ABSTRACT

This tenth annual KIDS COUNT data book examines statewide and county trends in the well-being of West Virginia's children; this year's report looks at a decade of data based on indicators in four areas: child health, education, safety and security, and economic conditions. Following a summary that describes overall findings, the bulk of the report presents county profiles based on the 12 specific indicators of well-being: (1) percent low birth weight babies; (2) infant mortality rate; (3) child death rate; (4) percent of eligible children served by Head Start; (5) percent children approved for free and reduced school meals; (6) child abuse/neglect rate; (7) teen birth rate; (8) percent births to unmarried teens; (9) percent of high school dropouts; (10) juvenile delinquency case rate; (11) teen violent death rate; and (12) percent births to mothers with less than a twelfth-grade education. Trends for data are indicated for 1990-2000 decade. Over this time range, several indicators show improvement, including infant and child deaths, unemployment, and median family income. Worsening indicators include rates for low-birth weight babies, children approved for free or reduced-price meals, and juvenile delinquency cases. Information on definitions, methodology, and sources concludes the data book. (HTH)

Purpose

The West Virginia KIDS COUNT Fund works to improve the lives of West Virginia's at-risk children by:

- conducting research and disseminating that research to its constituents;
- identifying and supporting programs that work; and
- supporting public policies that promote prevention and early intervention.

The constituencies of the Fund are the business and faith communities, the media, and government.

3 Our hopes are that . . .

Business, religious communities, and government look to the Fund to meet their information needs. They see our data as reliable, independent, and easily understood. Our constituents use our data products to inform others of issues of child well-being and to influence public policies or programs. Businesses are increasingly oriented to children and family issues, both in their external activities as well as their internal policies. Our constituents talk about how KIDS COUNT works with business to identify, analyze, and develop strategies to expand the number of prevention and early intervention programs. The Fund's membership rolls continue to grow each year creating a large and diverse group of advocates for at-risk children.

Child Care Campaign

The Fund's primary work over the next two years will focus on child care. We have chosen this focus because the effects of child care upon the well-being of children are profound. A good start in life can do more to promote learning and prevent damage than we have ever imagined. There has been a tremendous increase in the demand for child care, and there is a shortage in the supply of licensed care. Our hope is to increase the supply of good care, knowing that this can break the cycle of poverty. The Fund will conduct child care research for its constituencies. In addition, the Fund will support child care programs that produce positive outcomes and will lend its support to child care policies that promote quality.

Acknowledgments

This *Data Book* could not be produced and distributed without the help of numerous people. West Virginia KIDS COUNT Fund is grateful to the Annie E. Casey Foundation, which created KIDS COUNT and funds West Virginia KIDS COUNT and KIDS COUNT grantees in the 50 states and the District of Columbia.

Contributions of the following individuals and organizations were invaluable. We are grateful for the contribution of the Survey Research Center at West Virginia University for their management of data collection and analysis. Thanks to Dr. Ron Althouse for administrative support and data coordination; Thomas J. Leonette for data collection and analysis; Cori Smith for assistance in editing the summary, findings, and definitions in the book; Kristi Wood for vital support and guidance throughout the entire project; Korok Biswas for support with data analysis; Dan Estep for assistance with the methodology for data processing, analysis, and the maps; and our deep appreciation to the following for assistance with data collection and analysis: Tom Light with the Office of Epidemiology and Health Promotion at WV Department of Health and Human Resources; Randy Childs with the Bureau of Business Research at WVU; Doris White and Larry White with the WV Department of Education; Craig Richards with the Office of Audit Research and Analysis, WV Department of Health and Human Resources; Donald Walker with the Office of Social Services, WV Department of Health and Human Resources; and Bill Huebner with the Governor's Cabinet on Children and Families.

KIDS COUNT is also indebted to the following individuals for providing data: John Endalsh with the Office of Analysis and Evaluation, U.S. Department of Agriculture; Mary Kay Harrison with the Office of Child Nutrition, WV Department of Education; and Laura Hutzel, WV Division of Criminal Justice Services.

KIDS COUNT is grateful for the creativity of Phil Evans who designed the layout and who has created all of our *Data Book* covers and *Data Book* post cards; and thanks to the numerous West Virginia KIDS COUNT dissemination partners for helping get the *Data Book* into the hands of community leaders across West Virginia. The dissemination partners are listed on the inside back cover.

KIDS COUNT is indebted to the enthusiastic and faithful service of its Research and Marketing committees. These committees guide the staff's work to select the *Data Book* theme, collect data and analysis, and get the *Data Book* out to people who can make a difference for children. The names of each committee member are located on page 92 of this report.

Special thanks to Missy Menefee, Communications Coordinator, West Virginia KIDS COUNT Fund, who coordinated the marketing plan and desktop publishing of this report with confidence and enthusiasm; special thanks also to Pam Folden who labored with professionalism in editing the book and preparing the charts.

West Virginia KIDS COUNT could not do its work without the financial support of the Annie E. Casey Foundation and the West Virginia businesses

and nonprofit organizations that have contributed funds to underwrite the costs of *Data Book* production. Special thanks is extended to the *WV KIDS COUNT Data Book* sponsors. The names of these sponsors are located on each county page in a box on the lower, right-hand corner and on pages 4-6.

West Virginia KIDS COUNT is grateful for the leadership and ever-ready assistance of the National KIDS COUNT staff: Bill O'Hare, Don Crary, Francine Brown, and Megan Reynolds.

Thanks also to all the West Virginians who make kids count.

The 2001 *WV KIDS COUNT Data Book* is the 10th annual profile of the conditions of West Virginia's children. The West Virginia KIDS COUNT Fund, in collaboration with the West Virginia University Survey Research Center, brings together the best available data to measure the well-being of children in West Virginia.

In 1989, the Annie E. Casey Foundation launched KIDS COUNT. This initiative is premised on the belief that the more the public and policy makers know about the status and needs

select issues for focus and action. Last year's *Data Book* continued to inspire community action for at-risk children and promoted public awareness about children through the print and broadcast media and helped many communities secure funding for programs targeting at-risk youth. Groups are supported by the KIDS COUNT Fund through information, ideas, and mini-grants.

We are thankful to our *Data Book* sponsors and show our appreciation by recognizing them on the county pages in the

*A decade of

CHILD WELL-BEING	THE SUCCESS STORY	THE CHALLENGES AHEAD
CHILD HEALTH	☆ decline in infant mortality, child deaths, and teen birth rate	❖ reduce the percent of low birth-weight babies
EDUCATION	☆ decrease in births to mothers who do not have a high school education	❖ ensure that all children have the tools to succeed
SAFETY AND SECURITY	☆ reduction in deaths from unintentional injuries	❖ curb violence in our communities
ECONOMIC CONDITIONS	☆ decline in unemployment and increase in median family income	❖ create good jobs for all workers

of children, the greater the likelihood those needs will be addressed.

