

What Works Clearinghouse

ClassWide Peer Tutoring

Program description¹

ClassWide Peer Tutoring (CWPT) is a peer-assisted instructional strategy designed to be integrated with most existing reading curricula. This approach provides students with increased opportunities to practice reading skills by asking questions and receiving immediate feedback from a peer tutor. Pairs of students take turns tutoring each other to reinforce concepts and skills initially taught

by the teacher. The teacher creates age-appropriate peer teaching materials for the peer tutors; these materials take into account tutees' language skills and disabilities. Although *CWPT* can be used in subject areas other than reading, this report focuses on *CWPT* for beginning reading for elementary school grade levels, which emphasizes reading fluency and comprehension skills.²

Research

One study of *CWPT* met the What Works Clearinghouse (WWC) evidence standards. The study included more than 200 students from six urban elementary schools in Kansas.³

The WWC considers the extent of evidence for *CWPT* to be small in the general reading achievement domain. No studies that met WWC evidence standards with or without reservations addressed alphabetics, fluency, or comprehension.

Effectiveness

CWPT was found to have potentially positive effects on general reading achievement.

	Alphabetics	Fluency	Comprehension	General reading achievement
Rating of effectiveness	na	na	na	Potentially positive
Improvement index ⁴	na	na	na	+14 percentile points

na = not applicable

- The descriptive information for this program was obtained from publicly available sources: the program's web site (www.jgcp.ku.edu, retrieved March 2007) and the research literature (Greenwood, Terry, Utle, Montagna, & Walker, 1993; Greenwood, Delquadri, & Hall, 1989). The WWC requests developers to review the program description sections for accuracy from their perspective. Further verification of the accuracy of the descriptive information for this program is beyond the scope of this review.
- CWPT* has developed a version of the program specifically for beginning readers (*BR: CWPT*). However, this report focuses only on the broader *CWPT* program, which was the focus of the studies reviewed.
- The evidence presented in this report is based on available research. Findings and conclusions may change as new research becomes available.
- These numbers show the average and range of improvement indices for all findings across the study.

Additional program information¹

Developer and contact

Developed by Juniper Gardens Children's Project, the *CWPT* manual and charts are distributed under the name *Together We Can* by Sopris West™. Address: 4093 Specialty Place, Longmont, CO 80504. Email: customerservice@sopriswest.com. Web: <http://www.sopriswest.com/>. Telephone: (303) 651-2829 or (800) 547-6747.

The *CWPT Learning Management System (CWPT-LMS)* is software support for implementing *CWPT* and is distributed by the Juniper Gardens Children's Project. *Beginning Reading CWPT*, a version of the program specifically designed for beginning readers (not reviewed in this report), is also distributed by Juniper Gardens Children's Project. Address: 650 Minnesota Avenue, 2nd floor, Kansas City, KS 66101. Web: www.jgcp.ku.edu. Telephone: (913) 321-3143.

Scope of use

CWPT was developed in the early 1980s by the Juniper Gardens Children's Project at the University of Kansas for use in inner-city schools. The program has been implemented with regular and special education students and English language learners. Information is not available on the number of students or schools that have used the program.

Teaching

CWPT is practiced 30 minutes a day throughout the week, including 20 minutes for tutoring and 10 minutes for material

preparation. At the end of the week, students are individually tested on that week's material and pretested on the material for the upcoming week. Each Monday, students are paired up and each set of partners is assigned to one of two teams. Partners take turns tutoring and testing each other and award each other points for correct answers. The team with the most points is announced daily and is recognized each Friday. According to the developer, the program can be implemented in any content area involving drill and memorization, such as for spelling words, reading workbooks, and vocabulary words.

A computer-based approach to *CWPT* is also available. The *ClassWide Peer Tutoring Learning Management System* is a system of peer tutoring instruction with computer software support designed to help teachers implement effective instruction, monitor progress, and sustain use of the program over time. Training materials are available on the developer web site, and training is available from Juniper Gardens' staff.

Cost

Together We Can, a *CWPT* manual with reproducibles and four dry-erase posters, costs \$51. The *CWPT Learning Management System* materials, including a CD, training, and teacher's manual, cost \$245. The *Beginning Reading CWPT* materials, including the teacher's manual, lesson chart, CD, installation instructions, and software manual, cost \$475.

