## Executive Summary

The Montgomery County Public Schools (MCPS) introduced the High School Academic Attainment (HSAA) model in 2001 to augment the existing state accountability system. The Maryland State Department of Education (MSDE) accountability system was implemented in the 1990s and focused primarily on elementary and middle schools. The HSAA model was designed to hold high schools accountable for the rigor of course taking and student performance. A cohort analysis was conducted to examine the graduating classes of 2000 through 2004. Transcript analyses were conducted on all students who graduated from MCPS high schools during those years. Each student was evaluated in terms of the four HSAA categories describing their high school course taking and performance.

Districtwide performance on the HSAA has shown little change over time. Patterns of classification into the four categories, College Rigorous, College Ready, College/Career Capable, and Minimally Prepared, have remained consistent within racial/ethnic groups, but there are some marked differences between groups. African American and Hispanic graduates predominantly fall into the Minimally Prepared and College/Career Capable categories. The majority of Asian American and White graduates are in the College Rigorous category. For Limited English Proficiency (LEP) graduates, the majority of students are in the Minimally Prepared category. Students receiving Free and Reduced-price Meals System (FARMS) and special education services predominantly fall into the Minimally Prepared and College/Career Capable categories.

When schools are examined by the three established standards, 11 of 23 MCPS high schools (47.8%) met Standard 1, with 40% of students in the College Rigorous category. One school (4.3%) met Standard 2, with 80% of students in the College Rigorous or College Ready categories. No schools met standard 3, having 100% of students in the College Rigorous, College Ready or College/Career Capable categories.

While the overall performance on the HSAA has remained consistent, changes have been observed in the 11 indicators that comprise the HSAA. The number of African American students satisfying seven of the 11 indicators increased, representing the largest increase for any student subgroup. The number of White students increased in six of the 11, Asian American students increased in three, and Hispanic students increased in one.

The HSAA has been an important part of the MCPS accountability measure in previous years. Since the passage of the *No Child Left Behind Act* (NCLB) and the introduction of new high school graduation requirements by MSDE, the role of HSAA has changed. Previously in high schools, there were no testing programs to measure academic proficiency in high school content areas. Because the Maryland High School Assessments (HSA) and Maryland School Assessment (MSA) are administered in MCPS high schools regularly, and will soon be a graduation requirement, now is the time to revise the HSAA model to reflect these new accountability measures.

# **An Examination of the 2003-2004 Montgomery County Public Schools High School Academic Attainment Model**

Faith Connolly  
Carol Schatz  
Marilyn Powell

This is the final report on the Montgomery County Public Schools' (MCPS) high school accountability measure—the High School Academic Attainment (HSAA) model. Since recent changes in accountability were implemented by the Maryland State Department of Education (MSDE) and MCPS, this report discusses the role of the HSAA model in this new context.

## **Background**

The HSAA was developed as part of the original MCPS System of Shared Accountability (SSA). Since its introduction, there have been many changes in accountability measures including the development of an MCPS strategic plan, introduction of new graduation requirements by MSDE, and implementation of federal accountability requirements associated with the *No Child Left Behind Act of 2001* (NCLB).

### **Original System of Shared Accountability**

MCPS introduced the SSA in 2001 to augment the existing state accountability system. The MSDE accountability system—Maryland School Performance Program (MSPP)—was implemented in the 1990s, but focused primarily on elementary and middle schools. The MSPP held high schools accountable for attendance, percentage of students passing the Maryland Functional Tests (MFT), and dropout rates. However, most students passed the MFTs in middle school, so it was not a true accountability measure for high schools.

The HSAA measures student performance by examining the rigor of academics during high school. The goals for the HSAA model are to reduce the need for college remediation and improve MCPS graduates' preparedness for college and/or career. The HSAA is a four-category system that reflects the rigor of the course of study completed by each graduating class. The four categories—College Rigorous, College Ready, College/Career Capable, and Minimally Prepared—correspond to the three high school program completion indicators reported by MSDE and measure the likelihood that a student may need remediation that distinguishes between students who are College Ready versus College/Career Capable.

