ABSTRACT

This instructional package, consisting of a text and 13 transparencies, is designed for high school classrooms. The five lessons in the instructional package relate to the "Five Themes of Geography" (Location, Place, Human-Environment Interaction, Movement, and Region) as promoted by the National Geographic Society. The lessons are designed to support the teaching of world geography and world history courses. Lesson topics are: (1) "Location of Germany on the Earth's Surface" (two lessons); (2) "Physical and Human Characteristics of Germany" (four lessons); (3) "Interaction of the German People and Their Environment" (four lessons); (4) "Cultural Diversity in Germany" (two lessons); and (5) "German Unification and Regional Changes" (seven lessons). Each topic states objectives; lists materials and resources; offers an overview; and provides maps and worksheets for student activities. (BT)

THE GEOGRAPHY OF GERMANY

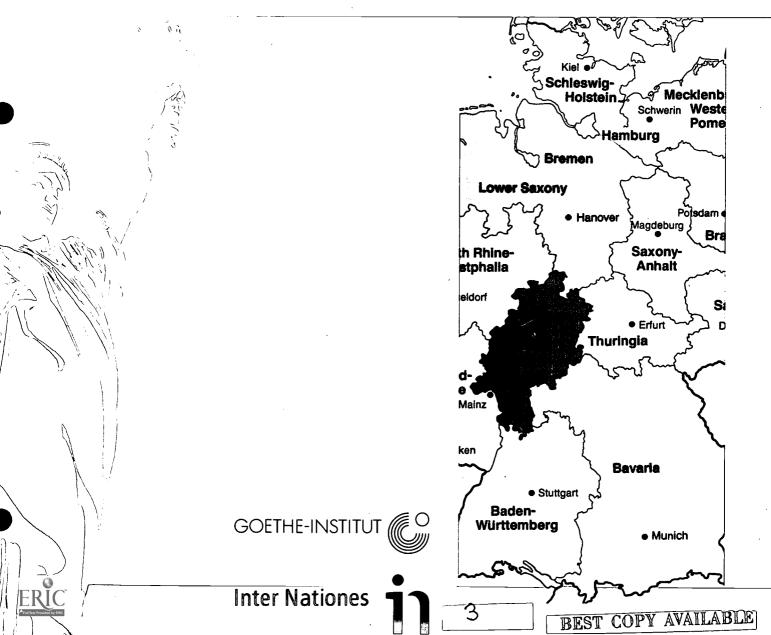

Lessons for Teaching the Five Themes of Geography

SOCIAL STUDIES

GRADES 9-12

by Glen Blankenship and D. William Tinkler

Glen Blankenship, co-author of the lessons, is Program Director for the Georgia Council on Economic Education at Georgia State University and the former Social Studies Coordinator for the Georgia Department of Education. In addition to his work in the field of curriculum development and teacher education, Dr. Blankenship is a frequent presenter to civic and educational organizations across the nation. Dr. Blankenship earned his B.A. and M.Ed. in Political Science from Georgia State University, and a Ph.D. from Emory University.

D. William Tinkler, co-author of the lessons, is a middle school principal for the Gwinnett County, Georgia, School System. Dr. Tinkler is active in his state's social studies professional organization, serving as president in 1993. He has also assisted in the writing of course guides and instructional materials on special topics. Graduating cum laude with a B.A. in Political Science from Duke University, Dr. Tinkler earned his Ed.D. from the University of Georgia.

These materials may be reproduced by teachers and schools systems for classroom use. Please provide a complete citation of the source when duplicating for other purposes.

Introduction

This collection of topics was developed as a result of study/travel seminars attended by Georgia educators during the summers of 1989, 1991, 1993 and 1999. An ongoing goal of the project was to develop and disseminate exemplary lessons for teaching about the Federal Republic of Germany.

These topics are designed so that they may be used individually via integration into the curriculum, or collectively used as a complete stand-alone unit. The teacher should adjust the materials to accomodate the needs, interests, and performance levels of students in their classrooms. Each topic begins with an outline for teaching which includes instructional objectives, a list of necessary materials, and a sequenced list of procedures for using the activities provided with the topic. The topics provide the teacher with most of the materials needed for implementation.

The authors would like to thank the following Georgia educators for the significant contributions of ideas and materials resulting in this instructional kit.

Eddie Bennett, Director of Staff Development, Pioneer RESA; Stuart Bennett, Principal, McIntosh High School; Horst Bussiek, former German Language Consultant, Georgia Department of Education; Carolyn Smith Carter, Bradwell Institute, Liberty County Schools; David Cline, Cedar Hill Elementary School, Gwinnett County Schools; Gwendale Belle Gaines, Miller Middle School, Bibb County Schools; Ruth Gassett, Fine Arts Coordinator, Georgia Department of Education; Gwen Hutcheson, Social Studies Coordinator (retired), Georgia Department of Education; Glen Jones, German Language Teacher, LaFayette High School, Walker County Schools; Jeanette Kirby, Social Studies Coordinator (retired), Muscogee County Schools; Carol McCullough, Heritage High School, Rockdale County Schools; Emmett Mullins, Cedar Hill Elementary School, Gwinett County Schools; Mary Mullins, Art Teacher, Snellville Middle School, Gwinett County Public Scools; James Pippin, Arnold Junior High School, Muscogee County Schools; Kim Puritt, Banks County High School, Banks County Schools; Helen Richardson, Executive Director of Curriculum Services, Fulton County Schools; Marsha Scheppler, Timothy Elementary School, Clarke County Schools; Donald O. Schneider, Professor of Social Science Education, The University of Georgia; Lindsey Smith, Lovejoy High School, Clayton County Schools; Carolyn Soff, Renfroe Middle School, Decatur City Schools; Mary Spillane, German Language Teacher, Cobb County Schools; Marie Wilson, Georgia Council on Economic Education.

The authors deeply appreciate the assistance of **Dr. Michael Nentwich**, Goethe-Institut Inter Nationes Atlanta, for his significant contributions to his document. Without his encouragement, support and enthusiasm, these lessons would not exist.

Modern Germany

Materials for the Social Studies Classroom Description of Publications

A Kid Like Me Across the Sea is a primary/elementary instructional package targeted at grades K-3 with interest level extending to adult. This series of five lessons draws heavily on interpretation of photographs and addresses the topics of physical and cultural geography; basic needs of food, clothing and shelter; community services and community helpers; transportation and communication; political symbols; and migration of people.

Communities and Regions in Germany is an instructional package targeted at upper elementary curriculum. This instructional package, presented to students as a travelogue, stresses basic map and globe/geography skills and presents case studies of communities (cities/towns/villages) across Germany.

Overview of Germany is designed for middle school classrooms. The four lessons in the package correlate to the study of world cultures (perspective taking and symbols), geography and government. The materials focus on national studies and state studies from a comparative United States/Germany approach.

Germany in Europe: Enduring Issues is designed for the middle and secondary school classroom. The unit is organized around three topics: Germany in the European Union (history of the EU, characteristics of member states, and EU governance), Economic Issues in Germany and the European Union (the Euro, environmental policy, standard of living), and The People of Germany and the European Union (citizenship, nationalism, immigration, and the legacy of the Holocaust).

The Geography of Germany is designed for high school classrooms. The five lessons in this instructional package relate to the "Five Themes of Geography" (Location, Place, Human-Environment Interaction, Movement and Region) as promoted by the National Geographic Society. The lessons are designed to support the teaching of courses in world geography and world history.

Cultural Reflections: Work, Politics and Daily Life in Germany is also designed for the high school classroom. The three lessons in this instructional kit include "The German Worker," "Culture and Daily Life in Germany" and "Government in Germany." Student activities focus on comparative economic systems, worker training and apprentice-ship programs, structure of government (including case studies of the health care system and the federal budget), the role of the press in Germany, and leisure activities.

Additional materials which support these instructional programs are also available: political and physical wall maps of Germany and Europe; Germany Since 1945: A Focus on Berlin video; Facts About Germany handbook; and additional resources.

These materials were written by social studies educators in Georgia and printed by **Goethe-Institut Inter Nationes, Bonn.**

Single copies at cost price are available from National Council for the Social Studies, NCSS Publications

Topic 1

The Location of Germany on the Earth's Surface

Topic Objectives

The student will be able to:

- describe the absolute and relative location of Germany.
- discuss the significance of location as related to climate and economy.

<u>Lessons</u>

Lesson 1 - Germany's Location in the World

Germany is a nation located in the geographical center of Europe with doors that open both east and west. Germany shares a border with more nations (nine) than any other nation in Europe. Distribute copies of the world map (Worksheet 1.1). Using Transparency 1 and a large, pull-down world map, show students the location of Germany and ask them to mark it on their maps. Because all wall maps found in schools may not yet show one Germany, explain that from 1949 to 1990 Germany was divided into two parts: West (Federal Republic of Germany) and East (German Democratic Republic). Discuss the location of Germany relative to the United States and to your state. For example, examine latitudes which cross both Germany and North America. Discuss student impressions of what types of climatic characteristics are associated with these latitudes. Students should note, for example, that although Germany is at a higher latitude than the United States the climate is moderate year-round due to the Gulf Stream

Distribute Worksheet 1.2 "Germany's Location in the World" to reinforce class discussion. A wall map will be needed to complete the activity along with crayons, color pencils, or markers.

Lesson 2 - Germany's Location in Europe

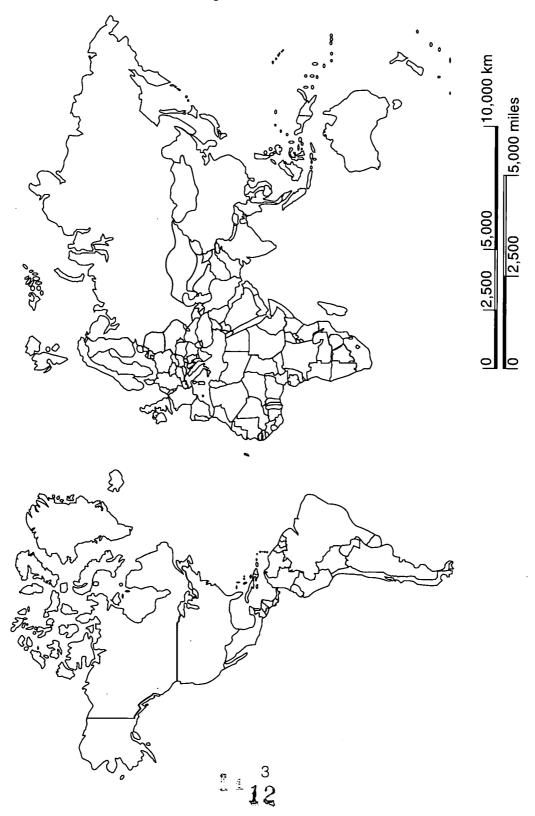

Physical location of a nation within a region can have significant political, economic and social/cultural implications. To establish the relationship between Germany and her neighbors, distribute copies of Handout 1.1 "Europe Outline Map" and help students locate and label Germany in the center of Europe by using Transparency 1. Assign students to work in groups of two or three to complete the map and Worksheet 1.3, "The Location of Germany in Europe." When students have completed the activity sheet, discuss responses and the importance of geographic location for a country with regard to trade and transportation.

The Location of Germany in Europe

Germany's Location in the World

Directions: Complete the activities below. You may need a textbook, an atlas, or other resources to help you.

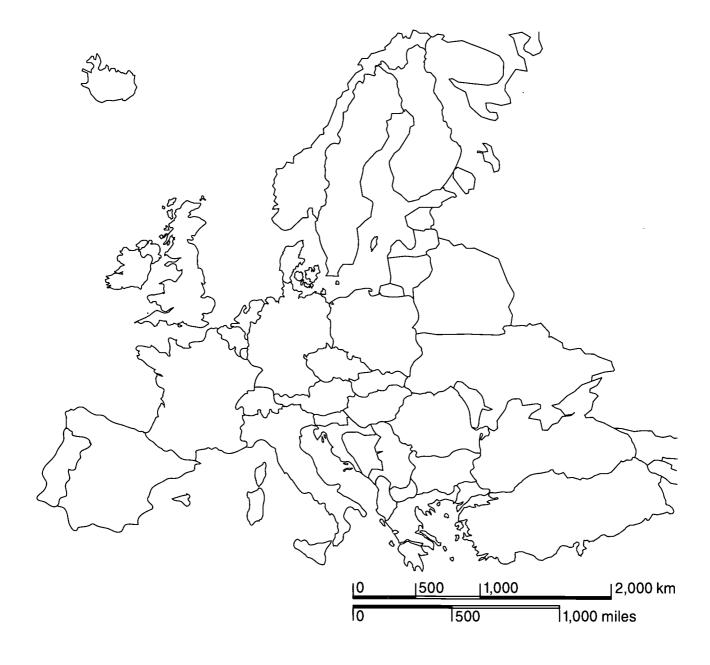

- A. Complete the following on a copy of a world outline map (Worksheet 1.1).
 - 1. Locate Germany and color it yellow. Label it "FRG", which stands for its official name: Federal Republic of Germany.
 - 2. Outline the continent of Europe in black. Label the area "Europe."
 - 3. Locate the United States. Color it blue and label it "USA" (include Alaska and Hawaii).
 - 4. Mark YOUR state with a red shaded area.
 - 5. Outline and label the continent of North America in black.
 - 6. Label the two oceans that separate North America from Europe.
- B. Use the map to answer these questions about YOUR state and the country of Germany. Put a check under the correct column to answer each question.