Research

Twelve studies reviewed by the WWC investigated the effects of *CWPT*. One study (Greenwood, Terry, Utley, Montagna, & Walker, 1993) was a randomized controlled trial that met WWC evidence standards. The remaining 11 studies did not meet WWC evidence screens.

Met evidence standards

Greenwood et al. (1993) randomly assigned schools to intervention or comparison groups. The *CWPT* program was delivered to one cohort of students for four years while they were in first grade to fourth grade, and outcomes were tracked two years later in sixth grade. For rating purposes, this WWC intervention report focuses on these follow-up findings for 218 sixth-grade students.⁵

5. The findings reviewed for rating purposes document program effects two years after the delivery of the intervention had ended.

Research *(continued)*

Extent of evidence

The WWC categorizes the extent of evidence in each domain as small or moderate to large (see the [What Works Clearinghouse Extent of Evidence Categorization Scheme](#)). The extent of evidence takes into account the number of studies and the

total sample size across the studies that met WWC evidence standards with or without reservations.⁶

The WWC considers the extent of evidence for *CWPT* to be small for general reading achievement. No studies that met WWC evidence standards with or without reservations addressed alphabetics, fluency, or comprehension.

Effectiveness

Findings

The WWC review of interventions for beginning reading addresses student outcomes in four domains: alphabetics, fluency, comprehension, and general reading achievement.⁷ The study included in this report covers one domain: general reading achievement. The findings below present the authors' estimates and WWC-calculated estimates of the size and the statistical significance of the effects of *CWPT* on students.⁸

General reading achievement. Greenwood et al. (1993) reported a statistically significant effect of *CWPT* on the Comprehensive Test of Basic Skills–Reading. According to WWC analysis, however, the effect was not statistically significant. The effect size was large enough to be considered substantively

important according to WWC criteria (that is, an effect size of at least 0.25).

Rating of effectiveness

The WWC rates the effects of an intervention in a given outcome domain as positive, potentially positive, mixed, no discernible effects, potentially negative, or negative. The rating of effectiveness takes into account four factors: the quality of the research design, the statistical significance of the findings, the size of the difference between participants in the intervention and the comparison conditions, and the consistency in findings across studies (see the [WWC Intervention Rating Scheme](#)).

The WWC found *CWPT* to have potentially positive effects on general reading achievement

Improvement index

The WWC computes an improvement index for each individual finding. In addition, within each outcome domain, the WWC computes an average improvement index for each study and an average improvement index across studies (see [Technical Details of WWC-Conducted Computations](#)). The improvement index represents the difference between the percentile rank of the average student in the intervention condition versus the percentile rank of the average student in the comparison

condition. Unlike the rating of effectiveness, the improvement index is based entirely on the size of the effect, regardless of the statistical significance of the effect, the study design, or the analyses. The improvement index can take on values between –50 and +50, with positive numbers denoting results favorable to the intervention group.

The improvement index for general reading achievement is +14 percentile points on the one measure in the single study that met WWC evidence standards.

6. The Extent of Evidence Categorization was developed to tell readers how much evidence was used to determine the intervention rating, focusing on the number and size of studies. Additional factors associated with a related concept, external validity, such as the students' demographics and the types of settings in which studies took place, are not taken into account for the categorization.
7. For definitions of the domains, see the [Beginning Reading Protocol](#).
8. The level of statistical significance was reported by the study authors or, where necessary, calculated by the WWC to correct for clustering within classrooms or schools and for multiple comparisons. For an explanation, see the [WWC Tutorial on Mismatch](#). See the [WWC Intervention Rating Scheme](#) for the formulas the WWC used to calculate the statistical significance. In the case of *CWPT*, corrections for clustering were needed.

The WWC found *CWPT* to have potentially positive effects on general reading achievement *(continued)*

Summary

The WWC reviewed 12 studies on *CWPT*. One of these studies met WWC evidence standards; the remaining studies did not meet WWC evidence screens.⁹ Based on this one study, the WWC found potentially positive effects on general reading achievement. The evidence presented in this report may change as new research emerges.

9. One single-case design study was identified but is not included in this review because the WWC does not yet have standards for reviewing single-case design studies.
10. Does not use a strong causal design: the study did not use a comparison group.
11. Does not use a strong causal design: this study, which used a quasi-experimental design, did not use equating measures to ensure that the comparison group was equivalent to the treatment group.
12. The outcome measures are not relevant to this review.
13. The sample is not appropriate to this review: the parameters for this WWC review specified that students should be in grades kindergarten through 3; this study did not disaggregate students in the eligible range from those outside the range.