### **A Description of the HSAA**

The HSAA examines student performance by the rigor of high school course taking and academic achievement. Students are placed into one of four categories—College Rigorous, College Ready, College/Career Capable, or Minimally Prepared. The categories were designed

to capture the skill level of graduating seniors. Students who qualified for the College Rigorous category were expected to have the academic skills to be successful in challenging higher education institutions. Students who qualified for the College Ready category were expected to be successful in higher education, with minimal risk of remediation. For the College/Career Capable category, students' course taking either qualified them for college, but they were at risk of needing remediation in college, or included a career preparation program for skilled employment. Students who qualified for the Minimally Prepared category met the minimum standards for a Maryland diploma (see Table 1). One of the concerns with the HSAA is that students with special needs receiving certificates of completion are not represented by the existing categories.

Table 1  
HSAA Categories and Indicators

| Category               | Definition  | Pertinent Indicators   |
|------------------------|---|--|
| College Rigorous       | Student satisfied 4 of the 6 MSDE rigorous indicators   | <ol style="list-style-type: none"> <li>1. Two credits foreign language (B or better)</li> <li>2. One credit above Algebra 2 (B or better)</li> <li>3. Four credits science (B or better)</li> <li>4. Two credits Adv Tech (B or better)</li> <li>5. Cumulative GPA of 3.0 or higher</li> <li>6. SAT total score of 1000 or higher</li> </ol> |
| College Ready          | Student did not meet the standards for College Rigorous, but completed USM requirements and transcript variables indicate low likelihood for college remediation. | <ol style="list-style-type: none"> <li>7. Highest math level with one earned credit</li> <li>8. Honors credits earned</li> <li>9. Academic GPA</li> <li>10. Met the University System of Maryland (USM) course requirements for admission</li> </ol>   |
| College/Career Capable | Student must have completed indicator 10 or 11  | <ol style="list-style-type: none"> <li>10. Met USM course requirements for admission</li> <li>11. Complete career program</li> </ol>   |
| Minimally Prepared     | Student completed high school diploma requirements with no additional rigor   |  |

Students' performance on the 11 indicators is examined to determine HSAA categories. After students are classified into one of four categories, schools are evaluated by the percentage of students who fall into the four categories. Three standards were established for schools.

- Standard 1: At least 40% of graduating seniors have successfully completed a College Rigorous program
- Standard 2: At least 80% of graduating seniors have successfully completed a College Ready program or higher
- Standard 3: 100% of graduating seniors have successfully completed a College/Career Capable program or higher

Over time, schools were expected to move students into more rigorous categories by encouraging them to take more rigorous course work or career preparation during high school.

## Methodology

This report addresses four key research questions to examine the current status of MCPS schools on the HSAA model.

### Key Research Questions

The following research questions are addressed in this report:

1. How have MCPS students performed on the HSAA? Has performance changed over time?
2. How are students performing on the HSAA by gender, race/ethnicity, and receipt of special services? Has performance of these student groups changed over time?
3. How many schools met the HSAA standards?
4. How did MCPS and student subgroups perform on each of the 11 indicators that make up the HSAA? Have their performances changed over time?

### Creation of Analysis File

To examine the current status of the HSAA, an analysis was conducted on students who are reported to MSDE as either receiving a diploma or withdrawing to college. Each year, students who graduated between July 1 of the previous year and June 30 of the current year are reported on this file. For example, the graduating class of 2004 includes all students who graduated in August 2003 through June 2004. Student transcript data are merged with the student file for transcript analyses. For reporting purposes, American Indian students are included in analyses, but not reported as a subgroup because the number of students is too small to make valid inferences about trends.

### Students Included in the HSAA

The students included in each cohort are those who have earned a diploma during the academic year. The number of students included in each cohort is reported in Table 2. Students are reported by gender, race/ethnicity, limited English proficiency (LEP), and receipt of special services such as Free and Reduced-price Meals System (FARMS) and special education. Students receive special education, English for Speakers of Other Languages (ESOL), and/or FARMS services during Grade 12.

