ABSTRACT

This report, based on the College Board's Annual Survey of Colleges, provides updated information on tuition and other expenses associated with attending public and private nonprofit institutions of postsecondary education in the United States in the 2002-2003 academic year. The annual survey is distributed to more than 2,900 postsecondary institutions across the United States to collect a wealth of data on many aspects of undergraduate education. For the 2002-2003 academic year, the average tuition and fees charged by public four-year colleges and universities is \$4,081, up \$356 from the 2001-2002 year, for an increase of 9.6%. This continues a trend of rapidly increasing tuition and fees over the last 2 years. Regional differences in tuition and fees were identified. Because increases in room and board rose more slowly than tuition and fees, the total fixed cost of attending four-year colleges rose 7.5% for public institutions and 5.5% for private institutions. About 38% of undergraduates at four-year institutions are at institutions charging less than \$4,000 in tuition and fees, and almost 70% face charges of less than \$8,000. Only 7% are enrolled in institutions charging \$24,000 or more per year. More than half of all students receive some form of financial aid. Figures from this year's survey show, that as in the past, the costs of not attending college are likely to be much greater over a lifetime than the costs of attendance. (Contains 12 tables and 15 figures.) (SLD)

INTRODUCTION

This report, based on the College Board's Annual Survey of Colleges, provides updated information on tuition and other expenses associated with attending public and private nonprofit institutions of postsecondary education in the United States. The Annual Survey is distributed to over 2,900 postsecondary institutions across the country, collecting a wealth of data on enrollment, admissions, degrees and majors, tuition, financial aid, and other aspects of undergraduate education.

Each fall the College Board releases the survey results on how much colleges and universities plan to charge undergraduate students in the new academic year. Simultaneously we release information from a counterpart survey conducted by the College Board, *Trends in Student Aid*.

Taken together, the companion reports, *Trends in College Pricing* and *Trends in Student Aid*, tell much about the financing of postsecondary educational opportunity in America. One provides the latest information on college charges and expenses. The other tracks the amount of financial assistance available to help pay these bills. In both publications we report trend data in both current and constant (inflation-adjusted) dollars.

Scope of the Report

This edition of *Trends in College Pricing* presents data for the 2002–2003 academic year for two-year and four-year public and private nonprofit institutions. The data include:

- average fixed charges for undergraduates—tuition and fees and room and board (Table 1);
- average nonfixed budget components—books and supplies, commuter room and board, transportation, and other expenses (Table 2); and
- sample student expense budgets for each type of institution (Table 3).

Although students do have some degree of discretionary control over the nonfixed components of their budgets, both fixed and nonfixed costs should be taken into account by families in planning to meet educational expenses. Both kinds of expenses are considered by institutions in constructing student aid budgets for purposes of determining need and eligibility for financial aid. The amounts reported here are higher than the amounts most students and families are actually expected to pay, since over half of them receive some form of financial aid.

Table 1 also reports the percent change from the previous year in tuition and fees as well as room and board for each category of institution. The averages for 2001–2002 (the “base year”) and 2002–2003 (the new academic year) are derived from the exact same set of institutions.

The balance of the report provides regional breakdowns of the current pricing information, historical data, analysis of college pricing in relation to family income and available

financial aid, and supplemental indicators on college participation rates, institutional enrollments and revenues, and the correlation between education level and earnings. New additions this year include information on college participation rates by race and gender, as well as a comparison between revenue sources for the public and private sectors.

When the College Board first started issuing press releases on the tuition figures from the Annual Survey in the early 1980s, the primary focus was a current snapshot of college expenses—that is, the published prices facing students and parents in the upcoming academic year. With sustained tuition inflation during most of the past two decades, the media and the public have increasingly focused on the percent increase from year to year and trends over time. The *Trends in College Pricing* publication originated four years ago, largely in response to the intense interest in long-term trends analysis.

Enrollment-Weighted and Unweighted Data

This report provides both enrollment-weighted averages, or average prices that students confront, and unweighted averages, or average college charges.

Weighted and unweighted averages represent two different vantage points from which prices can be viewed:

- The experience of the average student in incurring charges at various types of institutions [weighted], and
- A simple averaging of institutional charges [unweighted].

When weights are used in the calculations, fixed charges and estimated expenditures reported by colleges with larger enrollments are weighted more heavily than those of institutions with smaller enrollments. When calculations are performed without weighting, the fixed charges and estimated expenditures of all reporting institutions are treated identically and simply averaged.

