any purpose other than telephone surveying. Upon completion of the research, all lists were returned to the client or deleted.

Criterion did not reveal respondent identities or respondents' individual answers to questions. Respondents were assured of their anonymity in participating in the surveys.

Criterion thoroughly understood the conditions regarding the Freedom of Information and Protection of Privacy Act and adhered to all requirements.

2.5. DATA ANALYSIS

Throughout most of the questionnaires, a four-point scale was used for respondents to rate their opinions and perceptions: Very Satisfied, Satisfied, Dissatisfied and Very Dissatisfied. For the purposes of analysis, “Very Satisfied” and “Satisfied” were combined into a “Satisfied” rating. Similarly, “Very Dissatisfied” and “Dissatisfied” were combined into a “Dissatisfied” rating.

Additional scales used in the questionnaires included respondents rating their agreement (strongly agree, agree, disagree, strongly disagree), learning expectations (too high, about right, too low) and involvement (a lot, some, very little, not at all).

Upon completion of data collection, the data from each respondent group was checked for quality and consistency. Detailed tables of the results were generated for each respondent group, with the frequency and percentage distribution of responses to each question shown by the overall population of each group, as well as broken down by key respondent characteristics, such as age and gender. For consistency purposes, the subset analysis was the same as in previous years. A complete demographic profile of each respondent group, with the exception of parents of children with special needs, can be found in Appendix C.

The detailed data tables for each respondent group are found under separate cover.

2.6. STATISTICAL RELIABILITY

The measure of statistically significant differences over time did not fall within the scope and requirements of this project.

However, for a given sample size, it is possible to set what are called “confidence bounds” or limits around an observed percentage and assert that such limits are correct 95 percent of the time. These confidence bounds are valuable indicators of the reliability of observed results. When interpreting data, confidence bounds should always be kept in mind because these limits can vary dramatically depending on the sample size, with smaller sample sizes generally providing less reliable data than larger sample sizes. A table of these confidence bounds can be found in Appendix D.

These tables do not provide an indication of whether an observed percentage is meaningful, as that depends upon the context and the interpretation that will be made, not confidence level alone. For this reason, this report will highlight results that are interpreted as interesting and meaningful, rather than deal exclusively with references to statistical significance.

The following table demonstrates the margin of error associated with the number of completed interviews for each respondent group:

	# of Interviews	Margin of Error (19 times out of 20)
Parents of Children with Severe Special Needs	800	± 3.5%
Parents of Children with Mild/Moderate Special Needs	690	± 3.8%
Parents of ECS – Grade 12 Students	800	± 3.5%
High School Students	800	± 3.5%
General Public	2,000	± 2.2%
Adult Learners ¹	1,000	± 3.1%
Adult Non-attendees ²	2,000	± 2.2%

¹ Adult learners are those who have taken some education or training in the last 12 months)

² Adult non-attendees are those who have not taken any education or training in the last 12 months)

SECTION ONE – KEY FINDINGS ACROSS RESPONDENT GROUPS

3. KEY FINDINGS ACROSS RESPONDENT GROUPS

3.1. GOAL ONE: HIGH QUALITY LEARNING OPPORTUNITIES

3.1.1. Core Measure - Satisfaction with the Quality of Alberta's Learning System

This measure examines the percentage of parents (ECS – Grade 12), high school students, the general public, parents of children with severe and mild/moderate special needs and adult learners who were satisfied with the quality of ECS to Grade 12 education, the adult learning system and education or training taken in the past twelve months.

Satisfaction with the quality of Alberta's learning system is high among parents (ECS – Grade 12) (88%) and high school students (94%).

Satisfaction was also high with the adult learning system, with 75% of the general public and 83% of adult learners being satisfied. Ninety-two percent (92%) of adult learners were satisfied with their education or training in the past twelve months. Satisfaction with the ECS – Grade 12 learning system was lower among the general public (70%), parents of children with mild/moderate special needs (69%), and parents of children with severe special needs (77%).

The percentage of respondents who were satisfied with the quality of Alberta’s learning system remains steady compared to 2000.

Table 1: Satisfaction with the Quality of Alberta’s Learning System

	1995	1996	1997	1998	1999	2000	2001
With ECS – Grade 12 Education:							
Parents (ECS – Grade 12)	89%	88%	89%	88%	87%	87%	88%
High School Students	94%	95%	97%	96%	94%	95%	94%
Public	--	--	--	70%	66%	68%	70%
Severe Special Needs Parents	--	--	--	--	--	--	77%
Mild / Moderate Special Needs Parents	--	--	--	--	--	--	69%
With the Adult Learning System:							
Public	--	--	--	--	--	--	75%
Adult Learners	--	--	--	--	--	--	83%
Education/Training Taken in Last 12 Months							
Adult Learners	--	--	--	93%	90%	91%	92%

Source: *EnviroNics West Surveys 1995, 1996, 1997; The Advisory Group Surveys 1998, 1999; Criterion Research Corp. Surveys 2000, 2001.*

Additional Subsegment Analysis

Although Calgary parents (ECS – Grade 12) were more likely to provide very satisfied ratings, there weren’t trends across the respondent groups based on the gender, region or age demographic variables.

Parents of children with special needs and parents with children in ECS or kindergarten were more likely than parents with children in other grade levels to report high satisfaction with the overall quality of education.

3.1.2. Core Measure – Participation Rate of Albertans Age 17 and Over in Credit and Non-Credit Programs and Courses in the Last Twelve Months

Approximately one-third (30%) of the general public of Alberta indicated that they have accessed the adult learning system in the past twelve months. This overall percentage is down slightly from 1999 and 2000. Regionally, participation in the adult learning system ranged from a low of 25% in rural areas, to a high of 36% in Edmonton, with Calgary (32%) and urban areas (29%) falling in the middle.

Except for Edmonton, participation was down compared to 2000. Specific differences by geographic location included: respondents were less likely to have accessed the system compared to 2000 in Calgary (32% vs 36%), in urban areas (29% vs 32%) and rural (25% vs 28%). Participation in the adult learning system in Edmonton in 2001 was unchanged from last year (36%).

Table 2: Incidence of Adults Who Have Accessed the Adult Learning System in the Past Twelve Months

	Total	Edmonton	Calgary	Other Urban	Rural
1999	32.3%	37.0%	30.7%	38.0%	27.9%
2000	32.7%	35.9%	36.3%	32.5%	27.9%
2001	29.9%	35.9%	31.8%	29.0%	25.4%

* Incidence was calculated not only on completed interviews, but also included those who agreed to complete but the quota for learners was full and those who agreed to complete but the age/gender quota was full.

Participation in the adult learning system is listed for specific ages below.

Table 3: Incidence of Adults by Age Group Who Have Accessed the Adult Learning System in the Past Twelve Months

	Age Range					
	17-24	25-34	35-44	45-54	55-64	65+
2001*	65.4%	36.2%	27.7%	27.9%	16.7%	10.5%

* Incidence was calculated on completed interviews and the results were weighted to reflect actual population distributions.

3.1.3. Overall Percentage of Parents and Public who Agree that Students are Learning What they Need to Know

Parents (ECS – Grade 12) and the general public were asked to think about what was being taught in school, and to rate whether or not they agreed that students are learning what they need to know.

Eighty one percent (81%) of parents (ECS – Grade 12) agreed that students are learning what they need to know overall (up from 77% in 2000, but still below the level in 1995/96, of 83%). Sixty-four percent (64%) of the public agreed students are learning what they need to know overall (up from 61% in 2000, and close to the peak level of 66% in 1996/97).

Figure 1: Percentage of Parents and Public Who Agreed Students Are Learning What They Need to Know (Overall)

Source: *EnviroNics West Surveys 1995, 1996, 1997; The Advisory Group Surveys 1998, 1999; Criterion Research Corp. Surveys 2000, 2001.*

Additional Subsegment Analysis

General public respondents aged 17-24 were more likely to agree than those in the older age categories that students are learning what they need to know. General public respondents with two or more dependents were also more likely to agree that students are learning what they need to know overall.

3.1.4. Percentage of Parents and the Public who Agreed that Students are Learning what they Need to Know in Selected Areas

As well as being asked whether or not students are learning what they need to know overall, parents (ECS – Grade 12) and the general public were asked whether they agree that the curriculum focuses on what students need to know in specific areas.

The majority of the public and parents (ECS – Grade 12) agreed that students are learning what they need to know in science, social studies, reading, mathematics, writing and technology skills. However, both groups were more likely to agree students are learning what they need to in science, social studies, reading and mathematics, than in writing and technology skills.

Parental agreement that students are learning what they need to know was very high for science (89%), social studies (84%), reading (83%) and mathematics (81%). Slightly lower percentages of parents agreed students are learning what they need to know in writing (79%) and technology skills (70%; down from 75% in 2000).

Eighty percent (80%) of the general public agreed students are learning what they need to know in science (80%). Lower proportions indicated agreement for mathematics (70%), social studies (70%) and reading (68%). Agreement that students are learning what they need to know among the public was lowest for technology skills (65%) and writing (62%).

Agreement levels among the public in 2001 were similar to those in 2000 in most subject areas. The exception was for technology skills, which increased from 62% to 65%.

Table 4: Percentage of Parents and the Public Who Agreed That Students are Learning What They Need To Know in Selected Areas

	Parents		Public	
	2000	2001	2000	2001
Science	88%	89%	78%	80%
Social Studies	83%	84%	69%	70%
Reading	82%	83%	66%	68%
Mathematics	82%	81%	70%	70%
Writing	77%	79%	62%	62%
Technology Skills	75%	70%	62%	65%

Source: Criterion Research Corp. Surveys 2000, 2001.

3.1.5. Parents of Children with Special Needs Agreement that Students are Learning what they Need to Know in Selected Areas

Parents of children with special needs reported their agreement with similar statements regarding that students are learning what they need to know in selected areas.

Approximately three-quarters of **parents of children with severe special needs** reported that students are learning what they need to know in the areas of communication (77%), gross motor development (77%), social and adaptive skills (73%) and fine motor control (73%). Lower proportions reported agreement with the areas of reading (68%), life skills (68%), mathematics (66%) and writing (61%).

Approximately three-quarters of **parents of children with mild/moderate special needs** reported that students are learning what they need to know in the areas of communication (77%), social and adaptive skills (75%) and gross motor development (74%). Lower proportions reported mathematics (71%), life skills (71%), fine motor control (70%), reading (69%), and writing (68%).

Results of parents of children with either severe or mild/moderate special needs were similar for each of the selected areas except for writing (61% vs 68% respectively) and mathematics (66% vs 71%), where parents of children with mild/moderate special needs were more likely to report agreement.

These are new questions added in 2001, so comparisons to previous years were not available.

Table 5: 2001 Results - Percentage of Parents of Special Needs Children Who Agreed That Students are Learning What They Need To Know in Selected Areas

	Severe	Mild / Moderate
	2001	
Reading	68%	69%
Writing	61%	68%
Mathematics	66%	71%
Social and / or Adaptive Skills	73%	75%
Life Skills	68%	71%
Communication	77%	77%
Gross Motor Development	77%	74%
Fine Motor Control	73%	70%

Source: Criterion Research Corp. Surveys 2001.

Additional Subsegment Analysis

As with parents (ECS – Grade 12) and public agreement that students are learning what they need to know, younger respondents were more likely to have high agreement levels than older respondents for many of the subject areas.

For a number of subject areas, parents (ECS – Grade 12) and parents of special needs children in ECS or kindergarten were more likely to have high agreement levels that their children are learning what they need to know in selected areas.

3.1.6. Percentage of Learners, Parents and the Public Who Agreed/Strongly Agreed that Learners have Ease of Access to Lifelong Learning

The majority of the general public (68%), adult learners (68%), parents (ECS – Grade 12) (73%) and high school students (86%) agreed that learners or high school graduates have ease of access to lifelong learning. Ratings from the general public and adult learners were higher than in 2000, while results for parents and students were similar to 2000.

Figure 2: Percentage Who Agreed/Strongly Agreed that Learners have Ease of Access to Lifelong Learning

Source: Criterion Research Corp. Surveys 2000, 2001.