Funded in 1991, West Virginia KIDS COUNT is one of 50 similar projects throughout the United States.

The 2001 *WV KIDS COUNT Data Book* measures 12 indicators of child and adolescent health, education and economic status. It also includes background information for each county, including demographic and family income data.

This year's *Data Book, Trends in Child Well-Being-1990 to 2000*, looks at a decade of data. A decade of trends helps us see where we are succeeding and where we need to do more. These trends can help us decide where to focus our resources.

The *WV KIDS COUNT Data Book* is used as a tool to

box in the lower, right corner.

Making KIDS COUNT in West Virginia is a shared enterprise. Consider how you might help support the children of West Virginia. We all need to do more. To join a constituency for children and become part of the solution, call 1-888-KIDSCOUNT (1-888-543-7268).

Summary and Findings

State Percent Change 1990-2000

	Number of Counties That Are		
	Worse	Unchanged	Better No Measure
Percent low birth-weight babies	44	0	11
Infant mortality rate (per 1,000 live births)	21	0	34
Child death rate (ages 1-14 per 100,000 children)	18	0	36
Percent of eligible children served by Head Start (ages 3-4)	3	0	52
Percent children approved for free and reduced-price school meals (grades K-12)	48	0	7
Child abuse/neglect rate (per 100,000 children)	0	0	55
Teen birth rate (ages 15-19 per 1,000 females)	13	0	42
Percent births to unmarried teens (ages 10-19)	40	0	15
Percent high school dropouts	24	0	31
Juvenile delinquency case rate (ages 10-17 per 1,000 youths)	35	0	20
Teen violent death rate (ages 15-19 per 100,000 teens)	22	0	33
Percent births to mothers with less than a 12th grade education	2	0	53

TRENDS IN CHILD WELL-BEING – 1990 TO 2000

This year, we have organized the 12 traditional indicators into four domains to present another way of looking at child well-being trends over the decade. The domains selected are Health, Education, Safety and Security, and Economic Conditions.

We have chosen to highlight one or two successes and some challenges ahead for each of the four domains. Generally, these choices have not been difficult because the successes are fairly clear and the challenges seem obvious when we see how some indicators worsen over time. How communities address these challenges may vary, and often many actions are needed. What is important for our success is working together, understanding that many of these challenges are system failures, public problems with public solutions. Examples of how we can work together to fix some conditions are discussed below. These successes and challenges are summarized in a chart on page 7.

HEALTH

KEY INDICATORS	WV 1990	WV 2000	WV TREND	*BEST COUNTY	*WORST COUNTY
Percent low birth-weight babies	6.9%	8.2%	Worse	Pleasants	McDowell, Pocahontas
Infant mortality rate	9.1%	8.0%	Better	Wirt	Summers
Child death rate	31.1%	26.5%	Better	Brooke, Monroe, Nicholas, Ritchie, Tucker, Wirt	Lewis
Teen birth rate	56.5%	48.6%	Better	Monongalia	McDowell
Percent births to unmarried teens	9.5%	10.2%	Worse	Tucker	McDowell

*2000

What are the successes?

A number of state and community projects, beginning decades ago, have improved the well-being of our children's health. A specific campaign to reduce infant mortality began in 1976 with a Perinatal Health Committee, sponsored by the WV Bureau of Public Health and West Virginia University. Over time, its work increased awareness about the importance of prevention in reducing infant deaths. When greater federal dollars became available in the 1970s,

the availability of women's health services improved, the federally funded family planning services expanded, and the number of primary care health clinics in the state increased. A series of task forces continued through the years to reduce barriers to care. The 1985 Maternal Health Services Task Force worked to develop emergency transportation systems for maternal care. In 1988, a Healthy Futures project, funded by the Robert Wood Johnson Foundation, created a statewide delivery system for at-risk mothers and babies with case management and other services.¹ Recently, new federal legislation, with funding for children's health insurance, has expanded greatly the percent of children able to afford and, thus, receive health care.

Some of West Virginia's child health success is represented by the decline in infant and child deaths and the continuing reduction in the number of teens having babies. **Remarkably, 94 percent of West Virginia's children have health insurance.**

Trends in Infant Mortality Rate (per 1,000 live births) in West Virginia 1990-2000

Summary and Findings

What are the challenges ahead?

The state has many challenges ahead in improving health care; our focus here is the challenge to reduce the percent of low birth-weight babies. At the end of the decade, 8.2 percent of all babies born weighed less than 5.5 pounds. Health experts believe that the increase of low birth-weight babies is associated with a number of societal conditions, such as smoking, segregation in public housing, and a lack of social supports, such as transportation and home visits.

The high rate of low birth-weight births has been a persistent problem over the decade. The rate in 1990 was 6.9 percent and the rate in 2000 was 8.2 percent, an 18.4 percent worsening trend over the decade. Experts believe that a combination of strategies needs to be employed to prevent low birth weight.² These strategies include: (1) smoking prevention and cessation programs; (2) promoting responsible fatherhood; and (3) addressing some of the social risk factors associated with low birth weight.

Trends in Percent Low Birth-Weight Babies in West Virginia 1990-2000

Trends in Teen Birth Rate (ages 15-19 per 1,000 females) in West Virginia 1990-2000

Social support from the father or other family predicts better birth outcomes, especially higher birth weight.³ Teens and single moms are at higher risk of having a low birth-weight baby, and these groups may need increased social supports.⁴

There is a link between racial segregation and low birth weight. Studies show that the risk of low birth weight for African-American mothers is significantly higher in more segregated areas. While these segregated areas may have greater poverty, poverty alone cannot explain the high rate of low birth-weight births in highly segregated areas. For African-American women living in segregated areas, even an increase in income does not lower the incidence of low birth weight.⁵

Services that contribute to increased social support are maternal-child home visits and transportation. Some of these services have been cut back and/or eliminated and should be re-examined for their usefulness in reducing low birth weight as well as infant mortality.

EDUCATION

KEY INDICATORS	WV 1990	WV 2000	WV TREND	*BEST COUNTY	*WORST COUNTY
Percent of eligible children served by Head Start	42.9%	59.5%	Better	Hardy	Kanawha
Percent high school dropouts	16.7%	16.4%	Better	Tucker	Berkeley
Percent births to mothers with less than a 12 th grade education	25.5%	19.9%	Better	Tucker	McDowell

*2000

What are the successes?

