Apprenticeship

Apprenticeship is post-secondary education with a difference. Apprenticeship begins with finding an employer. Employers hire apprentices, pay their wages and provide on-the-job training and work experience. Approximately 80 per cent of an apprentice's time is spent on the job under the supervision of a certified journeyperson or qualified tradesperson. The other 20 per cent involves technical training provided at, or through, a post-secondary institution – usually a college or technical institute.

To become certified journeypersons, apprentices must learn theory and skills, and they must pass examinations. Requirements for certification—including the content and delivery of technical training—are developed and updated by the Alberta Apprenticeship and Industry Training Board on the recommendation of Carpenter Provincial Apprenticeship Committee.

The graduate of the Carpenter apprenticeship program is a certified journeyperson who will be able:

- to responsibly do all work tasks expected of a journeyperson
- to supervise, train and coach apprentices
- to understand the principles of sound and safe construction
- to know the characteristics and proper use of all building construction materials
- to read blueprints, do layout work and calculate quantities of materials
- to build various types of forms of concrete
- to build all types of wood framed buildings and apply exterior and interior finish of wood or wood substitutes
- to be proficient in the safe use and maintenance of hand and power tools
- to be familiar with the work of other tradesmen in the building industry
- · to perform assigned tasks in accordance with quality and production standards required in industry
- to comply with all safety regulations of the construction industry
- · to perform assigned tasks in accordance with quality and production standards required by industry

Apprenticeship and Industry Training System

Industry-Driven

Alberta's apprenticeship and industry training system is an industry-driven system that ensures a highly skilled, internationally competitive workforce in more than 50 designated trades and occupations. This workforce supports the economic progress of Alberta and its competitive role in the global market. Industry (employers and employees) establishes training and certification standards and provides direction to the system through an industry committee network and the Alberta Apprenticeship and Industry Training Board. The Alberta government provides the legislative framework and administrative support for the apprenticeship and industry training system.

Alberta Apprenticeship and Industry Training Board

The Alberta Apprenticeship and Industry Training Board provides a leadership role in developing Alberta's highly skilled and trained workforce. The board's primary responsibility is to establish the standards and requirements for training and certification in programs under the Apprenticeship and Industry Training Act. The board also provides advice to the Minister of Advanced Education and Technology on the needs of Alberta's labour market for skilled and trained workers, and the designation of trades and occupations.

The thirteen-member board consists of a chair, eight members representing trades and four members representing other industries. There are equal numbers of employer and employee representatives.

Industry Committee Network

Alberta's apprenticeship and industry training system relies on a network of industry committees, including local and provincial apprenticeship committees in the designated trades, and occupational committees in the designated occupations. The network also includes other committees such as provisional committees that are established before the designation of a new trade or occupation comes into effect. All trade committees are composed of equal numbers of employer and employee representatives. The industry committee network is the foundation of Alberta's apprenticeship and industry training system.

Local Apprenticeship Committees (LAC)

Wherever there is activity in a trade, the board can set up a local apprenticeship committee. The board appoints equal numbers of employee and employer representatives for terms of up to three years. The committee appoints a member as presiding officer. Local apprenticeship committees:

- monitor apprenticeship programs and the progress of apprentices in their trade, at the local level
- make recommendations to their trade's provincial apprenticeship committee (PAC) about apprenticeship and certification in their trade
- promote apprenticeship programs and training and the pursuit of careers in their trade
- make recommendations to the board about the appointment of members to their trade's PAC
- help settle certain kinds of disagreements between apprentices and their employers
- carry out functions assigned by their trade's PAC or the board

Provincial Apprenticeship Committees (PAC)

The board establishes a provincial apprenticeship committee for each trade. It appoints an equal number of employer and employee representatives, and, on the PAC's recommendation, a presiding officer - each for a maximum of two terms of up to three years. Most PACs have nine members but can have as many as twenty-one. Provincial apprenticeship committees:

- make recommendations to the board about:
 - standards and requirements for training and certification in their trade
 - courses and examinations in their trade
 - apprenticeship and certification
 - designation of trades and occupations
 - regulations and orders under the Apprenticeship and Industry Training Act
- monitor the activities of local apprenticeship committees in their trade
- determine whether training of various kinds is equivalent to training provided in an apprenticeship program in their trade
- promote apprenticeship programs and training and the pursuit of careers in their trade
- consult with other committees under the Apprenticeship and Industry Training Act about apprenticeship
 programs, training and certification and facilitate cooperation between different trades and occupations
- consult with organizations, associations and people who have an interest in their trade and with employers and employees in their trade
- may participate in resolving certain disagreements between employers and employees
- carry out functions assigned by the board

Alberta Government

Alberta Advanced Education and Technology works with industry, employer and employee organizations and technical training providers to:

- facilitate industry's development and maintenance of training and certification standards
- provide registration and counselling services to apprentices and employers
- coordinate technical training in collaboration with training providers
- certify apprentices and others who meet industry standards

Technical Institutes and Colleges

The technical institutes and colleges are key participants in Alberta's apprenticeship and industry training system. They work with the board, industry committees and Alberta Advanced Education and Technology to enhance access and responsiveness to industry needs through the delivery of the technical training component of apprenticeship programs. They develop lesson plans from the course outlines established by industry and provide technical training to apprentices.

Apprenticeship Safety

Safe working procedures and conditions, incident/injury prevention, and the preservation of health are of primary importance in apprenticeship programs in Alberta. These responsibilities are shared and require the joint efforts of government, employers, employees, apprentices and the public. Therefore, it is imperative that all parties are aware of circumstances that may lead to injury or harm.

Safe learning experiences and healthy environments can be created by controlling the variables and behaviours that may contribute to or cause an incident or injury. By practicing a safe and healthy attitude, everyone can enjoy the benefit of an incident and injury free environment.

Alberta Apprenticeship and Industry Training Board Safety Policy

The Alberta Apprenticeship and Industry Training Board (board) fully supports safe learning and working environments and emphasizes the importance of safety awareness and education throughout apprenticeship training- in both on-the- job training and technical training. The board also recognizes that safety awareness and education begins on the first day of on-the-job training and thereby is the initial and ongoing responsibility of the employer and the apprentice as required under workplace health and safety training. However the board encourages that safe workplace behaviour is modeled not only during on-the-job training but also during all aspects of technical training, in particular, shop or lab instruction. Therefore the board recognizes that safety awareness and training in apprenticeship technical training reinforces, but does not replace, employer safety training that is required under workplace health and safety legislation.

The board has established a policy with respect to safety awareness and training:

The board promotes and supports safe workplaces, which embody a culture of safety for all apprentices, employers and employees. Employer required safety training is the responsibility of the employer and the apprentice, as required under legislation other than the Apprenticeship and Industry Training Act.

The board's complete document on its 'Apprenticeship Safety Training Policy' is available at www.tradesecrets.gov.ab.ca; access the website and conduct a search for 'safety training policy'.

Implementation of the policy includes three common safety learning outcomes and objectives for all trade course outlines. These common learning outcomes ensure that each course outline utilizes common language consistent with workplace health and safety terminology. Under the title of 'Standard Workplace Safety', this first section of each trade course outline enables the delivery of generic safety training; technical training providers will provide trade specific examples related to the content delivery of course outline safety training.

Addendum

As immediate implementation of the board's safety policy includes common safety learning outcomes and objectives for all course outlines, this trade's PAC will be inserting these safety outcomes into the main body of their course outline at a later date. In the meantime the addendum below immediately places the safety outcomes and their objectives into this course outline thereby enabling technical training providers to deliver the content of these safety outcomes.

STANDARD WORKPLACE SAFETY

A. Safety Legislation, Regulations & Industry Policy in the Trades

Outcome: Describe legislation, regulations and practices intended to ensure a safe work place in this trade.