* Asked whether high school graduates have ease of access to lifelong learning

3.1.7. Percentage of Parents and Public Who Agreed That Learning Expectations of Students Are “Too High”, “About Right” or “Too Low”

Parents (ECS – Grade 12) and the general public were asked whether they feel the learning expectations of students are too high, too low or about right. Parents were more likely than the general public to feel learning expectations are *just right*, while the public was more apt to feel expectations are *too low*. More than half (58%) of parents indicated that learning expectations are just right, while one-quarter (25%) felt expectations are too low. Thirteen percent (13%) felt expectations are too high, and 4% are unsure.

A lower 46% of the general public felt learning expectations are about right, while 36% felt they are too low. Eleven percent (11%) felt expectations are too high, and 6% are unsure.

There were small differences compared to 2000 in either respondent group.

Table 6: Percentage who Agreed Learning Expectations of Students are Too High/Too Low/Just Right

	Parents						
	1995	1996	1997	1998	1999	2000	2001
Too High	11%	7%	8%	12%	13%	12%	13%
About Right	53%	60%	59%	60%	61%	58%	58%
Too Low	35%	30%	31%	25%	24%	27%	25%
Don't Know	2%	2%	2%	3%	2%	3%	4%

	Public						
	1995	1996	1997	1998	1999	2000	2001
Too High	11%	8%	10%	8%	9%	12%	11%
About Right	41%	46%	43%	46%	47%	44%	46%
Too Low	41%	43%	43%	40%	39%	38%	36%
Don't Know	7%	3%	3%	7%	6%	6%	6%

Source: *EnviroNics West Surveys 1995, 1996, 1997; The Advisory Group Surveys 1998, 1999; Criterion Research Corp. Surveys 2000, 2001.*

Additional Subsegment Analysis

Parents of children in grades 1 through 6 were less likely to have reported that learning expectations are too low than parents with children in grades 7 through nine.

General public respondents from Calgary were more likely than respondents in other regions to report that learning expectations are too low, and less likely to report that they are just right.

General public respondents aged 17-24 were more likely to indicate that learning expectations are about right, whereas those aged 45-64 were more likely to have indicated that learning expectations are too low. University graduates were also more likely to have indicated expectations are too low.

3.1.8. Percentage of Parents of Children with Special Needs who were Satisfied with Services for their Child

Parents of children with severe and mild/moderate special needs were asked to rate their satisfaction with the services their child receives overall, and in a number of specific areas. (Unless otherwise indicated, results for parents with children with severe special needs are presented first when presented with results for the parents of children with mild/moderate special needs.)

Overall, 76% (parents of severe special needs children) and 71% (parents of mild/moderate special needs children) expressed satisfaction with the services their child is receiving in his/her school. Satisfaction with specific services was high among both respondent groups. Satisfaction among parents of children with severe special needs ranged from 65% for services being arranged quickly to 88% for the child needs the services to be able to attend. For parents of children with mild/moderate special needs, satisfaction was lowest for the element “service providers spend the right amount of time with my child” (60%) and highest for the elements “service providers work well together” (78%) and “my child benefits from the services provided” (78%).

Parents of children with severe special needs are more likely than parents of children with mild/moderate special needs to have reported that they were satisfied with their involvement in the provision of services for their child (80% vs 75%).

Satisfaction with accessibility was similar for both respondent groups.

Approximately three-quarters were satisfied that it was easy to access services (77%) and less than 70% report that their child receives the support services they need to be successful in school (69% vs 66%). A lower 65% and 64% were satisfied that services were arranged quickly.

Parents of severe special needs children were more likely than the other respondent group to indicate satisfaction with the effectiveness elements of special needs services: that their child needs services to be able to attend school, (88% vs 73%) and their child is benefiting from the services provided (82% vs 78%).

As with the effectiveness elements, parents of children with severe special needs were more likely to be satisfied with the efficiency elements. Eighty-two and seventy eight percent (82% and 78%) were satisfied that the people who provide services to their child work well together. A lower 68% and 60% were satisfied that the people providing services spend the right amount of time with their child.

Seventy-four and sixty-nine percent (74% and 69%) were satisfied that the types of services their child receives are appropriate.

Compared to results from the year 2000 surveys, satisfaction was generally slightly lower in 2001 for the various elements among parents of children with severe special needs. Among the accessibility elements, satisfaction was slightly higher for ease of access to services and services were arranged quickly. Research was not conducted with parents of children with mild/moderate special needs in 2000.

Table 7: Satisfaction of Parents of Special Needs Children with Special Needs Services

	Severe				Mild / Moderate

Source: *The Advisory Group Surveys 1998, 1999; Criterion Research Corp. Surveys 2000, 2001*

¹ Presentation of the survey question to respondents differed slightly from 1998 to 1999, 2000 and 2001. In 1998, all respondents were simply asked if they agreed with the statement "It was easy to access services for my child". In 1999, respondents were asked if they agreed with the same statement, but in relation to specific services their child received. As many children with special needs access multiple services, some parents gave multiple responses (one response for each service their child accessed). The proportion of parents who agreed or strongly agreed in 1999, 2000 and 2001 that it was easy to access services for their child is an aggregate figure incorporating multiple responses from some parents. Section 2 – 4.1.1. Incidence of Receiving Various Services to Support Participation in School Program of this report provides the detailed responses on satisfaction with ease of access to specific services received.

Additional Subsegment Analysis

For a number of special needs service elements, parents of special needs children in ECS or kindergarten were more likely to have indicated strong agreement with the special needs service elements than parents of special needs children in other grades.

3.1.9. Percentage of the Public Who Agree That Alberta’s Learning System as a Whole is Affordable/Within the Means of Most Albertans

Half of adult Albertans were asked to report their agreement that Alberta’s learning system as a whole – that is, including elementary, junior and senior high schools, and post secondary institutions – is **affordable** and the other half were asked if it is **within the means of most Albertans**.

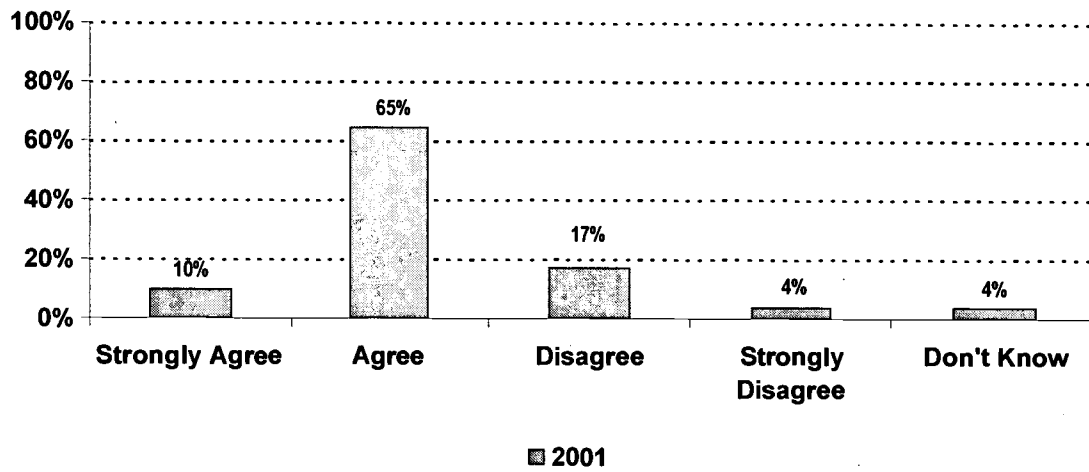

Sixty-seven percent (67%) reported that the learning system is affordable and (75%) indicated that it is within the means of most Albertans.

Figure 3: 2001 Results - Alberta’s Learning System as a Whole is Affordable

Source: Criterion Research Corp. Surveys 2001.

Figure 4: 2001 Results - Alberta's Learning System is Within the Means of Most Albertans

Source: Criterion Research Corp. Surveys 2001.

Respondents who reported agreement or disagreement that Alberta’s learning system is affordable were asked to report their reasons for their rating.

Fifty-one percent indicated that they are satisfied as their reasons for their agreement. Lower percentages reported that the system is affordable for some (21%), post secondary education is expensive (16%), it is publicly funded system (12%), not affordable for some (4%), K-12 have to pay for extras (3%), not satisfied (2%), more money needs to go to schools (2%) as the reasons for their agreement.

Table 8: 2001 Results - Reasons for Agreement that Alberta's Learning System¹ is Affordable

	Total
Satisfied	51%
Affordable for some	21%
Post secondary education is expensive	16%
Publicly funded system	12%
Not affordable for some	4%
K-12 have to pay for extras	3%
Not satisfied	2%
More money needs to go to schools	2%
Other Mentions	3%
Don't Know	8%

Source: Criterion Research Corp. Surveys, 2001.

Note: ¹ Refers to Alberta's learning system as a whole (K-12 and post-secondary)

A majority of those who disagreed that Alberta's Learning System is affordable indicated that post secondary education is expensive (66%) as the reason for their disagreement. Others indicated that it is not affordable for some (19%), K-12 have to pay for extras (15%), they are not satisfied (9%), that more money needs to go to schools (5%), they are satisfied (4%), that it is affordable for some (3%), that interest rates on loans too high (2%), and that it is a publicly funded system (2%) as their reason.

Table 9: 2001 Results - Reasons for Disagreement that Alberta's Learning System is Affordable

	Total
Post secondary education is expensive	66%
Not affordable for some	19%
K-12 have to pay for extras	15%
Not satisfied	9%
More money needs to go to schools	5%
Satisfied	4%
Affordable for some	3%
Interest rates on loans too high	2%
Publicly funded system	2%
Other Mentions	4%
Don't Know	2%

Source: Criterion Research Corp. Surveys, 2001.

The other half of adult non-attendees were asked to report agreement or disagreement that Alberta’s Learning System is **within the means of most Albertans**. In turn they were asked to report their reasons for their rating.

The majority who reported agreement indicated that they are satisfied (57%) as the reason for their rating. Other reasons included that it is affordable for some (18%), it is a publicly funded system (11%), that post secondary education is expensive (10%), that it is not affordable for some (4%), K-12 have to pay for extras (2%) and they are not satisfied (2%).

Table 10: 2001 Results - Reasons for Agreement that Alberta's Learning System is Within the Means of Most Albertans

	Total
Satisfied	57%
Affordable for some	18%
Publicly funded system	11%
Post secondary education is expensive	10%
Not affordable for some	4%
K-12 have to pay for extras	2%
Not satisfied	2%
Other Mentions	6%
Don't Know	11%

Source: Criterion Research Corp. Surveys, 2001.

Half of those who reported disagreement indicated that post secondary education is expensive (50%) as the reason for their rating. Other reasons included that the system is not affordable for some (22%), they are not satisfied (11%), that more money needs to go to schools (10%), K-12 have to pay for extras (8%), they are satisfied (5%), there are not enough seats (4%), it is not affordable for special needs kids (3%), K-12 depends on where you live (2%) and that it is a publicly funded system (2%).

Table 11: 2001 Results - Reasons for Disagreement that Alberta's Learning System is Within the Means of Most Albertans

	Total

3.2. GOAL TWO: EXCELLENCE IN LEARNER ACHIEVEMENT

3.2.1. Core Measure - Percentage of Parents and High School Students Who Agreed That Teachers Help Improve Student Learning

In order to evaluate the performance of ECS – Grade 12 teachers, parents (ECS – Grade 12), high school students and parents of children with either severe or mild/moderate special needs rated teachers' performance in a number of areas.

The majority of each respondent group agreed that teachers use appropriate strategies and set appropriate learning expectations and high standards.

Eighty percent (80%) of parents (ECS – Grade 12) agreed that teachers use appropriate methods that help their children learn, while 79% of students and 80% of parents of children with severe special needs agreed. A lower 76% of parents of children with mild/moderate special needs agreed.

In terms of learning expectations and high standards, approximately 80% of parents agreed teachers:

- Clearly communicate to students what they are expected to learn (78%)
- Help students achieve learning expectations (80%)

A slightly lower 75% agreed teachers help students achieve high standards.