The race/ethnicity composition of the cohort analyzed for the HSAA has not changed much for the five cohorts reviewed. Slightly less than 10% of students received FARMS for each of the cohorts; slightly less than 8% received special education services. The percentage of LEP students was the highest for the graduating cohort of 2000, at 4.8%, and lowest for the graduating cohort of 2004, at 3.2%.

Table 2  
Number of Diploma Graduates Included in Analyses by Demographic Group

|                   |          | Graduating Class |       |       |       |       |

|                   | %        | 7.7              | 8.1   | 7.7   | 7.9   | 7.6   |
| LEP               | <i>N</i> | 369              | 279   | 328   | 301   | 287   |
|                   | %        | 4.8              | 3.5   | 3.9   | 3.4   | 3.2   |

### Analysis Conducted

To address the research questions, student performance indicators were analyzed for linear trends across years (or across successive cohorts). “Increase” indicates a statistically significant linear trend. Similarly, “decrease” indicates a statistically significant decrease over the 5-year period.

With approximately 42,000 students included in these analyses, published psychological research generally requires the effect size as well as probability level to be reported for findings (American Psychological Association, 2001). This permits the reader to evaluate the robustness and practical significance of the reported effects. For the purposes of this examination, reported findings have a probability of  $p < .0045$ <sup>1</sup> and a minimum effect size of at least  $r = \pm 0.023$ .<sup>2</sup>

<sup>1</sup> Type I error rate for each performance indicator is limited by using  $p < (.05/11)$ , reflecting 11 subgroups.

<sup>2</sup> Cohen (1988) indicates the magnitudes of  $r$  corresponding to small, medium, and large effect sizes for many areas of psychological research are  $r = .10$ ,  $.30$ , and  $.50$ , respectively. However, investigating changes in performance among different cohorts over time is an area of research in which effect sizes are typically quite small. Effects with the minimum correlation coefficient size of  $\pm 0.023$  correspond with  $r^2 = 0.0005$ , and account for at least 0.05 % of the observed total variance of the scores.

## Results

This section addresses each of the questions listed in the methodology section. MCPS performance on the HSAA is reported for the district for all students and subgroups, then for each school’s status on each of the indicators that contribute to the HSAA.

### Student Performance on the HSAA

Districtwide performance on the HSAA has shown little change over time (see Figure 1). The percentage of students in each category has changed very little since the graduating class of 2000. Most students (40% to 42%) are in the College Rigorous category. The percentage of students in the College Ready category has ranged from 16% to 18%, and the percentage in College/Career Capable has ranged from 21% to 26%. The percentage of students in Minimally Prepared category ranges from 17% to 19%.

Figure 1. HSAA performance for MCPS diploma graduates of 2000 through 2004.

### HSAA Student Performance by Student Subgroups

Figure 2 contains the information for categories by race/ethnicity. Comparisons by race/ethnicity show that while patterns have remained consistent from year to year, there are some marked differences between racial/ethnic groups. African American graduates predominantly fall into the Minimally Prepared and College/Career Capable categories (32% and

33%, respectively, for the graduating class of 2004). The majority of Asian American graduates are in the College Rigorous category (59% for the graduating class of 2004). Hispanic graduates, similar to the pattern seen for African American graduates, fall predominantly into the Minimally Prepared and College/Career Capable categories (40% and 29%, respectively for the graduating class of 2004). The majority of White students fall into the College Rigorous categories (54% for the graduating class of 2004).