As a “snapshot,” neither set of averages is more or less “correct” than the other; they describe different phenomena. The College Board produced weighted averages for the first time in 1987, having previously computed unweighted averages only. The weighted averages may be more helpful to students and families in anticipating future education expenses.

Some researchers, policy analysts, and academic administrators find the unweighted averages useful in studying longitudinal trends and evaluating a particular institution's practices against a larger set. Thus the College Board continues to compute unweighted averages as well. Unweighted averages for 2001–2002 and 2002–2003 are displayed in Table 7 of the report.

Survey Response and Institutions Included in Calculations

Data were collected on questionnaires distributed in October 2001, and subjected to intensive review and follow-up where necessary through the following spring and summer. The database for this analysis was closed in late August 2002.

Out of the surveys mailed to 2,939 public and private nonprofit institutions, 2,414 (82 percent) were included in this year's analysis. To ensure that the averages we report are as accurate as possible at the time they are computed, the College Board maintains two kinds of internal controls:

- We include in the calculations only those institutions for which we have two consecutive years' worth of data. The purpose of this restriction is to minimize the distortions that might otherwise be caused by institutions responding one year and not the next.
- We do not report any average unless sufficient observations are available within each cell to justify an average. Because institutions are not required to report information in all categories, rates of response vary considerably by budget component. Where the number of institutions reporting data was not large enough to provide meaningful information, we do not publish average figures.

See **Notes and Sources** at the back of this report for more detail on composition of the sample and statistical controls.

Revision of Base-Year Figures

The base-year values for 2001–2002 used in this analysis differ somewhat from the 2001–2002 averages that we reported last year. The difference is due in part to one of the restrictions mentioned above. Restricting the analysis to those institutions for which two consecutive years' worth of data are available requires that the College Board annually recompute the base-year averages at the same time it calculates new averages and rates of change.

The base-year numbers also change as a result of revisions submitted by institutions. During the course of each year schools may provide the College Board with updated or corrected information, adjusting the data they initially reported for the previous year. Several hundred institutions submitted changes to their earlier figures for 2001–2002. Most of these revisions are minor. Some result from simple human error, which in some measure can only be expected in such a large survey, and many result from the increasing complexity of tuition and fee formulas and determining what fees apply to all students.

The difference between the average tuition and fees we reported a year ago and the recomputed averages in this report is less than 1 percent for both public and private four-year institutions. However, the 2001–2002 tuition and fee level we report this year for public two-year institutions is 7.5 percent lower than the level we reported last year, while the charges at two-year private colleges have been revised upward by 15.7 percent. The difference in the public two-year sector may be the result of a higher response rate than in past years. The small sample sizes and relatively low response rate that explain the inconsistency in the two-year private sector mean that these estimates should be interpreted with particular caution. The result is that combining this year's rate of

increase with the rate of increase we reported last year will give a misleading impression of the trends in prices at two-year institutions. Using the historical figures published here is more reliable.

Thus, the reader is advised that the average prices for 2002–2003—and calculated rates of change—published in this report are subject to recomputation one year hence.

Limitations of Historical Data

How have prices changed over recent decades? Table 5 presents a historical series based on enrollment-weighted averages. Tables 8 and 8a provide longitudinal trends based on unweighted data.

Our internal data controls help to ensure that averages and estimated rates of increase are as accurate and meaningful as possible at the time they are computed and published. However, they do not control for shifts in the sample from year to year in the historical series and thus do not ensure precise longitudinal comparability. The historical data presented in this report are a best approximation of the changes in college prices over time.

Treatment of Commuter Student Costs

Last year we revised our presentation of expenses for commuter students. Earlier reports focused on commuter students living with parents, and estimated costs did not include housing, thus underestimating total expenses for most commuter students.

Room and board costs for commuter students are based on average expenses for students living off-campus but not with parents. These are not fixed institutional charges, but rather estimated local living costs for off-campus students. This revised treatment more accurately reflects expenses incurred by the majority of commuter students. Because of this new approach, longitudinal data on commuter student living costs are not available for presentation in this report.

Acknowledgments

The report would not have been possible without the cooperation and work of the following individuals at the College Board: Michael Tuller, Catherine Serico, and the Annual Survey of Colleges staff in Guidance Publishing; Kathleen Little and Linda Peckham of the College and University Enrollment Solutions Division; Lezli Baskerville and Michele Booth-Cole of the Washington Office; Erin Thomas, Meredith Haber, and the staff of the Creative Services Division; and the Public Affairs Division. Susan McCrackin and consultants, Sandy Baum and Kathleen Payea, managed the project, analyzed the data, and prepared the report.