Approximately 90% of students agreed teachers help students achieve learning expectations and high standards:

- Help students achieve learning expectations (91%)
- Help students achieve high standards (86%)

Compared to 2000, satisfaction among both students and parents is similar. This is the first year these questions are asked of parents with children with either severe or mild/moderate special needs.

Table 12: Percentage of Parents (ECS – Grade 12) and High School Students who Agreed that Teachers Help Improve Student Learning

	1995	1996	1997	1998	1999	2000	2001
Appropriate Strategies							
Parents: Teachers use teaching methods that help their children learn	--	82%	86%	83%	83%	80%	80%
High School Students: Teachers use a variety of approaches to meet their learning needs	82%	87%	88%	81%	83%	78%	79%

Source: *Environics West Surveys 1995, 1996, 1997; The Advisory Group Surveys 1998, 1999; Criterion Research Corp. Surveys 2000, 2001.*

Additional Subsegment Analysis

Parents of special needs children in ECS or kindergarten were more likely to strongly agree, and parents of special needs children in the higher grades were less likely to strongly agree that teachers use appropriate strategies to help children learn.

3.3. GOAL THREE: WELL PREPARED LEARNERS FOR LIFELONG LEARNING, WORLD OF WORK AND CITIZENSHIP

3.3.1. Core Measure - Perceptions That Learners Are Prepared for Lifelong Learning, the World of Work, and Citizenship

Parents, high school students and the general public were asked for their opinions about whether high school students were being adequately prepared for post-secondary education and citizenship upon leaving high school.

Although there was strong agreement among parents that students are learning what they need to know (81%), lower proportions of parents and the public agree that students are being adequately prepared for post-secondary education and citizenship upon leaving high school. High percentages of students, however, agreed.

More than half of parents (53%) and the general public (60%) agreed that graduates in Alberta are prepared to enter post-secondary education and training, while 86% of students agreed.

Forty-three percent (43%) of parents and 48% of the public agreed that graduates are being taught the rights and responsibilities of citizenship, while 80% of students agreed with this statement.

The public reported higher agreement in 2001 that students are prepared for the rights and responsibilities of citizenship (48% vs 41%) and that students are prepared to enter post-secondary education and training (60% vs 55%). Results are similar for the other elements compared to the 2000 research.

Table 13: Percentage of Parents/Students and the Public Who Agreed That High School Graduates Are Prepared for Lifelong Learning, the World of Work and Citizenship

	1995	1996	1997	1998	1999	2000	2001

Source: *Envionics West Surveys 1995, 1996, 1997; The Advisory Group Surveys 1998, 1999; Criterion Research Group Surveys 2000, 2001.*

- Notes:
1. The survey question used between 1996 to 1999 was worded differently than in 1995. Such differences can affect responses and lead to different results. In 1995, respondents were asked whether “High school graduates are being taught the knowledge, skills and attitudes to....”.
 2. Questions on preparation for citizenship were not asked in 1997 through 1999.

Adult learners and adult non-attendees rated their agreement with a series of questions to determine whether adult learners are being adequately prepared for lifelong learning, the workforce and citizenship.

Three-quarters or greater of learner and non-attendees agreed that adults taking education or training are getting an appropriate combination of skills and knowledge to prepare them for lifelong learning and the workforce. A lower proportion of both groups agreed that adult learners are being adequately prepared for the rights and responsibilities of citizenship.

Not surprisingly, learners were more likely to have agreed with these statements than non-attendees, as they have their own recent experiences to draw upon. Non-attendees were also more apt than learners to be unsure.

Approximately eighty percent (80%) of adult learners agreed that adults taking education or training are getting an appropriate combination of skills and knowledge to prepare them for both lifelong learning (80%) and the workforce (82%), while 69% agreed that learners are being prepared for the rights and responsibilities of citizenship.

Seventy-five percent (75%) of adult non-attendees agreed that adults taking education or training are getting an appropriate combination of skills and knowledge to prepare them for both lifelong learning and the workforce, while 67% agreed that learners are being prepared for the rights and responsibilities of citizenship.

Compared to 2000, agreement rose among adult non-attendees that adults taking education or training are getting an appropriate combination of skills and knowledge to prepare them for lifelong learning, the workforce and the rights and responsibilities of citizenship. Adult learners reported similar agreement in 2001 as they did in 2000 with these elements.

Table 14: Percentage of Adult Learners and the Public Who Agreed that Adult Learners Have An Appropriate Combination of Skills and Knowledge to Prepare them for Lifelong Learning, the World of Work and Citizenship

	1998	1999	2000	2001
For Lifelong Learning:				
Adult Learners	--	--	81%	80%
Adult Non-attendees	--	--	70%	75%
For the Workforce:				
Adult Learners	82%	77%	81%	82%
Adult Non-attendees	75%	69%	74%	75%
For the Rights and Responsibilities of Citizenship:				
Adult Learners	--	--	65%	69%
Adult Non-attendees	--	--	61%	67%

Source: Bannister Research Consulting Surveys 1998, 1999; Criterion Research Group Surveys 2000, 2001.

Additional Subsegment Analysis

Adult learners and non-attendees aged 17 – 24 were more likely to be satisfied that adults taking education are prepared for the workforce than those aged 45-64.

3.3.2. Percentage of Parents and Public who were Satisfied with the Opportunity to be Involved In/Are Satisfied with their Involvement in Decisions at Schools in their Community

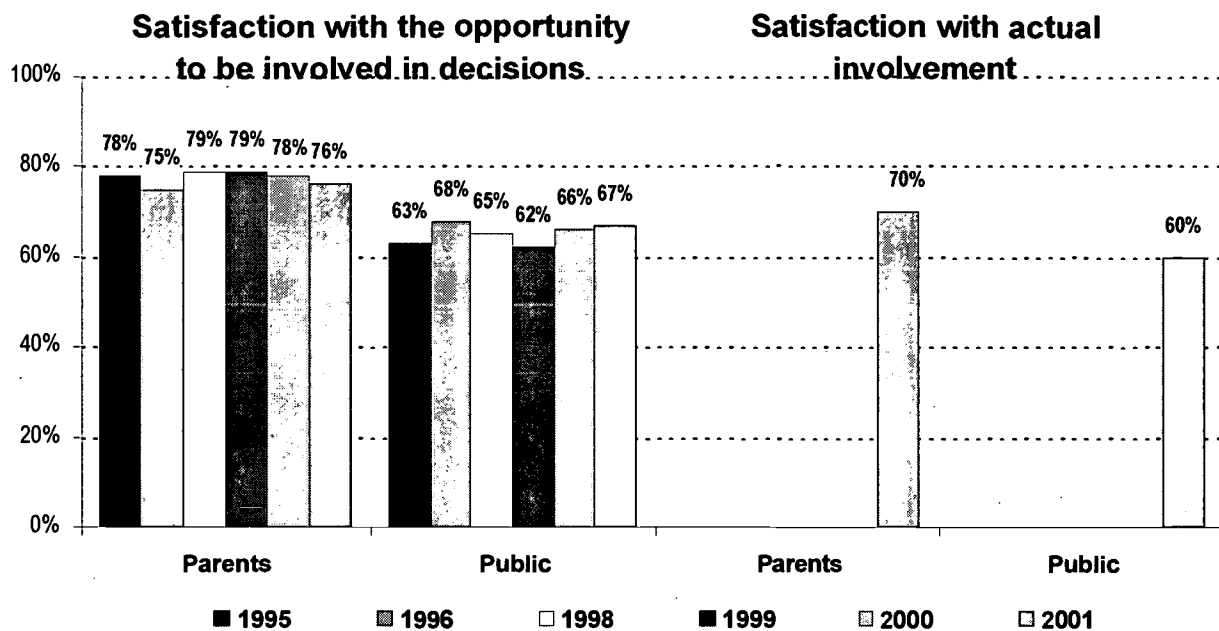

Parents (ECS – Grade 12) and the general public reported the extent they have been involved in the decision making process with any schools in their community. More than half (54%) of parents and 32% of the general public indicated that they have been involved a lot or somewhat in the decision making process at schools in their community.

The self-stated incidence of being involved in decision making remained at the 2000 level among parents. However, the general public was less likely to have indicated that they are involved compared to a year ago (32% vs 36%).

Both parents and the public reported their satisfaction with the opportunity to be involved and their actual involvement. The majority of parents (76%) and the public (67%) were satisfied with the opportunity to be involved in decision making. Parents were more likely to report satisfaction with their actual involvement compared to the public (70% vs 60%).

Although less involvement in decision making was reported compared to 2000, the general public reported similar results to the 2000 research. This is the first year that the parents and the public were asked about their actual involvement.

Figure 5: Percentage of Parents and the Public who Indicated Involvement in Decisions at Schools/Satisfaction with the Opportunity to be Involved in Decision-Making

Source: *EnviroNics West Surveys 1995, 1996; The Advisory Group Surveys 1998, 1999; Criterion Research Corp. Surveys 2000, 2001.*

Additional Subsegment Analysis

General public respondents aged 25-34 and 65 plus were less likely to have indicated that they were involved some in the decision making process in schools in their community. Those same age categories were more likely to report no involvement as well.

Those aged 35-44 were more likely to have indicated some involvement. They were also less likely to report no involvement. Those from rural areas were also less likely to have reported no involvement.

3.4. GOAL FIVE: HIGHLY RESPONSIVE AND RESPONSIBLE MINISTRY

3.4.1. Satisfaction of Learners, Employers and Taxpayers with the Value for Money Spent on the Learning System.

High levels of satisfaction (70%) were expressed among parents (ECS – Grade 12) with the value for the money spent in their child’s school. However, satisfaction among the general public that they are receiving value for the money that is spent in schools in their community was much lower (60%). Similar results were reported by the general public when asked if taxpayers are receiving value for money (58%). Approximately half of the general public respondents reported **their** satisfaction with the value for money spent whereas the other half reported their satisfaction that **taxpayers** are receiving value for money spent.

Seventy-four percent (74%) of adult learners were satisfied with receiving value for the money that is spent on adult learning institutions in their community, while only 62% of non-attendees reported their satisfaction with the value for money spent or that the taxpayer is receiving value for money spent. Approximately half of the non-attendee respondents reported **their** satisfaction with the value for money spent whereas the other half reported their satisfaction that **taxpayers** are receiving value for money spent. The survey results suggest that the alternate wording of the questions piloted this year (i.e., “if **taxpayers** are receiving value for money spent”) did not affect the result.

Compared to 2000, higher satisfaction with receiving value for the money spent on the learning system is reported by the public for both versions of the question for the schools in their community and by adult learners on adult learning institutions.

Table 15: Percentage of Adult Learners and the Public Who Are Satisfied That They/Taxpayers Are Receiving Value For Money That Is Spent on the Learning System

	1995	1996	1997	1998	1999	2000	2001
On (K-12) Schools in Your Community

¹ In 2001, half of respondents were asked if they are receiving value for money and the other half were asked ² if taxpayers are receiving value for money.

3.4.2. Responsiveness of the Education System to the Needs and Expectations of Parents, Students and the Public

The majority of parents (75%), students (89%), the general public (66%) and parents of children with either severe special needs (74%) or mild/moderate special needs (71%) were satisfied with the responsiveness of the education system to their needs and expectations.

Parents satisfaction declined slightly from last year, while students and the general public satisfaction was similar to 2000 levels.

Figure 6: Percentage of Parents, Students the Public Satisfied with the Responsiveness of the Education System to their Needs and Expectations

Source: *The Advisory Group Surveys, 1999; Criterion Research Corp. Surveys 2000, 2001*

Additional Subsegment Analysis

Parents of special needs children in ECS or kindergarten were more likely to report strong satisfaction with the responsiveness of the school than those with special needs children in higher grades.

The general public from Calgary were less likely to report satisfaction with the responsiveness of the school than were respondents from other regions of the province. Respondents aged 17-24 were more satisfied than older age groups.

3.4.3. Parents of Special Needs Children: Perceptions of Their Child’s Individual Program Plan

Parents of children with special needs were asked about their satisfaction with their child’s Individual Program Plan (IPP).

Parents of Special Needs Children who Agree that they Are Meaningfully Involved in the Development Child’s Individual Program Plan

The majority of parents of special needs children agreed that they were meaningfully involved in the development of their child’s IPP. Specifically, 80% of parents of children with severe special needs and 70% of parents of children with mild/moderate special needs agreed.