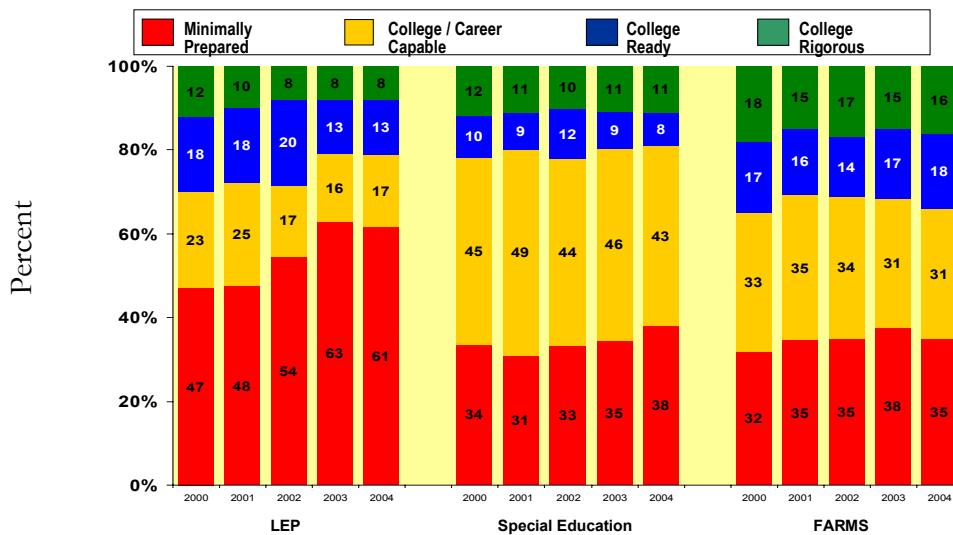

Figure 2. HSA performance for MCPS diploma graduates of 2000 through 2004 by race/ethnicity.

### MCPS Performance High School Academic Attainment Data

Note: There are changes to the disaggregated data displays for 2004. The baseline has been recalculated to be consistent with Strategic Plan reporting. Thus, the new baseline year is 2000, not the average of the combined years 1999-2001 as in previous reporting.

Figure 3. HSA performance for MCPS diploma graduates of 2000 through 2004 by special services.

For LEP graduates the majority of students are in the Minimally Prepared category (61% for the graduating class of 2004). Students receiving special education services predominantly fall into the Minimally Prepared and College/Career Capable (38% and 43%, respectively, for the graduating class of 2004). Students receiving FARMS services predominantly fall into the Minimally Prepared and College/Career Capable (35% and 31%, respectively, for the graduating class of 2004) (see Figure 3).

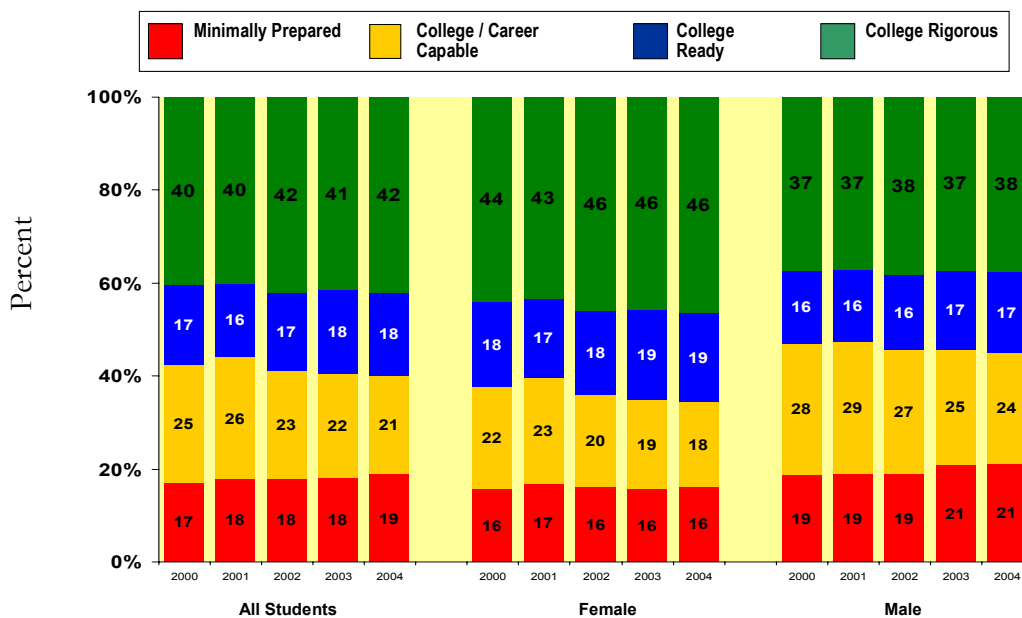

Figure 4. HSA performance for MCPS diploma graduates of 2000 through 2004 by gender.