We welcome reader comments and suggestions on these *Trends* reports. Visit College Board on the Web at www.collegeboard.com for an electronic version of this document and its counterpart *Trends in Student Aid 2002*.

2002-03 TUITION AND FEES

For the 2002–2003 academic year, the average tuition and fees charged by public four-year colleges and universities is \$4,081, up \$356 from \$3,725 in 2001–2002, an increase of 9.6 percent. Average private four-year college tuition and fees rose by 5.8 percent or \$1,001, from \$17,272 to \$18,273. These increases exceed the rise in the CPI over the year by 8.4 and 4.7 percent, respectively. Tuition and fees at two-year public institutions average \$1,735, 7.9 percent (\$127) more than last year, while those at two-year private institutions average \$9,890, an increase of 7.5 percent (\$690). (Tables 1, 4, and 5)

TUITION AND FEE TRENDS

In the 1970s there was little, if any, real growth in college prices. In the early 1980s, however, tuition and fees began to grow much more rapidly than consumer prices. Over the ten-year period ending in 2002–2003, after adjusting for inflation, average tuition and fees at both public and private four-year colleges and universities rose 38 percent, much more slowly than over the preceding decade. Still, charges in both sectors have grown over the last two years at relatively high rates by historical standards. This is particularly true for public institutions, whose inflation-adjusted increase of 8.4 percent in tuition and fees is larger in 2002–2003 than in any year since 1987–88. The pattern of state governments restricting the growth in appropriations when the economy slows, leading to particularly large increases in the cost of attending public colleges and universities, is clearly evident this year. (Figures 4 and 6; Tables 5 and 6a)

REGIONAL DIFFERENCES

Both tuition and fee levels and their rates of growth differ significantly across the country. Tuition and fees have grown more slowly over the last decade in New England than they have in any other region of the country. The Southwest has experienced the most rapid growth in both the public and private four-year sectors, while tuition and fee charges at public two-year colleges have grown most in the South. (Tables 4 and 6)

TOTAL FIXED COST

Total fixed charges include room and board, in addition to tuition and fees. Because room and board rose less than tuition and fees, the increases in the total fixed cost of attending four-year colleges are 7.5 percent for public institutions and 5.5 percent for private institutions, lower than the tuition and fee increases cited above. (Table 1)

AFFORDABILITY

About 38 percent of undergraduate students attending four-year colleges and universities full-time are at institutions charging less than \$4,000 in tuition and fees, and almost 70 percent face tuition charges of less than \$8,000. Only 7 percent are enrolled in institutions charging tuition of \$24,000 or more per year. Since over half of all students receive some form of student aid, even these numbers significantly overestimate the amount students and their families are actually paying for tuition and fees. (Figures 1, 3, 8, 14, and 15; also see companion *Trends in Student Aid* report)

During the 1980s, the cost of attending college rose over three times as fast as median income, while student aid grew slowly. College costs continue to grow relative to the median family income, but student aid grew much more rapidly than tuition and fees over the decade. However, much of the growth in aid has been in the form of loans, rather than grants. (Figure 6)

Median family income tells only part of the story because incomes grew steadily less equal during the 1980s and 1990s. Families near the top of the income distribution have actually seen their incomes grow enough over the last decade to keep up with the cost of attending college. Over the past 20 years, the affordability problem has, however, increased for all others, particularly for students from the lowest-income families. (Figure 5)

INSTITUTIONAL REVENUES

Between 1980–81 and 1995–96, the portion of revenues at public colleges and universities coming through state appropriations declined from 45 percent to 36 percent. Tuition and fees increased to constitute 19 percent of revenues, compared to only 13 percent in 1980–81. Tuition and fees account for a much larger percentage of the revenues of private colleges and universities. This amount grew to 43 percent in 1995–96 from 35 percent in 1980–81. Declines in state and federal funding as a percentage of total expenditures have shifted a greater share of the costs to students and families. (Figure 13)