Figure 7: Percentage of Parents of Severe / Mild / Moderate who Agreed that they were Meaningfully Involved in Development of Individual Program Plan

Source: Criterion Research Corp. Surveys 2001

Additional Subsegment Analysis

Parents of children with severe special needs in ECS or kindergarten were more likely to agree that they were meaningfully involved in the development of their child’s IPP and its goals than were parents of children with severe special needs in higher grades.

Parents of children with mild/moderate special needs in ECS or kindergarten were more likely to agree with their child’s IPP goals, than were parents of children with mild/moderate special needs in higher grades.

3.4.4. Parents of Special Needs Children who Agree with Child’s Individual Program Plan Goals

The majority of parents of special needs children agreed with their child’s IPP goals. Specifically, 82% of parents of children with severe special needs and 74% of parents of children with mild/moderate special needs agreed.

Figure 8: Percentage of Parents Satisfied with Child’s Individual Program Plan Goals

Source: Criterion Research Corp. Surveys 2001

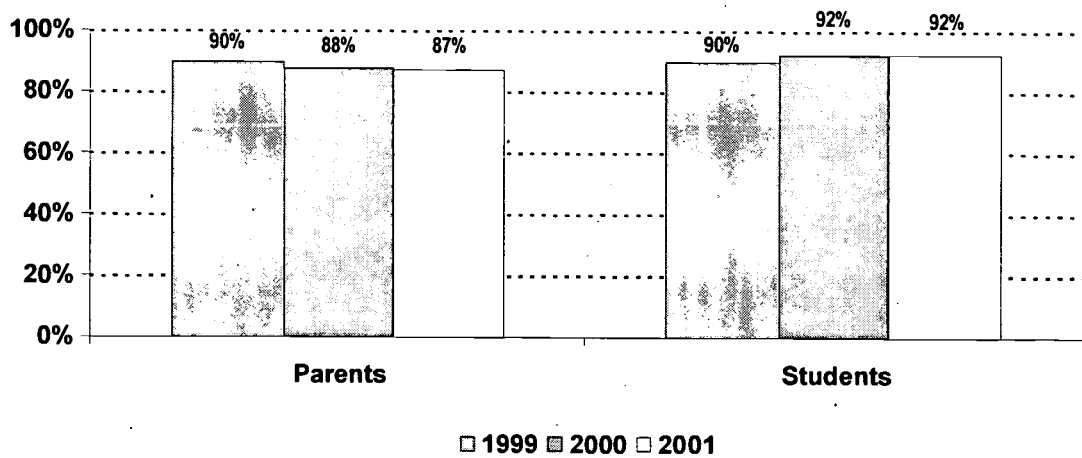

3.4.5. Satisfaction that Schools Provide a Safe and Caring Environment

Both parents and students were asked whether they agreed the school is providing a safe and caring environment.

A strong majority of parents and students agreed that schools provide both a safe and a caring environment.

Approximately 90% of parents agreed that their child’s school is safe (87%) and caring (87%). Similar proportions of students agreed that their school is safe (92%) and caring (89%). Over the three years, 1999, 2000 and 2001, there have been small changes among either respondent group.

Figure 9: Percentage of Parents and Students Who Agreed That Their School Provides a Safe Environment

Source: *The Advisory Group Surveys 1999; Criterion Research Group Surveys 2000, 2001.*

Figure 10: Percentage of Parents and Students Who Agreed That Their School Provides a Caring Environment

Source: The Advisory Group Surveys 1999; Criterion Research Group Surveys 2000, 2001.

3.4.6. Evaluation of Computers / Computer Skills in Alberta Schools

More than three-quarters (79%) of parents felt that the school is helping to improve their child’s computer skills a lot or some. Sixty-six percent (66%) of students felt the same way.

Since 2000, the percentage of parents who felt their school helps their child improve their computer skills has remained the same (79%), while the percentage of students has slightly decreased (66% from 69%).

Table 16: Percentage of Students and Parents Who Reported that School Helps Them/Their Child Improve their Computing Skills “Some” or “A Lot”

	1995	1996	1997	1998	1999	2000	2001
Parents	--	--	--	67%	80%	79%	79%
Students	62%	65%	62%	64%	70%	69%	66%

Source: *EnviroNics West Surveys 1995, 1996, 1997; The Advisory Group Surveys 1998, 1999; Criterion Research Group Surveys 2000, 2001.*

Seventy-three percent (73%) of parents and 86% of students were satisfied with the access to computers in their schools. This satisfaction, among both parents and students, has remained stable since 2000.

Figure 11: Percentage of Parents and Students Who were Satisfied With Their Child’s Access to Computers in School

Source: *The Advisory Group Surveys 1999; Criterion Research Corp. Surveys 2000, 2001.*

3.4.7. Satisfaction with Access to and Quality of Information on Student Achievement

Parents and the general public indicated their satisfaction with the information received about Alberta's elementary, junior and senior high schools.

The majority of parents were satisfied with both the access to information on their child's educational progress and achievement (87%) and the quality of the information (86%).

The general public was more satisfied with information received on overall student achievement in the district (65%) than from the provincial government (59%). Results are similar to the 2000 research except where public satisfaction with the information received from the provincial government is higher (59% vs 54%) in 2001.

The majority of parents of special needs children were satisfied with both the quality of information on student progress and on overall progress. Specifically, 83% parents of children with severe special needs indicated satisfaction with the quality of information and 79% on the overall progress. Parents of children with mild/moderate special needs reported lower satisfaction with the quality of information on student progress (78%) and on the progress overall (72%).

Table 17: Percentage of Parents and Public Who were Satisfied with Information Received on Student Achievement

	1995	1996	1997	1998	1999	2000	2001

Source: Environics West Surveys 1995, 1996, 1997; The Advisory Group Surveys 1998, 1999; Criterion Research Corp. Surveys 2000, 2001.

Note: In 1999, the measure of public satisfaction with overall student achievement in the school district was replaced with public satisfaction on overall student achievement from the provincial government.

Additional Subsegment Analysis

General public respondents from Edmonton were less likely to be satisfied with the information from their school district than were respondents from other regions of the province.

Parents of children with severe special needs in ECS or kindergarten were more likely to have reported strong satisfaction with the quality of progress information than were parents of children with severe special needs in higher grades.

In terms of satisfaction with the access to information about how money is specifically spent, satisfaction was higher with the access to information about how money is spent by the local school and local school board than about how money is spent by the provincial government on all schools.

Parents are more satisfied than the public with information about how money is spent by the local school (63% vs 48%) and by the local school board (53% vs 47%). The general public indicated slightly higher satisfaction about how money is spent by the provincial government on all schools (42% vs 41%).

Compared to 2000, similar percentages of both respondent groups were satisfied with the access they have to information about the various elements.

Table 18: Percentage of Parents and Public Who Are Satisfied With the Access They Have to Information about How Money Is Spent

	1995	1996	1997	1998	1999	2000	2001
By the Local School							
Parents	64%	60%	69%	66%	62%	63%	63%

Source: *Enviroics West Surveys 1995, 1996, 1997; The Advisory Group Surveys 1998, 1999; Criterion Research Corp. Surveys 2000, 2001*

As with satisfaction with the access to specific types of information, satisfaction with the information received about how money is spent by the local school and local school board was higher than satisfaction with the information received about how money is spent by the provincial government on all schools.

Parents were also more satisfied than the public with the information received about how money is spent by the local school (62% vs 47%) and local school board (50% vs 45%). The general public indicated slightly higher satisfaction with the information received about how money is spent by the provincial government on all schools in the province (41% vs 39%).

Compared to 2000, higher percentages of both respondent groups were satisfied with the information about how money is spent by the provincial government on all schools.

3.4.8. Most Useful Sources of Information about Alberta’s Elementary, Junior and Senior High Schools

Parents (ECS – Grade 12) and the general public reported the most useful source of information about Alberta’s elementary, junior and senior high schools.

One quarter or more of parents indicated that the school newsletter (39%), the school (29%) and the newspaper (25%) were the most important source of information. Lower proportions reported other parents (15%), teachers (12%), television (10%), the internet (9%), the school board (7%), their children (6%), the radio (5%) and the government (2%).

The general public indicated that the newspaper (25%), the school (17%), the school newsletter (16%) and the television (16%) were the most important source of information. Lower proportions reported teachers (12%), their children (9%), other parents (9%), the internet (7%), the radio (5%), the school board (4%) and the government (2%).

Newspapers, television and the school board have decreased in reported usefulness compared to 1996 for both respondent groups, while the mentions for Internet and other parents have increased.

Table 20: Most Useful Sources of Information about Alberta’s Elementary, Junior and Senior High Schools

	Parents			Public		
	1995	1996	2001	1995	1996	2001

When responses to overall satisfaction, environment elements, satisfaction with information elements, value for money elements and learner preparedness elements are compared based on most useful source of information, those respondents who indicated school sources were generally more likely to report satisfaction with the information elements.

Those respondents who indicated that personal sources are most useful were more likely to report lower levels of satisfaction with the learner preparedness elements. Compared to those who indicated media sources, those respondents who reported school sources were more likely to report satisfaction across the majority elements.

Elements of satisfaction were compared based on the responses to most useful source of information about the adult learning system. Those who indicated politicians or government as the most useful source were more likely to have reported satisfaction with the elements relating to value for money spent and preparation for the workforce. Media sources were identified as the most useful source of information by those with the highest levels of satisfaction regarding access to information.

Source: Criterion Research Corp. Surveys 2001.

*Sources of Information were grouped into media sources, public relations, personal sources, government sources and other sources. Media sources included TV, newspaper and radio. Public relations sources included public relations campaigns, brochures and calendars. Personal sources included personal, family and friends experience. Government sources included Government forums and politicians.

¹In 2001, half of respondents were asked if they are receiving value for money and the other half were asked ² if taxpayers are receiving value for money.

SECTION TWO – OTHER FINDINGS BY RESPONDENT GROUP

4. OTHER FINDINGS BY RESPONDENT GROUPS

4.1. PARENTS OF CHILDREN WITH SEVERE AND MILD / MODERATE SPECIAL NEEDS

4.1.1. Incidence of Receiving Various Services to Support Participation in School Program

The proportion of parents of special needs children who indicated their child receives specific services were reported for this year, 2000/2001, and last year, 1999/2000. In the 2000 research, respondents reported specific services received in 1999/2000.

Parents of Children with Severe Special Needs

As in the 2000 research, the majority of parents of children with severe special needs indicated that their child received a teacher assistance or aide (83%). Less than half of respondents indicated their child received speech language therapy (44%), management of behavioral problems (43%) and handicapped children's services (40%). Similar and lower proportions reported that their child receives occupational therapy (32%), regular medications or injections (32%), personal counseling (30%) and psychiatry or psychology (29%). Less than 25% each indicated equipment and supplies (24%), physiotherapy (20%), physical needs (20%), audiology (14%) and child welfare (13%). Approximately five percent mentioned emergency medications or injections (6%), sign language interpreter (6%), native liaison worker (6%), probation supervisor (6%), institutional placement (5%) and respiratory therapy (4%).

Differences compared to this year's recall of last years receipt of services included lower proportions indicating their child is receiving a teachers assistant or aide, speech language therapy, handicapped Children's Services and equipment or supplies. Higher proportions reported regular medications or injections this year.

Parents of Children with Mild/Moderate Special Needs

As with parents of children with severe special needs, the majority of parents of children with mild/moderate special needs indicated that their child received a teacher assistant or aide (56%). Thirty percent or less of respondents indicated speech language therapy (29%), management of behavioral problems (26%) and personal counseling (24%). Lower proportions reported that their

child receives regular medications or injections (18%), psychiatry or psychology (15%), occupational therapy (13%), audiology (12%), equipment or supplies (11%) and handicapped children's services (10%). Less than one in ten each indicated child welfare (8%), physiotherapy (6%), physical needs (6%), emergency medications or injections (4%), native liaison worker (4%), sign language interpreter (3%), probation supervisor (3%), respiratory therapy (3%) and institutional placement (3%).