The category with the most female and male students is College Rigorous (46% and 38% respectively, for the graduating class of 2004) (see Figure 4).

### Schools Meeting the HSA Standards

A total of 11 of 23 MCPS high schools (47.8%) met Standard 1, with 40% of students in the College Rigorous category. One school (4.3%) met Standard 2, with 80% of students in the College Rigorous or College Ready categories. No schools met Standard 3, with 100% of students in the College Rigorous, College Ready, or College/Career Capable categories (see Table 3).

### **District and Student Subgroups Performance on the HSAA Indicators**

While little progress is seen on the HSAA standards, improvement is seen on some of the 11 indicators that comprise the HSAA.

Performance on four of the 11 indicators that comprise the HSAA increased for the district.

1. The percentage of students with 2 credits in foreign language and earning a B or better;
2. The percentage of students with 1 credit above Algebra 2 and earning a B or better;
3. The average highest math level with 1 credit earned; and
4. The average number of Honors credits earned.

The increase in the percentage of students taking foreign language and advanced level math and earning a B or better indicates either an increase in the percentage of students taking these courses and doing well or an increase in the percentage of students earning a B or better. The increase in the average highest math level with 1 credit earned indicates a change in math course taking patterns (i.e., more students are taking more rigorous math courses in high school). The increase in the average number of Honors credits earned also indicates a change in course taking patterns (i.e., students are taking, on average, more Honors courses).

One indicator decreased. It was the percentage of students with 2 credits of advanced technology course work. For the graduating class of 2003, students had to complete three advanced technology credits, not two, if one of the credits was to count for technical education. This shift approximately halved the percentage of students meeting the indicator (see Appendix A). The identification of a statistically significant decrease is likely the result of a policy change, not a change in course taking.

Six of the 11 indicators have shown no change. They are percentage of students who earned 4 credits of science at a B or better, percentage with a cumulative GPA of 3.0 or higher, percentage with an SAT score of 1000 or higher, percentage completing the University of Maryland course requirements, percentage completing an MSDE-approved career program, and academic GPA.

Table 4 summarizes the results for each of the 11 indicators for all student subgroups and Appendix A contains a subgroup review for each indicator that contributes to the HSAA. Again, the advanced technology indicator has not been identified because it is the result of a change in calculation, not course taking patterns.

For the indicators that showed an increase for all students, a review of student subgroups shows some interesting patterns. The foreign language indicator has a positive trend for female graduates. Female students have either consistently taken more foreign language credits throughout the 5 years or increased the percentage scoring a B or better. The percentage was 74.0% for females in the graduating class of 2000 and 80.5% for females in the graduating class of 2004. For males, the percentage was 58.7% for the graduating class of 2000 and 61.8% for males in the graduating class of 2004 (see Appendix A).

Table 4

## MCPS Performance on HSAA Indicators for Diploma Graduates of 2000 through 2004

|   | Graduating Class of |       |       |       |       | Significant Change |
|---|---------------------|-------|-------|-------|-------|--------------------|
|   | 2000                | 2001  | 2002  | 2003  | 2004  |                    |
| Percentage with 2 credits foreign language(B or better) | 66.6                | 66.8  | 70.8  | 69.3  | 71.4  | Increase           |
| Percentage with 1 credit above Algebra 2 (B or better)  | 40.4                | 41.5  | 43.6  | 45.3  | 46.2  | Increase           |
| Percentage with 4 credits science (B or better)         | 41.2                | 40.9  | 41.2  | 42.2  | 43.7  | --                 |
| Percentage with 2 credits adv tech (B or better)        | 13.1                | 15.2  | 16.7  | 8.5   | 1.4   | Decrease*          |
| Percentage with cum. GPA of 3.0 or higher               | 48.1                | 47.3  | 49.0  | 48.4  | 49.1  | --                 |
| Percentage with score of 1000+ on SAT-1                 | 52.5                | 52.2  | 53.6  | 53.1  | 53.3  | --                 |
| Avg. highest math level with 1 credit earned            | 4.59                | 4.54  | 4.59  | 4.61  | 4.67  | Increase           |
| Avg. number of Honors credits earned                    | 7.1                 | 7.2   | 7.7   | 8.0   | 8.9   | Increase           |
| Avg. academic GPA                                       | 2.69                | 2.67  | 2.70  | 2.70  | 2.71  | --                 |
| Percentage with USM course requirements for admission   | 75.0                | 73.6  | 75.2  | 74.7  | 74.8  | --                 |
| Percentage completing career program                    | 11.1                | 12.8  | 11.7  | 11.8  | 10.4  | --                 |
| Number of Students                                      | 7,720               | 8,083 | 8,392 | 8,931 | 9,089 | N/A                |