Our success in education is reflected in all three of the *Data Books'* education indicators. **Our progress in getting more children into Head Start and increasing the educational level of mothers is remarkable. However, the high school dropout rate has reached a plateau—the rate is virtually the same in 2000 as it was in 1990.** Perhaps this means we have done all we can with individual, one-on-one approaches, such as targeting programs to children who have already begun to miss school. Perhaps our long-term investment in Head Start—providing children with early stimulation, a healthy start, and chances to explore and discover—will result in fewer dropouts when these children enter public school.

Trends in Percent Births to Mothers With Less Than a 12th Grade Education in West Virginia 1990-2000

Trends in Percent High School Dropouts in West Virginia 1990-2000

Summary and Findings

What are the challenges ahead?

The challenge in education is ensuring that all of West Virginia's children have the tools to succeed. This challenge covers a lot of ground, including high standards in curriculum, instruction, and assessment; strong, meaningful family participation; schools that are small enough to engage the children; preschool experiences that prepare children to learn; and education that is made a part of a larger community commitment to healthy youth. These five approaches have demonstrated that they can positively contribute to the success of children in school and in overall development.⁶

We at the KIDS COUNT Fund are particularly interested in the challenge of preparing children to learn through preschool experiences. Good early care and education programs change lives. Some actions to increase the availability of preschool experiences include: (1) increasing public understanding about the importance of early education and its relationship to later success in life; (2) increasing the amount of financial support from government, financing similar to the way higher education is supported, where in private and public funding reduce the cost of parent fees; (3) supporting the state as it works to develop a pre-kindergarten program for four year olds and a delivery system for all children birth to five; and (4) supporting the participation of business as it works to assist its employees' children with early learning opportunities.⁷

Trends in Percent of Eligible Children Served by Head Start (ages 3-4) in West Virginia 1993-2000

SAFETY AND SECURITY

What are the successes?

Our success in safety and security is the steady decline in the rate of violent deaths among our teens.

The teen violent death rate consists of accidents (generally auto accidents), suicide, homicide, and deaths of undetermined cause. The rate of teen violent death overall is 64.6 per 100,000 children: the rate for accidents is 47.2; suicide is 11.0; homicide is 5.4; and deaths of unknown cause is 0.9. Some of the decline in teen violent death is believed to be due to improvements in teaching motor vehicle safety and the increased use of seat belts.

KEY INDICATORS	WV 1990	WV 2000	WV TREND	*BEST COUNTY	*WORST COUNTY
Child abuse and neglect rate	8786.8-	9595.8	Worse	Jefferson	McDowell
Teen violent death rate	77.2	64.6	Better	Morgan	Wirt, Summers

^{*2000}
- 1998 Child Abuse and Neglect Rate

Summary and Findings

What are the challenges ahead?

Our challenge for the future is reducing violence in our communities because one of the biggest threats to the safety and security of our children is violence. Some factors associated with violence are societal conditions, such as lack of income or jobs that pay well enough or lack of investment in education and job training. The violence we speak of here is the abuse, neglect and/or sexual abuse of children. According to the Child Welfare League of America's National Data Analysis System, West Virginia has experienced a 45.0 increase in the rate of children reported and referred since 1990. The rate per 1,000 children in 1990 was 56.9, and in 1999 it was 89.4.⁸

According to the Packard Foundation's 1998 report, *Protecting Children from Abuse and Neglect*, a major step we can take to reduce abuse and neglect is to reduce poverty.⁹ Some strategies to do this include investing in education and job training and investing in industries that have good

Trends in Child Abuse/Neglect Rate (per 100,000 children) in West Virginia 1998-2000

jobs that can support families. This Packard Report also notes that reforms in child protection are often driven by media attention to individual child tragedies, but such reactive reforms do not lead to actions that work in the long term.¹⁰

We need to tell our story in a new way. Instead of focusing on individual tragedies and how we need to fix the person, we need to focus on fixing the conditions that lead to violence. Violence is a societal concern, one requiring the actions of many.

In addition to economic remedies discussed above, other steps may include supporting the expansion of substance abuse prevention programs, teaching violence prevention and conflict resolution, and developing sufficient mental health resources. The support and commitment of the public are crucial to sustaining an effective response to child abuse and neglect. Too often we expect the child protection agency to do it all, and it cannot. It needs the involvement of parents, concerned citizens, community agencies, private organizations, and other groups that work with children.¹¹

Trends in Teen Violent Death Rate (ages 15-19 per 100,000 teens) in West Virginia 1990-2000

ECONOMIC CONDITIONS

KEY INDICATORS	WV 1990	WV 2000	WV TREND	*BEST COUNTY	*WORST COUNTY
Total jobs in high-paying industries (1999)	256,068	252,769	Worse	Hardy ¹	Ohio ¹
Total jobs in low-paying industries (1999)	365,760	457,354	Better	NA	NA
Unemployment rate	8.4%	5.5%	Better	Jefferson, Monongalia	Calhoun
Percent children in poverty (1998)	26.2%	24.2%	Better	Putnam	Webster
Median family income (1999 dollars)	\$34,398	\$36,484	Better	Jefferson	McDowell
Percent children in single-parent families	21.0%	24.6%	Worse	Putnam	McDowell
Percent children approved for free and reduced-price school meals	41.0%	49.4%	Worse ²	Brooke	McDowell
Juvenile delinquency case rate	32.4	37.9	Worse	Gilmer	Cabell

*2000

¹Hardy county has the highest percent of all jobs that are in high-paying industries; Ohio county has the lowest.

²The percent of children approved for free and reduced-price school meals is used as a measure of families who are poor and near poor.

What are the successes?

Some of West Virginia's success in economic conditions is reflected in the unemployment rate and the increase in median family income. **A decline in unemployment and the increase in median family income are certainly successes.** Incomes have gone up over the decade, and many former welfare recipients are working. However, welfare recipients end up in jobs with low wages and limited prospects for advancement.¹² The number of jobs have increased over the decade; however, low-paying jobs have increased by 20.5 percent since 1990, while high-paying jobs have decreased by 1.3 percent. Low-paying jobs do not generally pay well enough to support a family. Low-paying jobs include categories like janitor, food servers, retail and wholesale clerks, farming, and other service jobs.

Summary and Findings

What are the challenges ahead?

We believe the economic challenge is to build a strong economy that focuses on long-term profits and good jobs for all workers. Such responsible management can create jobs that pay well enough for all of us.