			YOUR STATE	GERMANY
	1.	Which is the most northerly?		
	2.	Which has an overall cooler climate?		
	3.	Which is east of 0° longitude?		
	4.	Which is south of 40° latitude?		
	5.	Which is closest to the Equator?		
C.	Ar	swer the following using information on your	map.	
	1.	What is the approximate distance (in miles) from your state to Germany?		
	2.	What continent is south of Europe?	<u> </u>	
	3.	What continent is east of Europe?		<u>-</u> · · · · · · · · · · · · · · · · · · ·
	4.	What is the nearest ocean to Germany?		

Europe Outline Map

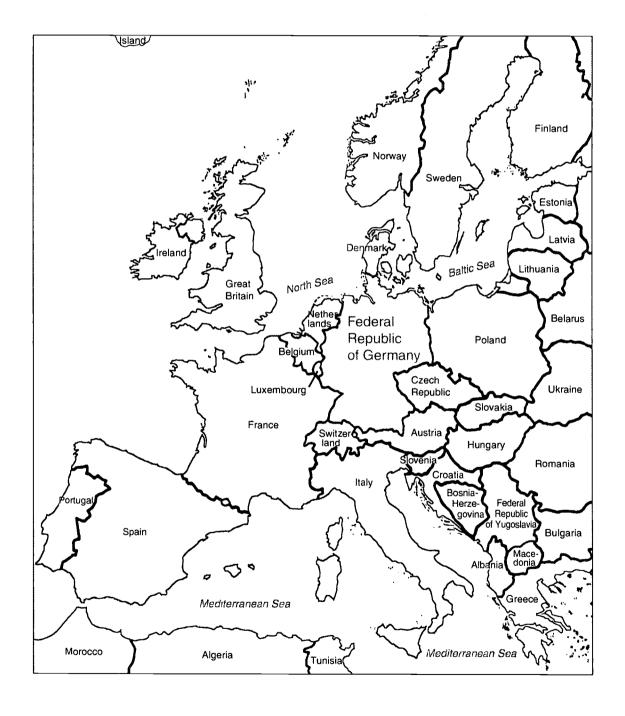

The Location of Germany in Europe

Ει	rections: Use other maps as a reference in order to complete this worksheet and label the outline map of prope (Handout 1.1). Label Germany in Central Europe. Explain to students that Germany has a land area of about 138,000 sq. mi. (96,140 sq. mi. for former West Germany and 41,860 sq. mi. for former East Germany.) In comparison: Great Britain: 94,208 sq. mi. Italy: 116,216 sq. mi. France: 211,196 sq. mi. From east to west Germany is 329 miles at its widest point. From north to south the greatest length is 544 miles
2.	Shade all countries that are a part of the European Union (EU). Use Transparency 1 as a guide (member countries are shown in light green except for Germany which is shown in dark green). European countries that are not members of the EU are shown in gray; North African countries are shown in yellow). This group of countries is an association that has agreed to create a single market for goods and services in Western Europe in 1993. The free circulation of goods and people would be allowed between these countries. The countries you should shade are: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, United Kingdom.
3.	Label all the countries that border the Federal Republic of Germany. They are: Denmark Poland Czech Republic Austria Switzerland France Luxembourg Belgium Netherlands The country sharing the longest border with Germany is Austria (487 miles). Use the scale to identify the country showing the shortest boundary. Which nations share boundaries over 250 miles?
4.	Label the bodies of water that give a seacoast to the Federal Republic of Germany. They are the Baltic Sea and the North Sea.
5.	Describe the location of Germany as related to other European countries and the EU countries.
	·
6.	What advantages to trade and transportation would Germany's location have?
7.	What disadvantages might Germany's location have?

The Location of Germany in Europe

8

Topic 2 <u>Physical and Human</u> <u>Characteristics of Germany</u>

Topic Objectives

The student will be able to:

- describe the major physical features of Germany.
- interpret graphs and tables summarizing population data on Germany.
- analyze selected population data on Germany as it relates to other nations.

Lessons

Lesson 1 - Physical Features of Germany

Germany's physical features and natural resources have contributed greatly to its industrial development and population increase. Show Transparency 2 and discuss with students the four major landforms of Germany. Then, divide the class into groups of four students and have them complete Worksheet 2.1 "The Four Major Landforms of Germany," writing framed paragraphs and answering the summary questions at the end. Randomly call on students to read the group's paragraph on one of the landforms and explain the significance of each as related to population and industry. The teacher may use Teacher Resource 2.1 as a key to this activity.

In the whole class discussion that summarizes this activity the teacher can pose the following questions:

- Q-Besides landforms, what other information is important in determining the distribution of population throughout Germany?
- A-Factors might include the location and flow of rivers (see Transparency 2), mineral deposits (see Transparency 3), strategic global location for commercial airline flights (see Transparency 1) and industrial centers (see Transparency 4).
- Q-How do some of these factors affect economic development and population distributions in Germany?
- A-All the rivers which have been named on the map are navigable. The combined length of all the regularly traveled waterways is 4,160 miles (2,730 along rivers and 1,430 on the seas). Rivers and canals are very important for the German economy. Almost a fourth of all German goods are shipped by water. Eighty percent of all the goods in Germany that are shipped by water are transported on the Rhine. As expected, population density is highest along the banks of this river. [See Teacher Resource 2.2 "Rivers and Canals in Germany" for further information.]

Lesson 2 - Germany's Population Pyramid

Population growth and age distribution are important to a country's need for human capital and support of welfare programs (e.g., health and social security). Ask students to speculate about the impact on a community's population of each of the following:

- a.Many people marry at a young age and have five or six children. This goes on for several generations. (The population will grow dramatically.)
- b.Many people delay marriage and child rearing until they are in their 30's. As a result, the average size family includes less than two children per couple. (If sustained, the population would decline.)
- c.The country goes to war, many are killed, especially young men called to serve in the military. (A decrease among certain age groups and males occurs disrupting the normal population distribution.)

Project a transparency of Handout 2.1 "The German Population Tree." The age distribution of the population in the western section and the eastern section is not the same. In West Germany in 1988 only 14.7% of the population was under 15 years old, and 15.3% over 65 years old. In East Germany 19.4% of the population was under 15 years old and 14.1% over 65 years old. East Germany's birthrate did not decline as much as West Germany's, which is among the lowest in the world. Cover the years 1988 and 2040. Ask students to interpret what the 1910 population tree shows (a typical developing nation population pyramid with a high birthrate and fairly low life expectancy).

Uncover the 1988 graph and ask students to compare it to the 1910 graph. It shows the impact of two world wars and a decrease in the birthrate. Note the greater number of older females. Ask students to project ahead. If trends continue, what will the graph look like in the 21st century?

Uncover the 2040 graph. Are the students' speculations correct?

V . 3

What are the implications of these potential changes for each of the following:

- overall size of the population
- education
- social welfare for older citizens
- economic development

Additional data about population in Germany can be found in Teacher Resource 2.3 "Population Data on Germany."

Lesson 3 - Population Density in Germany

Mark off an area on the classroom floor approximately 6 feet by 6 feet in size. Explain that this represents the combined area of the states of Alabama, Georgia and South Carolina. Ask three students to stand in this area and explain that this represents the population of the three states (approximately 14.1 million people). Now add fifteen more students to the same area. Explain that this represents the population of Germany (81.8 million people) in the same amount of land.

For comparative purposes, refer students to Transparency 5 "Population Density" which compares Germany with the three-state region of Alabama, Georgia and South Carolina. (Note: This activity may be repeated using the state of Montana, a state geographically the same size as Germany but much smaller in population.)

To verify which country or region is the most crowded, compute the population density of each. To do this, simply divide the population by the area. This will provide the number of people per square mile:

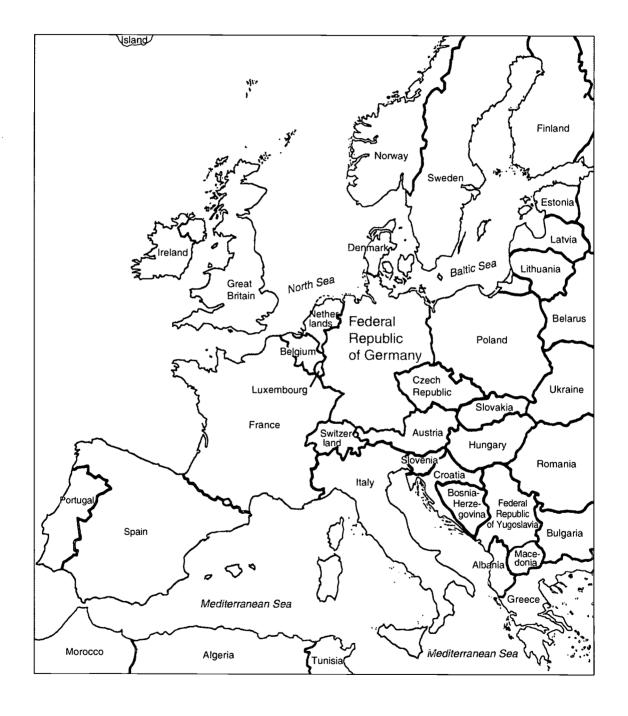

Population/Area = Population Density
The teacher can then ask the class to list at least
two advantages of living in a place with a high
population density. Then, as a follow up, the
teacher should have students list at least two disadvantages of living in a place with a high population density.

Lesson 4 - Population Distribution in Germany

In former West Germany almost 40% of the population live in the larger cities of over 100,000 inhabitants. Only 6% live in communities of 2,000 or less. In former East Germany 27% of the population live in the 15 largest cities (population 100,000 or more) and 23.5% in communities of 2,000 or less. To show the population distribution in Germany, give students Worksheet 2.2 "Outline Map of Germany," as well as Handout 2.2 "Population Density in the German States" and ask them to shade the map reflecting patterns of population density. When completed, ask students to explain the patterns of population density in reference to those factors discussed in Lesson 1 above: location/flow of rivers (Transparency 2), mineral deposits (Transparency 3), strategic location for airlines (Transparency 1) and industrial centers (Transparency 4).

The Four Major Landforms of Germany

The North German Plain is a section of the east European flatland that		
The middle of Germany is characterized by		
South of the Danube lie the foothills of the		
n the extreme south of Germany lie the picturesque		

Questions:

Based on physical features alone, in which area of Germany would one most likely find:

- 1. the highest density of population?
- 2. agriculture as a main economic activity?
- 3. skiing and other cold weather sports taking place year-round?

16

The Four Major Landforms of Germany

Germany has four distinctive types of landscape:

- The northern portion (The North German Plain) is flat.
- The largest portion the middle and southern region – consists of a hilly landscape with some moderately high mountains called the Sub-alpine Region.
- In southern Bavaria there is the Alpenvorland, the foothills of the Alps.
- Finally, in the far south, there are the Alps themselves, high mountains along the border with Austria.

Northern Germany

The North German Plain is a 90 to 310 miles wide section of the east European flatland that is bounded on the north by the North and Baltic seas and in the south by the Sub-alpine Region. The countryside is flat and mainly agricultural. In order to protect the valuable farmland, many dams have been built. Ocean currents have created many islands along the coast. The East and North Frisian Islands, separated from the mainland by shallow water [mud flats], are popular vacation areas. The island of Helgoland is located in the North Sea 37 miles from the mainland. Helgoland is the smallest German island.

Central Germany

The middle of Germany is characterized by subalpine mountain ranges, plateaus, volcanic formations, valleys and basins. Numerous rivers have cut deep valleys in the landscape. The Rhine Valley is the main feature in the western section. The central part consists of the Harz Mountains, the Thuringian Forest, and the Franconian Forest. The most striking feature of this region is the Harz Mountains, the highest peak of which rises 3,748 feet.

Southern Germany

South of the Danube lie the foothills of the Alps, a 485 miles-long, narrow strip of hilly land north of the Alps. The average elevation is 1,641 feet; the region reaches a maximum width of 460 feet near Regensburg. The landscape is characterized by mountain chains with picturesque lakes, small villages as well as bogs and moors. The highest mountain in Germany is the Zugspitze in the Bavarian Alps.