\* Starting with the class of 2003, students had to earn 3 technology credits (rather than 2 as in previous years)

-- No reportable finding

African American, Asian American, and White students also increased the percentage of students with 2 or more credits of foreign language and earning a B or better. African American students began far below the district percentage—41.6% for the graduating class of 2000 compared with 66.6% for all MCPS graduates (see Table A1).

Trends for earning at least one credit above Algebra 2 with a B or better was positive and linear for all subgroups except Hispanic graduates, LEP graduates, and graduates receiving FARMS and/or special education services. For the similar indicator measuring the highest math level course, there is also an increase for female, African American, and White graduates. Female and White students began above the district average for the graduating class of 2000, and the percentage of students meeting HSAA indicators continued to grow. African American students began below the district average of percentage of students meeting HSAA indicators for the class

of 2000, increased the percentage meeting the indicator, but remained below the district. LEP students began below the district and their numbers have also dropped (see Appendix A).

Table 5  
Summary of 5-Year Trends for MCPS Performance  
Overall and by Student Subgroups for Diploma Graduates of 2000 through 2004

|  | All | Gender |      | Race/Ethnicity |            |          |       | Special Services |            |     |
|--|-----|--------|------|----------------|------------|----------|-------|------------------|------------|-----|
|  |     | Fem    | Male | African Amer   | Asian Amer | Hispanic | White | FARMS            | Spec. Educ | LEP |
| Percentage with 2 credits foreign language (B or better) | ↑   | ↑      |      | ↑              | ↑          |          | ↑     |                  |            |     |
| Percentage with 1 credit above Algebra 2 (B or better)   | ↑   | ↑      | ↑    | ↑              | ↑          |          | ↑     |                  |            |     |
| Percentage with 4 credits in science (B or better)       |     |        |      | ↑              | ↑          |          |       |                  |            |     |
| Percentage with 2 credits adv tech (B or better)         |     |        |      |                |            |          |       |                  |            |     |
| Percentage with cum. GPA of 3.0 or higher                |     |        |      | ↑              |            |          |       |                  |            |     |
| Percentage with score of 1000+ on SAT-1                  |     |        |      | ↑              |            |          |       |                  |            |     |
| Avg. highest math level (1 credit earned)                | ↑   | ↑      |      | ↑              |            |          | ↑     |                  |            |     |
| Avg. number of Honors credits earned                     | ↑   | ↑      | ↑    | ↑              | ↑          | ↑        | ↑     | ↑                |            |     |
| Avg. academic GPA  |     |        |      |                |            |          |       |                  |            |     |
| Percentage with USM course requirements for admission    |     | ↑      |      |                |            |          | ↑     |                  |            | ↓   |
| Percentage completing career program                     |     |        |      |                |            |          |       |                  |            |     |

↑ Statistically significant increase

↓ Statistically significant decrease

The trend for the average number of Honors credits is positive and linear for all student subgroups, except for those graduates who received special education services and LEP students.

Review by student race/ethnicity identifies some interesting patterns. African American students increased for 7 of the 11 indicators. This is the highest increase for any student subgroup. While an improvement, African American students are below the district on all measures, starting with the graduating class of 2000. They continue to be below the district with the graduating class of 2004, except for the percentage of students completing an MSDE-approved career program in which they were above the percentage of MCPS graduates for the class of 2000 (19.0% compared with 11.1% for MCPS) and continue to be above the district in 2004 (17.0% compared with 10.4%).

White students had the next highest increase in indicators, 6 of the 11; Asian American increased in three, and Hispanic students increased in one. Hispanic students showed growth in the average number of Honors credits earned.