COLLEGE PARTICIPATION

Enrollment in postsecondary education has risen for all economic, racial, and ethnic groups during the past quarter century. Yet an individual's chances of entering and completing college remain closely correlated with family background. Only 54 percent of high school graduates from the lowest-income quartile enroll in college, compared to 82 percent of those with incomes above \$86,000. White high school graduates are much more likely than African American and Hispanic high school graduates to continue their educations. Over the last decade, the female college participation rate has surpassed the rate for males. (Figures 9 and 10)

ECONOMIC BENEFITS OF EDUCATION

College is an investment that pays off over a lifetime, in both monetary and nonmonetary terms. Median annual income for bachelor's degree recipients is 80 percent higher than median income for those with only a high school diploma. Over a lifetime, the gap in earnings between those with a high school diploma and a B.A. (or higher) exceeds \$1,000,000. While the cost of college may be imposing to many families, the cost associated with not going to college is likely to be much greater. (Figures 11 and 12)

Note: Averages in *italicized type* indicate that while the number of institutions reporting data on this item was large enough to support an analysis, the sample size was marginal. Dashes indicate that the sample was too small to provide meaningful information. Data are enrollment-weighted, with the exception of Additional Out-of-State Charges (Unweighted).

* Room and board costs for commuter students are average estimated living expenses for students living off-campus but not with parents.

Notes and Sources

Data Sources and Analytical Details

Averages and rates of change described in this report are based on data reported by public and private nonprofit colleges and universities as part of the College Board's 2002–2003 Annual Survey of Colleges.

Data were collected on questionnaires distributed in October 2001, and subjected to intensive review and follow-up where necessary through the following spring and summer months. Institutions had until the third week of August 2002 to submit or revise their figures. To collect comparable price information, the survey asked institutions to provide tuition and fee data based on charges to most first-year, full-time students, based on a nine-month academic year of 30 semester hours or 45 quarter hours. If firm 2002–2003 figures were not yet established at the time the database was closed out in August, but a reliable institutional or systemwide forecast was available, projected data were used in the analysis.

Data from nearly 82 percent of those surveyed (2,414 of 2,939) were examined as part of this year's analysis. Averages in particular cells, however, are based on smaller subsets of these data that meet the criteria for inclusion, in particular two consecutive years' worth of pricing data plus required enrollment-weighting data.

In developing averages and calculating rates of change for direct charges, we have produced both weighted and unweighted figures since weighting was first introduced in 1987. For estimated student expenditures in nonfixed budget components, we have produced only weighted averages since 1987.

Weights are applied differentially, depending on the data element being analyzed.

- Two sets of averages and rates of change are provided for "tuition and fees"—weighted (by total undergraduate enrollment) and unweighted.
- Two sets of averages and rates of change are provided for "resident room and board"—weighted (by the number of undergraduates living

Table A. Composition of Sample for Tuition and Fees (T&F) Analysis

	Total Surveys mailed	Total Survey Respondents	Number of Institutions Included in T&F Analysis	Institutions in Sample where T&F Are Projected (not firm)
2-yr Public	1,005	909	874	20
2-yr Private	124	100	66	3
4-yr Public	600	515	480	11
4-yr Private	1,210	1,077	994	14
Total	2,939	2,601	2,414	48

in college housing at each institution) and unweighted.

- One set of averages and no rates of change are provided for "estimated student expenditures in nonfixed budget components," weighted differentially:

- "Books and supplies" (weighted by total undergraduate enrollment)
- "Resident transportation" and "other resident costs" (weighted by the number of undergraduates living in college housing)
- "Commuter room and board," "commuter transportation," and "other commuter costs" (weighted by the number of commuting undergraduates at each institution, reflecting the expenses of commuters not living at home with parents)

Note that the additional "out-of-state charges" included in Table 3 (sample budgets) and Table 4 for public colleges reflect the mean charges reported by institutions, and not a weighted average. Some two-year public colleges also levy an additional out-of-district surcharge. Private institutions rarely levy nonresident surcharges.

Composition of the Sample

Table A describes the institutions that were included in this analysis, by sector.

- The first column reports the number of questionnaires sent to each type of institution.
- The second column reflects the number of institutions of each type and control that responded to the Annual Survey of Colleges in 2002.
- The third column represents the number of total institutions of each type and control that provided both two consecutive years' worth of

tuition data and the full-time enrollment data required for weighting. The analyses are performed on the data from these institutions.

- The fourth column indicates the number of institutions that submitted "projected" (as distinct from "firm" or "actual") data at the time the analysis was performed.