Table 24: Incidence of Receiving Various Services to Support Participation in School Program

Service	Last Year Reported	SEVERE		MILD / MODERATE	
		1999/2000 Last Year (Recalled) ¹	2000/2001 This Year	1999/2000 Last Year (Recalled) ¹	2000/2001 This Year

Source: Criterion Research Corp. Surveys: 2000, 2001

Note: ¹ Results from 2000 research (last year reported) conducted by Criterion Research Corp. In 2001, respondents were asked which services were received last year (1999 / 2000) and this year (2000 / 2001).

4.1.2. Satisfaction with Specific Services Received to Support School Participation

Parents of Children with Severe Special Needs

Seventy-five percent or more of respondents indicated that services were easy to access: regular medications or injections (88%), physiotherapy (84%), physical needs (84%), audiology (81%), Handicapped services (81%), respiratory therapy (81%), emergency medications or injections (80%), occupational therapy (79%), personal counseling (79%), speech language therapy (77%), child welfare (76%), equipment/supplies (76%), probation supervision (76%), sign language interpreter (75%) and teacher assistant/aide (74%).

Lower proportions reported psychiatry and psychology (70%), behavioral problem management (70%), institutional placement (66%) and native liaison worker (65%).

Parents of Children with Mild/Moderate Special Needs

More than ninety percent of parents reported that probation supervision (96%) and regular medications/injections (92%) services were easy to access.

Seventy five percent or more indicated that handicapped services (88%), physical needs (86%), respiratory therapy (83%), equipment/supplies (83%), personal counseling (82%), physiotherapy (81%), emergency medications/injections (80%), audiology (78%), native liaison worker (78%), speech language therapy (77%), child welfare (75%), teacher assistant/aide (75%) services were easy to access.

Lower proportions of parents reported that sign language interpreter (71%), behavioral problem management (70%), occupational therapy (69%), psychiatry/psychology (58%) and institutional placement (58%) services were easy to access.

Table 25: Percentage of Parents of Children with Severe and Mild / Moderate Special Needs Who Agreed that Specific Services were Easy to Access

	Severe			Mild / Moderate
	1999	2000	2001	2001

Other services	75.4%	77.8%	69.0%	71.1%

Source: The Advisory Group Surveys 1999; Criterion Research Corp. Surveys 2000, 2001.

Similar to the 2000 research, parents who disagreed that a specific service was easy to access reported their reasons, they were in response to the specific service identified. The results of the 2000 research were qualitative in nature only and were not coded for analysis. The 2001 research included the coding of these responses and the tables are presented in Appendix D.

Main findings across both special needs segments include that parents consistently indicated the following:

- waiting lists are too long
- there is a poor quality of service
- they have to do it themselves/there isn't any help
- specialists and support staff are not available
- there is insufficient service
- there is a lack of funding
- information about services is hard to find and
- they have to prove that their child is a special needs child.

Parents of children with severe special needs also indicated that there is too much red tape and bureaucracy.

4.2. PARENTS OF CHILDREN WITH SPECIAL NEEDS WHO AGREED WITH ALLOCATION OF RESOURCES FOR STUDENTS WITH SPECIAL NEEDS UNDER THE STUDENT HEALTH INITIATIVE

This research included the responses of parents of special needs children regarding the Student Health Initiative. Parents were asked about their satisfaction with a number of Student Health Initiative elements: knowledge, opportunity for input, level of involvement and services received.

Similar proportions of parents of children with severe and mild/moderate special needs reported their satisfaction with their involvement (61% and 58%), they are knowledgeable about the partnership in their community (29% and 30%) and they have received services through the partnership (23% and 22%).

Parents of severe special needs children were more likely to agree that they had the opportunity to provide input (48% vs 42%). Other than their agreement with their knowledge about the partnership, parents of severe special needs were more likely to have reported their agreement with the elements of the Student Health Initiative.

Table 26: Percentage of Parents of Children with Special Needs who Agreed with Allocation of Resources for Students with Special Needs Under the Student Health Initiative

	Severe	Mild / Moderate
Knowledgeable		
About Student Health Partnership in community	29%	30%
Input		
Had the opportunity to provide input into the Student Health Partnership	48%	42%
Level of Involvement		
Satisfied with the level of involvement	61%	58%
Services		
Child has received student health services through the Student Health Partnership	23%	22%

4.3. PARENTS (ECS – GRADE 12)

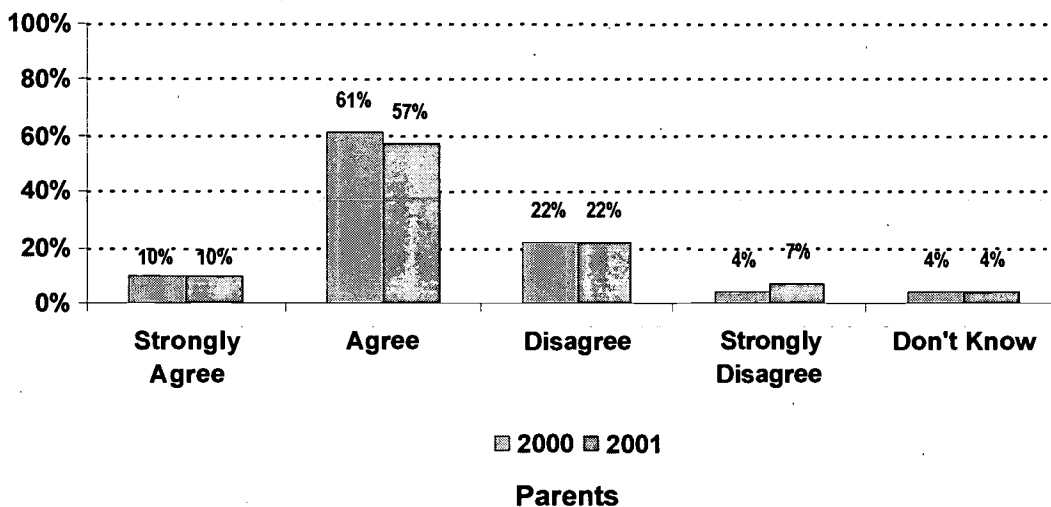

4.3.1. Parental Satisfaction with Information Needed to Access Programs and Services for their Child

Parents (ECS – Grade 12) were asked whether they agree that they can obtain the information they need to access programs and services that meet their child’s learning needs.

Two-thirds (67%) agreed or strongly agreed that they can obtain the information, while approximately one-third (29%) disagreed or strongly disagreed.

There was a slight decrease in the percentage of parents who agreed or strongly agreed that this information is obtainable in comparison to 2000 (67% from 71%), while those who disagreed or strongly disagreed increased slightly (29% from 26%).

Figure 12: Parental Satisfaction That They Can Obtain the Information Needed to Access Programs and Services for their Child

Source: Criterion Research Corp. Surveys 2000, 2001.

4.4. ADULT LEARNERS

4.4.1. Type and Location of Education / Training Taken in Past Twelve Months

Adult learners were asked to specify what types of education or training they had taken in the past twelve months. Respondents could give more than one response to this question.

The most common types of education or training taken by adult learners in the past twelve months were job-related courses (61%) and university, college or technical institute courses (59%). Fewer adult learners indicated they had taken training on the job (43%) or self-interest courses (39%) in the past twelve months, while 23% stated they had taken upgrading classes.

Compared to the 2000 research, adult learners reported lower incidence in all types of education or training except for on the job training which was slightly higher in 2001.

Figure 13: Types of Education / Training Taken in Past Twelve Months

Source: Criterion Research Corp. Surveys 2000, 2001.

Additional Subsegment Analysis

Older adult learners were more likely to report that they were involved in job related education or training, as were those who had two or more dependents. Younger age groups were more likely to report university or public college as the location for their education of training.

4.4.2. Where Education / Training was Taken in Past Twelve Months

When asked to specify where the education or training was taken, more than one-quarter of adult learners mentioned either public college (28%) or university (26%).

Lower percentages had taken education or training in the past twelve months at a technical institute (14%), the workplace (11%), high school (8%), private company (6%), private college (6%), in the community (4%), vocational college (2%), a private university college or church (2%) or private vocational school (1%)

Compared to 2000, similar proportions of respondents reported the same location of training or education in 2001.

Table 27: Where Education / Training was Taken in Past Twelve Months

	2000	2001
Location of Training / Education		
Public College	27%	28%
University	22%	26%
Technical Institute	14%	14%
Workplace	10%	11%

4.4.3. Main Reason for Taking Education / Training in Past Twelve Months

When asked to specify the main reason for taking any education or training in the past twelve months, approximately one in five (19%) adult learners identified “to improve their career or career opportunities” as the reason. Other reasons for taking education or training were cited by 15% or less: to get a job (15%), improve knowledge (13%), improve skills (11%), self development or improvement (9%), interest in the subject (7%), to complete or advance a degree (6%), required by employer (6%), to change a career (5%), to improve earnings (2%), for recreational or leisure interest (2%) and for community or volunteer involvement (less than 1%).

2001 results were similar to the results of the 2000 research.

Table 28: Main Reason for Taking Education / Training in Past Twelve Months

	2000	2001
Improve career / career opportunities	20%	19%
To get a job	13%	15%
Improve knowledge	13%	13%

* Less than 1%

4.4.4. Satisfaction that Adults are Able to Access Education / Training They Want

Three-quarters (75%) of adult learners expressed satisfaction that most adults are able to access the education or training they want. Results from the 2001 research were similar to the 2000 research.

Figure 14: Satisfaction that Adults are Able to Access Education / Training they Want

Source: Criterion Research Corp. Surveys 2000, 2001.

4.4.5. Main Reason for Being Satisfied / Dissatisfied with Education / Training Taken in Past Twelve Months

The adult learners who were satisfied overall with the education or training they had taken in the past twelve months were asked to provide the main reason for their satisfaction.

Almost one-third (31%) of adult learners who were satisfied with their education or training cited that the education made them more knowledgeable or skilled as the reason for their satisfaction, while 15% mentioned having good instructors.

Other reasons mentioned by one in ten or less of learners who were satisfied with their education or training included: the education made them more effective in their job (12%), it met their expectations (9%), got them a job (6%), it was quality education (4%), it made them more confident (4%), increased their recreational or leisure skills (3%), good facilities (2%), got them a promotion (1%) and small class sizes (1%).

Results were similar to the 2000 research.

Table 29: Main Reason for Being Satisfied with Education / Training Taken in Past Twelve Months

Those who are satisfied with education / training	2000	2001
Made me more knowledgeable / skilled	31%	31%
Good instructors	17%	15%
Made me more effective in job	10%	12%
Met my expectations	--	9%
Got a job	4%	6%
Quality education	--	4%
Made me more confident	2%	4%
Increased recreational / leisure skills	3%	3%
Good facilities	1%	2%
Got a promotion	1%	1%

* Less than 1%

Note: In 2001, where respondents provided a non-precoded response, these responses were coded and reported in the appropriate tables. Previous research provided such qualitative responses in verbatim form only.

Those adult learners who were dissatisfied with the education or training they had taken in the past twelve months provided the main reason for their dissatisfaction. However, due to the small sample of these respondents, caution is to be exercised in the interpretation of this data.

Approximately 15% cited having poor instructors (16%), expensive cost (16%) and the education or training not meeting their expectations (15%) as the reason for their dissatisfaction.

Less than 10% of respondents mentioned the information not being relevant (9%), too many people per class (5%), education in Alberta is too conservative (4%), scheduling issues (4%), not

learning anything new (2%), never getting a job (2%), courses being too long (2%) or too short (1%) as the reason for their dissatisfaction.

Compared to the 2000 research, greater proportions of adult learners reported the main reason for dissatisfaction results from poor instructors, too expensive, did not meet expectations and information is not relevant.

Table 30: Main Reason for Being Dissatisfied with Education / Training Taken in Past Twelve Months

Those who are dissatisfied	2000	2001
Poor instructors	13%	16%
Too expensive	10%	16%
Did not meet expectations	10%	15%
Information not relevant	4%	9%
Too many people per class	--	5%
Education in Alberta is too conservative	--	4%
Scheduling issues	2%	4%
Did not learn anything new	4%	2%
Never got a job	2%	2%
Too long	1%	2%
Too short	--	1%
Poor facilities	1%	--
Other Mentions	49%	22%
Don't Know	2%	--

Note: In 2001, where respondents provided a non-precoded response, these responses were coded and reported in the appropriate tables. Previous research provided such qualitative responses in verbatim form only.