Rivers and Canals in Germany

The longest rivers of Germany are:

the Rhine	538 miles
the Elbe	493 miles
the Danube	402 miles
the Main	326 miles
the Weser	273 miles
the Saale	265 miles
the Spree	237 miles
the Ems	231 miles
the Neckar	228 miles
the Havel	213 miles
the Moselle	150 miles

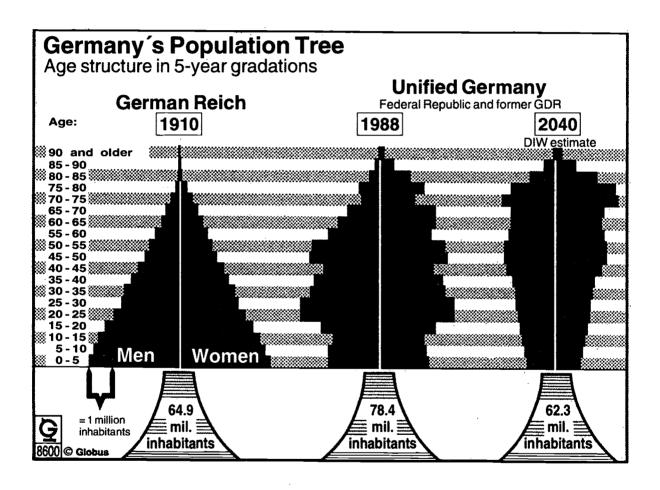

The important canals in Germany are:

Name	Built	Length
the Midland Canal	1938	199.7 miles
the Dortmund-Ems Canal	1899	167.2 miles
the Main-Danube Canal	1972-1992	106.3 miles
the Elbe Side Canal	1976	69.9 miles
the North-Sea-Baltic-Sea Canal	1895	61.3 miles
the Oder-Spree Canal	1935	52.0 miles
the Oder-Havel Canal	1914	51.5 miles
the Elbe-Havel Canal	1936	34.8 miles
the Teltow Canal	1906	23.5 miles
the Havel Canal	1952	21.7 miles

The only canal that can handle ocean traffic is the North-Sea-Baltic-Sea Canal.

The German Population Tree

19

Population Data on Germany

There are about 82.0 million people living in Germany today.

By comparison:

Great Britain:

58.3 million

France:

59.0 million

Italy:

56.7 million

United States:

273.0 million

In 1998, a total of 785,000 babies were born – 3.4% fewer than in 1997. The birthrate continues to decrease.

Currently, some 7.3 million foreigners live in the Federal Republic of Germany. Some 1.8 million of them are EU citizens.

In 1993, 218,888 resettlers came to Germany. This figure represents a decrease of 5.1% over the previous year.

From 1988 to 1993, the percentage of all resettlers who came from Russia and other CIS countries increased from 24% to 94%. During the same period, the percentage of resettlers from Poland dropped from 80% to 8%. Now, fewer people come, in 1997 they numbered 134,400.

For many years now, Germany has been the country in Europe that welcomes the largest number of immigrants. According to the 1999 Annual Report of the OECD (Organization for Economic Cooperation and Development), Germany is, after the United Sates, the second largest immigrant country in the world, taking in more than 600,000 people. In the USA, the number of immigrants declined from 915,900 in 1996 to 798,400 in 1997. According to OECD, the European country with the second highest number of immigrants in 1997 was the United Kindom with 236,900.

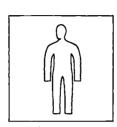

Population Density

Population approximately 82,0 million

Area: 137,855 sq. mi.

Inhabitants per sq. mi.

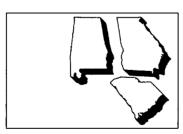

Population approximately 263,3 million

Area: 3,618,768 sq. mi.

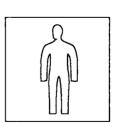

73 Inhabitants per sq. mi.

United States of America

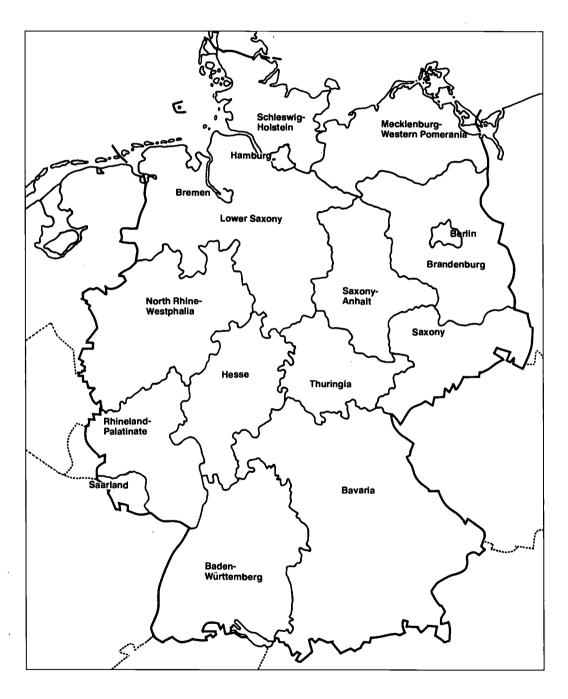

Alabama Georgia **South Carolina** **Populations** approximately 14.1 million

Topic 3

The Interaction of the German People with Their Environment

Topic Objectives

The student will be able to:

- analyze the various types of industry in Germany and compare them with those in the United States.
- interpret map and statistical data to examine the environmental impact of industrialization in Germany.
- formulate possible solutions to the problem of acid rain as it impacts both Germany and the United States.

■ Handout 3.4 "Environment v. Employment Scenario"

Worksheet 3.4 "Decision Making Chart"

<u>Lessons</u>

Lesson 1 - Land Use in Germany

Germany has the largest population of any country in Western Europe. Given its high population density, an important factor to consider is how the limited natural resources are allocated for use. Have students analyze Transparency 6 and complete Worksheet 3.1 "Land Use Statistics." Based on the data provided in the circle graph in Transparency 6 and Teacher Resource 3.1 "Land Use in Germany," have students complete the worksheet chart. Information will need to be computed using percentages from the graph. Then, have students consult Transparency 7 and discuss Germany's major trading partners and the types of products that Germany distributes worldwide. Teacher Resource 3.2 "International Trade" can be used to help students construct a data retrieval chart of the major trading partners, major imports and major exports of Germany.

Lesson 2 - Industrial Areas in Germany

The type of industries that have been developed in Germany provide important economic comparisons with other nations. To explore this topic, assign students to groups of two or three members and ask each group to identify the location and type of German industry under the first two columns of Worksheet 3.2 "Industrial Areas." Background and graphic information associated with Transparency 4 and Handout 3.1 "Important Industrial Areas and Mineral Resource Locations" should be consulted to complete this task. Then, using U.S. atlases or other media resources, ask the groups to record the names of equivalent industrial sites found in the United States in the third column of the chart.

Lesson 3 - Pollution in Germany

The growing strain on the environment is one of the central problems to which government and private citizens alike must devote more and more energy and money. Tell students they are scientists studying the effects of industrialization on the environment. Ask students to complete Worksheet 3.3 "Acid Rain Effects" by consulting the diagram and background notes on Handout 3.2 "Acid Rain in Germany." Have each student team up with two or three others to speculate about the problems posed by this type of pollution for people living in the United States. Once the worksheet has been completed and the class has discussed the answers, tell them that they have an opportunity of visiting three sites in Germany where they believe acid rain might be most severe. Based on Handout 3.1 "Important Industrial Areas and Mineral Resource Locations," Transparencies 3 and 4 and Handout 3.3 "Product Map of Germany," students may identify the three regions most likely to have this type of environmental pollution. Have them write a short paragraph that explains why they chose a particular geographic area to study, using evidence from the consulted materials to support their decision. Student answers will vary but may include the following:

- northern Germany near Hamburg because of extensive livestock and grain production and oil drilling.
- the south-central region near Frankfurt because of major industrial areas, grain production and vineyards.
- eastern Germany near Leipzig because of heavy mining and industrial centers and the agricultural production of wheat and potatoes.

26

Lesson 4 - The Environment

Decisions about environmental problems affect other areas of daily life and can involve difficult choices. Distribute copies of Handout 3.4 "Environment vs. Employment Scenario" and Worksheet 3.4 "Decision Making Chart." After students have read the scenario, divide the class into four groups: members of the state parliament (Saxony-Anhalt), factory workers, business merchants, and citizens of the community. Have each group use the decision making chart to organize several options and the possible effects and consequences of following these options from the perspective of their group.

Students in each group should prepare a onepage position statement in which they explain their decisions using the Decision Making Chart. Allow representatives from each group to read the position statement of each of the other groups. Conduct a mock hearing before the environmental committee of the parliament in which the factory workers, merchants and citizens express their opinions and concerns. Compare the solutions of each group as they are presented and discuss with the class why each group might have arrived at their particular solution. Each group should defend its decision based on the information recorded on their Decision Making Charts. The members of parliament will then discuss the various proposals and decide on a course of action.

Land Use Statistics

	Area in sq. mi.	Percentage of Germany's Land
Land Used for Agriculture		
Buildings		
Streets		
Rivers/Lakes/Parks		
Forest		
Total	138,000 sq. mi.	100%

Land Use in Germany

Eighty-three percent of the land surface of Germany consists of fields, forests, and pastures (79% in former West Germany, 87% in former East Germany). The new federal states in the east are more heavily agricultural than the old, with more than 35% of the land area being used as farmland (in old West Germany only 30% was used for farming). In the states of Saxony-Anhalt and Mecklenburg-Western Pomerania as much as 50% of the land is devoted to agriculture.

Thirty percent of Germany (29,000 sq. mi. in the West, 12,000 in the East) is covered with forests. Most of the forest land is found in the uplands and mountains. In the north the forests are predominately oak and birch, in the middle oak, birch, and mixed forests, and in the south forests with spruce and fir, as well as mixed woodlands. The states of Rhineland-Palatinate and Hesse have the greatest percentage of their surface in forests, with 40.5% and 39.8% respectively.

Of the 138,000 sq. mi. land area of Germany 70,000 sq. mi. is devoted to agriculture and forestry (46,000 sq. mi. west, 24,000 east), which is about 50.4% of the total.

The number of farms in Germany is decreasing. Today, some 600,000 farms are in operation. The decline has especially affected the smaller farms up to 50 hectares in size. On the other hand, the number of farms that measure 50 hectares and more has increased. The average farm size is 26 hectares.

The importance of organic farming is growing. There are now some 4,400 organic farms, with a total area of 313,820 acres.

Some 3% of all working people in Germany work in agriculture.

(For comparison:

France: 5% Italy: 7% Spain: 9% Greece: 20%)

The number of people employed in agriculture continues to decrease. Between 1993 and 1996 it decreased from 1.83 million to 0.7 million. About 10% of those employed in this sector in eastern Germany lost their jobs. Shrinking incomes as a result of sluggish sales have forced many farmers into part-time farming.

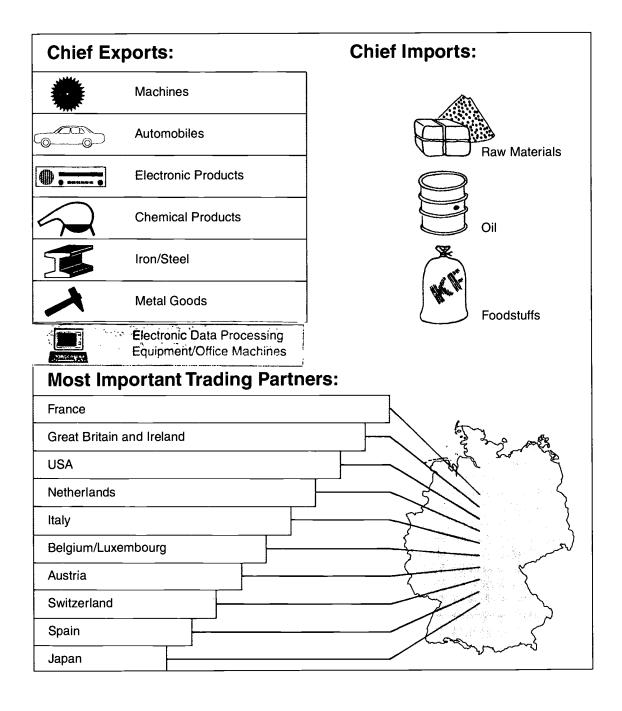

A large number of agricultural workers in Germany are only employed in agriculture as a sideline

In Germany more sugar, wine, milk, milk products, beef, veal, pork, and wheat were produced than were consumed by the public.

International Trade

Page 1

In former West Germany . . .

Germany must import almost all of its raw materials:

Petroleum about 96% (1998 statistics)

Natural Gas about 79% lron about 98%

(the figures for other raw materials are similar)

Germany trades with countries all over the world. The petroleum, for example, consumed in Germany comes from the following places:

North Sea 39 million metric tons USSR 28 million metric tons Africa (outside of Libya) 23 million metric tons Near East 13 million metric tons Libya 13 million metric tons (1998 statistics)

(1990 Statistics)

Going by the value of imports and exports, Germany is second only to the United States in world trade. In 1998 Germany achieved trade surplus ever of 127 billion German marks. Exports (955.2 billion marks) and imports (828.2 billion marks) also reached their highest level ever in 1998.