The increase in poverty among children in the U.S. and West Virginia is attributed largely to the lack of improvement in wage income when adjusted for inflation.¹³ This is a societal problem. We need to think about building jobs and the economy for the long term. Too many companies and decision makers focus on short-term profits to the detriment of the greater good. We need to change that thinking and create a future with a strong economy and good jobs for all workers. That means investing in education and job training and encouraging investment in industries with the kinds of good jobs that support families and strengthen communities.¹⁴ These are long-term solutions. Other actions that can help include establishing a **state Earned Income Tax Credit**, a widely popular federal program administered by the tax system that boosts income for those who have jobs that do not pay well enough. Other action includes **increasing the state tax threshold**. West Virginia's tax threshold is \$10,000, one of the lowest in the country.¹⁵

State Maps By Indicator

Low Birth-weight Babies

Percent Low Birth-weight Babies

Babies of low birth weight are those who weigh under 5.5 pounds at birth.

Infant Mortality

Infant Mortality Rate (per 1,000 live births)

Infant mortality is the number of deaths of infants under one year of age per 1,000 live births.

Child Death

Child Death Rate (ages 1-14 per 100,000 children)

The child death rate is the number of deaths of children between the ages of 1-14 years per 100,000 children.

Teen Births

Teen Birth Rate (ages 15-19 per 1,000 females)

The teen birth rate includes all births to married and unmarried girls ages 15-19.

Unmarried Teen Pregnancy

Percent Births to Unmarried Teens (ages 10-19)

The percent of births to unmarried teens is the percentage of all live births to unmarried girls ages 10 through 19.

Head Start

Percent of Eligible Children Served by Head Start (ages 3 - 4)

The percentage of all eligible children 3-4 years old who are participating in Head Start.

High School Dropouts

Percent High School Dropouts

A high school dropout is one who leaves high school before graduation without transferring to another school. While national KIDS COUNT and West Virginia's Department of Education each use different methods of calculation, West Virginia KIDS COUNT continues its original method in order to provide trend data over time.

Child Abuse and Neglect

Child Abuse/Neglect Rate (per 100,000 children)

The child abuse/neglect rate is the number of referrals of maltreatment and risk of maltreatment accepted for investigation by government officials per 100,000 children.

Teen Violent Deaths

Teen Violent Death Rate (ages 15-19 per 100,000 teens)

The teen violent death rate is the number of deaths from homicides, suicides and unintentional injuries to teens ages 15 to 19 years per 100,000 teens.

State Maps By Indicator

Juvenile Delinquency

Juvenile Delinquency Case Rate (ages 10-21 per 1,000 youths)

The Juvenile Delinquency Case Rate is the number of delinquency cases reported per 1,000 youths ages 10 through 21.

Free and Reduced-Price School Meals

Percent Children Approved for Free and Reduced-Price School Meals (grades K - 12)

Children are eligible to receive free school meals if the family income is below 130 percent of poverty. Reduced-price meals are provided to children with family income below 185 percent of poverty.

Births to Mothers With Less Than a 12th Grade Education

Percent Births to Mothers With Less Than a 12th Grade Education

The percent of all births to mothers with less than a 12th grade education. The educational level of parents is a strong predictor of child well-being, particularly concerning academic achievement.

West Virginia Children, Race, and the 2000 Census

CHILD POPULATION TRENDS 1980 THROUGH 2000

	1980	1990	2000	# Change 1980-2000	% Change 1980-2000
U.S.	63,754,960	63,941,000	72,293,812	8,538,852	13%
WV	559,636	443,577	402,393	-157,243	-28%

- West Virginia lost 28 percent of its child population since 1980, the highest percent decrease in the nation.
- The number of children in the U.S., however, has increased significantly.

Sources: O'Hare, William P. *The Child Population: First Data From the 2000 Census*. The Annie E. Casey Foundation and The Population Reference Bureau. June 2001 and *KIDS COUNT Census Data Online* accessed at www.aecf.org/. *WV KIDS COUNT Data Book*. 1993 County Profiles of Child Well-Being.

THE PERCENT OF WEST VIRGINIA CHILDREN IN POVERTY BY RACE*

RACE	ALL CHILDREN		CHILDREN IN POVERTY	
	Number	% Under 18	Number	Percent
One Race	395,829	98.4%	93,922	23.7%
White alone	376,698	93.6%	87,006	23.1%
Black or African American alone	14,809	3.7%	6,177	41.7%
American Indian and Alaska Native alone	767	0.2%	158	20.6%
Asian alone	2,062	0.5%	186	9.0%
Native Hawaiian and Other Pacific Islander alone	110	0.0%	33	30.0%
Other Race	1,383	0.3%	362	26.2%
Two or more Races	6,564	1.6%	2,174	33.1%
Totals	402,393	100%	96,096	23.9%

- The percent of African-American children in poverty is 41.7%. This is an improvement over the 1990 rate of 50.2%.
- The African-American child population in poverty is 41.7% compared to the white child population in poverty of 23.1%.

*The percent of poverty has been calculated for each racial category. In other words, for the race "White alone," the calculation tells us what percent of this category is poor.

APPENDICES

Definitions, Methodology And Sources

Noted below is how an indicator or background fact is constructed when the West Virginia University Survey Research Center performs calculations to determine rates or percentages.

Indicator or background fact clarification is provided for those variables needing some explanation about the data; this does not apply to every variable.

Data sources are the same for both state and county unless otherwise specified. Headings specify different state and national sources when the national data source is different from the state or county source.

CHILD ABUSE/NEGLECT RATE **(per 100,000 children)**

Indicator:

The number of referrals of maltreatment and risk of maltreatment accepted for investigation by Child Protective Services per 100,000 children.

How is it Constructed?

At the state and county level, this indicator is a rate per 100,000 children based on a three-fiscal-year average (1997-1998, 1998-1999, and 1999-2000 for 2000). The rate is calculated as 100,000 times the number of referrals of children under 18 referred for investigation of abuse and neglect divided by the total number of children under 18.

Indicator Clarification:

The number of referrals does not correlate with the number of child abuse/neglect cases because more than one referral can be reported for a single case. The number of children under 18 is based on 1998, 1999 and 2000 census data. Differences in the reporting procedures over the years prevent comparison of rates between counties and trends over time.

Data Sources:

State (1990 and 2000) Child Protective Services Referrals Accepted for Investigation. West Virginia Department of Health and Human Resources / Bureau for Children and Families and the Office of Social Services.

CHILD DEATH RATE

(ages 1-14 per 100,000 children)

Indicator:

The number of deaths due to all causes, of children between the ages of 1-14 years, per 100,000 children.

How is it Constructed?

At a state and county level, this variable is a rate per 100,000 children based on a five-year average (1988, 1989, 1990, 1991, and 1992 for 1990; and 1996, 1997, 1998, 1999, and 2000 for 2000). The rate is calculated as 100,000 times the number of child deaths due to all causes divided by the total number of children ages 1-14. The national rate is calculated in the same manner but is based only on 2000 data and not on a five-year average.