14. The sample is not appropriate to this review: the parameters for this WWC review specified that students should be in grades kindergarten through third grade during the time of the intervention; this study did not focus on the targeted grades.

Appendix

Appendix A1 Study Characteristics: Greenwood et al., 1993 (randomized controlled trial)

Characteristic	Description
Study citation	Greenwood, C. R., Terry, B., Utle, C. A., Montagna, D., & Walker, D. (1993). Achievement placement and services: Middle school benefits of ClassWide Peer Tutoring used at the elementary school. <i>School Psychology Review, 22</i> (3), 497–516.
Participants	Two-hundred and ninety-three first-grade students (170 students in intervention, 123 students in comparison) participated in this longitudinal study that followed students during program implementation from first grade to fourth grade and followed up two years later in sixth grade. ¹ The study assigned schools to conditions—four schools were randomly assigned to the intervention and two schools to the comparison. About 24% of the students in the intervention group and 27% of the students in the comparison group were lost to analysis at follow-up at sixth grade. ² The study demonstrated equivalence of baseline scores of students in the intervention and comparison samples included in the analysis.
Setting	Six Chapter I elementary schools in one school district in Kansas City, Kansas.
Intervention	Most teachers were involved in the study for one year. Two teachers refused to participate in the <i>CWPT</i> program, but agreed for the assessments to take place. Teachers received either three hours of paid university credit or a monetary compensation for their participation in the study.
Comparison	Comparison group students received their regular reading instruction program and Title I services. <i>CWPT</i> training or implementation was not conducted in the comparison schools. Teachers received either three hours of paid university credit or a monetary compensation for their participation in the study.
Primary outcomes and measurement	The primary outcome measure at grade 6 was the reading subtest of the Comprehensive Test of Basic Skills–Form U (CTBS–U), 3rd edition. The reading subtest of the Metropolitan Achievement Test (MAT) was administered at grade 4, but is not reviewed in this intervention report because of severe attrition of students. Language subtests for both measures were also administered but are not included in this review because they do not reflect outcome domains that are the focus of this Beginning Reading WWC review (see Appendix A2 for more detailed descriptions of the outcome measure reviewed for rating purposes).
Teacher training	Most of the participating classrooms were taught by a different teacher each year. The participating teachers received <i>CWPT</i> training each year. Teachers first read the program manual and then discussed with their consultants the changes to be made in their classroom practices. After the initial planning and preparation, consultants helped teachers implement the intervention in their classrooms. Teachers were considered trained when they received a score of 85% or above on the consultants' observation checklists.

1. This intervention report focuses on the part of the study that randomly assigned Chapter I schools to intervention and control conditions. Greenwood et al. (1993) also compared *CWPT* students in Chapter I schools and non-*CWPT* students in non-Chapter I schools.
2. In an earlier analysis of outcomes at the end of the program implementation at fourth grade, attrition was more severe and differential by treatment status, 68.2% of the students in the intervention group and 44.2% of the students in the comparison group were not included in the analysis at the end of the fourth grade. However, study authors were able to locate some students in sixth grade when they fed back into a common middle school. Because of these high and differential rates of attrition, outcomes at grade 4 are not reviewed in this WWC intervention report.

Appendix A2 Outcome measure in the general reading achievement domain

Outcome measure	Description
CTBS-U Reading subtest	This is the reading subtest of the Comprehensive Test of Basic Skills–Form U (CTBS-U), 3rd edition. The sub-skills measured by this standardized subtest include visual discrimination, letter recognition, auditory discrimination, sight vocabulary, phoneme/grapheme consonants and vowels, vocabulary in context, word part clues, and comprehension (as cited by Greenwood et al., 1993).