- Demonstrate the ability to apply the Occupational Health and Safety Act, Regulation and Code.
- 2. Explain the role of the employer and employee in regard to Occupational Health and Safety (OH&S) regulations, Worksite Hazardous Materials Information Systems (WHMIS), fire regulations, Workers Compensation Board regulations, and related advisory bodies and agencies.
- 3. Explain industry practices for hazard assessment and control procedures.
- 4. Describe the responsibilities of workers and employers to apply emergency procedures.
- 5. Describe positive tradesperson attitudes with respect to housekeeping, personal protective equipment and emergency procedures.
- 6. Describe the roles and responsibilities of employers and employees with respect to the selection and use of personal protective equipment (PPE).
- 7. Select, use and maintain appropriate PPE for worksite applications.
- B. Climbing, Lifting, Rigging and Hoisting

Outcome: Describe the use of personal protective equipment (PPE) and safe practices for climbing, lifting, rigging and hoisting in this trade.

- 1. Select, use and maintain specialized PPE for climbing, lifting and load moving equipment.
- 2. Describe manual lifting procedures using correct body mechanics.
- Describe rigging hardware and the safety factor associated with each item.
- Select the correct equipment for rigging typical loads.
- 5. Describe hoisting and load moving procedures.

C. Hazardous Materials & Fire Protection......

Outcome: Describe the safety practices for hazardous materials and fire protection in this trade.

- 1. Describe the roles, responsibilities features and practices related to the workplace hazardous materials information system (WHMIS) program.
- Describe the three key elements of WHMIS.
- 3. Describe handling, storing and transporting procedures when dealing with hazardous material.
- 4. Describe safe venting procedures when working with hazardous materials.
- 5. Describe fire hazards, classes, procedures and equipment related to fire protection.

Workplace Health and Safety

A tradesperson is often exposed to more hazards than any other person in the work force and therefore should be familiar with and apply the Occupational Health and Safety Act, Regulations and Code when dealing with personal safety and the special safety rules that apply to all daily tasks.

Workplace Health and Safety (Alberta Employment, Immigration and Industry) conducts periodic inspections of workplaces to ensure that safety regulations for industry are being observed.

Additional information is available at www.worksafely.org

Technical Training

Apprenticeship technical training is delivered by the technical institutes and many colleges in the public post-secondary system throughout Alberta. The colleges and institutes are committed to delivering the technical training component of Alberta apprenticeship programs in a safe, efficient and effective manner. All training providers place great emphasis on safe technical practices that complement safe workplace practices and help to develop a skilled, safe workforce.

The following institutions deliver Carpenter apprenticeship technical training:

- Keyano College
- Lethbridge College
- Grande Prairie Regional College
- Red Deer College

- Lakeland College
- Medicine Hat College
- Northern Alberta Institute of Technology
- Southern Alberta Institute of Technology

Procedures for Recommending Revisions to the Course Outline

Advanced Education and Technology has prepared this course outline in partnership with the Carpenter Provincial Apprenticeship Committee.

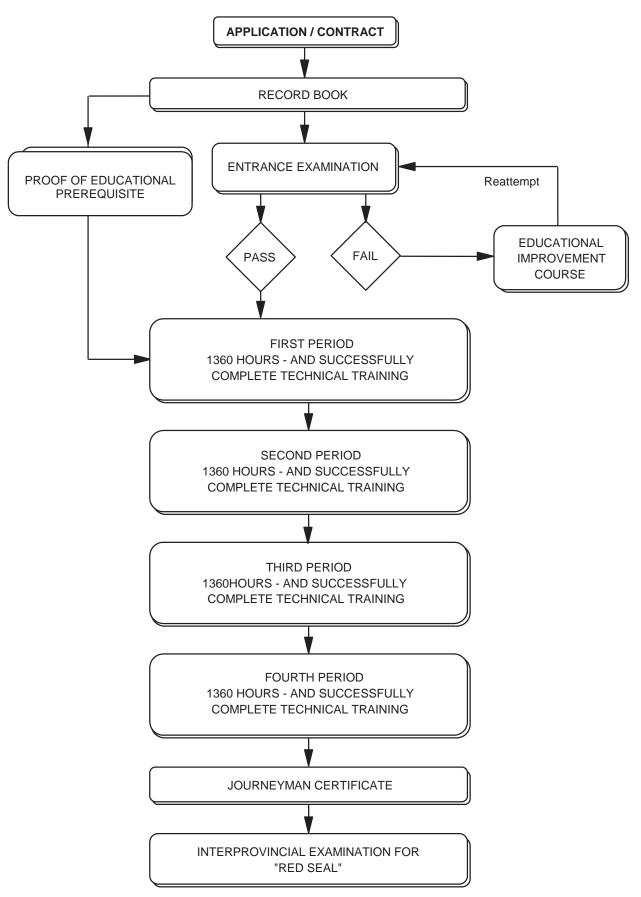

This course outline was approved on March 23rd, 2007 by the Alberta Apprenticeship and Industry Training Board on a recommendation from the Provincial Apprenticeship Committee. The valuable input provided by representatives of industry and the institutions that provide the technical training is acknowledged.

Any concerned individual or group in the province of Alberta may make recommendations for change by writing to:

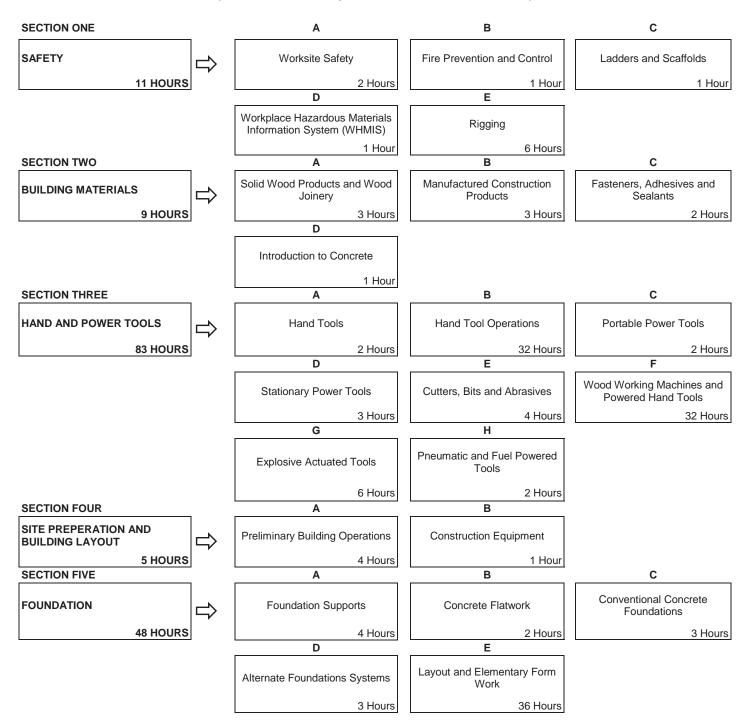

Carpenter Provincial Apprenticeship Committee c/o Industry Programs and Standards Apprenticeship and Industry Training Advanced Education and Technology 10th floor, Commerce Place 10155 102 Street NW Edmonton AB T5J 4L5

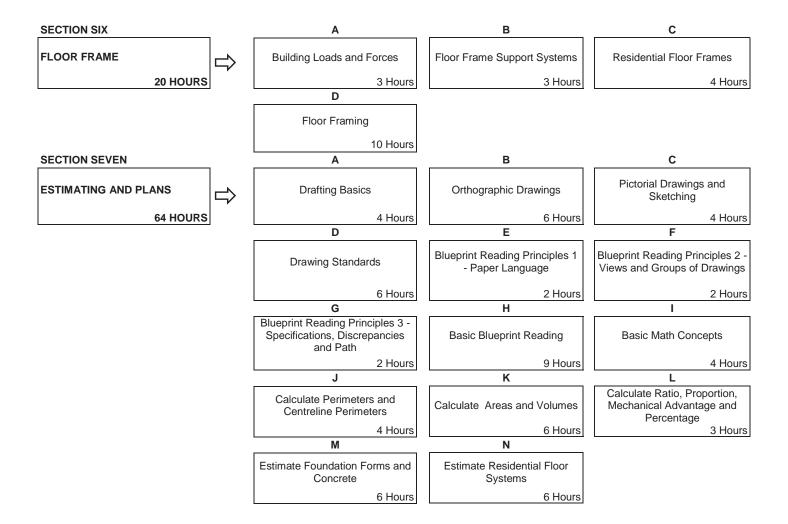

It is requested that recommendations for change refer to specific areas and state references used. Recommendations for change will be placed on the agenda for regular meetings of the Carpenter Provincial Apprenticeship Committee.