By way of illustration, in calculating the average tuition and fees for two-year public institutions, we used data from 874 of the 909 two-year public institutions that responded (or about 96 percent). Within that sample of 874 institutions, approximately 2 percent (i.e., 20 schools) reported projected, rather than firm, data.

Tests are constructed for every data cell to determine whether there are sufficient observations to support analysis. With the single exception of books and supplies, which draws a response rate comparable to tuition and fees, the response rates to other fields, including resident room and board, are lower.

The samples we construct for regional subsets are, of course, smaller. In some regional subsets, the number of usable observations in some budget components is so low that we either do not publish the averages or classify them as marginal.

Please note that the foregoing discussion applies only to the question of how many institutions are included in the pricing analysis (averages and rates of change), not to the number of institutions whose data the College Board publishes in *The College Cost & Financial Aid Handbook*. In the *Handbook*, entries for individual institutions responding to the Annual Survey indicate whether the tuition figures are current, projected, or prior year data. The 2003 edition of the *Handbook* was published in August 2002.

Longitudinal Data

In Table 5, tuition averages from years prior to 1986-87 are extracted from the National Center for Education Statistics' Integrated Postsecondary Education Data System (IPEDS). The two data sets, IPEDS and the College Board's Annual Survey, track very closely. The historical data include the revised data for each year and are, therefore, not entirely consistent with the data originally published for any given year. Rates of change in Table 5 are based on the revised data and do not always correspond to the annual rates of change originally published.

Inflation Adjustment

The Consumer Price Index for all urban dwellers (the CPI-U) is used to adjust for inflation. Updated CPI data are available from the Bureau of Labor Statistics Web site (<http://stats.bls.gov/cpihome.htm>). The academic base year 2001-2002 was extrapolated from the current CPI data and is inclusive of July 2002 to June 2003 (estimated).

Formula for Constant Dollar Conversion:

CONSTANT <small>(base year)</small> Dollars	=	CURRENT <small>year</small> dollars	X	$\frac{\text{CPI for the base year}}{\text{CPI for the current year}}$
--	---	--	---	--

Table B provides academic and calendar year CPI data. The factor column provides the user with a multiplication factor equal to that of CPI (base year) divided by CPI (current year), as illustrated in the right-hand side of the above equation. A simple multiplication of a current year figure by the associated factor will yield a constant-dollar result.

Table B. Consumer Price Index (1982-84 = 100)

Academic Year			Calendar Year		
Year	CPI	Factor	Year	CPI	Factor
1992-93	142.5	1.2636	1992	140.3	1.2760

trends in college pricing

This report provides the most recent and complete statistics available on pricing of U.S. public and private nonprofit postsecondary institutions. Based on the College Board's *Annual Survey of Colleges*, data presented in this publication cover tuition and fees, room and board, and other costs associated with going to college.

Defining Terms

According to the National Commission on the Cost of Higher Education, defining "cost," "price," and "subsidy" is critical to clarifying the issues in financing postsecondary education.

- **Costs** refer to the expenditures associated with delivering instruction, including physical plant and salaries.
- **Prices** are the expenses that students and parents face. Published price is the price institutions charge for tuition and fees as well as room and board in the case of students residing on campus. A full student expense budget also includes books, supplies, and transportation. Net price is what the student and/or family must cover after financial aid awards are subtracted.
- **General subsidies** make it possible for institutions to charge less than the actual costs of instruction. State, federal, and local appropriations, as well as private philanthropy, reduce the prices faced by all students—whether or not they receive financial aid.

This report provides the published prices facing students and parents. It does not include estimates of average net price. However, we refer readers to the companion publication, *Trends in Student Aid 2002*, for data on the grant, loan, work-study, and education tax credit aid that helps families cover the expenses of college attendance. This report also does not focus on the underlying costs of instruction or subsidies to institutions.

The Washington Office of the College Board conducts research relevant to public policy issues in education. The office is located at 1233 20th Street, NW, Suite 600, Washington, DC 20036. Phone 202 822-5900.

Additional copies of this report, item #995973, may be ordered for \$15 each from College Board Publications, Box 886, New York, NY 10101-0886. Please add \$4 for postage and handling. Credit card orders may be placed by calling 800 323-7155 Monday through Friday, 8 a.m. to 9 p.m. (ET). For additional information, call College Board Publications Customer Service at 212 713-8165 Monday through Friday, 8 a.m. to 9 p.m. (ET). Purchase orders over \$25 are accepted.