4.4.6. Main Reason for Being Dissatisfied that Adults Taking Education / Training are Getting Appropriate Skills / Knowledge for the Workforce

Adult learners who expressed dissatisfaction that adults taking education or training are getting appropriate skills and knowledge to prepare them for the workforce were asked the reasons for their rating.

Approximately one in five were dissatisfied because of poor program quality (22%). Lower proportions cited incorrect items being taught (13%), individuals having poor life skills (11%), individuals not having enough technical expertise (9%), people generally unprepared (8%), more training required to get the job (6%), too expensive (4%), inadequate instructors (3%), lack of access for rural communities (3%), many still unemployed (3%), schools only want tuition but do not care (2%), people are not aware of programs and options (2%) and individuals having poor literacy skills (less than 1%).

Higher proportions cited poor program quality (22% vs 15%) and not having technical expertise (9% vs 4%) in 2001 compared to 2000.

Table 31: Main Reason for Being Dissatisfied that Adults Taking Education / Training are Getting Appropriate Skills / Knowledge for the Workforce

	2000	2001
Poor program quality	15%	22%
Incorrect items being taught	10%	13%
Individuals have poor life skills	14%	11%
Individuals do not have enough technical experience	4%	9%
People generally unprepared	--	8%
More training required to get job	--	6%
Too expensive	--	4%
Need more experience	--	4%
Instructors are out of touch	--	3%
Instructors are inadequate	6%	3%
Lack of access / Rural communities	--	3%
Many still unemployed	--	3%
School only wants tuition but does not care	--	2%
People are not aware of programs / options	--	2%
Individuals have poor literacy skills	4%	1%
Other Mentions	37%	9%
Don't Know	9%	3%

Source: Criterion Research Corp. Surveys 2000, 2001.

Note: In 2001, where respondents provided a non-precoded response, these responses were coded and reported in the appropriate tables. Previous research provided such qualitative responses in verbatim form only

4.4.7. Indication of Whether Education / Training would be Taken Again

Reflective of the high levels of satisfaction among adult learners, the majority (86%) indicated that they would take the education or training again.

Table 32: Indication of Whether Education / Training would be Taken Again

	2000	2001
Would take education / training again	83%	86%
Would not take education / training again	16%	14%

Source: Criterion Research Corp. Surveys 2000, 2001.

Respondents indicated that the main reasons for taking education or training again are their satisfaction (7%), education or training is required or necessary (4%), to become more effective (3%) and related or advanced courses (2%).

Table 33: Reason for Taking Education Training Again

	2001
No Mentions	62%
Satisfied	7%
If Required / Necessary	4%
To get more effective	3%
Related / Advanced courses	2%
Other general negative comments	2%
Other Mentions	7%
Don't Know	15%

Note: Numbers do not add to 100% due to rounding.

4.5. ADULT NON-ATTENDEES

4.5.1. Reasons for Not Taking Education or Training in the Past Twelve Months

All general public respondents who indicated that they had not taken any education or training in the past twelve months were asked to provide the main reason for not taking any.

The most frequent responses were “not having the time” (29%) or “feeling that education is not necessary” (25%). Less frequently mentioned were “their age” (10%), “education costing too much” (8%), “not being interested” (7%), “family obligations” (7%), “not being available locally” (3%) and “physical barriers” (1%) as the reason for not taking any education or training in the past twelve months.

Results from 2001 were similar to the 2000 research.

Table 34: Main Reason for Not Taking Education / Training in Past Twelve Months

	2000	2001
Do not have the time	26%	29%
Not necessary	26%	25%
Age (retired)	9%	10%
Costs too much	7%	8%
Not interested	8%	7%
Family obligations	8%	7%
Not available locally	2%	3%
Physical barriers	1%	1%
Other Mentions	10%	9%
Don't Know	2%	1%

Source: Criterion Research Corp. Surveys 2000, 2001.

Those respondents who indicated that cost was a factor in not taking any education or training in the past twelve months were asked if they applied for government sponsored financial aid. Of those respondents, 44% indicated that they did apply for financial aid from the government. Of those who applied for financial assistance, 22% indicated that they did not receive this financial aid.

Table 35: Incidence of Applying for / Receiving Government Sponsored Financial Aid Among those who Indicate Cost was a Reason for Not Taking Education / Training in Past Twelve Months

	2001
Applied for Government Aid (n=91)	44%
Received assistance	78%
Did not receive assistance	22%
Did Not Apply for Government Aid	56%

Source: Criterion Research Corp. Surveys 2001.

Those respondents who did not take education or training in the past twelve months were asked if they ever had taken training or education in adult learning. Of non-attendees in the past year that mentioned cost as a factor for not taking education or training, 54% indicated that they have taken some education or training in Alberta’s adult learning system at some time.

Table 36: Incidence of Non-attendees Who Cited Cost as a Factor Indicating That They Have Ever Accessed Adult Education or Training in Alberta

	2001
Ever taken education or training in adult learning	
Yes	54%
No	46%

4.5.2. Reasons for Being Dissatisfied that Adults Taking Education / Training are Getting Appropriate Skills

Adult non-attendees who were dissatisfied that adults taking education or training are getting the appropriate skills or knowledge for the workforce were asked to cite the reasons for their dissatisfaction.

Approximately one in five cited poor program quality (17%). Other mentions included that training is not effective to get ahead (13%), incorrect items being taught (12%), individuals not having enough technical experience (10%), individuals having poor life skills (9%), funding

issues (6%), not enough available (5%), instructors being inadequate (5%), dissatisfied in general (4%), no jobs (4%) and individuals having poor literacy skills (3%).

Compared to 2000, non-attendees were more likely to cite poor program quality (17% vs 10%), incorrect items being taught (12% vs 6%) and individuals have poor life skills (9% vs 3%) as main reasons for being dissatisfied.

Table 37: Main Reason for Being Dissatisfied that Adults Taking Education / Training are Getting Appropriate Skills / Knowledge for the Workforce

	2000	2001
Poor program quality	10%	17%
Training not effective in getting ahead	--	13%
Incorrect items being taught	6%	12%
Individuals do not have enough technical experience	11%	10%
Individuals have poor life skills	3%	9%
Funding issues (not available / too expensive)	--	6%
Not enough available	--	5%
Instructors are inadequate	5%	5%
Dissatisfied (general)	--	4%
No jobs	--	4%
Individuals have poor literacy skills	2%	3%
Need to start training for career in High School	--	2%
Poor work ethic	--	2%
Program length (too short / too long)	--	2%
Institutions are out of touch	6%	2%
Other Mentions	48%	6%
Don't Know	9%	3%

Source: Criterion Research Corp. Surveys 2000, 2001.

Note: In 2001, where respondents provided a non-precoded response, these responses were coded and reported in the appropriate tables. Previous research provided such qualitative responses in verbatim form only.

4.5.3. Satisfaction that Most Adults are Able to Access the Education / Training They Want

Seventy-one percent (71%) of respondents were satisfied that most adults are able to access the education or training they want. Similar results were reported in 2000.

Figure 15: Satisfaction that Adults are Able to Access Education / Training they Want

Source: Criterion Research Corp. Surveys 2000, 2001.

Those respondents who were dissatisfied that most adults are able to access the education or training they want were asked to cite the reasons for their dissatisfaction.

Twenty-one percent (21%) cited costs are more than what is considered worth as the reason for their dissatisfaction. Lower proportions cited that their debt load to be incurred would be too high (12%), too expensive (11%), geographic problems (8%), lack of available courses (8%), loans to those in need are insufficient (5%), entrance requirements too high (5%), lack of flexibility (5%), local access issues (4%), lack of appropriate courses (3%) and student grants are insufficient (3%) as the reason for their dissatisfaction.

Results from 2001 were similar to the 2000 research.

Table 38: Main Reason for Being Dissatisfied that Most Adults are Able to Access Education / Training they Want

	2000	2001
Costs are more than what is considered worth	21%	21%
Debt load to be incurred too high	9%	12%
Too expensive	--	11%
Geographic problem	10%	8%
Lack of available courses	10%	8%
Loans to those in need are insufficient	6%	5%
Entrance requirements too high	4%	5%
Lack of flexibility	4%	5%
No access locally	--	4%
Lack of appropriate courses	--	3%
Student grants are insufficient	2%	3%
Less accessible to low income people	--	2%
Should be available to all	--	2%
People don't know about it	--	2%
Not enough openings	--	2%
Lack of information on careers	4%	2%
Other time issues	--	2%
Other Mentions	27%	6%
Don't Know	3%	1%

Source: Criterion Research Corp. Surveys 2000, 2001.

Note: In 2001, where respondents provided a non-precoded response, these responses were coded and reported in the appropriate tables. Previous research provided such qualitative responses in verbatim form only.

4.5.4. How Resources Should be Invested in Alberta's Adult Learning System

All adult non-attendees reported how they think resources should be invested if the Alberta's adult learning system had additional resources.

Fifteen percent (15%) cited reduction in tuition as how additional resources should be invested. Approximately one in ten each suggested that additional resources should be invested to increase access to education or training (9%), increasing student financial aid (7%) or improving the quality of education or training (6%), more programs (6%) and improve programs (5%). Four percent (4%) each suggested increase funding, improving the skills of the workforce and upgrading buildings or equipment.

Higher proportions cited reduction in tuition as how additional resources should be invested in the adult learning system compared to the 2000 research (15% vs 11%).

Table 39: How Additional Financial / Non-Financial Resources Should be Invested in Alberta's Adult Learning System

	2000	2001
Reduce tuition	11%	15%
Increase access to education / training	9%	9%
Increase student financial aid	8%	7%
Improve quality of education / training	8%	6%
More programs	--	6%
Improve programs / training / courses	--	5%
Increase funding	--	4%
Improve skills of the workforce	2%	4%
Upgrade the buildings / equipment	2%	4%
Increase access	--	3%
Make smaller / More classrooms	--	2%
Programs to put people in the workforce	--	2%
Improve instructors / instruction	--	2%

Source: Criterion Research Corp. Surveys 2000, 2001.

Note: In 2001, where respondents provided a non-precoded response, these responses were coded and reported in the appropriate tables. Previous research provided such qualitative responses in verbatim form only.

4.5.5. Strongest Influence on Opinions of Adult Learning System

Approximately 30% of adult non-attendees indicated that personal experiences (30%) and the experiences of friends or family members (28%) most strongly influenced their opinions of the adult learning system.

One in five (21%) cited the media as the strongest influence on their opinions, while 12% were most influenced by brochures or calendars, 2% by government forums or politicians and 1% by public relations campaigns.

Similar results were reported in the 2000 research.

Table 40: Strongest Influence on Opinion of Adult Learning System

	2000	2001

4.6. HIGH SCHOOL STUDENTS

4.6.1. Agreement with Aspects of Apprenticeship Training and the Trades as a Career Choice; Factors Influencing Career Choices

Students were asked to rate their agreement with statements concerning apprenticeship training, the trades as a career choice and about the factors which influence those choices.

Ninety-two percent (92%) reported that they plan to pursue a university or college education. Over 80% reported that parents and family shaped career choices (86%), they would recommend the trades as a viable career choice (84%), they are aware of the trades as a career choice (82%) and that careers in the trades are interesting and challenging (81%).

Lower proportions indicated that friends and high school students influenced career choices (71%), teachers, guidance and/or career counselors influenced career choices (71%), their counselor/teacher increased awareness of the trades(70%), they have considered a career in the trades (54%), post-secondary institutions web sites influenced career choices (50%), post-secondary institutions advertising influenced career choices (47%), they plan to pursue a trade (38%) and other internet advertising influenced career choices (27%).

There tended to be greater awareness and agreement by male students than female students regarding apprenticeship training and the trades as career options.