Third Period (8 Weeks 30 Hours per Week – Total of 240 Hours)

Fourth Period (8 Weeks 30 Hours per Week – Total of 240 Hours)

NOTE: The hours stated are for guidance and should be adhered to as closely as possible. However, adjustments must be made for rate of apprentice learning, statutory holidays, registration and examinations for the training establishment and Apprenticeship and Industry Training.

FIRST PERIOD TECHNICAL TRAINING CARPENTER TRADE COURSE OUTLINE

UPON SUCCESSFUL COMPLETION OF THIS PROGRAM THE APPRENTICE SHOULD BE ABLE TO PERFORM THE FOLLOWING OUTCOMES AND OBJECTIVES.

SECT	ION ONE:		SAFETY11 HOURS
A.	Worksit	e Saf	ety2 Hours
	Outcoi	ne:	Apply Occupational Health and Safety Regulations and safe work practices in the workplace.
	1.	Inte	rpret Occupational Health and Safety regulations/code.
	2.	Des	cribe requirements related to personal protective equipment and safety measures.
	3.	Des	cribe emergency procedures for dealing with injured workers.
	4.	Des	cribe potential health hazards.
В.	Fire Pre	venti	on and Control1 Hour
	Outcor	ne:	Identify and describe fire classes, extinguishers, prevention and detection.
	1.		cribe the classes of fires and the appropriate fire extinguishers suitable to fight each of se fires.
	2.	Des	cribe procedures and equipment related to preventing, detecting and warning of fires.
C.	Ladders	and	Scaffolds1 Hour
	Outcor	ne:	Identify and describe types and safe applications of ladders and scaffolding.
	1.	Des	cribe the use of various types of ladders.
	2.	Des	cribe the use of various types of scaffolds.
D.	Workpla	ace H	azardous Materials Information System (WHMIS)1 Hour
	Outcor	ne:	Describe WHMIS requirements and labeling used by the construction industry.
	1.	Des	cribe the three key elements of WHMIS.
	2.	lder	ntify WHMIS labels and describe the hazards associated to controlled products.
E.	Rigging		6 Hours
	Outcor	ne:	Describe and demonstrate rigging methods.
	1.	Den	nonstrate slings and hitches used for lifting material:
		a)	types of slings
		p)	uses
		c) d)	sling configurations location of chokers and slings on loads
	2.	,	nonstrate the ability to select and tie knots and hitches:
		a)	types of ropes
		b)	uses
		c)	load limits

5. Identify and describe scaffold systems. SECTION TWO:9 HOURS Solid Wood Products and Wood Joinery3 Hours Identify and describe solid wood products and joinery. Outcome: 1. Describe common types and characteristics of solid wood products. 2. Describe how lumber is milled, seasoned, stored and ordered. 3. Identify and describe the application of commonly used mouldings. 4. Identify and describe the application of wood joints for fabrication and installation. Manufactured Construction Products3 Hours Outcome: Identify and describe manufactured building products used in the construction industry. 1. Identify and describe the application of panel products. 2. Identify and describe the application of engineered wood products. 3. Identify and describe the application of synthetic and metal products. Fasteners, Adhesives and Sealants......2 Hours Identify different types, functions and applications of some of the more common Outcome: fasteners, adhesives and sealants. 1. Identify the types and function of fasteners commonly used in construction. 2. Identify the types and function of adhesives commonly used in construction. 3. Identify the types and function of sealants commonly used in construction. Outcome: Describe the ingredients, production, placing and curing of concrete. 1. Identify the ingredients and production of concrete. 2. Describe the placement and curing of concrete. Hand Tools......2 Hours Outcome: Identify and describe hand tools and their proper uses. 1. Identify and describe the use of measuring, marking, laying-out, aligning and squaring tools. 2. Identify and describe the use of cutting tolls (edge, tooth, scraping and sanding abrasives), boring and drilling tools. 3. Identify and describe the use of assembling, dismantling and clamping tools.

Demonstrate the ability to select hand signals to operators of lifting equipment.

Identify safe working loads (S.W.L.).

3.

4.

B. Hand Tool Operations			perations32 Hours	S
	Outco	ome:	Demonstrate the use of hand tools to construct projects using wood materials.	
	1.		npetently use hand tools as listed in theory in the construction of projects using wood iterials:	
		a)b)c)d)	solid woods, plywood's, chip and particle boards practice with making and fitting joints of wood practice with fitting of mouldings (butt, mitre, cope) gluing, clamping and lay up	
	2.	Sha	rpen and maintain hand tools.	
C.	Portab	le Pov	ver Tools2 Hours	S
	Outco	ome:	Identify and describe the safe operation and maintenance for portable power tools.	
	1.	Ider	ntify and describe the safe operation and regular maintenance of portable saws.	
	2.		ntify and describe the safe operation and regular maintenance of portable planning and aping equipment.	
	3.		ntify and describe the safe operation and regular maintenance of portable drilling and tening equipment.	
	4.	Ider	ntify and describe the safe operation and regular maintenance of portable abrasive tools.	
D.	Station	nary Po	ower Tools3 Hours	s
	Outco	ome:	Identify and describe the safe operation and maintenance of stationary power tools.	
	1.	Ider	ntify and describe the safe operation and regular maintenance for stationary saws.	
	2.	Ider	ntify and describe the safe operation and regular maintenance of stationary planning tools.	
	3.		ntify and describe the safe operation and regular maintenance for stationary drilling, and sanding tools.	
E.	Cutters	s, Bits	and Abrasives4 Hours	S
	Outco	ome:	Describe the use and maintenance of cutting tools and abrasives.	
	1.	Des	cribe the action of a cutting edge on a work piece.	
	2.		ntify and describe the abrasive materials, machines and tools used to maintain chisels, ne irons and scrapers.	
	3.	Des	scribe the types and uses of sanding abrasives.	
	4.	Ider	ntify and describe the types, uses and maintenance of saw blades.	
	5.	lder	ntify and describe the types, uses and maintenance of drill bits and router bits.	