Indicator Clarification:

Due to the small number of child deaths on the county level, a small change in the actual number from the period 1990 to 2000 may result in a large percentage change for trend data. The number of children 1-14 years old is based on 1990 (for 1990) and 2000 (for 2000) census data.

Data Sources:

State (1990, 2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics

Center, Charleston, WV.

National (2000) Deaths: Final Data for 2000. Monthly Vital Statistics Report; Vol 48 No 11, Hyattsville, Maryland: National Center for Health Statistics. July 24, 2000.

EDUCATIONAL EXPENDITURES PER PUPIL **(2000 dollars)**

Background Fact:

Current per pupil expenditures based on average daily attendance for public school programs pre-kindergarten through twelfth grade expressed in 2000 constant dollars.

How is it Constructed?

For comparison purposes, educational expenditure data for 1990-1991 were converted into 2000 dollars; a deflator was calculated using the Consumer Price Index-Urban Population from the Bureau of Labor Statistics.

Data Sources:

(1990) WV Department of Education: Per Pupil Expenditure for Instructional Personnel, 1990-1991.
(2000) WV Department of Education: General Current Expense Fund. Expenditures on a Per Pupil Basis for the 1999-2000 Year. U.S. Department of Labor: Bureau of Labor Statistics.

INFANT MORTALITY RATE

(per 1,000 live births)

Indicator:

The number of deaths of infants under one year of age per 1,000 live births.

How is it Constructed?

At a state and county level, this variable is a rate per 1,000 live births based on a five-year average (1988, 1989, 1990, 1991, and 1992 for 1990; and 1996, 1997, 1998, 1999, and 2000 for 2000). The rate is calculated as 1,000 times the number of infant deaths due to all causes divided by the number of total births. At the national level, the rate is calculated as 1,000 times the number of infant deaths in 2000 divided by the number of live births in 2000.

Indicator Clarification:

Due to the small number of deaths to infants under one year of age on the county level, a small change in the actual number from the period 1990 to 2000 may result in a large percentage change for trend data.

Data Sources:

State (1990, 2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.
National (2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

JUVENILE DELINQUENCY CASE RATE (ages 10-21 per 1,000 youths)

Indicator:

This is the number of delinquency cases reported per 1,000 youths ages 10-21. A case is defined by the Juvenile Justice Data Base as a written and signed petition or complaint charging the juvenile with one or more crimes or status offenses committed within a 24-hour period in one county.

How is it Constructed?

At the state and county level, this variable is a rate per 1,000 youths based on youths ages 10-19 in 1991-1992 for 1990 and youths ages 10-21 for 2000. The rate is calculated as 1,000 times the number of juvenile cases divided by the total number of youths ages 10-19 for 1990 and 10-21 for 2000.

Indicator Clarification:

The 1990 trend data is based on youths ages 10-19 with a denominator of the 1990 10-19 years-old population. The 2000 data is based on youths ages 10-21 with a denominator of the 1990 10-19 years old.

Data Sources:

(1990) WV Supreme Court of Appeals, Juvenile Justice Committee. Juvenile Delinquency in West Virginia, Annual Report, July 1, 1991 to June 30, 1992. Juvenile Justice Data Base, Table IV, Page 14.

MEDIAN FAMILY INCOME (1999 dollars)

Background Fact:

The median family income used in the 2001 *Data Book* is the median income of families. It represents all families, those with and without children. MFI is the dollar amount that divides the income distribution into two equal groups—half with income above the median and half with income below it.

How is it Constructed?

For comparison purposes, median family income data for 1990-2000 were converted into 1999 dollars; a deflator was calculated using the Consumer Price

Index-Urban Population from the Bureau of Labor Statistics. The median family income is based on analysis of U.S. Census data by the Population Reference Bureau.

Data Sources:

(1990) Bureau of the Census. Census of Population and Housing, 1990: Summary Tape File 3C, (Table 107A): Prepared by the Bureau of the Census, Washington: The Bureau (WV University Office of Health Services Research), 1992.
(2000) U.S. Bureau of the Census, Census 2000, Table DP-3. Profile of selected economic characteristics: 2000. For West Virginia and its counties.

PERCENT ALL FAMILIES WITH RELATED CHILDREN WHO RECEIVE CASH ASSISTANCE

Background Fact:

This is the percentage of families with related children who receive public assistance under the Temporary Aid to Needy Families (TANF) program. Eligibility for this program is income based.

How is it Constructed?

To arrive at the percentage, the total of TANF cases is divided by the number of families with related children. Families with related children are comprised of married couples with related children, female heads with related children, and male heads with related children. At a state and county level, this background fact is a percentage based on a three-fiscal-year average (1988-1989, 1989-1990, and 1990-1991) for 1990 and one fiscal year (1999-2000) for 2000.

Background Fact Clarification:

The 1990 trend data is calculated using the percentage

Definitions, Methodology And Sources, continued

of families with related children who received public assistance under the Aid to Families with Dependent Children (AFDC) program. Eligibility requirements for AFDC and TANF are different. The number of families with related children for both 1990 and 2000 come from the Decennial Census.

Data Sources:

State (1990, 2000) WV Department of Health and Human Resources, Fiscal Year 1988-1989, 1989-1990, 1990-1991 sources. Fiscal Year 1988-1989, 1989-1990, 1990-1991 for 1990; unpublished annual bulletin from Office of Audits, Research and Analysis. The source for families with related children for 1990 is from the U.S. Bureau of the Census of Population and Housing, Data Set: 1990 Summary Tape File 1 (STF 1) - 100 percent data.

National (2000) WV Department of Health and Human Resources, Welfare Reform Report to Legislative Oversight Commission on Health and Human Resources Accountability. February 1, 2001.

PERCENT BIRTHS TO MOTHERS WITH LESS THAN A 12TH GRADE EDUCATION

Indicator:

The percentage of all births to mothers with less than a 12th grade education.

How is it Constructed?

At a state and county level, this indicator is based on a three-year average (1989, 1990, and 1991 for 1990; and 1998, 1999, and 2000 for 2000). The numerator is the number of births to mothers with less than a 12th grade education divided by the total number of births. The national figure is calculated in the same way as state and county figures but is based on data from one year, 2000.

Data Sources:

State (1990, 2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

National (2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

PERCENT BIRTHS TO UNMARRIED TEENS (ages 10-19)

Indicator:

At a state and county level, this indicator is the percentage of all live births to unmarried girls ages 10-19. At a national level, the percentage represents live births that are to unmarried women under 20 years of age.