About 27% of all German-made products are exported. Therefore, Germany is considered the second greatest exporter of all the industrialized countries.

By comparison:

Country	Percentage of Products Exported
Great Britain	30%
Italy	27%
France	24%
United States	12%
Japan	10%

The most commonly imported goods are: vegetables, fruit, tropical fruits, coffee, tea, cocoa, raw materials, clothing, textiles, computers, office machines.

The most commonly exported products are: cars, machines, chemical products, electronics, foodstuffs, iron/steel, metal goods, aerospace equipment.

The most important trade partners of Germany in 1997 were:

nany	Imports to Germany	
10.6%	France	11.0%
8.6%	The Netherlands	8.5%
8.4%	Italy	8.2%
7.3%	USA	8.1%
7.1%	Great Britain	7.3%
	8.6 % 8.4 % 7.3 %	10.6% France 8.6% The Netherlands 8.4% Italy 7.3% USA

<u>International Trade</u> Page 2

In former East Germany ...

The chief trade partners of former East Germany were the Soviet Union, Czechoslovakia, West Germany, Poland, and Hungary. Almost 60% of all foreign trade by former East Germany was done with member countries of COMECON. COMECON was dissolved in 1991. More than one-third of all exports from former East Germany went to the Soviet Union. From January to July of 1990 this portion was 42%. In 1989 these were the most common goods imported from the Soviet Union: natural gas, petroleum, minerals, metals, machines, vehicles, raw materials. The most common products exported to the Soviet Union in 1989 were: machines, vehicles, military equipment, consumer goods, fertilizer, chemicals.

In 1989 trade between the two Germanies reached its highest level ever of 15.3 billion German marks. West Germany bought 7.2 billion German marks worth of goods from East Germany. Chief among these were: chemical products, textiles, clothing, gasoline. 8.1 billion German marks worth of goods were imported into East Germany from West Germany, goods such as machines, vehicles, chemical products, iron and steel, foodstuffs, and agricultural equipment.

The Federal Republic of Germany

In 1998 Germany was the second largest exporter in the world, just behind the United States. Goods worth 955 billion DM were exported and goods worth 828 billion DM imported.

The following goods in particular were imported into Germany:

Vegetables, fruit, tropical and sub-tropical fruits

Coffee, tea, cocoa

Raw materials, mineral raw materials

Clothina, textiles

Computer hardware and software, office equipment

The following goods in particular were exported from Germany:

Cars

Machines

Chemical products

Electrical products

Foodstuffs

Textiles

Iron/steel

Aircraft and space-vehicles

Metal products

Germany has trading relations with many countries throughout the entire world. The most important trading partner is France; other important trading partners are the Netherlands, the United States, Great Britain and Italv.

Exports from Germany:		Imports to Germany:	
France	10.6%	France	11.0%
USA	8.6%	The Netherlands	8.5%
Great Britain	8.4%	Italy	8.2%
Italy	7.3%	USA	8.1%
The Netherlands (Figures for 1997)	7.1%	Great Britain	7.3%

The vast majority of exports of German goods, about 80%, is exported to countries of the European Union and other Western industrialized countries.

. }:

Lesson 2

Teacher Resource 3.2

<u>International Trade</u> Page 3

The Federal Republic of Germany has to completely or partly import all important raw materials, such as crude oil, natural gas and iron.

Every year raw materials worth over 30 billion DM are imported; the value of exported raw materials, on the other hand, only amounts to approximately 6 billion DM.

The Single European Market

On January 1, 1993 the Single European Market was introduced. The 12 existing domestic markets were joined together to form one single market.

This means that trade between Germany and the countries of the European Union (now 15 member nations) is no longer export trade but, rather, domestic trade.

To make this possible the differences between the individual member states must be overcome. In order to overcome these differences numerous laws and regulations are necessary.

Types of Industries

BEST COPY AVAILABLE

Handout 3.1

Important Industrial Areas and Mineral Resource Locations

Page 1

Industrial Areas

Germany is an industrialized country. The important industrial areas are:

- the Ruhr region, including the areas around Duesseldorf and Cologne
- the area around Frankfurt
- the Mannheim/Ludwigshafen area
- Stuttgart and the Neckar Valley
- the Hanover/Braunschweig region
- the Dresden/Chemnitz region
- the region around Leipzig/Halle
- the territory around Cottbus

In addition there are the following cities and their surrounding areas:

Former West Germany
Munich
Augsburg
Ulm
Ingolstadt
Saarbruecken
Bremen

Former East Germany
Zwickau
Erfurt
Meißen
Magdeburg
Neubrandenburg
Rostock

Nuremberg Hamburg Luebeck

In former East Germany most of the industrialization is concentrated in the south. The Halle-Bitter-feld-Merseburg triangle is particularly industrially developed. Almost 40% of all chemical products are made here.

The most heavily industrialized areas are also the most densely populated areas.

Several industries, such as coal, steel, and shipbuilding, are becoming less important than more modern industries, such as mechanical engineering [machine making] and electronics. For this reason traditional industrial regions, such as the Ruhr region and cities with shipyards, are having to restructure. This is especially true of all of the industrial centers in former East Germany!

The quality of the infrastructure varies greatly among the industrial regions. While in the area that was formerly West Germany the infrastructure is very sound, the quality of the infrastructure in

the new states of former East Germany was rather alarming at the time of unification. This goes for the streets as well as the communication system.

The industrial structure in the new states is in critical condition. In order to improve the situation it is necessary to make many changes; in particular, most of the outdated equipment needs to be replaced. The outmoded plants that burn brown coal need to be replaced by more environmentally friendly installations. In the long term it is planned to replace brown coal with other sources of energy such as bituminous coal, natural gas, and petroleum.

BEST COPY AVAILABLE

Important Industrial Areas and Mineral Resource Locations

Page 2

Mineral Resources

Germany has little mineral wealth. Germany has major reserves only of rock salt, potash salt, lignite and hard coal. Germany is strongly dependent on imports of raw materials and is highly vulnerable to disruptions of world trade.

Coal: The largest lignite (soft/brown coal) reserves are located near Cottbus and Leipzig; other large reserves are being mined in an area near Aachen and Cologne.

In the 1990s, Germany has produced one-fourth of the world's lignite. In 1999, a total of 161 million tons were mined: 96.5 million in western Germany and 64.8 million in eastern Germany. In eastern Germany, lignite mining decreased by 62% between 1989 and 1993 and by 66% between 1989 and 1999.

The largest hard coal reserves are found in the Ruhr region. Hard coal is also mined in the Saar region and near Aachen. As a result of the crisis in the German steel industry, in 1993 hard coal production decreased by 12%, to 59 million tons. In 1999, 40.5 million tons were produced.

Oil: Oil is extracted primarily in an area between the Weser and Ems rivers, as well as northeast of Hanover, south of Leipzig and in the Alpine foothills. In 1999, a total of 123 million tons of oil were used. About 80 million tons of oil were imported. Germany's main oil suppliers are Russia, Norway and the UK.

Natural gas: Natural gas is extracted northwest of Hanover, in the northern German low plains; in Saxony Anhalt (south of Magdeburg); in the upper Rhine lowlands; and in the Bavarian Alpine foothills. Domestic production covers only part of Germany's requirements: it meets 21% of the country's requirements. In 1998, German imports decreased by 4% to 63.5 billion m³.

Salt: Former West Germany is one of the world's most salt-rich countries. Each year, some 6 million tons of salt are mined, along with 8 million tons of potash. These figures amount to 10% of the global production of these two products. The largest salt reserves are located in the Hanover/Hildesheim area and near Bad Hersfeld.

Iron: Iron ore reserves are found in the Rhine slate mountains, in the eastern part of the Franconian "Alb" region and in the northern Harz foothills. Iron ore production continues to decrease.

. 12

Important Industrial Areas and Mineral Resource Locations

Page 3

Industrial Centers

The most important industries in former West Germany were largely the same as those in former East Germany. In the first rank of importance are (going by number of people employed) steel, mechanical engineering (machine building) and vehicle manufacturing. Electronics, precision engineering, and data processing were second in importance in former West Germany; in former East Germany they were third in importance. In former East Germany consumer goods stood in second place.

Former West Germany

Going by sales the following companies were the largest in 1997:

Company	Product	Sales (in millions of German marks)	Home City
Daimler-Chrysler	Cars/Aerospace	124,050	Stuttgart, Detroit
Volkswagen	Cars	113,245	Wolfsburg
Siemens	Electronics	106,930	Berlin/Munich
VEBA	Energy/ Chemicals	76,067	Düsseldorf
RWE	Enery/Construction	72,136	Essen

German enterprises are ranked among the top ten companies in the world in several fields: in the automobile industry, Daimler-Benz and Volkswagen; in the chemical industry, BASF, Hoechst and Bayer; in the electronics industry, Siemens; in the engineering & metal industry, Thyssen, Mannesmann, Preussag and MAN.

In some areas of the economy most of the activity is concentrated in a few large corporations. For example:

In other areas most of the activity is in mediumsized companies.

Most of the large companies are corporations that issue stock. Germany has the most stockholders after the United States.

Type of activity	Percent Concentrated in Large Corporations	Type of activity	Percent Concentrated in Large Corporations
Tobacco Aerospace Business machines Mining	94 % 90 % 80 % 80 %	Petroleum processing Data processing Automobile industry	9 80 % 78 % 69 %

Important Industrial Areas and Mineral Resource Locations

Page 4

Former East Germany

The economy in former East Germany is in the process of being changed from a communist-controlled demand economy to an open market economy.

In the mid 1970s East Germany began the process of combining companies that manufactured similar products into large combines, of which there were 220 altogether.

At the end of the 80s about 95% of East German companies were government owned, the so-called "Volkseigene Betriebe" (People's Businesses") or VEB. There were only a relatively few private businesses, and these businesses were only on a rather small scale.

The following were among the largest industrial combines in East Germany in 1988:

Combine	Type of Product	Sales (in billions of East German marks)	Home City
VEB Kombinat Robotron	Data Processing and Office Machinery	11.4	Dresden
VEB Kombinat Fortschritt	Farming Equipment	8.7	Neustadt (Saxony)
VEB Kombinat Baumwolle	Textiles	8.6	Karl-Marx-Stadt (today Chemnitz)
VEB Mansfeld-Kombinat "Wilhelm Pieck"	Metal Industrie	7.7	Eisleben

A major task since the joining of the East and West German economies is to privatize East Germany's industry and bring it up to speed with the world-wide open market economy. This task has been put in the hands of the "Treuhandanstalt" ("Faithful-hand-institution"), which had taken in 1.5 billion marks as of November 1990. As of January 1991, 450 companies had come into private hands.

In September 1990 26% of the business people in former West Germany had cooperated with their East German colleagues. Twelve percent more had concrete plans to do so.

Legal uncertainties about property, surplus personnel in companies, and antiquated equipment are the most difficult problems facing the people who are trying to unite industries in former East Germany with those of the West.

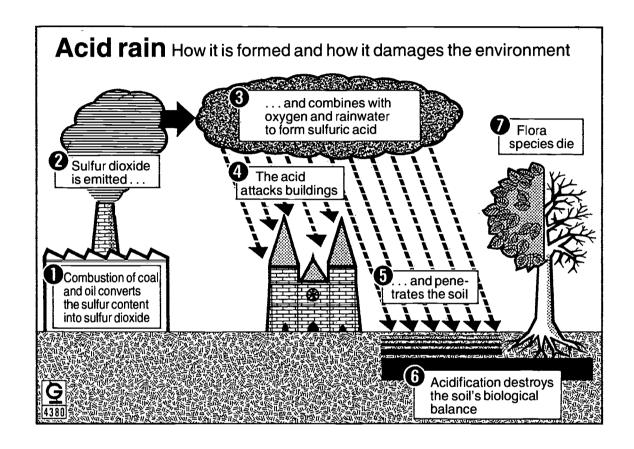

The process so far has shown that many East German companies cannot be made competitive in the Western economy.

Acid Rain in Germany

In former West Germany 2.9 million metric tons of nitrous oxide were released into the atmosphere from traffic, industry, and private homes. Through efforts at pollution reduction this number should be down to 2 million metric tons in the future.

Cars and trucks account for 68% of these emissions. Nitrogen oxide emissions from power plants have been reduced by 60% since 1980 as a result of air quality regulations for the power sector.

The condition of the environment in former East Germany is one of the most pressing problems the new Germany has to face. Air pollution reached a dramatic extreme; the burning of brown coal (lignite or soft coal) released particularly large amounts of pollutants. This resulted in an

emission of 359 kg of sulphur dioxide and nitrous oxide per person per year. Particularly hard-hit are the areas around Halle, Bitterfeld, Leipzig and Cottbus.