F.	Wood	working Machines and Powered Hand Tools32 Hours
	Outco	ome: Demonstrate the safe use of woodworking machines and powered hand tools.
	1.	Describe and demonstrate the safe use of a table saw.
	2.	Describe and demonstrate the safe use of a radial arm saw.
	3.	Describe and demonstrate the safe use of a jointer.
	4.	Describe and demonstrate the safe use of a thickness planer.
	5.	Describe and demonstrate the safe use of a band saw.
	6.	Describe and demonstrate the safe use of a drill press.
	7.	Describe and demonstrate the safe use of grinders.
	8.	Describe and demonstrate the safe use of sanders.
	9.	Describe and demonstrate the safe use of power mitre saws.
	10.	Describe and demonstrate the safe use of hand electric saws.
	11.	Describe and demonstrate the safe use of power routers and spline cutters.
	12.	Describe and demonstrate the safe use of power drills and screw guns.
	13.	Describe and demonstrate the safe use of pneumatic and gas fasteners.
	14.	Describe and demonstrate the safe use of hand power plane.
	15.	Describe and demonstrate the safe use of hammer drills.
	16.	Describe and demonstrate the safe use of chainsaws.
	17.	Describe routine maintenance for the power tools identified above.
	18.	Demonstrate proficiency by making selected shop projects that make use of a variety of building materials.
G.	Explos	sive Actuated Tools6 Hours
	Outco	ome: Describe and demonstrate the safe operation of explosive actuated tools.
	1.	Differentiate between high and low velocity explosive actuated tools.
	2.	Describe explosive actuated tool power loads (low and high velocity), power load strength and safety requirements.
	3.	Describe explosive actuated tool fasteners, accessories and applications.
	4.	Assess base material suitability and related fastening requirements.
	5.	Describe explosive actuated system safety, firing procedure and tool maintenance.
	6.	Perform tool maintenance and use an explosive actuated tool safely.
	7.	Describe the safe use of low velocity tools and their operation.
	8.	Be aware of the safety features and the different types of fasteners and charges.
	9.	Learn the safety codes and regulations.
	10.	State causes of misfire. Identify the operator's responsibility.
	11.	Explain the relationships between pins, charges and materials.
	12.	Discuss the hidden features of fastening surfaces.
	13.	Demonstrate servicing of tools and supplies.
	14.	Learn proper and safe storage of tools and charges and the disposal of misfired charges.

	15.	Den	nonstrate operation and the actual firing of a low velocity tool.	
	16.	Prov	ve proficiency upon successful completion of test and course.	
H.	Pneuma	atic aı	nd Fuel Powered Tools	2 Hours
	Outco	me:	Identify and describe the safe operation of pneumatic and fuel-powered to	ools.
	1.	Ider	tify and describe the safe operation and maintenance of pneumatic tools.	
	2.	lder	tify and describe the safe operation and maintenance of fuel-powered tools.	
SECT	ON FOU	R:	SITE PREPERATION AND BUILDING LAYOUT	5 HOURS
A.	Prelimi	nary E	Building Operations	4 Hours
	Outco	me:	Identify preliminary building operations required prior to the footings bei	ing placed.
	1.	Des	cribe initial site procedures and requirements.	
	2.	Des	cribe building layout procedures.	
	3.	Des	cribe the application levelling equipment.	
	4.	Des	cribe the excavation and shoring procedures.	
В.	Constru	uction	Equipment	1 Hour
	Outcome:		Identify light and heavy equipment used in construction, and employ safe procedures when working with cranes and hoisting equipment.	е
	1.	Ider	tify and describe typical construction equipment.	
	2.	lder	tify and describe hoisting and rigging equipment, methods and procedures.	
SECT	ON FIVE	:	FOUNDATION	48 HOURS
A.	Founda	tion S	Supports	4 Hours
	Outco	me:	Describe continuous and independent footings for light construction.	
	1.	Des	cribe the types of and design considerations for concrete footings.	
	2.	Des	cribe the layout and construction of concrete footings.	
	3.	Des	cribe the various types of piles and their construction.	
В.	Concre	te Fla	twork	2 Hours
	Outco	me:	Describe the preparation, formwork, reinforcement and concrete placement procedures for slabs on grade.	ent
	1.		cribe the sub grade preparation, reinforcement, and concrete placing requirements on grade.	nts for
	2	Des	cribe forming methods and concrete placement method for slabs on grade	

C.	Conve	ntional (Concrete Foundations3 Hours
	Outco	ome: l	Describe construction methods for conventional concrete foundations.
	1.		ibe the components and erection processes for Strip-Ease and other modular foundation systems.
	2.	Descr	ibe steel reinforcement, concrete placement and form removal for concrete foundations.
	3.	Descr	ibe the dampproofing, drainage and backfill requirements for concrete foundations.
D.	Alterna	ate Foun	dations Systems3 Hours
	Outco	ome: l	Describe alternate foundation systems.
	1.		fy and describe the components of a permanent wood foundation system and the red construction procedures.
	2.		fy and describe the components of insulated concrete systems and the basic construction edures.
	3.	Identi	fy and describe other foundation systems.
E.	Layout	and Ele	ementary Formwork36 Hours
	Outco	ome: l	Demonstrate layout procedures and construct complete foundation formwork.
	1.		lish excavation lines and building perimeters from given reference points.
	2.		ruct and brace batter boards.
	3.	Squar	e with tape using diagonals and 3-4-5 methods.
	4.	Trans	fer building lines to bottom of excavation.
	5.	Const	ruct footing forms:
		a) b) c) d) e)	rectangular, "T" or "L" shape perimeters pad footings step footings squaring, levelling, alignment, bracing keyways
	6.	Const	ruct footing forms for columns, posts and bearing partitions (also stepped types).
	7.	Const	ruct a built-in-place wall form, as would be done on a job site.
	8.	Use p	refabricated panels for wall forms; use the various types of hardware and ties.
	9.	Fabrio	cate and install:
		a) b) c) d) e) f)	bucks bulkheads window units pilasters beams reinforcements
	10.	Estab	lish elevations and wall heights.
	11.	Provid	de for anchoring and level joist system with:
		a) b)	ledgers anchor bolts
	12.		at setting forms, pegs and screeds for concrete slabs on or below grade (basement floors, e slabs, sidewalks). Use elevations, slopes and control joints.

SECTI	ON SIX:		FLOOR FRAME	20 HOURS
A.	Building	Loa	ds and Forces	3 Hours
	Outcon	ne:	Identify and describe the forces that act upon buildings and the designsed to counteract these forces.	gn principles
	1.	Des	cribe the forces, live and dead loads, which act upon a building.	
	2.		cribe the compressive, tensile and lateral forces that act on a building and bees are counteracted.	now these
	3.	Des	cribe construction design and principles used to counteract loads and force	S.
В.	Floor Fr	ame	Support Systems	3 Hours
	Outcon	ne:	Describe floor frame support systems.	
	1.	Des	cribe the design and construction of beam supports.	
	2.	Des	cribe the design and construction of commonly used beams.	
	3.	Des	cribe the methods used to anchor the floor frame to the foundation.	
C.	Residen	tial F	Floor Frames	4 Hours
	Outcon	ne:	Identify and describe the components and the installation of a reside frame.	ential floor
	1.	Ider	ntify and describe the components of a residential floor frame.	
	2.	Des	cribe the layout and installation procedures for floor frame systems.	
	3.	Des	cribe joist restraints and subfloor sheathing installation.	
	4.	Des	cribe the components and the installation of engineered floor systems.	
D.	Floor Fr	amin	g	10 Hours
	Outcon	ne:	Design and construct floor framing.	
	1.	Lay	out built-up wood beams, and identify nailing patterns.	
	2.	_	out joists for consideration of loads and other trades, including bearing and rititions, floor openings, plumbing stacks and fixtures and fireplaces.	non-bearing
	3.	Con	struct floor assembly using common techniques and materials:	
		a) b)	checking and aligning crowns of joists bridging systems	
		c)	application systems (fasteners and adhesives) used for common board plywood and other sheathing	s, T & G,
SECTI	ON SEVE	N:	ESTIMATING AND PLANS	64 HOURS
Α.	Drafting	Bas	ics	4 Hours
	Outcon		Identify and demonstrate the use of basic drawing instruments.	
	1.	Des	cribe the functions of basic drawing instruments.	

Form round or circular slabs with various radii.

13.

2.

Use drafting equipment to complete geometric exercises.