How is it Constructed?

At a state and county level, this indicator is based on a three-year average (1989, 1990, and 1991 for 1990; and 1998, 1999, and 2000 for 2000). The numerator is the number of births to unmarried teens ages 10-19; the denominator is the total number of births. National data is calculated by dividing the number of births to unmarried teens under age 20 by the total number of births. National data is based only on 2000 data.

Indicator Clarification:

Due to the small number of births to unmarried teens in some counties, a small change in the actual number from the period 1990 to 2000 may result in a large percentage change for trend data. The base population for this indicator is the births to all mothers, regardless of age.

Data Sources:

State (1990, 2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

National (2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

PERCENT BIRTHS WITH EARLY PRENATAL CARE

Background Fact:

The percentage of live births that are to women who began prenatal care in the first three months of their pregnancy.

How is it Constructed?

At a state and county level, this indicator is a percentage, based on a three-year average (1989, 1990, and 1991 for 1990; and 1998, 1999, and 2000 for 2000).

The numerator for the variable is the number of births with first trimester care; the denominator is all births with known prenatal care.

Background Fact Clarification:

Live births to women who did not report the month in which prenatal care was started were excluded from the computation. This background fact does not tell us anything about the quality, frequency, or consistency of care that the mother received during this time. Lack of early prenatal care does not in itself cause poor birth outcomes.

Data Sources:

State (1990, 2000) WV Department of Health and

Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

PERCENT CHILDREN APPROVED FOR FREE OR REDUCED-PRICE SCHOOL MEALS (grades K-12)

Indicator:

The percent of all enrolled children in grades K-12 who applied and were approved for free or reduced-price school meals. This indicator is used as a measure of the percent of poor and near poor children in West Virginia. Children whose parent's income is at or below 130% of poverty are eligible for free meals; reduced-price meals are available for children whose parent's income is between 131% and 185% of poverty.

How is it Constructed?

At a county and state level, this variable is a percentage based on 1991-1992 fiscal year data for 1990; and 2000-2001 fiscal year data for 2000. The numerator is the number of submitted and approved applications for free or reduced-price school meals in grades K-12; the denominator is the total student enrollment in grades K-12. The number of children who are eligible for free and reduced-price school meals is thought to be undercounted since not all eligible persons return the application form.

Data Sources:

State (1990) WV Department of Education, Office of Child Nutrition, Charleston, WV. West Virginia Child Nutrition Programs, Percentage of Needy Students, October Fiscal Year 1991-1992.
(2000) West Virginia Department of Education, Office of Child Nutrition, Charleston, WV. West Virginia Child

Nutrition Programs, Percentage of Needy Students, October Fiscal Year 1999-2000.
National (2000) National Center for Education Statistics. nces.ed.gov. 1999.

PERCENT CHILDREN IN POVERTY

Background Fact:

The percentage of children in poverty is the share of children under age 18 who live in families with incomes below the U.S. poverty threshold as defined by the U.S. Bureau of the Census. In 1998, the poverty threshold for a family of two adults and two children was \$16,350. For comparison purposes, the 2001 (most current) poverty threshold is \$17,960 for a family with two adults and two children.

How is it Constructed?

To arrive at the percent children in poverty, the total number of children below the poverty level is divided by the total number of children under age 18.

Background Fact Clarification:

Since the 1999 Data Book, we have used information from the Small Area Income and Poverty Estimates (SAIPE) series of the U.S. Census Bureau which provides state-level estimate of income and poverty. SAIPE provides income and poverty estimates for counties and school districts in odd-numbered years.

Data Sources:

State (1990, 2000) For both state and county poverty estimates: U.S. Census Bureau, Small Area Income and Poverty Estimates program, data accessed online at www.census.gov/hhes/www/saipe.html (September 2000).

PERCENT CHILDREN IN SINGLE-PARENT FAMILIES

Background Fact:

This is the percentage of children under age 18 who live in families headed by a person without a spouse present in the home. Children are defined as never-married people under age 18 who are related to the household by birth, marriage, or adoption.

How is it Constructed?

To arrive at the percent children in single-parent families, the total number of children in single-parent families was divided by the total number of children under age 18. Single parents are comprised of female-headed or male-headed families with no spouse present. Numbers for this formula were based on U.S. Census Bureau data.

Data Sources:

State (1990) Bureau of the Census. Census of Population and Housing, 1990: Summary Tape File 1C, (Table P21)/Prepared by the Bureau of the Census. - Washington: The Bureau (WV University Office of Health Services Research), 1992.
(2000) Calculated from Census 2000 Summary File 3 (SF 3) Sample Data, Table P16.

PERCENT LOW BIRTH-WEIGHT BABIES

Indicator:

The percentage of all live births is defined as babies who weigh under 2,500 grams (5.5 pounds) at birth.

How is it Constructed?

At a state and county level, this indicator is a percentage based on a three-year average (1989, 1990, and 1991 for

Definitions, Methodology And Sources, continued

1990; and 1998, 1999, and 2000 for 2000). The numerator for this variable is the number of low birth-weight babies; the denominator is total births for all ages. National data is the number of low birth-weight babies in 2000 divided by the total births for all ages in 2000.

Indicator Clarification:

While the low birth-weight indicator encompasses two levels of birth weight, those of moderately low weight and very low weight, it is those surviving infants of very low birth weight who, research shows, have notably higher odds of impaired development; this fact can be masked when looking at the two levels of low birth weight in combination.

Data Sources:

State (1990, 2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.
National (2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

PERCENT MINORITY POPULATION

Background Fact:

The percentage of the total population that is identified as minority.

How is it Constructed?

To arrive at percent minority population, the total minority population was divided by the total population. Numbers for this formula were based on 1990 and 2000 census data.

Data Sources:

(1990) Bureau of the Census. 1990-99 Annual Time Series of County Population Estimates by Age, Sex, and Race/Hispanic Origin, 1990: Prepared by the Bureau of the Census. -Washington.
(2000) U.S. Bureau of the Census, Census 2000 for the State of West Virginia, Tables DP-1, Profile of the General Demographic Characteristics for West Virginia: 2000. Data accessed online at www.census.gov/Press/Release/www/2001/tables/redist_wv.html#demoprofile.

PERCENT MINORITY POPULATION UNDER AGE 18

Background Fact:

The percentage of the population under age 18 identified as minority.

How is it Constructed?

To arrive at the percent minority population under age 18, the total minority population under 18 was divided by the total population under 18. Numbers for this formula were based on 1990 and 2000 census data.