Table 41: 2001 Results - Agreement with Aspects of Apprenticeship Training and the Trades as a Career Choice; Factors Influencing Career Choices

	2001
I plan to pursue a university or college education.	92%
Parents and family helped me to shape my career choices.	86%
I would recommend the trades as a viable career choice for others.	84%
I am aware of apprenticeship training and the trades as a career choice.	82%
Careers in the trades are interesting and challenging.	81%
Friends and high school students helped me to shape my career choices.	71%
Teachers, guidance counselors and/or career counselors helped me to shape my career choices.	71%
My counselor/teacher made me aware of the options available in apprenticeship and industry training.	70%
I have considered the trades as a career option.	54%
Information from post-secondary institutions on their internet web sites influenced my career choices.	50%
Advertisements from post-secondary institutions on television, radio and in newspapers influenced my career choices.	47%
I plan to pursue a trade as my career choice.	38%
Other advertising on trades/internet web sites such as Tradesecrets.com. influenced my career choices.	27%
Other Factors Influencing Career Choices: Personal Factors (NET)	9%
Personal Interests	7%
Personal Goals	1%
Myself	1%
Personal Experience	*

5. ADDITIONAL SUBSEGMENT ANALYSIS

Where trends were apparent based on subsegment demographics, these trends were noted.

5.1. PARENTS OF CHILDREN WITH SPECIAL NEEDS

Parents of children with either severe or mild/moderate special needs, with children in ECS or kindergarten, tended to provide strong agreement and satisfaction ratings. These parents were likely more active in their child's education at this stage and this may have contributed to higher ratings.

5.2. PARENTS (ECS – GRADE 12)

As with parents of special needs children, parents with children in the lower grades, specifically ECS or kindergarten, provided higher strong agreement and satisfaction ratings.

5.3. HIGH SCHOOL STUDENTS

Male students were more likely to have indicated awareness of and the possibility of apprenticeship training and the trades as a career choice than female students.

5.4. THE GENERAL PUBLIC AND ADULT LEARNERS

Regionally, respondents from Calgary were less likely to have high agreement/satisfaction levels on a majority of elements. Other urban centres (excluding Calgary and Edmonton) were more likely to have high agreement/satisfaction levels on a majority of elements.

When looking at quality of and access to information and preparedness, Edmonton respondents had lower satisfaction/agreement levels, while rural respondents had higher satisfaction/agreement levels.

Younger respondents, particularly in the 17-24 age group, were more likely to have high agreement/satisfaction levels, while older respondents, particularly in the 45-64 age group, tended to have lower agreement/satisfaction levels on a majority of elements. Results were similar for adult learners in the 17-24 age group, whereas learners in the 25-34 age group were less likely to have high satisfaction/agreement levels.

Male respondents had higher satisfaction/agreement levels than female respondents on a majority of elements.

Self employed respondents had lower satisfaction/agreement levels than other respondents, while those who indicated they were students had higher satisfaction levels than respondents who were not students.

General public respondents (re K-12 education) with two or more dependents had higher satisfaction/agreement levels than those with no dependents.

6. CONCLUSIONS AND OBSERVATIONS

Satisfaction with Alberta's learning systems continued to remain high and similar to the levels indicated in 2000.

Respondent groups actively involved in the learning system (i.e. parents and adult learners) had high satisfaction/agreement levels in comparison to those who were not (i.e. general public).

High Quality Learning Opportunities

Generally, parents (ECS – Grade 12), high school students and adult learners reported high levels of satisfaction/agreement. The majority of parents and the public feel that students are learning what they need to know overall (81% and 64% respectively), specifically in the areas of science (89% and 80%), social studies (84% and 70%), reading (83% and 68%) and mathematics (81% and 70%). Lower proportions agreed that students are learning what they need to know in the areas of writing (79% and 62% respectively) and technology skills (70% and 65%).

Parents of children with special needs tended to have high satisfaction/agreement levels (61% to 77%), but were less likely than parents and high school students to agree that students are learning what they need to know. Parents of children with mild/moderate special needs had higher satisfaction/agreement levels than parents of children with severe special needs that their children are learning what they need to know in the areas of writing and mathematics.

Parents of special needs children were satisfied with most aspects of special needs services that their children receive. Parents of children with severe special needs indicated higher satisfaction than parents of mild/moderate special needs children, particularly in the areas of service provision, effectiveness, efficiency and relevance elements.

Parents of children with special needs were less satisfied that "services for my child were arranged quickly." As in previous research, arranging services quickly and increasing accessibility are areas with room for improvement.

Similar to the 2000 research, roughly one in three adults over the age of 17 reported accessing adult learning education or training within the last 12 months. Respondents in Edmonton were more likely than those from other cities or rural areas in Alberta to have accessed the system in the last 12 months (36% in Edmonton vs 32% in Calgary, 29% in other urban cities and 25% in

rural). Calgary respondents were less likely in 2001 compared to 2000 to have accessed the system (32% vs 36%).

Excellence in Learner Achievement

The vast majority of parents and high school students agreed that teachers are using appropriate strategies (76% to 80%) and are setting appropriate learning expectations and standards (75% to 91%).

Parents (ECS – Grade 12), high school students and parents of children with special needs all had high levels of agreement that teachers use methods to help their children learn.

Well Prepared Learners for Lifelong Learning, the World of Work and Citizenship

High school students strongly agreed that they are prepared for post-secondary education and training (86%), and for citizenship (80%). By comparison, only about half of parents (53%) and the public (60%) agreed that students are prepared for post-secondary education and training, and less than half agreed that they are prepared for the rights and responsibilities of citizenship (43% and 48% respectively). These low satisfaction levels suggest that there may be a need for enhanced communication to parents and the public about student outcomes.

The majority of adult learners and non-attendees agreed that adult learners have the appropriate combination of skills and knowledge for lifelong learning (80% and 75% respectively), the workforce (82% and 75%) and the rights and responsibilities of citizenship (69% and 67%). In the areas of lifelong learning and the workforce, those actively involved in the adult learning system were more likely to have high agreement levels than those not involved in the learning system.

Actual involvement in decisions at local schools for 2001 remained unchanged from 2000 for parents (54%) but decreased for the public (from 36% to 32%). Half of parents (54%) and one third of the public (32%) were involved in decisions at the local school. Higher participation in decisions at the local school was associated with higher satisfaction levels.

Highly Responsive and Responsible Ministry

Those who participated in the learning system (i.e. parents and learners) had higher satisfaction levels with receiving value for money than those who did not (i.e. the public and non-attendees). Whether for schools in their community or for adult learning institutions, parents and adult learners had high satisfaction levels in comparison to the public and non-attendees with receiving value for money spent on the learning system.

Participating in decision making, being involved in the learning system, and other elements impact satisfaction regarding value for money spent. Improving access to and the quality of information regarding how money is spent by the local school, the school board and the provincial government are associated with increased satisfaction with receiving value for money spent.

General public respondents tended to report, with similar agreement, that either they personally felt **they** were receiving value for money or that **taxpayers** were receiving value for money. It may be that respondents do not differentiate themselves from taxpayers when asked about value for money spent. (i.e. the alternate wording for this question had no effect on the findings).

Parents (ECS – Grade 12) reported higher satisfaction levels than the general public with both the access to and the information itself regarding how money is spent by the local school and the local school board. Similar but lower proportions of both respondent groups were satisfied with the access to information regarding how the provincial government spends money.

Parents (ECS – Grade 12), high school students and parents of children with special needs had high satisfaction levels with both the access to and the information on student achievement.

Most respondent groups were satisfied with the responsiveness of the education system to their needs and expectations. High school students, parents (ECS – grade 12) and parents of special needs children had the highest satisfaction levels.

Respondents citing school or government sources as their most useful source of information (compared to other sources of information,) were more likely to have higher satisfaction/agreement levels. In contrast, when media or personal sources were indicated as most useful, satisfaction or agreement ratings tended to be lower. Adult learners and non-attendees who indicated that politicians or government were their most useful source of

information were more likely to have higher satisfaction/agreement levels regarding value for money spent and preparation for the workforce.

Parents of special needs children strongly agreed (80% of parents of children with severe special needs and 70% of parents of children with mild/moderate special needs) that they were meaningfully involved in the development of their child's Individual Program Plan (IPP) and its goals.

As in previous years' survey findings, satisfaction that schools provide a safe and caring environment was high for both parents and students.

Satisfaction with access to computers in schools was very high for students (86%), but somewhat lower for parents (73%). Satisfaction that schools help them/their child improve their computing skills was 79% for parents, but only 66% for students. The lower satisfaction level for students may relate, in part, to the fact that many students acquired high levels of computing skills outside the school, and, consequently feel that school did not help them "improve" their computing skills.

information were more likely to have higher satisfaction/agreement levels regarding value for money spent and preparation for the workforce.

Parents of special needs children strongly agreed (80% of parents of children with severe special needs and 70% of parents of children with mild/moderate special needs) that they were meaningfully involved in the development of their child's Individual Program Plan (IPP) and its goals.

**YEAR 2001 SATISFACTION WITH EDUCATION IN ALBERTA
PARENTS OF CHILDREN WITH MILD MODERATE AND SEVERE SPECIAL
NEEDS SURVEY
FINAL DOCUMENT (March 27, 2001)**

Hello, my name is _____ from Criterion Research, an opinion research firm. On behalf of Alberta Learning, we are asking a random sample of parents/guardians of children with special needs about their satisfaction with various aspects of their children's special needs programs during the 2000-2001 school year.

PAT RESPONSE (If unsure of what Alberta Learning is): Alberta Learning is a new Alberta government department, formed in May 1999 when the former departments of Alberta Education (which had responsibility for Kindergarten to Grade 12) and Alberta Advanced Education and Career Development (which had responsibility for post-secondary and adult learning) joined.

Please be assured that we are not trying to sell you anything. We are just interested in your opinions. All answers are kept confidential. Your responses will help to provide the Alberta Government with information to improve the way services are provided for children with special needs.

For the purposes of this survey, may I please speak to the person in your household who is the parent/guardian of a child with special needs and is the person who has had the most recent birthday. Would that be you?

- 1 Yes
- 2 No **ARRANGE CALLBACK/REINTRODUCE IF NECESSARY**

Contact Name/Phone Number:

If you have any questions or concerns about this research project, please do not hesitate to call Terry Wendel at the Special Programs Branch of Alberta Learning in Edmonton, (780) 422-6326.

1. Is your special needs child in *READ LIST* (NOTE: IF THE PARENT INDICATES MORE THAN ONE SPECIAL NEEDS CHILD IN SCHOOL, ASK PARENT TO ANSWER THE REMAINING QUESTIONS FOR THE CHILD WITH THE MOST RECENT BIRTHDAY)

- 1 Kindergarten/Early Childhood Services
- 2 Grades 1 to 6

**YEAR 2001 SATISFACTION WITH EDUCATION IN ALBERTA:
PUBLIC/ADULT LEARNER SURVEY - FINAL**

Hello, my name is _____ from Criterion Research, an opinion research firm. We are conducting a survey on behalf of Alberta Learning. Please be assured that we are not trying to sell you anything. We are just interested in your opinions. Responses to this survey will be reported on an aggregate basis only; individual identities and responses are confidential.

For the purposes of this survey, may I please speak to the person in your household who is 17 years of age or older and has had the most recent birthday (would that be yourself)?

- 1 Yes
2 No **ARRANGE CALLBACK / REINTRODUCE IF NECESSARY**

PAT RESPONSE (If unsure of what Alberta Learning is): Alberta Learning is a new Alberta government department, formed in May 1999. Alberta Learning was formed from the former departments of Alberta Education (which had responsibility for Kindergarten to Grade 12) and Alberta Advanced Education and Career Development (which had responsibility for post-secondary and adult learning).

**IF QUOTA FOR PUBLIC SURVEY (N=2000) IS FULL, SKIP TO SECTION B
OTHERS CONTINUE**

Contact Name/Phone Number:

If you have any questions or concerns about this research project, please do not hesitate to call Pat Ehman at Alberta Learning in Edmonton (780) 427 – 3583.

SECTION A

Note: Structure CATI so that half the respondents answer version #1 of Q.#1.a and half answer version #2 (n=2000; 1,000 respondents answer each version of Q.#1.a.