	3.	Des	cribe the applications of geometry in trade situations.
	4.	Prac	tice producing shapes, angles and drawing to scale with the basic drafting instruments.
В.	Orthog	_j raphic	Drawings6 Hours
	Outco	me:	Use the principles of orthographic drawing to sketch orthographic projections of objects.
	1.	Des	cribe the concept and principles of orthographic projection.
	2.	Ske	ch orthographic projections of objects that have surfaces parallel to the viewing plane.
	3.	Ske	ch orthographic projections of objects that have hidden edges or surfaces.
	4.	Ske	ch orthographic projections of objects that have sloped surfaces.
	5.	Ske	ch orthographic projections of objects that have oblique surfaces.
	6.	Ske	ch orthographic projections of objects that have curved surfaces or holes.
C.	Pictoria	al Drav	vings and Sketching4 Hours
	Outco	ome:	Identify and practice the drawing techniques and principles used to produce isometric drawings.
	1.	Des	cribe pictorial drawing methods.
	2.	Des	cribe the isometric principles.
	3.	Des	cribe how isometric angles are shown and drawn.
	4.	Des	cribe how to develop isometric circles and arcs.
D.	Drawin	ng Star	dards6 Hours
	Outco	ome:	Use basic drawing guidelines and interpretation skills to create the orthographic, sectional views, details and cutting list required for a shop project.
	1.	Des	cribe line types used in orthographic drawings.
	2.	Den	onstrate correct dimensioning methods and techniques.
	3.	Des	cribe page layout and centering techniques.
	4.	Des	cribe section and details and the use of material symbols.
E.	Bluepr	int Rea	ding Principles 1 - Paper Language2 Hours
	Outco	ome:	Describe and interpret the paper language used in producing a set of working drawings (blueprints).
	1.	Iden	tify and describe the different lines styles used in a set of working drawings.
	2.	Iden	tify the common symbols used in a set of working drawings.
	3.	Iden	tify abbreviations commonly used on blueprints.
	4.	Des	cribe the page layout for drawings.
	5.	Iden	tify and describe different dimensioning techniques.

F.	Blueprint Reading Principles 2 - Views and Groups of Drawings2 Ho				
	Outcon	ne:	Identify and interpret the information contained in the different views presa set of working drawings (blueprints).	ented in	
	1.		tify the different views (drawings) and how they are viewed and describe the path ween views.	IS	
	2.	Iden	tify the different groups of drawings.		
	3.	Desc	cribe the different views found in a set of plans.		
G.	Blueprir	nt Rea	ding Principles 3 - Specifications, Discrepancies and Path	2 Hours	
	Outcon	ne:	Describe and interpret the information contained in a set of blueprints.		
	1.	Desc	cribe specifications.		
	2.	Desc	cribe the standards for resolving discrepancies between drawings and specification	ons.	
	3.	Desc	cribe the steps used to navigate through a set of working drawings.		
н.	Basic Bl	luepri	nt Reading	9 Hours	
	Outcome:		Find required information on a set of blueprints using systematic steps an guidelines for blueprint reading.	d	
	1.	Find	information and navigate between the different views in a set of blueprints.		
I.	Basic M	lath C	oncepts	4 Hours	
	Outcome:		Use a calculator and apply basic math concepts to solve trade-related mat problems in both the metric and imperial systems of measurement.	h	
	1.	Desc	cribe basic math concepts and operations.		
	2.	Desc	cribe the basic calculator functions and operations.		
	3.	Desc	cribe the metric measurement system (SI).		
	4.	Desc	cribe the imperial measurement system.		
	5. Des		cribe calculations involving fractions.		
	6.	Conv	vert measurements between metric and imperial systems.		
	7.	Worl	king with equations.		
	8.	Desc	cribe calculations using the Pythagorean Theorem.		
J.	Calculat	te Per	imeters and Centreline Perimeters	4 Hours	
	Outcon	ne:	Use a calculator and the appropriate formulas to determine the perimeter a centerline perimeter for various shapes and buildings.	and	
	1.	Iden	tify and use formulas dealing with perimeter.		
	2. Com		plete calculations for centreline perimeter.		
K.	Calculat	te Are	as and Volumes	6 Hours	
	Outcon	ne:	Use a calculator and the appropriate formulas to determine the area and versious shapes and objects.	olume for	
	1.	Iden	tify and use formulas dealing with area.		
	2.	Iden	tify and use formulas dealing with volume.		

L.	Calcula	ting, F	Ratios, and Proportion, Mechanical Advantage and Percentage3 Hours
	Outcome:		Use a calculator and the appropriate math operations to solve various trade-related problems involving ratio and proportion, mechanical advantage and percentage.
	1.	Des	cribe ratio and proportion and its application to solve trade related calculations.
	2.	Des	cribe mechanical advantage and related calculations for levers, pulleys and gears.
	3.	Des	cribe percentage calculations and their trade related applications.
М.	Estimat	e Fou	ndation Forms and Concrete6 Hours
	Outco	me:	Calculate the quantity of forming material and concrete required for typical residential concrete foundations.
	1.	Des	cribe the difference between a material takeoff and an estimate.
	2.	Estir	mate material requirements for forming strip footings, pad footings and foundation walls.
	3.	Estir	mate concrete volumes for footings and foundation walls.
	4.	Estir	mate concrete floor areas and volumes.
N.	Estimat	e Res	idential Floor Systems6 Hours
	Outco	me:	Calculate the quantity of framing materials required for conventionally framed residential floor and floor support systems.
	1.	Calc	culate material takeoffs for floor support systems.
	2.	Des	cribe the use of on-centre formulas to calculate the number of floor frame components.

Calculate material takeoffs for floor frames.

3.

SECOND PERIOD TECHNICAL TRAINING CARPENTER TRADE COURSE OUTLINE

UPON SUCCESSFUL COMPLETION OF THIS PROGRAM THE APPRENTICE SHOULD BE ABLE TO PERFORM THE FOLLOWING OUTCOMES AND OBJECTIVES.

SECTI	ION ONE:		FRAME STRUCTURES	. 40 HOURS
A.	A. Constructio		Site Safety	2 Hours
	Outcon	ne:	Safety considerations for personal and worksite safety.	
	1.	Des	cribe the personal, equipment and worksite safety considerations for residential	carpentry.
В.	Framing	Syst	tems	2 Hours
	Outcon	ne:	Describe the various wall framing systems for wood frame buildings.	
	1.	Iden	tify and describe different framing systems.	
	2.	Des	cribe how load transfer and material shrinkage affect these systems.	
C.	Wall and	d Pari	tition Framing	6 Hours
	Outcon	ne:	Describe the layout, assembly and erection of framed walls.	
	1.	Iden	tify wall frame members and their functions.	
	2.	Des	cribe wall layout and wall plate layout.	
	3.	Des	cribe the assembly and erection of exterior walls.	
	4.	Des	cribe the layout and assembly of interior walls.	
	5.	Des	cribe the consideration for other trades, vapour barriers and other special featur	es.
D.	Ceiling I	Fram	ing	2 Hours
	Outcon	ne:	Describe the design, layout and erection of ceiling joists.	
	1.	Des	cribe the layout and installation of ceiling joists.	
	2.	Inte	rpret building code span tables to design ceiling joists.	
E.	The Building		Envelope	4 Hours
	Outcon	ne:	Describe the materials and techniques used to reduce heat loss.	
	1.	Des	cribe heat transfer and heat loss through building components.	
	2.	Des	cribe insulation and sound reduction techniques.	
	3.	Des	cribe the function of air, vapour and weather barriers.	
	4.	Des	cribe basic energy efficient construction techniques.	