The term "Waldsterben" (dying forests) is commonly applied to large forested areas with high percentages of damaged trees. Air pollution is considered the main cause of the forest damage – a combination of various interacting air pollutants whose chemical processes in the soil impair tree growth. In 1997, 59% of all trees were classified as "damaged" (1991: 68%). The extent of forest damage varies from Land to Land. Thuringia has the highest level of forest damage – 47%, while the state of Rhineland Palatinate has the lowest – 12%.

26.

Environment vs. Employment Scenario

The members of Parliament of the German state of Saxony-Anhalt, located in eastern Germany, want strict air and water quality standards. They have discussed the fact that 90% of the factories in their state are powered by coal which is high in sulfur and produces great amounts of thick black soot. This pollutant not only settles on the buildings and vegetation in the area, but also travels great distances in the upper atmosphere to later be deposited on the earth's surface. Serious health problems, most especially among children and the elderly, have been linked to this air pollution. Additionally, many of the factories in the state are involved in the chemical industry. Some of the waste from these factories is toxic and often escapes into the rivers and streams, making them unfit for organisms to survive. Therefore, the fish, and most plant species in them have been killed.

The parliament must consider these serious environmental hazards, but it must also examine the consequences if these factories are closed. Thousands of men and women will be without jobs. This comes at a time when the government has moved away from a socialist economy which subsidized an individual's income, rent, utilities, food, and health care. Now, the people are learning to live in a free market economy in which people must find and keep their own jobs, and pay more for rent, utilities, and food. For the first time, people are having to pay property taxes and share in the cost of their health care.

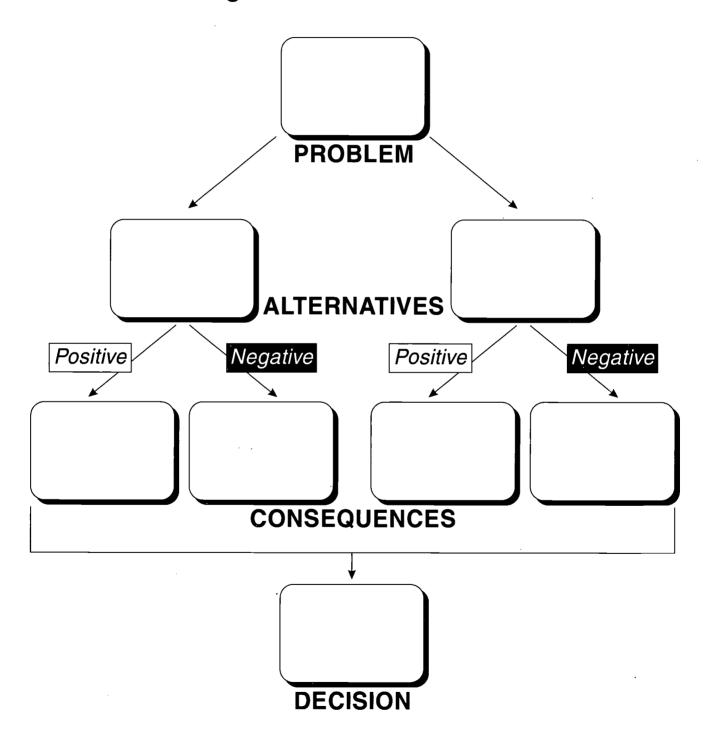

How should this issue be solved?

Lessons

Lesson 1 - Foreigners in Germany

Distribute copies of Worksheets 4.1 "Map of the Continental United States" and 4.2 "Map of Europe" and a compass to groups of students. Direct the groups to extend the radius of the compass to equal 500 miles as indicated by the scale on each map. Placing the point of the compass on St. Louis (S) and Frankfurt, Germany (F), ask groups to draw circles on both maps. Repeat the same procedure using 1,000 miles as the radius instead of 500 miles. Ask student groups to compare observations about the cultural diversity found within each pair of circles, particularly what challenges are posed by traveling 500 miles east of Frankfurt as opposed to traveling 500 miles east of St. Louis.

Students should discover that there is far more cultural diversity within a 500 mile radius from Frankfurt than there is within a 500 mile radius from St. Louis. Because of the proximity of diverse cultures around Germany, contrasted with the ethnic homogeneity within European nation-states, immigration and refugee asylum are different for Germany than for the United States. Have students analyze Transparency 8 and Handout 4.1 "Foreigners in Germany" to verify how many different cultural groups are immigrating to Germany.

Lesson 2 - Immigration to Germany

While there have been attacks on foreigners in many European countries, in Germany these attacks often raise the specter of the Nazi past. On the other hand, postwar Germans have given refuge to numerous political activists who fled regimes of oppression. They encourage the integration of foreign-born workers and their families into Germany's society, and as champions in foreign travel, are not known to be xenophobic. Distribute copies of Handout 4.2 "Focus on Foreigners in Germany" for students to read about contemporary attitudes and events on immigration to Germany. Then, have students analyze Handout 4.3 "Basic Law" and within groups compose recommendations to Gerhard Schröder as to whether the existing Basic Law relating to immigrant citizens should be upheld or revised in some other way.

One way to focus students research and analysis is to pose the question about what kinds of restrictions, if any, should be placed on immigrant groups and refugees entering Germany. What type of pressures and concerns exist in Germany that affect such a decision which may or may not exist in the United States? For example, factors to consider include:

- How would you, as a renter during housing shortage, feel about foreign newcomers?
- What attitude differences remain between former East and West Germans?
- Since local authorities in Germany must provide asylum seekers with housing, medical services and an allowance, how do more established citizens feel about the recent influx of refugees?

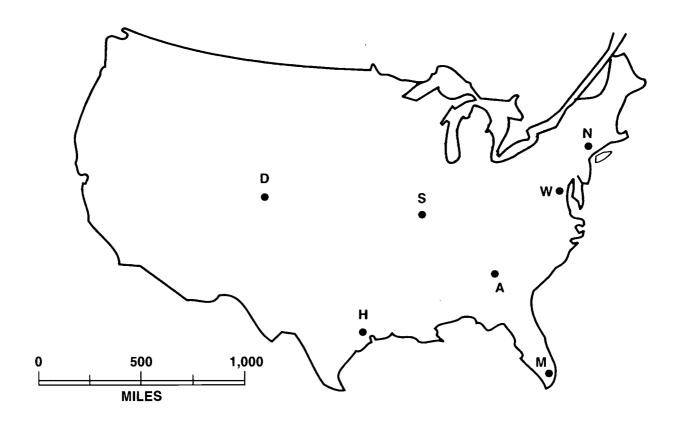

These recommendations can take the form of written reports or oral presentations from the various student groups.

Foreigners in Germany

Page 1

In 1998, 7.3 million foreigners lived in Germany (8.9% of the total population). Approximately 1.8 million are citizens from EU countries. Many foreigners live with their families in Germany. 97% of foreigners live in western Germany and 3% in eastern Germany. The foreigners come mainly from the following countries:

Country	Number of People	Percent of Foreign Population
Turkey	2,110,200	28.9%
Former Yugoslavia	719,500	9.9%
Italy ·	612,000	8.4%
Greece	363,500	5.0%
Bosnia-Herzegovina	190,100	2.6%
Poland	283,600	3.9%
Croatia	208,900	2.9%
Austria	185,200	2.5%
Spain	131,121	1.8%
Portugal	132,578	1.7%

mannyia	50	1.0/0

From 1991 to 1995 the foreign population of Germany increased by 1,291,600 people. This is above all due to the arrival of refugees from former Yugoslavia, the influx of people seeking asylum and the fact that birth rates amongst foreigners are relatively high compared to the rates for Germans. Currently, about 7,3 million foreigners live in Germany.

Particularly large numbers of foreigners live in the industrial conurbations. In 1998 2,837,000 foreign employees worked in the Federal Republic of Germany and thus accounted for around 7% of the gainfully employed. The majority of foreign employees, namely approximately 50%, were engaged as manual workers. The foreign employees mainly originate from the following countries:

Turkey	2,435,000
Italy	667,000
Greece	358,000
Croatia	315,000

Foreign employees enjoy the same social security as Germans (health insurance, protection against dismissal, pension entitlement, child allowance, unemployment benefits, etc.). To a great extent they have their own cultural institutions.

The Maastricht Agreement, which has been in force since 1993, guarantees citizens from the EU countries communal voting rights in their place of residence in the EU.

Foreigners in Germany

Page 2

In Germany the nationality of a person's parents and their place of birth are decisive factors in determining their citizenship. The general rule is that when people are naturalized they have to give up their previous citizenship as a matter of course. However, there are exceptions to this rule.

People who are persecuted in their own country on political, racist or religious grounds can apply for political asylum in the Federal Republic of Germany. In 1993 restrictions concerning the Asylum Law, the so-called third country regulation, came into force. According to this asylum seekers who enter the country from another EU Member State or a safe third country are no longer granted asylum. The result is that the number of asylum seekers went down dramatically – from July 1993 to June 1994 (i.e. directly after the law came into force) by 65%. In 1992 there were 438,191 asylum seekers but by 1999 it was only 138,319. By no means do all people in Germany agree with this new regulation and regard it as just.

It is extremely regrettable that xenophobia is increasingly becoming a problem amongst parts of the population and individual groups. This is manifested in acts of violence perpetrated against foreigners. However, at the same time, the number of people who take a decisive stance against xenophobia is also growing.

Basic Law

The Basic Law of the Federal Republic of Germany (May 23, 1949) is the constitution for Germany. The following Articles relate to immigration and German citizenship:

"Article 3

(Equality before the law)

- (1) All persons shall be equal before the law.
- (2) Men and women shall have equal rights.
- (3) No one may be prejudiced or favored because of his sex, his parentage, his race, his language, his homeland and origin, his faith, or his religious or political opinions."

(Note: Recruited by the German government, the foreign (guest) workers who did not return home can apply for naturalized citizenship after 10 years. Many who have stayed have not been naturalized. Children of these foreigners born in Germany are not automatically granted German citizenship.)

"Article 16a (Asylum)

- (1) Anybody persecuted on political grounds has the right of asylum.
- (2) Paragraph (1) may not be invoked by anybody who enters the country from a member state of the European Communities or another third country where the application of the Convention relating to the Status of Refugees and the Convention for the Protection of Human Rights and Fundamental Freedoms is assured. Countries outside the European Communities which fulfil the conditions of the first sentence of this paragraph shall be specified by legislation requiring the consent of the Bundesrat. In cases covered by the first sentence measures terminating a person's sojourn may be carried out irrespective of any remedy sought by that person."

"Article 116

(Definition of 'German', Regranting of citizenship)

(1) Unless otherwise provided by law, a German within the meaning of this Basic Law is a person who possesses German citizenship or who has been admitted to the territory of the German Reich within the frontiers of 31 December

- 1937 as a refugee or expellee of German stock (Volkszugehörigkeit) or as the spouse or descendant of such person.
- (2) Former German citizens who, between 30. January 1933 and May 1945, were deprived of their citizenship on political, racial, or religious grounds, and their descendants, shall be regranted German citizenship on application. They shall be considered if they have established their domicile (Wohnsitz) in Germany after 8 May 1945 and have not expressed contrary intention."

(Note: People from Eastern Europe who can claim German ancestry, and who can get to Germany, will be granted all rights of citizenship. Many of them cannot speak the German language.)

"Article 119

(Refugees and expellees)

In matters relating to refugees and expellees, in particular as regards their distribution among the Laender, the Federal Government may, with the consent of the Bundesrat, issue regulations having the force of law pending the settlement of the matter by federal legislation. The Federal Government may in this matter be authorized to issue individual instructions for particular cases. Except where there is danger in delay, such instructions shall be addressed to the highest Land authorities."

(Note: Land and Laender refer to the states within the country. The Bundesrat is the Federal Council or the assembly of the federal state representatives.)

Lessons

Lesson 1 - Regions in Germany

The basic unit of geographic analysis is the "region," an area that is unified and distinguished by specific criteria. The most common type of regions are those displaying political power (e.g., nations, provinces, countries, cities), but there are countless other ways to define meaningful regions depending on the problem being considered. Some regions are defined by one characteristic such as a governmental unit, a language group, or a landform type, and others by the interaction of many complex features. While it represents an area of political power, Germany also can be examined in terms of the interplay of other factors. For example, from the end of World War II until 1990, East and West Germany were developing into distinct regions. This process is being reversed today.

Divide students into groups of three and show all groups the following transparencies in order: Transparency 2, Transparencies 3 and 4, and Transparencies 10 and 11. Ask each group to describe the type of region(s) defined by each set of transparencies. Then, have students discuss how the interplay of characteristics defined above influenced the creation of political regions as illustrated by Transparencies 9 and 12.