1a(v1) Thinking about Alberta's learning system as a whole - that is, including elementary, junior and senior high schools, and post-secondary institutions - would you READ ANSWER SET that Alberta's learning system is **affordable**?

1a(v2) Thinking about Alberta's learning system as a whole - that is, including elementary, junior and senior high schools, and post-secondary institutions - would you READ ANSWER SET that Alberta's learning system is **within the means of most Albertans?**

1 Strongly Agree

2 Agree

3 Disagree

4 Strongly disagree

(DO NOT READ) 5 Don't Know/Not Applicable

1.b For what reason did you give that rating?

Now, I'd like to ask you some questions specifically about elementary, junior and senior high school education in Alberta.

2. Overall, how satisfied are you with the quality of education that students in elementary, junior and senior high schools are receiving in your community? Are you... **(ROTATE AND READ)**

1 Very satisfied

2 Satisfied

12. **Rural Central:** Rocky Mountain House, Sundre, Innisfail, Stettler, Lacombe, Wetaskiwin, Drumheller, Wainwright
13. **Rural South:** Brooks, Claresholm, Fort MacLeod, Cardston, Taber, High River

APPENDIX B – DETAILED METHODOLOGY

1. DISTRIBUTION OF INTERVIEWS BY REGION / REGION QUOTAS

1.1 Parents of ECS – Grade 12 Students/High School Students/Parents of Children with Severe Special Needs/Parents of Children with Mild/Moderate Special Needs

Samples for the Parents of ECS – Grade 12 Students, High School Students and Parents of Children with Severe and Mild/Moderate Special Needs segments consisted of a listing of student names. The majority of the original samples (of 4,000 names per segment) were accompanied by telephone numbers. A portion of the original samples were missing telephone numbers and were looked up by Criterion Research.

To avoid any bias toward conducting interviews in those areas that may or may not have had more telephone numbers than others (for example, urban locations versus rural locations), quotas based on the geographic distribution of names in the original samples were implemented. For comparability of results between the years, these region quotas were based on the census divisions as they stood in 1999.

1.1. Parents of ECS – Grade 12 Students

Region	# in Sample	Proportion	Quota	# of Listings*
Calgary (CD 6)	1,321	33.0%	264	1295
Edmonton (CD 11)	1,312	32.8%	263	1204
South (CD 1,2,3)	306	7.6%	61	302
Central (CD 4,5,7,8, 9,10,14,15)	567	14.2%	113	651
North (CD 12,13,16, 17,18,19)	494	12.4%	99	375
	4,000	100%	800	3827

* After matching the phone number to the name and/or address provided

1.2. High School Students

Region	# in Sample	Proportion	Quota	# of Listings*
Calgary (CD 6)	1,348	33.7%	270	1323
Edmonton (CD 11)	1,375	34.3%	275	1233
South (CD 1,2,3)	282	7.0%	56	284
Central (CD 4,5,7,8, 9,10,14,15)	540	13.5%	108	616
North (CD 12,13,16, 17,18,19)	455	11.4%	91	344
	4,000	100%	800	3800

* After matching the phone number to the name and/or address provided

1.3. Parents of Children with Severe Special Needs

Region	# in Sample	Proportion	Quota	# of Listings*
Calgary (CD 6)	1,091	27.3%	218	995
Edmonton (CD 11)	1,283	32.1%	257	1234
South (CD 1,2,3)	343	8.6%	69	324
Central (CD 4,5,7,8, 9,10,14,15)	626	15.6%	125	584
North (CD 12,13,16, 17,18,19)	657	16.4%	131	610
	4,000	100%	800	3747

* After matching the phone number to the name and/or address provided

1.4 Parents of Children with Mild/Moderate Special Needs

Region	# in Sample	Proportion	Quota	# of Listings*
Calgary (CD 6)	1033	25.8%	207	1018
Edmonton (CD 11)	1157	28.9%	232	1134
South (CD 1,2,3)	431	10.8%	86	424
Central (CD 4,5,7,8, 9,10,14,15)	717	17.9%	143	689
North (CD 12,13,16, 17,18,19)	662	16.6%	132	342
	4,000	100%	800	3907

* After matching the phone number to the name and/or address provided

1.5 General Public / Adult Learners

Geographic quotas were also established for the general public interviews. These quotas were based on the age and gender distribution of Alberta by census division. The following table demonstrates the total number of interviews achieved:

		CENSUS DIVISION																		
		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
17	M	3	13	3	1	4	68	1	14	1	4	89	4	3	1	0	4	5	1	3
-24	F	4	14	2	1	1	63	4	11	0	5	105	3	5	3	2	2	2	1	12
25	M	16	25	5	4	9	233	8	24	2	16	211	16	10	6	7	9	13	2	19
-44	F	18	35	8	5	11	299	10	43	5	20	343	16	19	8	14	10	11	7	23
45	M	8	19	4	0	6	112	7	17	1	9	102	4	7	3	6	5	4	0	9
-64	F	13	19	4	2	6	131	8	24	2	14	179	10	14	5	5	3	8	3	17
65+	M	2	5	2	1	2	18	3	3	2	3	29	1	2	1	1	1	0	1	1
	F	2	11	2	1	3	39	4	10	1	6	40	3	3	1	1	1	1	1	3
Totals		66	141	30	15	42	963	45	146	14	77	1098	57	63	28	36	35	44	16	87

The interviews achieved were then grouped by geographic region according to the same dispersal as was used in previous years. These sub-groupings formed the basis for the weights used.

Region	Unweighted Total	Proportion	Weighted Total	Proportion
Calgary	835	27.8%	879	29.3%
Edmonton	721	24.0%	687	22.9%
Other Urban	482	16.0%	429	14.3%
Rural Areas	962	32.0%	1005	33.5%
	3000	100%	3000	100%

The communities included in each of these sub-groupings are as follows:

- **Calgary:** Calgary
- **Edmonton:** Edmonton, Winterburn
- **Other Urban:** Airdrie, Camrose, Drumheller, Fort McMurray, Fort Saskatchewan, Grande Prairie, Leduc, Lethbridge, Lloydminster, Medicine Hat, Red Deer, Spruce Grove, St. Albert, Wetaskiwin
- **Rural Areas:** All towns, villages and hamlets in Alberta, including the hamlet of Sherwood Park*

* Alcomdale, Alsike, Athabasca, Barrhead, Bawlf, Beaumont, Beaverlodge, Beiseker, Bentley, Big Valley, Black Diamond, Blackfalds, Blackie, Bonanza, Bow Island, Boyle, Bragg Creek, Breton, Brooks, Brownvale, Buffalo, Busby, Calahoo, Calmar, Canmore, Carbon, Cardston, Caroline, Carrot Creek, Carseland, Chipman, Clairmont, Claresholm, Clyde, Coaldale, Cochrane, Cold Lake, Coleman, Conklin, Coronation, Crooked Creek, Crossfield, Czar, Daysland, De Winton, Delia, Devon, Diamond City, Didsbury, Donalda, Donnelly, Drayton Valley, Duffield, Edgerton, Edson, Elk Point, Elkwater, Eureka River, Exshaw, Fairview, Falher, Falun, Flatbush, Foremost, Forestburg, Fort Assiniboine, Fort Kent, Fort Macleod, Fort Vermillion, Fox Creek, Gleichen, Grand Centre, Grande Cache, Granum, Grassland, Grimshaw, Hanna, Irma, Irricana, Islay, Jasper, Jarvie, Kinsella, Kirriemuir, La Crete, Lac La Biche, Lacombe, Langdon, Legal, Lodgepole, Longview, Lundbreck, Ma Me O Beach, Magrath, Manning, Markerville, Marwayne, McLennan, Millerville, Millet, Morinville, Morrin, Mulhurst, Namao, Nanton, New Serepta, Niton Junction, Nobleford, Nordegg, Okotoks, Olds, Oyen, Peace River, Peers, Penhold, Perryvale, Picture Butte, Pincher Creek, Ponoka, Purple Springs, Radway, Ralston, Raymond, Redcliff, Rimbey, Riviere Qui Barre, Rocky Mountain House, Rycroft, Ryley, Sangudo, Schuler, Sedalia, Sexsmith, Sherwood Park, Slave Lake, Spirit River, St Michael, St Paul, Standard, Stavely, Stettler, Stirling, Stony Plain, Strathmore, Sundre, Swan Hills, Sylvan Lake, Taber, Thorhild, Thorsby, Three Hills, Tofield, Tomahawk, Trochu, Turner Valley, Two Hills, Valleyview, Vauxhall, Vegreville, Vermillion, Veteran, Viking, Vulcan, Wabamun, Wabasca, Wainwright, Wanham, Warner, Westlock, Whitecourt, Wildwood, Willingdon, Winfield, Youngstown

2. DISTRIBUTION OF INTERVIEWS BY GRADE LEVEL/ GRADE QUOTAS

For the purposes of comparisons with previous years, grade quotas were set in the parents of ECS – Grade 12 and high school student samples. These quotas are reflective of the population of students in these grades in the original samples. Quotas were also established for the special needs samples.

2.1. Parents of ECS – Grade 12 Students

	Population in AB	Proportion	Quota
ECS	41,588	7.2%	58
Grades 1 - 6	260,546	45.0%	360
Grades 7 - 9	132,687	22.8%	182
Grades 10 - 12	145,348	25.0%	200
	580,169	100%	800

2.2 High School Students

	Population in AB	Proportion	Quota
Grade 10	47,708	32.9%	264
Grade 11	45,550	31.3%	250
Grade 12	52,090	35.8%	286
	145,348	100%	800

2.3 Parents of Children with Severe Special Needs

	Population in AB	Proportion	Quota
ECS	3,247	20.7%	165
Grades 1 - 6	6,420	40.8%	327
Grades 7 - 9	3,270	20.8%	166
Grades 10 - 12	2,552	16.2%	130
Ungraded	227	1.4%	12
	15,716	100%	800

2.4 Parents of Children with Mild/Moderate Special Needs

	Population in AB	Proportion	Quota
ECS	5,457	8.8%	70
Grades 1 - 6	30,000	48.3%	386
Grades 7 - 9	15,485	24.9%	200
Grades 10 - 12	10,906	17.6%	141
Ungraded	264	0.4%	3
	62,112	100%	800

3. SAMPLE ISSUES WITH PARENTS OF CHILDREN WITH SEVERE OR MILD/MODERATE SPECIAL NEEDS

During the fielding of the parents of children with special needs segments, there was an issue with the samples. High percentages of parents of children with severe special needs (20.7%) and even higher percentages of parents of children with mild/moderate special needs (44.2%) reported that their child was not a special needs child. In the case of parents of children with mild/moderate special needs, fielding was directed to end by the client team with 690 of the 800 expected completions. The expected 800 interviews were completed with parents of children with severe special needs.

4. CALCULATION OF WEIGHTED AVERAGE (PARENTS OF SPECIAL NEEDS CHILDREN SATISFACTION WITH SPECIFIC SERVICES RECEIVED TO SUPPORT SCHOOL PARTICIPATION)

The parent-stated incidence of receiving specific services to support their child's school participation varied, from 4% (respiratory therapy) to 83% (teacher assistant/aide). When calculating an average of the satisfaction with specific services it is inappropriate that each satisfaction score be given an equal weight, due to the varying incidences.

Therefore, before the average was calculated, the stated incidence of each specific service was multiplied by the satisfaction rating given for each service (step one). The resulting number was then increased in order to achieve a percentage based on 100% incidence (step two). The average of these numbers was then taken (step three).

The following examples illustrate these steps:

Specific Service	Stated Incidence	Satisfaction Rating
Service A	81.5%	71.0%
Service B	49.1%	72.8%

Step One: (Incidence) x (Rating)

Service A: $81.5\% \times 71.0 = 57.9$

Service B: $49.1\% \times 72.8 = 35.7$

Step Two: Increase Filtered Base to Full Base

Service A: $100\% \div 81.5 = 1.2$
 $57.9 \times 1.2 = 69.5$

Service B: $100\% \div 49.1 = 2.0$
 $35.7 \times 2.0 = 71.4$

Step Three: Calculate the Average

$(69.5 + 71.4) \div 2 = 70.5$