F.	Wall Fram	ming24 Hours				
	Outcome	e: Layout and construct wall framing.				
	1. l	ayout plates using common spacings of members, including:				
		a) corners, intersecting walls				
		b) doors and window openings				
		c) considerations for special items, frames for pocket doors and bifolds fireplaces, insulation				
		d) backing requirements for fixtures e) beam supports				
SECT	ION TWO:	RESIDENTIAL ROOFS				
A.	Roof Fran	ning Systems2 Hours				
	Outcome	e: Identify residential roof systems.				
	1. I	dentify and describe roof systems.				
	2. [Define and use roof terminology.				
	3. [Describe cornice systems used in wood frame construction.				
В.	Gable Roo	ofs5 Hours				
	Outcome 1. (Describe the procedures for the calculating, layout and erecting of gable roofs. Calculate line lengths of common rafters.				
		Define and describe the layout and cutting of common rafters.				
		Describe the calculation, layout and cutting of gable studs.				
		Describe the assembly of a gable roof.				
		Using building codes to determine rafter dimensions and spacing.				
		Describe intermediate supports for rafters and layout procedures.				
C.	Hip Roofs	4 Hours				
	Outcome	Example: Describe the procedures for the calculating, layout and erecting of hip roofs.				
	1. [Describe the components of a hip roof and the math involved for layout.				
	2. [Describe the layout of a hip rafter.				
	3. [Describe the layout of a hip jack rafter and the ridge board.				
	4. [Describe the steps to erect and complete a hip roof.				
D.	Intersecti	ng Roofs4 Hours				
	Outcome	 Describe the procedures for the calculation, layout and assembly of intersecting roofs. 				
	1. I	dentify terminology used for rafters and roof systems.				
	2. [Describe formulas used for rafter calculations.				
	3. [Describe the layout of the components of an intersecting roof.				
	4. [Describe the erection of an intersecting roof.				

E.	Residential Truss Systems3 Hou						
	Outco	me:	Describe proper receiving, unloading, storage and handling procedures trusses.	for wood			
	1.	Ider	ntify and describe wood trusses.				
	2.	Des	cribe the loads and forces acting on a wood trusses.				
	3.	Des	cribe proper receiving, unloading, storage and handling of wood trusses.				
	4.	Des	cribe the methods of erecting and bracing wood trusses.				
	5.	Des	cribe bracing of wood trusses.				
F.	Roof Fr	amin	g	42 Hours			
	Outco	me:	Layout and construct roof framing.				
	1.	Lay	out and cut:				
		a) b) c)	pattern common rafter barge board line lengths, plumb and level cuts shortenings				
	2.	Lay	out and install collar ties.				
	3.	Cut	gable studs for standard and dropped gables.				
	4.	Buil	d and install soffits and fascias:				
		a) b) c) d) e)	butt or lapped joints ribbons, strongbacks integrating parallel partitions backing for finish materials location and framing requirements for attic access				
	5.	Inst	all wood and asphalt shingles.				
SECT	ION THRI	EE:	INTERIOR AND EXTIOR FINISHES	43 HOURS			
A.	Windov	vs and	d Doors	2 Hours			
	Outco	me:	Describe window and door selection and hardware.				
	1.	Des	cribe typical residential window types and their use.				
	2.	Des	cribe typical residential door types and their use.				
	3.	Des	cribe door hardware and accessories.				
В.	Windov	v and	Door Installation	2 Hours			
	Outcome:		Describe the installation of residential windows and doors including relablardware.	ated			
	1.	Des	cribe exterior window and door installation.				
	2.	Des	cribe the installation of interior doors and related hardware.				
	3.	Des	cribe interior window and door trim installation.				

C.	C. Exterior Finishes					
	Outcor	ne:	Describe exterior finishes and their installation.			
	1.	Des	cribe typical residential exterior finishes and their use.			
	2.	Des	cribe installation of siding and trim.			
	3.	Des	cribe preparation required for stucco or brick exteriors.			
D.	Roof Co	verir	ngs	2 Hours		
	Outcor	ne:	Describe installation procedures for residential roof coverings.			
	1.	Des	cribe the preparation required for residential roof coverings.			
	2.	Ider	ntify residential roof coverings.			
	3.	lder	ntify application procedures for asphalt shingles, wood and roll roofing.			
E.	Interior	Finis	h	21 Hours		
	Outcor	ne:	Install and trim doors.			
	1.	Inst	all a door jamb into a prepared opening (using building paper).			
	2.	Han	ng and trim an interior door.			
	3.	Inst	all a lock (latch) set.			
	4.	Inst	all other frames and doors (interior pocket, bifold and bi-pass doors).			
F.	Exterior	Finis	sh	12 Hours		
	Outcor	ne:	Install wood, metal and vinyl siding.			
	1.	Inst	all vertical and horizontal applications of siding:			
		a)	air/moisture barriers, trims, starter strips, drip caps and water table			
		b)	installation around window and door units			
		c)	flashing and sealants			
SECTI	ON FOUR	₹:	WOOD STAIRS	31 HOURS		
A.	Single F	light	Stairs	5 Hours		
	Outcor	ne:	Construct a straight flight stair.			
	1.	Defi	ne stair terms and understand code limitations.			
	2.	Mak	se stair calculations.			
	3.	Con	struct a semi-housed stair.			
В.	Multi-Fli	ight S	Stairs	5 Hours		
	Outcor	ne:	Describe multi-flight stair construction.			
	1.	Des	cribe stair types and classifications.			
	2.	Cald	culate multi-flight stair dimensions.			
	3.	Des	cribe stair construction techniques.			

C.	Wood S	tairs	21 Hours
	Outcor	ne:	Layout and construct stairs.
	1.	Lay	out stair stringers (notched, mitred and semi-housed).
	2.	Use	e templates and jigs.
	3.	Cut	components and assemble stair units.
SECT	ION FIVE:		ESTIMATING AND PLANS
A.	Drawing	y Sta	ndards4 Hours
	Outcor	ne:	Use basic drawing guidelines and interpretation skills to create the orthographic views, sectional views and details for a shop project.
	1.	Des	scribe line types used in orthographic drawings.
	2.	Der	nonstrate correct dimensioning methods and techniques.
	3.	Des	scribe page layout and centring techniques.
	4.	Des	scribe section and details and the use of material symbols.
В.	Blueprir	nt Re	ading Principles2 Hours
	Outcor	ne:	Describe and interpret a set of working drawings.
	1.	Des	scribe and interpret the paper language used in reading a set of drawings.
	2.		ntify and interpret the information contained in the different views presented in a set of awings.
	3.	Des	scribe the steps used to navigate through a set of drawing.
C.	Residen	itial E	Blueprint Reading10 Hours
	Outcor	ne:	Follow the blueprint reading pattern and path to find information on a set of residential blueprint.
	1.		ctice skills related to finding information and navigating between the different views in a set residential blueprints.
D.	Light Co	omm	ercial Blueprint Reading8 Hours
	Outcor	ne:	Find information in a set of commercial drawing relating to the architectural, structural, mechanical and electrical aspects of the building.
	1.	Des	scribe reading and locating information on a set of light commercial blueprints.
E.	Reading	g Eng	jineered Floor and Truss Shop Drawings4 Hours
	Outcor	ne:	Interpret engineered floor and truss drawings for assembly, layout and support systems related to the blueprints for a construction project.
	1.	Inte	rpret engineered floor joist shop drawings.
	2.	Inte	rpret roof truss drawings.

F.	Reading	ding Codes4 Hours			
	Outcom	Understand the application of the National Building Code as it relates to different types of buildings and how to find pertinent information within it.			
	1.	Describe the National Building Code and related documents.			
	2.	Describe methods of finding information in the National Building Code (NBC).			
G.	Trade Ma	th - Part A2 Hour	S		
	Outcom	e: Perform pure math calculations related to trade-based problems.			
	1.	Perform and perform calculations based on basic math concepts and skills.			
	2.	Perform calculations for perimeter and centreline perimeter.			
	3.	Perform calculations for areas and volumes.			
	4.	Perform calculations for ratio and proportion, mechanical advantage and percentage.			
Н.	Trade Ma	th - Part B2 Hour	s		
	Outcom	e: Perform pure math calculations related to trade-based problems.			
	1.	Perform calculations based on basic math concepts and skills.			
	2.	Perform calculations for perimeter and centreline perimeter.			
	3.	Perform calculations for areas and volumes.			
	4.	Perform calculations for ratio and proportion, mechanical advantage and percentage.			
I.	Wall Frai	ning Calculations7 Hour	s		
	Outcom	e: Produce a material takeoff for wood wall framing.			
	1.	Calculate material quantities using set spacings.			
	2.	Describe a method of calculating the amount of linear material required.			
	3.	Describe a method of calculating regular studs required for exterior and interior walls.			
	4.	Describe where additional studs are required in walls for estimating purposes.			
	5.	Describe a method of determining lintel lengths from rough door and window dimensions.			
	6.	Describe a method of calculating the amount of sheathing required for the exterior walls.			
	7.	Describe the order for assembly of a material takeoff for all components of exterior and interior walls.			
J.	Ceiling F	raming Calculations3 Hour	S		
	Outcom	e: Produce a material takeoff for stick framing a ceiling.			
	1.	Produce the ceiling framing material takeoff for a gable roof.			
	2.	Produce the ceiling framing material takeoff for a hip roof.			
K.	Roof Fra	ning Calculations8 Hour	S		
	Outcom	e: Produce material takeoffs for roof systems.			
	1.	Describe calculations using set spacings.			
	2.	Describe calculating material required for gable roofs.			
	3.	Describe calculating material required for hip roofs.			