The following is guide for what students should conclude about each Transparency:

- Transparency 2 Physical features and environmental factors
- Transparencies 3, 4 Natural resources and industry location
- Transparencies 10, 11 Linguistic and communication patterns

The interplay of linguistic/communication patterns (see Teacher Resource 5.1 for information regarding the historical development of regional language differences in Germany), physical features, natural resources and location of industry serves to define political regions within Germany as illustrated by Transparencies 9 and 12. Next, have student groups use atlas data to analyze factors which define similar types of regions in the United States and prepare a set of maps of the United States showing information similar to that provided on Germany.

Lesson 2 - German Unification

Using Teacher Resource 5.2 "German Unification Timeline," discuss the major events leading from the tearing down of the Berlin Wall to the unification of Germany. Show Transparency 9, which indicates the outline of the two Germanies and Berlin prior to October 3, 1990. The red lines dividing up former East Germany indicate the 14 administrative districts under Communist leadership. These 14 districts temporarily replaced the five German states which existed prior to World War II and which were reinstated during unification. (See Teacher Resource 5.3 for additional information about the states.)

The teacher should introduce events that were occurring in the United States and elsewhere in the world at approximately the same time. For example, Handout 5.1 (pages 1-3) shows a photograph of democratic demonstrations at Tiananmen Square in China, the fall of the Berlin Wall, and Yeltsin's opposition to the attempted coup in the Soviet Union. Assign students to groups of three or four and provide each group with a set of the photographs. Also, distribute one copy of Worksheet 5.1 "Analysis of Three Photographs" and have each group fill in the chart with the specific information requested in each column. Then, discuss the relationship of the three events as related to the changing world order.

Lesson 3 - Opening the Berlin Wall

Handout 5.2 includes excerpts from reflections written by a 13-year-old West German youth and a male teacher in his forties in December, 1989, shortly after the Berlin Wall, the symbol of division of East and West Germany, was both symbolically and physically torn asunder. Have students read the excerpts or read desired sections to them. Ask students:

- How does each writer feel about the events he witnessed?
- What positive things does each cite?
- What concerns does each raise?
- All things considered, does each have a favorable view of what transpired and of the future?
- Are you surprised by any of their views? Why?

Lesson 4 – East German Perspectives on Unification, Part A

Handout 5.3 contains reflections and observations recorded by American educators visiting Saxony-Anhalt, a state in what was formerly East Germany. Distribute the handout to students, make a transparency, or read selected portions to students. Have them describe the feelings conveyed, identify specific points raised by the various writers, and compare the observations with those in Handout 5.2. Ask students:

- What emotions and feelings are conveyed? How did the East Germans feel about unification?
- What indications do you find in these excerpts of restrictions placed on personal freedoms under the old regime in the GDR?
- What changes in their daily lives are people in the eastern section of Germany experiencing? Are these "good?" "bad?" On what basis do you make your judgment?
- Have you ever had an experience similar to that described in excerpts #2 or #4? Explain.
- What do you think the headmaster meant by his statement (#8)?
- What is your reaction to excerpt #9? Compare this statement with excerpt #7.
- How do these comments compare with those offered in the earlier handouts we read (Handouts 4.2 and 4.3)?

Lesson 5 – East German Perspectives on Unification, Part B

Handout 5.4, "A Letter from Anne . . . ", written in August 1991, provides one East German's perspective on the significance of "The Wall," the regime under which she lived and the events that led to the tearing down of the Wall and to unification. Distribute copies of the handout for students to read, or read selected portions of it to students. Ask students to consider the following:

- Why didn't Anne leave East Germany? What do you think of her decision?
- What clues can you find about Anne's feelings about the regime under which she lived and worked?
- How did the Wall affect her life?

- What was Anne's reaction to the fall of the Wall? What do you make of her reaction?
- How does Anne's reaction to the events of the fall of 1989 compare to those of Heinz and Hendrik (Handout 5.2)?

Lesson 6 - World Press Views on Unification

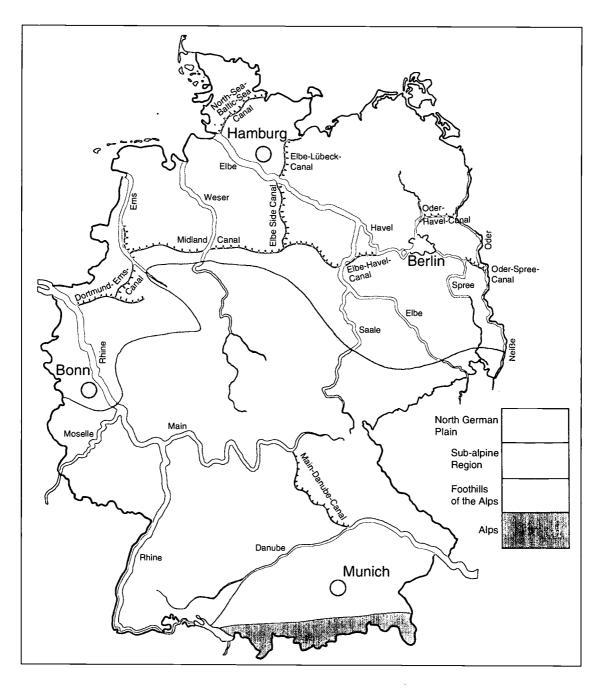

Handout 5.5 contains selected views from *The World Press Review*. The handout contains three questions for students to consider as they read the selections. Distribute the handout and have students read it and then discuss the questions.

Lesson 7 - The Federal Republic of Germany since 1949

To help students see the broader perspective of the history of the Federal Republic of Germany, distribute copies of Handout 5.6 for students to read. Transparency 13 provides a summary and photographs of some of the important events.

4. 1

The German Language

German is a Germanic language and is closely related to Dutch, Frisian, English, and the Scandinavian languages.

Because of migrations of its original speakers the Germanic root language developed into many different languages. The terms usually used for the broad division of the Germanic languages are East Germanic, North Germanic, and West Germanic. German comes from West Germanic, or to be more precise, High German, the standard form of the language, which is really a somewhat artificial standardization of several closely related dialects.

The history of the German language is roughly divided into three main eras: Old High German (ca. 750-1050), Middle High German (1050-1500) and New High German, which is from approximately the time of Luther to the present. The history of the German language is a history of gradual development, in which various sources and even single individuals played a part. Developing along with the standard language and its various root languages are spoken regional "every day" forms of the language, or "colloquial" language.

Contact with other languages has played a large role in the development of German. Up until the 12th century German was heavily influenced by Latin. This is shown by such words as Fenster (window) from Latin fenestra, or Mauer (wall) from Latin murus, or Wein (wine) from Latin vinum. Greek influences were felt during the Humanistic period in Germany. About 1200 German expressions come from French. In the 16th and 17th centuries the French influence was particularly strong. From this period come the words Möbel (furniture), Mode (fashion) and Adresse (address). At the end of the 19th century English became a very influential language. Parlament, Sport, and Streik (strike, as in job stoppage) are words borrowed at this time. In the 20th century American English has had a major impact on German. The influence is seen not only in vocabulary, but also in grammar. These words are typical of the words borrowed from American English: Teenager, Manager, Joint Venture, Musical.

German is the mother tongue in Germany, Austria, and part of Switzerland, although it is "col-

ored" mostly by a dialect and enriched by special expressions. It extends also into Luxembourg, Belgium, Alsace-Lorraine and Northern Italy. There are "islands" of German speakers in Eastern Europe, especially the Balkans, Poland and Russia, in Pennsylvania, Ohio, Wisconsin, western Kansas, and in Ontario, as well as Central and South America and in South Africa.

Today a standard form of the language is written and understood, but not necessarily spoken everywhere. Many Germans speak a dialect, but almost everyone is influenced by regional peculiarities. These peculiarities can be in vocabulary as well as pronunciation. While people in the north call Saturday Sonnabend, people in the south say Samstag. The same thing goes for Brötchen and Semmel, both of which mean "(bread) roll." There are differences, for the most part in vocabulary and pronunciation, between German spoken in Germany, Austria and Switzerland. The people in former East Germany have a somewhat different vocabulary than those in the west – the differences are partly due to certain ideological models of the past.

Dialects are not just "incorrect standard German," but self-contained systems [that is, they did not degenerate from standard German, but have a history of their own] with their own grammar, vocabulary and pronunciation. Many dialects are considerably different from the standard language. The further two dialects are from each other geographically, the more unlikely it is that the speakers can understand one another. The best known dialects are Bavarian, Swabian, and Saxon.

The boundaries between the dialects that are shown on Transparency 10 are not boundaries in any real sense. They only help to show the region in a very general way.

German Unification Timeline

Unification of the two German states could not have taken place without Germany's post-war reconciliation with the West, which occurred under Konrad Adenauer and its reconciliation with the East, which occurred under Willy Brandt. After 40 years of being separated, the two German states became united on October 3, 1990. The movement of refugees, the peaceful mass demonstrations, the growing political power of the opposition, and the East-West-détente were the driving factors that led to the end of the 40-year-old rule of the Communist Party (SED) in East Germany. The following chronology shows the important steps on the path to German Unity.

Summer 1989 Floods of citizens of East Germany begin to flee the country. Many seek asylum in West German governmental agencies in East Germany and the West German Embassies in Budapest, Prague, and Warsaw, which have to be closed when they become too full.

September 11, 1989 Hungary opens its borders. Inside of three days more than 15,000 East Germans cross over Hungary and Austria into West Germany. At the end of October the number reaches 50,000.

September 30 – October 1, 1989 The approximately 6,000 refugees in the West German embassies in Warsaw and Prague are allowed to go to West Germany. They cross the GDR in locked railway cars.

October 6-7, 1989 At the official celebration of the 40th anniversary of the founding of East Germany, the Soviet head of state Mikhail Gorbachev urges the East German government to reform.

October 16, 1989 In Leipzig 100,000 people demonstrate for democratic reforms with the cry "We are the people!" [Wir sind das Volk] (Subsequently, the so-called "Monday Demonstrations" take place every Monday.)

October 18, 1989 The Central Committee of the Communist Party relieves government and party boss Erich Honecker of all power and chooses Egon Krenz as his successor.

November 4, 1989 A million people demonstrate for reform in East Berlin. East and West Germans meet in a highly emotional atmosphere at the Wall.

November 7-8, 1989 The government of East Germany resigns. The entire politburo [governing body] of the Communist Party resigns.

November 9, 1989 East Germany opens its borders to West Berlin and West Germany.

November 17, 1989 The new government of East Germany under Prime Minister Hans Modrow begins work. The protest demonstrations of the citizens continue. The cry for the unification of both German states gets louder, "We are one people!"

November 28, 1989 Chancellor Helmut Kohl presents to the West German Parliament a 10-point plan for moving toward German Unification, and continues to push forward the unification process.

December 22, 1989 The Brandenburg Gate in East Berlin is opened.

February 10, 1990 Chancellor Helmut Kohl and Foreign Minister Genscher meet in Moscow with General Secretary Gorbachev, who assures the Germans that they may live together in one state. Regular meetings took place subsequently with President Bush and France's President Mitterand concerning this issue.

March 18, 1990 The first free parliamentary elections in 40 years take place in East Germany.

April 12, 1990 The East German parliament chooses Lothar de Maizière, chairman of the CDU, as Prime Minister. The government consists of a great coalition, with ministers from many different parties.

June 21, 1990 The East German Parliament passes a treaty that outlines how East Germany is to unite with West Germany [the German-to-German State Treaty.]

July 1, 1990 The Economic, Monetary, and Social Union specified in the treaty takes effect. The German mark becomes the official currency unit.

August 23, 1990 The East German Parliament approves the entry of East Germany into the Federal Republic [West Germany].

August 31, 1990 The Unification treaty is signed.

October 3, 1990 East Germany enters into the Federal Republic according to Article 23 of the Basic Law [Germany's constitution.] The newly unified country decides to abide by the Basic Law. The Allies grant unified Germany complete and unrestricted sovereignty. The groundwork for that was laid in the Two-plus-Four Negotiations (the two German governments plus the four allied powers from World War II; the Federal Republic of Germany was represented at these negotiations by Foreign Minister Hans Dietrich Genscher).

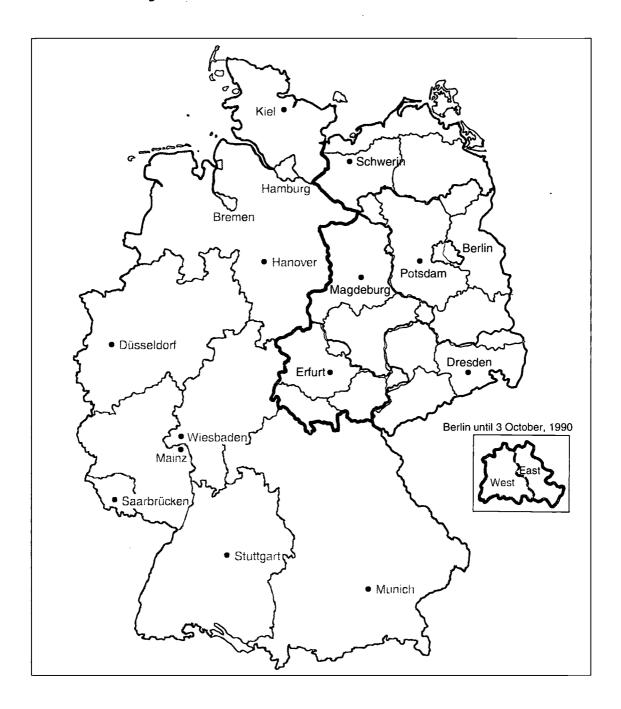

October 14, 1990 State parliamentary elections take place in the five new German states [made from former East Germany].