## Discussion and Recommendations

The Montgomery County Public Schools (MCPS) introduced the System of Shared Accountability (SSA) in 2001 to augment the existing state accountability system. The Maryland State Department of Education (MSDE) accountability system, Maryland School Performance Program (MSPP) was implemented in the 1990s, but focused primarily on elementary and middle schools. The MSPP held high schools accountable for attendance, percentage of students passing the Maryland Functional Tests (MFT), and dropout rates. However, most students passed the MFTs in middle school, so it was not a true accountability measure for high schools. The High School Academic Attainment (HSAA) model was designed to hold high schools accountable for the rigor of course taking and student performance.

Student transcripts were reviewed and students were then assigned to one of four HSAA categories—College Rigorous, College Ready, College/Career Ready, or Minimally Prepared. The percentage of students who fall into the four categories has not changed over the past 5 years. Review by race/ethnicity identifies some patterns that have remained consistent from year to year, but show some marked differences between race/ethnicity groups. African American graduates predominantly fall into the Minimally Prepared and College/Career Capable categories (approximately 40% and 30%, respectively). The majority of Asian American graduates are in the College Rigorous category (approximately 60%). Hispanic graduates fall predominantly into the Minimally Prepared and College/Career Capable categories (approximately 40% and 30%, respectively). The majority of White students fall into the College Rigorous category (just over 50%).

The majority of LEP students are in the Minimally Prepared category (approximately 60%). Students receiving special education services predominantly fall into the Minimally Prepared and College/Career Capable categories (approximately 35% and 40%, respectively). Students receiving FARMS services predominantly fall into the Minimally Prepared and College/Career Capable categories (approximately 40% and 30%, respectively). More female students are in the College Rigorous category (approximately 45%) than in any other single category. More male students are also in the College Rigorous category (just below 40%) than in any other single category.

When schools are examined by the three established standards, a total of 11 of 23 MCPS high schools (47.8%) met Standard 1, with 40% of students in the College Rigorous category. One school (4.3%) met Standard 2, with 80% of students in the College Rigorous or College Ready categories. No schools met Standard 3, with 100% of students in the College Rigorous, College Ready, or College/Career Capable categories.

While performance on the HSAA has not changed substantially, 4 of the 11 indicators used to categorize students have shown a statistically significant change. These include an increase in the percentage of students taking foreign language or advanced math and earning a B or better. This increase may reflect an increase in the percentage of students taking these courses or an increase in the percentage of students earning a B or better. The increase in the average highest math level with 1 credit earned indicates a change in math course taking patterns (i.e., more students are taking more rigorous math courses in high school). The increase in the average

number of honors credits earned also indicates a change in course taking patterns (i.e., students are taking, on average, more Honors courses).

Statistically significant growth was seen for different student subgroups. African American students increased for 7 of the 11 indicators. This is the highest number of indicators increasing for any student subgroup. While an improvement, African American students continue to be below the district on all measures, except with the percentage of students completing an MSDE-approved career program. White students increased for 6 of the 11 indicators, Asian American students increased in three, and Hispanic students increased on one. LEP students decreased in their performance of students acquiring the minimum University of Maryland System course requirements for admission.

Recent changes in MSDE's accountability systems have made new measures available. The HSAA played an important part in the System Shared Accountability, especially when the MSDE had limited accountability measures for high schools. In June 2004, the MSDE mandated that students entering 9<sup>th</sup> grade in 2005 must pass four HSAs in English I, algebra/data analysis, government, and biology. The graduation requirement is that students must pass all four tests or earn an average passing score on all four tests with a minimum score for any one assessment (MSDE, 2004).

Additionally, as part of NCLB, the MSDE established annual measurable objectives for two MSAs, Grade 10 reading and the Geometry MSA. These two assessment measures along with the four-year graduation rate determine whether a high school meets adequate yearly progress (AYP). Each year the percentage of students who meet the proficient and advanced categories must increase so that by 2013–2014 100% of students score at the proficient or advanced levels. Between now and 2013–2014, standards are set by the MSDE as Annual Measurable Objectives (AMOs). These are the current high school accountability measures implemented by MSDE. Schools that fail to meet AMOs are deemed to not meet AYP and become monitored by the MSDE and MCPS staff to identify means to improve outcomes.