- 4. Describe calculating material required for intersecting roofs.
- 5. Describe calculating sheathing and roof covering materials.
- 6. Describe calculating material required for truss roofs.

Outcome: Produce a material takeoff for exterior and interior wall finish materials.

- Calculate interior wall finish materials.
- 2. Calculate cornice and rake finish materials.
- Calculate exterior wall finish materials.
- Assemble a material takeoff for interior and exterior finish materials.
- M. Straight and Multi-Flight Stair Calculations......8 Hours

Outcome: Calculate the required dimensions for openings and stairs, working within the limits imposed by building codes, existing openings, limited headroom and floor space.

- 1. Calculate the unit rise, unit run, finished opening and rough opening for straight-flight stairs.
- 2. Calculate the unit rise, unit run, finished opening and rough opening for multi-flight stairs.
- 3. Use a blueprint, to produce a material takeoff for stair construction.

THIRD PERIOD TECHNICAL TRAINING CARPENTER TRADE COURSE OUTLINE

UPON SUCCESSFUL COMPLETION OF THIS PROGRAM THE APPRENTICE SHOULD BE ABLE TO PERFORM THE FOLLOWING OUTCOMES AND OBJECTIVES.

SECTION ONE:			SAFETY	
A.	A. Construction		Site Safety	2 Hours
	Outcom	ie:	Describe large job hazardous situations and their minimum safety require	ments.
	1.	Iden	tify typical commercial construction safety hazards.	
	2.	Desc	cribe potential hazards with hoisting and lifting equipment.	
В.	Scaffoldi	ing		4 Hours
	Outcom	ie:	Describe the safe erection of various scaffold systems and identify safety	concerns.
	1.		cribe general scaffold terms and components and the requirements for safe use action.	and
	2.	Iden	tify and describe scaffold systems and erection.	
	3.	Desc	cribe scaffold structures.	
SECTION TWO:			13 HOURS	
A.	Concrete	e Des	ign	3 Hours
	Outcome:		Describe the design and use of architectural and structural concrete as it the construction industry.	related to
	1.	Iden	tify the scope of concrete use with in the concrete industry.	
	2.	Desc	cribe concrete materials, design and testing.	
	3.	Desc	cribe concrete additives and treatments.	
	4.	Iden	tify grouts and mortars.	
В.	B. Transporting		and Placement of Concrete	3 Hours
	Outcom	ie:	Describe how concrete is transported and placed, from initial mixing to fir position.	ıa l
	1.	Desc	cribe how to transfer elevations to the top of concrete pours.	
	2.	Desc	cribe how concrete is transported from batching to pour location.	
	3.	Desc	cribe concrete placement and consolidation.	
	4.	Desc	cribe concrete forces before and after set.	

C.	Finishing and Curing of Concrete3 Hours						
	Outcom	e:	Identify and describe concrete placing, finishing and curing techniques.				
	1.	Des	cribe concrete placing finishing tools.				
	2.	Des	cribe the concrete slab finishing.				
	3.	Des	cribe concrete hardeners, toppings and sealers and their uses.				
	4.	Des	cribe special surface treatments and finishes.				
	5.	Des	cribe concrete curing procedures.				
D.	Joints an	d R	einforcement for Concrete2 Hours				
	Outcom	e:	Describe the purpose of concrete joints and the use of reinforcement in concrete structures.				
	1.	Con	pare construction joints, control joints, isolation joints, and expansion joints.				
	2.	Ider	tify types and sizes of deformed bars and welded wire fabric.				
	3.	Ider	tify the placement of reinforcing for footings, beams, columns, slabs, walls, and stairs.				
E.	Pre-Stres	ssed	and Precast Concrete2 Hours				
	Outcome:		Describe pre-stressed, precast and title-up construction and erection procedures.				
	1.	Des	cribe pre-stressed concrete.				
	2.	Des	cribe precast concrete manufacturing and erection.				
	3.	Des	cribe tilt up construction.				
SECT	ION THREE	Ξ:	BUILDING LAYOUT26 HOURS				
A.	Survey E	quip	oment3 Hours				
	Outcom	e:	Describe survey equipment used for basic building layout.				
	1.	Ider	tify and describe instruments used for layout of elevations and levelling.				
	2.	Ider	tify and describe instruments used for layout of angles and location of building components.				
	3.	Des	cribe basic surveying and use of accessories.				
В.	Layout P	roce	dures5 Hours				
	Outcome:		Use various layout tools to correctly place, straighten and plumb buildings and related parts.				
	1.	Des	cribe how rural or urban property is described.				
	2.	Ider	tify layout tools and describe their use.				
	3	Des	cribe how to lay out various elements of a structure				

C.	Building	Building and Construction Layout18 Hours							
	Outco	me:	Use survey equipment for building layout.						
	1.	Set	t up and operate builder's level and transit.						
	2.	Sig	ht and record backsights and foresights.						
	3.	Est	tablish elevations.						
	4.	Establish or re-establish straight, off-set and grid lines.							
	5.	Red	cord existing angles.						
	6.	Est	Establish a given angle.						
	7.	Det	termine actual finish floor elevations from a given datum or bench mark.						
	8.	Red	cord backsights and foresights.						
	9.	Tra	ansfer elevations using several set ups.						
	10.	Cal	lculate, cut and fill requirements.						
	11.	Loc	cate building corners, property pins and excavation lines using the transit.						
	12.	Loc	cate footings, piles and other building components.						
	13.	Set	t up laser equipment.						
	14.	Tra	ansfer elevations using laser equipment.						
	15.	Tra	ansfer building lines using laser equipment.						
	16.	Sta	ate the potential hazards of laser exposure.						
SECT	ION FOU	R:		73 HOURS					
A.	Footing	ıs, Gr	rade Beams & Piles	4 Hours					
	Outco		Describe foundation types, piles and grade beams used in commercial co						
	1.	Idei	ntify foundation, footing types and their requirements.						
	2.		ntify and describe the types of deep foundations.						
	3.	Ide	ntify and describe grade beams.						
В.	Wall an	d Col	lumn Forming	4 Hours					
	Outco	me:	Describe the forces encountered and the formwork required to build walls columns with concrete.	and					
	1.	Des	scribe the forces encountered during concrete placement.						
	2.	Des	scribe the various wall form systems available.						
	3.	Des	scribe the various column form systems available.						
	4.	Des	scribe the method of achieving architectural concrete finishes.						
	5.	Des	scribe slip forms.						