December 2, 1990 The first election for the Federal Parliament takes place in unified Germany. At the same time city council elections are held in Berlin for the first time. The results of this election are a confirmation of the policy that led to German unity.

German Unity

The Federal States

Page 1

Germany has a federal system of government. As of December 31, 1998 the country consists of 16 federal states.

The federal states of Germany are:

State	Capital	Area	Population	Population Density
Baden-Württemberg	Stuttgart	13,803 sq. mi.	10.42 million	755 sq. mi.
Bavaria	Munich	27,241 sq. mi.	12.09 million	444 sq. mi.
Berlin		341 sq. mi.	3.39 million	9,941 sq. mi.
Brandenburg	Potsdam	11,220 sq. mi.	2.59 million	231 sq. mi.
Bremen		156 sq. mi.	0.67 million	4,295 sq. mi.
Hamburg		292 sq. mi.	1.7 million	5,822 sq. mi.
Hesse	Wiesbaden	8,152 sq. mi.	6.03 million	740 sq. mi.
Lower Saxony	Hanover	18,280 sq. mi.	7.86 million	430 sq. mi.
Mecklenburg-Western Pomerania	Schwerin	9,204 sq. mi.	1.80 million	196 sq. mi.
North Rhine-Westphalia	Düsseldorf	11,610 sq. mi.	17.97 million	1,465 sq. mi.
Rhineland-Palatinate	Mainz	7,664 sq. mi.	4.02 million	525 sq. mi.
Saarland	Saarbrücken	992 sq. mi.	1.07 million	1,079 sq. mi.
Saxony	Dresden	7,080 sq. mi.	4.49 million	634 sq. mi.
Saxony-Anhalt	Magdeburg	7,894 sq. mi.	2.67 million	338 sq. mi.
Schleswig-Holstein	Kiel	6,073 sq. mi.	2.76 million	454 sq. mi.
Thuringia	Erfurt	6,275 sq. mi.	2.46 million	392 sq. mi.

The borders between the states in former West Germany have not been changed since World War II. The "new" states of Thuringia, Saxony, Saxony-Anhalt, Brandenburg, and Mecklenburg-Western Pomerania had been formed in East Germany after World War II by the Soviet military administration but were dissolved in 1952 by the East German government and replaced by other administrative districts (see Transparency 9). In 1968 the states were blotted out of the East German constitution. The reinstatement of the five former states was a condition for the entry of East Germany into the Federal Republic. This was achieved on July 23, 1990 by the passing of a law. According to the German constitution, it is possible to change the way the states are divided. Considering the way things are at present, many suggestions have been offered on how the states could be re-organized to improve the economic situation.

The state parliaments are newly elected every four years (every five years in North Rhine-Westphalia, Rhine-land-Palatinate, and the Saarland.) On October 14, 1990 the first free state parliamentary elections took place in the new states.

The size of the state parliaments varies according to the size of the state, from 23 representatives in the Saarland to 129 in Bavaria.

<u>The Federal States</u> Page 2

Parties represented in the parliament:

- The CDU the Christian Democratic Union (in Bavaria: the CSU – the Christian Social Union)
- The SPD the German Social Democratic Party
- The FDP the German Free Democratic Party
- Die Grünen the Greens (now together with the former "East-Greens", known as "Alliance '90")
- The PDS the Democratic Socialist Party (which is the party that replaced the SED – Socialist Unity Party in the former East German states.)

The federal states also take part in the decisionmaking process at the federal level. The members of the second chamber of the federal parliament (the Bundesrat) represent the federal states. Each state sends from three to six members, depending on the size of the state.

Each of the federal states collects its own taxes, but part of the taxes collected go to the federal government. Part of the federal portion of the taxes at the present time is going to pay for development in the five new states.

The responsibility for cultural matters (including education) lies entirely with the federal states.

In order that there not be too great a difference in quality of life among the different federal states, the more economically strong states give part of their tax revenues to the economically less developed states, thus evening out the financial condition of the states (system of compensation, Finanzausgleich).

Since January 1, 1995, a reorganization of the system of compensation went into effect.

The German states in former East Germany are now included in the mechanism of distribution of Value Added Tax revenues. This change was necessitated by the low over-all tax revenues of the new federal states, where economic development continues to be weak. The East German states receive a total of 56 billion marks, out of which 51 billion stem from federal sources. The volume of the 1995 system of compensation has been estimated at about 15 billion marks.

The borders between the states are not identical with the older tribal boundaries. The German dialects are also not restricted by state borders.

Handout 5.2

Reflections on the Opening of the Border...

Page 1

... by Hendrik, a 13-year-old grammar school student in West Germany, December 1989

Because there are now approved exit visas you find endless (lines of people) at border crossings. Welcome money, empty department stores in the areas close to the border; in Berlin e.g. they had price tags in Deutschmark East. These were the buzzwords in the weeks after the opening of the border. Practically without force the Wall got opened, border crossings were made passable again. Joy and jubilation seemed never ending. The absolute highlight may have been the opening of the Brandenburg Gate. People from all over the world came to witness this joy. After all these points also the negative ones must be mentioned: there were hooligans and rowdies, 'wallpeckers' who hammered pieces from the wall to keep as a souvenir or to sell.

My opinion on all this is that it is no solution that all people who have a bad standard of living in the GDR come over to us. I think it is better to start from scratch than to sweep the problems under the carpet. I think it is self-centered to say: "I go west, that is better for me!" One should remove the real problems and do it together. As far as unification is concerned I think that on the one hand it would be good if people from East and West could come together again but on the other hand we will have to pay a lot of money to help people in the GDR: housing, pollution of the environment, public buildings, etc.

Reflections on the Opening of the Border...

Page 2

... by Heinz, a West German teacher in his forties, December 1989

Considering the dramatic changes in the GDR, I have been particularly struck by the pictures of tens of thousands of refugees from the GDR, the cordial welcomes at border crossings and railway stations, and by the moving scenes at the opening of the Berlin Wall and the Brandenburg Gate, all of which displayed a feeling of belonging together which nobody had thought possible.

Forty years of division and separation have not been able to prevent or diminish the wish for unification. This feeling and this wish exist on both sides of the border. That this feeling of togetherness is beginning to be replaced by scepticism on this side is due to the fact that many people are beginning to realize that emotions are not sufficient to integrate new citizens.

Two thousand new arrivals from the GDR are having an effect. The housing market is absolutely empty. The situation with 2,000,000 structurally unemployed is very tense, social support for new arrivals is tearing holes in budgets of federal, state, and local governments. Now many people believe that it is not fair for the GDR refugees to get preferential treatment with jobs and housing. Some sort of "social envy" is beginning to have an effect . .

Personally I am struck by the following:

- how the speed of events obviously also favors undifferentiated, quick fixes.
- how at present a feeling of congratulating oneself, of being with the winner, is being articulated.
- how much conceit and condescension there is in recommending to people in East Germany what is good for them. We are now in some sense playing the part of the Americans after 1945, the "rich uncle from the West"; there seems to be an FRG "Marshall Plan" for a profitable takeover of a still relatively white spot on the map for investments of West German industry with an expected high profit margin.

- how smugly the market system is again hailed as the only successful one, as if the last thirty years had not shown with great clarity how we are in the process of irreversibly destroying the living conditions of future generations through the "capitalist" ways of production, of consumption, of energy wasting, of environmental destruction, of dulling people via media, of the profitable sale of drugs, of violence, of technology, etc.
- how the timid attempts of talking about alternatives are being discredited by pointing to the normative power of all events: "As every-one can see there is no functioning social-ism." . . .

Internationally people are rediscovering the fear of a Germany which could play an all-powerful economic and political role in Europe; on the other hand they are expecting Germany to play a greater role in solving the world's problems. Vaclav Havel, the writer and current President of the Czech Republic, comments that "Whether Germany has 60 or 80 million people is not the point. If this democratic and social state is based on the rule of law, we need not be afraid of a unified Germany".

[The current period is] characterized by new "openness." Open for quite new and unthought forms of integration and international understanding, but also under threat from old political structures, economic interests and a fundamentalist consciousness that is closed to the necessity of new global thinking. Now that old images of enemies which legitimized the arms race have become obsolete, mankind could now concentrate on that which really is existential, i.e. securing our existence. The changes in Central and Eastern Europe could be the start of a new phase of securing global peace and global resources.

Reflections of East German Teachers on Unification, July 1991

The following excerpts are from travel diaries of a group of American educators who visited Germany in June-July, 1991. They spent most of their time in Saxony-Anhalt, a former east German state that bordered West Germany. They were hosted by German teachers of English (many of whom also taught Russian).

- 1. Halberstadt teacher and wife of an architect "I was not allowed to have contact [travel outside the GDR] with my colleagues in other places. I'll never forgive them for that – for all the years I lost... I received a magazine from friends in the USA. The Stasi [secret police] found out and came to my house and took it. They told me never to communicate with these people again. I didn't until 'the change' five years later. My friends thought I was dead." There was a sadness in her voice, but also joy as she recounted her story.
- 2. A male teacher from Magdeburg in his late forties
 - "I remember going to Berlin and walking up to the Brandenburg Gate and looking over to West Berlin." His face filled with emotion, his eyes became tearful and his voice trailed off. He then recalled his elation when he heard the Wall had come down, and his first experience in revisiting the Brandenburg Gate and walking through it from East Berlin to West Berlin. "It is hard to describe in words the feelings one has at a time like that," he said.
- 3. On a journey across the Harz Mountains, a former East German woman recalls her grandfather's longing for a united Germany "We are German and we must be united," she recounted. With sadness in her voice she said, "He died before he could see the unification".
- 4. A woman from Halberstadt, married, no children

"My husband and I drove to Goslar [a West German town across the border] after the fall of the Wall in November and just prior to Christmas. We stood in the town center. There was a tall Christmas tree; the smell of roasting nuts in the air; snow was falling; and the shop windows were filled with all kinds of marvelous goods – things we had never seen before and never

- dreamed we could buy. We thought we were in fairyland."
- 5. A male local government official from Halberstadt

"With the push of a button, everything in eastern Germany must be like in West Germany, where it has taken 40 years to develop. . . "Democracy only lives at the local level."

- 6. A 59-year-old woman teacher, unmarried, nearing retirement
 - "Many people [in East Germany] would rather have had two Germanies, but unification was a necessity."
- 7. Halberstadt teacher, married, in her fifties "From the cradle to the grave we were taken care of by the government. Now we don't know how to make decisions for ourselves."
- A male school headmaster from Magdeburg "The psychological walls are higher than the Wall."
- 9. A visiting American's summary observation "In one respect the East Germans traded security for freedom. The change brought political freedom, but the change is painful for many who have lost economic and social security. Unemployment is high and will get higher. Some former East Germans feel their system had some desirable features and they should have been able to retain those, but the West Germans have required that things be done in the former eastern states as they are in the rest of the FRG. Although not all acknowledge it openly, some do express the view that they feel like second-class citizens."

A Letter from Anne . . .

Page 1

Anne, a 59-year-old teacher from what was formerly East Germany, wrote a letter in August, 1991, reflecting on the significance of "The Wall" and the events that led to its destruction and the eventual unification of Germany.

Let me begin with the fact that "The Wall" overshadowed the greater part of my life. I was 57 years old when it came down in November 1989. When studying in Berlin in the early 1950's (age 19) I had my first experience with Berlin as a "divided" city ... I used to visit my relations in West Berlin guite frequently, or I simply went window shopping or watched an interesting film there. At that time it was easily done, you bought a ticket for the underground or suburban [train] ... but you had to be prepared to undergo searching by customs officials on leaving or arriving at the "Ostsektor" (Eastern part of Berlin). Of course, it was rather unpleasant to see prosperity in the western part and lack of goods in our part accompanied by ... ideological tutelage.

My first teaching job took me to Halberstadt (1954), a medium-size town in the foothills of the Harz Mountains. Up to 1961 I continued with my visits to West Berlin, the last time some days before the Berlin Wall was erected. Two colleagues and good friends of mine, a young married couple with two children, I had illegally left the GDR via Berlin. I had decided to stay, because my parents lived in Eastern Germany. I was their only child and hated the idea of leaving them to themselves at an age when they needed my help. Besides, I had just started to build my first home with my own money, and I enjoyed teaching and the friendly atmosphere at my first school.