Data Sources:

(1990) U.S. Bureau of the Census. Census of Population and Housing, 1990: Summary Tape File 1C (Table P12)/Prepared by the Bureau of the Census. -Washington: The Bureau (WV University Office of Health Services Research), 1992.
(2000) KIDS COUNT Census Data Online, Annie E. Casey Foundation. Data for state and counties accessed online at www.aecf.org/cgi-bin/aecensus.cgi?action=profile&statefips=54&treeshow=counties.

PERCENT OF ELIGIBLE CHILDREN SERVED BY HEAD START (ages 3-4)

Indicator:

The percentage of all eligible children 3-4 years old who are participating (in funded positions - unduplicated count) in Head Start.

How is it Constructed?

At the state and county levels, this variable is a percentage based on 2000 data. The numerator for this indicator is the number of funded positions for children ages 3-4; the denominator is the estimated number of children 3-4 years old in poverty in 1990 (for 1990) and 2000 (for 2000). At the national level, the denominator is the estimated number of children ages 3-4 in poverty for 2000.

Indicator Clarification:

This indicator is based on data from 2000. The reader will notice that in some counties, the percentage of children 3-4 years old funded by Head Start exceeds the percentage of children in poverty; this is because guidelines for the program allow up to 10% of those children enrolled in Head Start to exceed the income level.

Data Sources:

State (1990) Department of Health and Human Services, Region III. Administration for Children and Families, Office for Community Programs, Philadelphia, Pennsylvania.
(2000) Governor's Cabinet on Children and Families, (304) 558-0600, Capitol Complex, Charleston, West Virginia.

National (2000) The percent of eligible children served is based on three-year-olds only. Head Start Bureau, Administration of Children, Youth, and Families, U.S. Department of Health and Human Services.

PERCENT OF HIGH SCHOOL DROPOUTS

Indicator:

The percentage of students in grades 7-12 who leave a public school before graduation without transferring to another school.

How is it Constructed?

At a state and county level, this indicator is based on a three-year average of school years 1989-1990, 1990-1991, and 1991-1992 for 1990; and 1998-1999, 1999-2000, and 2000-2001 for 2000. This percent is based on the number of 7th-12th grade dropouts divided by the number of 7th-12th grade dropouts plus the number of 12th grade graduates.

Data Sources:

State (1990) WV Department of Education. Unpublished special tabulations by the WV Department of Education. Charleston, West Virginia.
(2000) National Center for Education Statistics. nces.ed.gov. 1999.

PERCENT POPULATION UNDER AGE 18

Background Fact:

The percentage of the total population under age 18.

How is it Constructed?

To arrive at the percent population under 18, the population under 18 was divided by the total population. Numbers for this formula were based on 1990 census data for 1990 and 2000 census data for 2000.

Data Sources:

(1990) U.S. Bureau of the Census. 1990-1999 Annual Time Series of County Population Estimates by Age, Sex, and Race/Hispanic Origin, 1990: Prepared by the Bureau of the Census. -Washington.
(2000) U.S. Bureau of the Census. 1990-2000 Annual Time Series of County Population Estimates by Age, Sex, and Race/Hispanic Origin, 1998: Prepared by the Bureau of the Census. -Washington.

TEEN BIRTH RATE

(ages 15-19 per 1,000 females)

Indicator:

The number of live births to teens ages 15-19 per 1,000 females ages 15-19.

How is it Constructed?

At a state and county level, this indicator is a rate per 1,000 females ages 15-19 based on an average of 1989, 1990, and 1991 data for 1990; and 1998, 1999, and 2000 for 2000. The rate is calculated as 1,000 times the number of teen births to females ages 15-19 divided by the total number of females ages 15-19. National data is calculated in the same manner except that it is based on 2000 data and not on a three-year average.

Indicator Clarification:

The base population for this indicator is the total number of females, ages 15-19, in 1990 (for 1990 data) and 1999 (for 2000 data).

Data Sources:

State (1990, 2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

National (2000) WV Department of Health And Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

TEEN VIOLENT DEATH RATE

(ages 15-19 per 100,000 teens)

Indicator:

The number of deaths from homicides, suicides and unintentional injuries to teens ages 15-19 per 100,000 teens.

How is it Constructed?

At a state and county level, this indicator is a five-year average (1988, 1989, 1990, 1991, and 1992 for 1990; and 1996, 1997, 1998, 1999, and 2000 for 2000). The teen injury death rate is a composite of the number of deaths for injury mortality from homicide, suicide, and unintentional injuries. The rate is calculated as 100,000 times the number of teen injury deaths divided by the total number of youths ages 15-19. The national rate is calculated in the same manner, but it is based only on 2000 data and not on a three-year average.

Indicator Clarification:

Like the infant mortality and child death rates, this rate does not tell us anything about the quality of life for those teens surviving life-threatening injuries. Due to the small number of teen deaths on the county level, a small change in the actual number from the period 1990 to 2000 may result in a large percentage change for trend data. The number of youths between 15-19 years old is based on 1990 (for 1990) and 2000 (for 2000) census data.

Definitions, Methodology And Sources, continued

Data Sources:

State (1990, 2000) WV Department of Health and Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

National (2000) WV Department of Health And Human Resources, Bureau of Public Health, Office of Epidemiology and Health Promotion, Health Statistics Center, Charleston, WV.

TOTAL JOBS IN HIGH-PAYING INDUSTRIES

Background Fact:

This is the percentage change in the number of jobs in high-paying industries which a county has gained or lost from 1990 to 1999. Jobs in the mining, manufacturing, construction, transportation and financial sectors are classified as high-paying professions.

Data Sources:

(1990) U.S. Department of Commerce, Bureau of Economic Analysis, Table CA25, May, 1992.

(1999) U.S. Department of Commerce, Bureau of Economic Analysis, Table CA25, May, 2000.

TOTAL JOBS IN LOW-PAYING INDUSTRIES

Background Fact:

This is the percentage change in the number of jobs in low-paying industries which a county has gained or lost from 1990 to 1999. Jobs in agricultural services, wholesale and retail trade, and services sectors are considered as low-paying professions.

Data Sources:

(1990) U.S. Department of Commerce, Bureau of Economic Analysis, Table CA25, May, 1992.

(1999) U.S. Department of Commerce, Bureau of Economic Analysis, Table CA25, May, 2000.

TOTAL POPULATION

Background Fact:

The total population as reported by the Bureau of the Census.

Data Sources:

(1990) U.S. Bureau of the Census. County Population Estimates and Demographic Components of Change: 1990-2000, Washington.

(2000) U.S. Bureau of the Census, Census 2000 for the State of West Virginia, tables DP-1, Profile of General Demographic Characteristics for West Virginia: 2000. Data accessed online at www.census.gov/Press/Release/www/2001/tables/redist_wv.html#demoprofile.