Previously, in high schools, there were no testing programs to capture academic performance for high school content areas. Now that the HSAs are administered in MCPS regularly and will soon be a graduation requirement, it is the right time to revisit the HSAA model to reflect these new data sources. It is recommended that HSAA be reviewed in context of the new accountability measures in place for schools and students.

## Appendix A: Eleven Indicators for MCPS and Student Subgroups

Table A1

Summary of MCPS Performance Trends for  
Percentage Students Meeting **Foreign Language Rigor Indicator** by Student Groups

|                   | Graduating Class of |      |      |      |      | Significant<br>Change |
|-------------------|---------------------|------|------|------|------|-----------------------|
|                   | 2000                | 2001 | 2002 | 2003 | 2004 |                       |
| MCPS              | 66.6                | 66.8 | 70.8 | 69.3 | 71.4 | Increase              |
| Female            | 74.0                | 74.2 | 78.9 | 78.5 | 80.5 | Increase              |
| Male              | 58.7                | 59.1 | 62.8 | 59.8 | 61.8 | --                    |
| African American  | 41.6                | 42.0 | 43.8 | 47.0 | 47.8 | Increase              |
| American Indian   | 68.4                | 41.7 | 66.7 | 45.5 | 53.8 | --                    |
| Asian American    | 78.6                | 77.6 | 83.8 | 80.2 | 82.0 | Increase              |
| Hispanic          | 62.6                | 67.9 | 71.3 | 66.9 | 69.2 | --                    |
| White             | 73.1                | 72.8 | 76.9 | 74.4 | 77.6 | Increase              |
| FARMS             | 54.7                | 53.8 | 59.2 | 54.8 | 60.4 | --                    |
| Special Education | 27.4                | 26.8 | 30.2 | 27.5 | 32.0 | --                    |
| LEP               | 59.3                | 59.9 | 71.0 | 68.8 | 66.2 | --                    |

*Note:* The MSDE Foreign Language Rigorous Performance Indicator is defined as having earned 2 credits in a foreign language with grades of B or better.

--No reportable finding.

Table A2

Summary of MCPS Performance Trends for  
Percentage Students Meeting **Mathematics Rigorous Indicator** by Student Groups

|                   | Graduating Class of |      |      |      |      | Significant<br>Change |
|-------------------|---------------------|------|------|------|------|-----------------------|
|                   | 2000                | 2001 | 2002 | 2003 | 2004 |                       |
| MCPS              | 40.4                | 41.5 | 43.6 | 45.3 | 46.2 | Increase              |
| Female            | 42.7                | 44.8 | 47.9 | 49.2 | 49.6 | Increase              |
| Male              | 37.9                | 38.1 | 39.6 | 41.3 | 42.7 | Increase              |
| African American  | 16.8                | 17.2 | 17.6 | 21.7 | 21.6 | Increase              |
| American Indian   | 26.3                | 20.8 | 23.8 | 27.3 | 15.4 | --                    |
| Asian American    | 59.4                | 57.7 | 62.5 | 62.4 | 64.5 | Increase              |
| Hispanic          | 17.2                | 18.0 | 19.5 | 18.6 | 17.5 | --                    |
| White             | 48.3                | 51.7 | 53.7 | 54.9 | 57.4 | Increase              |
| FARMS             | 20.8                | 18.1 | 19.5 | 20.0 | 21.1 | --                    |
| Special Education | 11.5                | 12.4 | 12.9 | 13.4 | 14.3 | --                    |
| LEP               | 18.7                | 17.2 | 16.5 | 15.0 | 14.6 | --                    |

*Note:* The MSDE Mathematics Rigorous Performance Indicator is defined as having earned 1 credit above Algebra 2 with a grade of B or better.

--No reportable finding.

Table A3  
Summary of MCPS Performance Trends for  
Percentage Students Meeting **Science Rigorous Indicator** by Student Groups

|                   | Graduating Class of |      |      |      |      | Significant<br>Change |