Overnight [when the Wall went up] the discussions with friends whether to go west or to stay had come to an end. From 1961 on, until July 1989, I was never allowed to travel west and visit my numerous relatives in West Germany and West Berlin. I had tried several times to get permission on the occasions of weddings or serious illnesses in the family, but according to the especially strict regulations for teachers my requests were always answered negatively.

Our then Minister of Education ... had made the point: "The FRG is no country for teachers to travel to". (Our colleague whose mother had died in

West Germany was not allowed to take part in the funeral.) Not only couldn't you get permission to leave – you also had to answer questions about your western "contacts" in the principal's office – and you were urged to give up or restrict your contacts. All this had to be seen against the possibilities of losing your job, if you expressed your opinion too freely.

Discontent among teachers was steadily increasing, all the more as "normal" people (not teachers) had better chances to get a visa. In addition, the economic situation became worse and worse – so thousands of people, especially young ones, took the chance of turning their backs to the socialist GDR [by leaving] via Hungary and Czechoslovakia.

When the Halberstadt "New Forum" and the church initiated meetings ... (similar to Leipzig and other big cities) where citizens could speak their minds, more and more people of Halberstadt, and other teachers, joined too.

Within a very short time there was not enough space for all inside the church, so the crowd assembled in front of the church listening to the speeches over a loudspeaker, and after the meeting a long peaceful procession of people moved through the main streets, the participants carrying candles and shouting slogans against socialist policies and especially against the Stasi (security forces). This was done every Wednesday for weeks. It was an exciting time.

You picked up new hope for a "change". This meant first of all: No more state or party interference in our lives and the right to travel freely. I (and many others, too) did not think of currency [financial] union or even unification in those days. And then there was the opening of "The Wall". I learned about it when I watched the news on TV. I could not believe my eyes and ears – I was stunned and unable to move in my armchair, looking at the picture breathlessly.

Recollecting the events now I must say that my first reaction was not boisterous joy, I did not

A Letter from Anne . . .

Page 2

scream and laugh as others did – I felt empty, as if all strength had gone out of my body. The next reaction resulted in a question to myself: How long will it last?

Thousands of people rushed to their cars – they wanted to cross the borderline (which is about 30 km away from Halberstadt) and found themselves in a long, long queue. My neighbors – after waiting three hours in the exhaust gases – gave up. Their children stayed on and were successful after four hours and passed through crowds of [West Germans] applauding and throwing bottles of champagne into the "Trabis" [East German car]. One of my younger colleagues managed to get from Halberstadt to the Dutch frontier and back over this

weekend ... I stayed at home watching the touching scenes between people of the two Germanies on TV. My first border crossing took place two weeks later. I visited a cousin in West Berlin. It took me about half an hour (as in the 1950's) to reach her apartment including passport control and the trip by suburban train. She had been a school girl when I had met her the last time in her parents' home.

Now I can travel west any time I like (if I have the money). In the remaining years of my life I will try to fill at least some of the gaps in my knowledge of Germany to get an impression of what my home country is like.

Differing Views on Unification

Page 1

Below are opinions from selected newspapers around the world expressing a variety of views about the prospects of German unification. As you read these keep in mind that these views do not represent official government policy (an exception is Izvestia) and may not even reflect the views of large numbers of people in the countries where the papers are published. They do, however, illustrate the sharply different views that thoughtful people hold. As you read the comments consider the following questions:

- a. What benefits or positive outcomes of unification do some of the writers see?
- b. What concerns or worries some of them?
- c. How important an event is unification for Germany? for Europe? for the world?

SYDNEY Sydney Morning Herald (moderate): [A united Germany] will be a massive beast, invincible at the summer Olympics and an unmatchable economy that shadows all of its neighbors, single-handedly wedging Central Europe back onto the map between the once-unchangeable notions of West and East. – Robert Whitehead

LONDON Financial Times (independent): The addition of East to West Germany would not make as much of a difference as is supposed; nor would a united Germany be as overwhelming in European affairs as some people believe. ... Modern Germany is a trading power. It is improbable that it would turn its back on the huge markets of the West to pursue a will-o'-the- wisp in the East. – Martin Wolf

BUENOS AIRES La Prensa (conservative): The Soviet leaders are resignedly presiding over the inevitable liquidation of the empire they inherited... There is every reason for the German nation to achieve full independence and union, what could be one of the most transcendent and beneficial accomplishments of our time.

TEL AVIV Yediot Achronot (independent): The slogan, "One nation, one land," that more and more West German personalities have been reciting in recent days has a discordant and terrifying ring. To those who remember history, it is reminiscent of the bestial battle cry, "One nation, one people, one leader," that expressed the goals of expansion harbored by Nazi Germany and led to World War II.

MANILA Philippine Daily Globe (independent): Fewer scholars will henceforth speak with total confidence of a Pacific Century. There is no question that we are not finished with Eurocentric world order. – Blas F. Opie

PARIS Le Monde (liberal): We must insure that the unification of Germany and that of Europe move forward in parallel, so that the specter of hegemony does not again loom on the horizon... The cold war, waged in the name of ideological sympathies, has weakened the thrust of nationalisms. It is the duty of us all to make sure that the end of the cold war does not lead to their revival. – Andre Fontaine

MOSCOW Izvestia (government daily): The allies' position is of considerable importance here. Bonn evidently realizes that their theoretical readiness to support the idea of unification...and practise this direction are two different things... We intend to build together a common European home in which the various "domestic arrangements" will obviously be preserved. Whether its tenants will feel at ease and safe and the need for locked cellars and attics will disappear . . . that depends on working out joint agreements. The key point is that the balance of interests of other Europeans must not be disturbed; and that the political, economic, and social structures of postwar Europe, which took decades to erect and now serve as the only guarantee of its future security, must not be destroyed. - Yevgeny Bovkun

Differing Views on Unification

Page 2

ISTANBUL Milliyet (liberal-reformist): The merging of the Germanies would create a new superpower in Western Europe. All balances and areas of influence designed at Yalta would change. It is unclear how this process of stupefying speed will end. These are the possibilities that terrify the West.

TURIN La Stampa (liberal): History, that great joker, is laughing at all of those who so boldly announced its end. German reunification, a theme that seemed to have been mummified and buried, is resurfacing. Those in the West are least prepared for this, because they have always talked about unification, but rarely thought about it. The Soviet leaders are better prepared, having thought about it a lot without saying much. But all have been caught off-guard by the accelerating events . . .

No, history has not ended. - Barbara Spinelli

HAMBURG Die Zeit (liberal weekly): Even those who find themselves unable to accept two Germanies know perfectly well that, even in the best of all possible worlds, unity will come at the end of a long, long development that has only just begun; that it must not be allowed to occur under conditions that would tear us from the chains that have anchored us in the Atlantic and European communities from which, in past decades, we have found protection and support. It is also clear that unification will probably occur far more loosely than was the case with the German Reich that existed from 1871 to 1945 . . . And it is even clearer that the German question does not belong to Germans alone. – Theo Sommer

In 1945 the National-Socialist dictatorship collapsed after Germany lost the war. Until reunification in 1990 two German states existed next to each other and against other over a long period of time.

1949: Germany is devided. In the west the Federal Republic of Germany is founded as a parliamentary democracy modeled on the West. In the east the German Democratic Republic is founded, which is a communist dictatorship. The dominating figures were Konrad Adenauer for Western Germany and Walter Ulbricht for the German Democratic Republic (GDR).

1950: The first Economics Minister of the Federal Republic of Germany, Ludwig Erhard, proclaims the "Social Market Economy". The reconstruction of Germany begins. In the GDR the socialist model of a planned economy is introduced.

1953: On June 17 there is an uprising against the Communist system in East Berlin; hundreds of thousands of people take to the streets to protest the political dictatorship and the Socialist planned economy. The revolt is crushed by the GDR government.

1954: Under the Treaties of Paris the Federal Republic of Germany is accepted into the western alliance.

1955: Ten years after the Second World War the last German prisoners of war come home from Siberia. Diplomatic relations are agreed between Moscow and Bonn. The Federal Republic of Germany joins NATO. It becomes a sovereign state. Inhabitants of the GDR pour into the West over the border, which is still passable.

1957: In the Federal Republic of Germany there is a strong upswing in business known as the "Economic Miracle". Prosperity spreads amongst the West German people. To keep pace with the economic upturn "guest workers" are invited into the country.

1959: In the GDR "Republikflucht" (escape from East Germany) has in the meantime become a punishable offense. Despite this, every day thou-

sands of people flee from the so-called "Workers' and Farmers' State".

1961: In the night of August 13, armed units of the East-German army cordon off the border of the East-German sector of Berlin. The Berlin Wall comes into being, imprisoning the people of the GDR.

1963: John F. Kennedy visits the divided city and utters the frequently-quoted words: "I am a Berliner". In the same year the era of Konrad Adenauer, which lasted 14 years, comes to an end. The lifework of Adenauer was the Franco-German reconciliation, European Unification and the integration of the Federal Republic of Germany in the Western military alliance.

1968: In the Federal Republic of Germany dissatisfaction with middle class values, which has been growing since 1966, escalates into riots and violence directed at the system; a deep rift appears between the generations.

1970: There is finally movement in the frozen relations between East and West. The first Social Democratic Federal Chancellor, Willy Brandt, meets for talks with the East German Prime Minister, Willy Stoph. In Moscow, Brandt signs a nonaggression pact with the Soviet Union.

1972: The East German government loosens travel restrictions. The inhabitants of West Berlin are for the first time allowed to visit East Berlin again.

1973: The Treaty on Intra-German Relations comes into force. The two German republics agree to respect each other's sovereignty. The following was agreed: recognition of the borders, restriction of jurisdiction to the respective state territories, an exchange of "Permanent Representatives", continuation of intra-German trade. Both countries apply for membership in the United Nations Organization. The Federal Republic of Germany and the German Democratic Republic are accepted into the United Nations Organization.

<u>Important Dates</u> Page 2

In the following years the GDR introduces new regulations, which seal the division of Germany. However, at the same time, amongst the people of the two German Republics there is an increasingly strong urge to meet each other. By 1985 over 204,000 people have illegally crossed the border into the West. The Federal Republic of Germany tries to achieve concessions – for instance through granting loans amounting to millions of marks. Despite economic success the daily lives of people in the GDR become increasingly plagued by problems with the supply of goods and services.

The 1980s are an era of rapprochement. Contacts become closer and there is progress in the normalization of the relations between the two countries.

1981: Federal Chancellor Helmut Schmidt visits the GDR and holds talks with Communist Party Leader Erich Honecker.

1983: The Governing Mayor of West Berlin, Richard von Weizsäcker, meets Erich Honecker in East Berlin. It is the first meeting of this kind in the history of the divided city.

1984: The dissatisfaction of East German citizens with the political and economic conditions continues to grow. The number of people applying to emigrate increases and 35,000 are allowed to leave for the Federal Republic of Germany.

1985: Mines along the border fences of the GDR are dismantled and restrictions on imports of Western goods are relaxed. It becomes easier to visit the West.

1987: Erich Honecker visits the Federal Republic of Germany for the first time.

1989: The peaceful revolution begins: Thousands of East German citizens take to the streets to demonstrate for their freedom. Almost one million people want to leave the country. On December 22 the Brandenburg Gate in Berlin is opened.

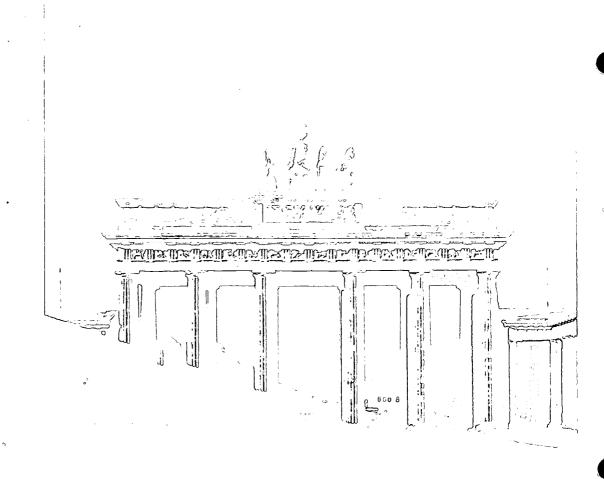

1990: Since October 3 Germany is reunited. On December 13 the first all-German elections take place.

1991: The Bundestag (Federal Parliamant) votes with a narrow majority for Berlin as the future seat of government and parliament.

The "Aufschwung Ost" (economic upswing in eastern Germany) begins. The aim is to achieve uniform living standards in eastern and western Germany. The resulting difficulties – for instance the run-down state of eastern Germany's industry, mass unemployment, great state indebtedness – lead to considerable tension.

2000/2001: Enormous efforts are still necessary to compensate for the differences in living standards which grew during the years when Germany was divided.