TOTAL POPULATION UNDER AGE 18

Background Fact:

The total population under age 18 as reported by the Bureau of the Census.

Background Fact Clarification:

Data for this variable for 2000 is based upon the 2000 Decennial Census.

Data Sources:

(1990) U.S. Bureau of the Census. 1990-2000 County Estimates by Age, Sex, and Race/Hispanic Origin, 1990: Prepared by the Bureau of the Census.-Washington.

(2000) U.S. Bureau of the Census, Census 2000 for the State of West Virginia, tables DP-1, Profile of General Demographic Characteristics for West Virginia:2000. Data accessed online at www.census.gov/Press/Release/www/2001/tables/redist_wv.html#demoprofile.

UNEMPLOYMENT RATE

Background Fact:

The number of people who are actively looking for work but are unemployed as a percentage of the civilian labor force.

Background Fact Clarification:

Data, beginning in 1994, are not directly comparable with data from 1993 and earlier because of the introduction of a major redesign of the Current Population Survey (household survey) questionnaire.

How is it Constructed?

This variable is a percentage based on the West Virginia Labor Force Statistics annual average, 2000. To calculate the unemployment rate, the total number of unemployed persons is divided by the number of persons in the civilian labor force.

Data Sources:

(1990) West Virginia Bureau of Employment Programs (www.state.wv.us/bep/).

(2000) West Virginia Bureau of Employment Programs (www.state.wv.us/bep/).

Most of the indicators and background facts are expressed as percentages or rates. Indicators and background facts presented as actual numbers include: total population, education expenditures per pupil (2000 dollars), total jobs in high-paying industries, total jobs in low-paying industries, total population under age 18 and median family income (1999 dollars). Actual numbers begin on page 88.

Trend data is based on the change between 1990 and 2000. In some cases, including percent low birth-weight babies, teen birth rate, percent births to unmarried teens, and percent births to mothers with less than a 12th grade education, the 1990 value is the average of 1989, 1990, and 1991, and the 2000 value is the average of 1998, 1999, and 2000. For indicators such as child death, infant mortality, and teen violent death, the 1990 value is the average of 1988, 1989, 1990, 1991, and 1992, and the 2000 value is the average of 1996, 1997, 1998, 1999, and 2000. The 1990 percent of high school dropouts is the average of three years: 1989-1990, 1990-1991 and 1991-1992; the 2000 percent of high school dropouts is the average of 1998-1999, 1999-2000 and 2000-2001 school years. Child abuse/neglect data are based on the average of 1997-1998, 1998-1999 and 1999-2000 for 2000. Head Start and Cash Assistance data are from 2000; and the percent children approved for free and reduced-price school meals data are from the 2000-2001 school year.

A composite county rank appears in the upper, right corner of each county profile. It is derived by

converting the county rates/percentages (on each indicator) into a z score. This is done in order to give each indicator equal weight. Then the indicator z scores for each county are added together to form a county composite z score. Finally, the composite z scores are ranked 1 (best) through 55 (worst).

All indicators, except the percent of eligible children served by Head Start and the child abuse/neglect rate, are used to calculate the county composite rankings. Except for the first *Data Book*, the 1992 edition, we have used the same 10 indicators to calculate the composite county rankings. Composite county rankings were published in the 1992 edition; however, the list of indicators was different.

All of the 12 indicators are ranked from 1 (best) to 55 (worst). The ranking is obtained by simply ranking the rate or percent from best to worst. These individual indicator rankings appear on each of the county pages under the county rank column. These rankings are based on the most current data, which this year is 2000 data. On all of the indicators, except for Head Start, the lowest rate or percent is given the most positive ranking (rank = 1). Whenever two or more counties are tied for the individual indicator rank, they are all assigned the same rank, e.g. if four counties tie at ranking position 1, all four are assigned a rank of 1, then the next county is ranked 5.

Caution should be used in interpreting the results of the rankings and trend data. Some indicators, such as the child death rate, document

relatively rare events. For example, a county may show a 100 percent worsening trend in its child death rate because it doubled its number of deaths, from 1 in 1990 to 2 in 2000.

Caution should also be used when reading the actual numbers. Since some of the indicators' actual numbers are averages for a three-year span, a zero reported may include one case within the three-year span. If a county has a reported rate higher than 0 for an averaged indicator and the reported actual number for that indicator is 0, then one case had occurred within the three-year span. This occurs due to rounding of the actual numbers to whole numbers.

All rate/percentages and percent changes are rounded to the nearest tenth of a percent.

"NC" indicates there was no change between the 1990 and 2000 rate or percent. "NA" indicates that data was not available. "NM" is used when the 1990 data is zero and 2000 data is any value above zero because a percent change from zero cannot be calculated. When the 1990 data is any value above zero and the 2000 data is zero, the percent change shown is always 100 percent. We also use "NM" to note that we do not calculate the percent change from 1990 to 2000 for the child abuse/neglect rate. Differences in reporting child abuse/neglect over the years prevent us from providing trend data for this indicator.

Numbers

COUNTY	Low Birth-Average		Infant Deaths		Child Deaths		Kids-in-Head Start		Kids-Approved For Free/Reduced Price Meals		Child Abuse/Neglect Cases Average	
	1990	2000	1988-92	1995-99	1988-92	1995-1999	1999	2000	2000	2001	1999	2000

WV KIDS COUNT Scores And Composite County Rankings

Scores and county rankings give some indication as to whether or not child well-being is better or worse than in other counties and by how much. The Scores and Composite Rankings chart provides a means of comparing the county's total performance based on 10 WV KIDS COUNT indicators of child well-being.

West Virginia University Survey Research Center

The West Virginia University Survey Research Center is an invaluable partner in the production of the *WV KIDS COUNT Data Book*. Survey Research Center staff manages data collection, processing, manipulation, data analysis, and map design.

West Virginia University established the WVU Survey Research Center in 1991 in response to a growing demand for a viable survey research organization. Given an initial charge of integrating aspects of the university's service, research, and teaching goals around survey methodologies, the Survey Research Center has successfully developed the organizational capacity to accomplish this threefold mission. The Survey Research Center assists faculty in various research endeavors, promotes organizational linkages, supports staff development, and is developing a statewide data base inventory. In many respects, the Survey Research Center has become an interactive research laboratory that combines the missions of teaching, research, and service.

DISSEMINATION PARTNERS

The West Virginia KIDS COUNT Fund and the West Virginia University Survey Research Center wish to thank the following organizations for their assistance in disseminating the 2001 WV KIDS COUNT Data Book:

A.B.L.E. Families, Inc.	Governor's Cabinet on Children and Families	West Virginia Council of Churches