Appendix A3 Summary of study findings included in the rating for the general reading achievement domain¹

Outcome measure	Study sample	Sample size ³ (schools/ students)	Authors' findings from the study		WWC calculations			
			Mean outcome (standard deviation ²)		Mean difference ⁴ (<i>CWPT</i> – comparison)	Effect size ⁵	Statistical significance ⁶ (at $\alpha = 0.05$)	Improvement index ⁷
			<i>CWPT</i> group	Comparison group				
Greenwood & Terry, 1993 (randomized controlled trial)⁸ – four years of intervention, after two years of follow-up								
CTBS-U Reading subtest	Grade 6 ⁹	6/218	46.17 (15.78)	40.77 (14.99)	5.40	0.35	ns	+14
Domain average¹⁰ for general reading achievement						0.35	ns	+14

ns = not statistically significant

1. This appendix reports findings considered for the effectiveness rating and the average improvement indices.
2. The standard deviation across all students in each group shows how dispersed the participants' outcomes are: a smaller standard deviation on a given measure would indicate that participants had more similar outcomes.
3. Sample sizes were requested by the WWC and received by the study author.
4. Positive differences and effect sizes favor the intervention group; negative differences and effect sizes favor the comparison group. The means included here were adjusted for reading achievement at baseline and IQ scores.
5. For an explanation of the effect size calculation, see [Technical Details of WWC-Conducted Computations](#).
6. Statistical significance is the probability that the difference between groups is a result of chance rather than a real difference between the groups.
7. The improvement index represents the difference between the percentile rank of the average student in the intervention condition and the percentile rank of the average student in the comparison condition. The improvement index can take on values between –50 and +50, with positive numbers denoting results favorable to the intervention group.
8. The level of statistical significance was reported by the study authors or, where necessary, calculated by the WWC to correct for clustering within classrooms or schools and for multiple comparisons. For an explanation about the clustering correction, see the [WWC Tutorial on Mismatch](#). See [Technical Details of WWC-Conducted Computations](#) for the formulas the WWC used to calculate statistical significance. In the case of Greenwood et al. (1993), corrections for clustering during the time of intervention delivery were needed, so the significance levels differ from those reported in the original study.
9. Students started the study when they were in first grade; intervention students participated in *CWPT* for four years (first through fourth grade).
10. This row provides the domain average, which in this instance is also the single finding from one study.

Appendix A4 CWPT rating for the general reading achievement domain

The WWC rates an intervention's effects in a given outcome domain as positive, potentially positive, mixed, no discernible effects, potentially negative, or negative.¹

For the outcome domain of general reading achievement, the WWC rated *CWPT* as having potentially positive effects. It did not meet the criteria for positive effects because only one study met WWC standards, and that study did not show statistically significant positive effects. The remaining ratings (mixed effects, no discernible effects, potentially negative effects, negative effects) were not considered because *CWPT* was assigned the highest applicable rating.

Rating received

Potentially positive effects: Evidence of a positive effect with no overriding contrary evidence.

- Criterion 1: At least one study showing a statistically significant or substantively important *positive* effect.

Met. One study of *CWPT* showed a substantively important positive effect.

AND

- Criterion 2: No studies showing a statistically significant or substantively important *negative* effect and fewer or the same number of studies showing *indeterminate* effects than showing statistically significant or substantively important *positive* effects.

Met. No studies of *CWPT* showed indeterminate effects. In addition, no studies showed a statistically significant or substantively important negative effect.

Other ratings considered

Positive effects: Strong evidence of a positive effect with no overriding contrary evidence.

- Criterion 1: Two or more studies showing statistically significant *positive* effects, at least one of which met WWC evidence standards for a strong design.

Not met. No studies showed a statistically significant positive effect. In addition, only one study of *CWPT* met the WWC standards with or without reservations.

AND

- Criterion 2: No studies showing statistically significant or substantively important *negative* effects.

Met. No studies of *CWPT* showed a statistically significant or substantively important negative effect.

1. For rating purposes, the WWC considers the statistical significance of individual outcomes and the domain-level effect. The WWC also considers the size of the domain-level effect for ratings of potentially positive or potentially negative effects. See the [WWC Intervention Rating Scheme](#) for a complete description.

Appendix A5 Extent of evidence by domain

Outcome domain	Number of studies	Sample size		Extent of evidence ¹
		Schools	Students	
Alphabets	0	0	0	na
Fluency	0	0	0	na
Comprehension	0	0	0	na
General reading achievement	1	6	218	Small

na = not applicable/not studied

1. A rating of “moderate to large” requires at least two studies and two schools across studies in one domain and a total sample size across studies of at least 350 students or 14 classrooms. Otherwise, the rating is “small.”