C.	Suspended Concrete Slabs4 Hours					
	Outcome:		Describe suspended slab forming systems and their alignment, stripping, shoring and reshoring procedures.			
	1.	Identi	tify types of suspended concrete slab systems.			
	2.	Descr	cribe the stationary forming of suspended slabs.			
	3.	Descr	cribe the fly forming of suspended slabs.			
	4.	Descr	cribe the stripping and reshoring procedures for suspended slabs.			
D.	Concrete	e Stair	rs	4 Hours		
	Outcom	ne:	Describe concrete stairs, their design and formwork procedures.			
	1.	Desci	cribe concrete stair types.			
	2.	Descr	cribe landings, handrails and guards.			
	3.	Comp	plete calculations for concrete stairs.			
	4.	Descr	cribe layout, formwork and stripping of concrete stairs.			
E.	Commer	cial F	Formwork	.39 Hours		
	Outcom	ne:	Layout and construct commercial formwork.			
	1.	Erect	t formwork for columns using a variety of hardware and accessories.			
	2.	Instal	Ill chamfer strips.			
	3.	Locat	te, plumb, align and brace columns, and establish elevations.			
	4.	Const	struct formwork for flared, haunched or multi-sided columns.			
	5.	Erect	t formwork for a slab (example):			
		a)	ribbed slab			
		b) c)	pan slab flat slab			
		d)	beam and slab			
		e)	cantilevered slab			
	6.	Level	el, align and brace slab forms.			
	7.	Erect	t formwork for a wall using a variety of hardware and accessories.			
	8.	Instal	Ill bulkheads, door bucks, window bucks, sleeves and accessories.			
	9.	Align	and brace wall forms.			
	10.	Const	struct a simple gang or giant form.			
F.	Concrete	e Stair	rs	.18 Hours		
	Outcome		Layout and construct concrete stair forms.			
	1.	Devel	elop a full size stair layout.			
	2.	Const	struct the formwork to support a concrete stair and landing.			
	3.	Cut a	and install inverted and open stringers.			
	4.	Instal	all sloped riser forms.			
	5	Install	Ill shoring to support the concrete stair and formwork			

SECTI	ON FIVE:	COMMERCIAL INTERIORS AND TIMBER CONSTRUCTION58 HOURS
A.	Interior S	stems and Door Frames5 Hours
	Outcome	Describe commercial interior systems, including suspended ceiling, metal framing and drywall.
	1.	Describe the installation of metal stud.
	2. I	Describe the installation of gypsum board.
	3.	Describe the installation of demountable partitions.
	4.	Describe the installation of suspended ceilings.
	5. I	Describe setting and anchoring of metal frames.
В.	Fire Prote	ction, Acoustics and Commercial Insulation2 Hours
	Outcome	: Identify and describe the commercial materials and installation methods for fire separation and acoustical and thermal insulations and sealants.
	1.	Describe the principals of fire protection and separations and the related materials and installation.
	2.	Describe the principles and materials of acoustic installations.
	3. I	Describe commercial insulation materials and installations.
C.	Commerc	ial Fasteners and Anchors2 Hours
	Outcome	e: Identify fasteners and anchors used in commercial construction and their usage.
	1.	dentify and describe fasteners, anchors, loads and tools.
	2. I	Describe methods of fastening various materials.
D.	Timber Co	onstruction4 Hours
	Outcome	: Identify the building materials, assembly methods and hardware associated with heavy timber construction.
	1.	Describe heavy timber construction details and methods.
	2. I	Describe glue laminated wood products and erection procedures.
	3. I	Describe heavy truss and box beam fabrication and erection procedures.
	4. I	Describe construction methods for Pole Buildings.

6.

5.

Install bracing to resist lateral movement.

Describe basic construction requirements for log buildings.

E.	Installation of Metal Fabricated Products						
	Outco	me:	ne: Layout, install and erect metal fabricated products.				
	1.	Inst	all a typical non-bearing partition of metal tracks and studs with emphasis or	n:			
		a) b) c) d) e) f) y)	floor layout floor and ceiling runners plumbing and aligning procedures various metal stud types bracing procedures intersecting walls window, door and access openings installation of frames resilient sound bars				
	2.	Set,	level, plumb and secure metal door jambs for use in block walls.				
	3.	Des	cribe application procedures for gypsum wall boards.				
	4.	Lay	out and install a suspended ceiling system.				
	5.		ct scaffold systems:				
		a) b) c) d) e) f)	metal frames metal frame rolling scaffold tube and clamp modular systems scaffold/hoarding systems swing stage				
F.	Skill De	velop	oment Projects	30 Hours			
	Outco	me:	Layout and construct selected projects for skill development.				
	1.	Mat	ch wood grains and apply edge veneers and plywood.				
	2.	Wor	k with a variety of joints and solid woods.				
	3.	Use	clamps and glues.				
	4.	Use	contact adhesives.				
	5.	Con	struct and install drawers, doors and shelves and sliding components.				
	6.		jigs, templates and other accessories to increase the efficiency of a variety	of power tools.			
	7.		fit and apply plastic laminates or other wood substitutes.				
	8.	Dev	elop obtuse, acute and compound angles and incorporate them into a proje	ct.			
SECT	ION SIX:		ESTIMATING AND PLANS	64 HOURS			
A.	Drawing	g Star	ndards	12 Hours			
	Outco	me:	Use basic drawing guidelines and interpretation skills to create the oviews, sectional views and details for a shop project.	rthographic			
	1.	Des	cribe line types used in orthographic drawings.				
	2.	Den	nonstrate correct dimensioning methods and techniques.				
	3.	Des	cribe page layout and centring techniques.				

Describe sections and details and the use of material symbols.

4.

	5.	Describe orthographic and pictorial drawing basics.	
В.	Blueprir	nt Reading Principles9 Hour	rs
	Outcor	ne: Describe and interpret a set of working drawings.	
	1.	Describe and interpret the paper language used in reading a set of drawings.	
	2.	Identify and interpret the information contained in the different views presented in a set of drawings.	
	3.	Describe the steps used to navigate through a set of drawings.	
C.	Pole and	d Timber Frame Blueprint Reading4 Hour	rs
	Outcor	ne: Develop the skills necessary to interpret blueprints to find information pertaining to the construction of pole and timber frame structures.	0
	1.	Practice blueprint reading relating to pole buildings, timber frame structures and SIPS (structurinsulated panels).	al
D.	Reinford	ed Concrete Blueprint Reading7 Hour	rs
	Outcor	ne: Develop the skills necessary to interpret structural drawings to find information pertaining to forming requirements and the placement of reinforcing steel.	
	1.	Practice blueprint reading relating to formwork, concrete joints and concrete reinforcement.	
E.	Trade M	ath Part A4 Houl	rs
	Outcor	ne: Perform pure math calculations related to trade-based problems.	
	1.	Perform and perform calculations based on basic math concepts and skills.	
	2.	Perform and perform calculations for perimeter, centreline perimeter, areas and volumes.	
	3.	Perform and perform calculations for ratio and proportion, mechanical advantage and percentage.	
	4.	Perform and perform calculations for spacings.	
	5.	Perform calculations pertinent to and in preparation for third-year math modules.	
F.	Trade M	ath Part B4 Houl	rs
	Outcor	ne: Perform pure math calculations related to trade-based problems.	
	1.	Perform calculations based on basic math concepts and skills.	
	2.	Perform calculations for perimeter, centerline perimeter, areas and volumes.	
	3.	Perform calculations for ratio and proportion, mechanical advantage and percentage.	
	4.	Perform calculations for spacings.	
	5.	Perform calculations pertinent to and in preparation for third-year math modules.	
G.	Comme	rcial Concrete Formwork Calculations4 Hour	rs
	Outcor	ne: Produce a material takeoff for commercial concrete formwork.	
	1.	Describe calculations using spacings.	
	2.	Calculate wall form plywood.	
	3.	Calculate dimensional lumber for formwork.	

Calculate snap ties and wedges for formwork.

4.

	5.	Pro	duce a formwork material takeoff.	
	6.	Des	cribe a sample material takeoff for formwork.	
Н.	Comm	ercial	Concrete Volume Calculations6 Hour	s
	Outco	ome:	Produce a material takeoff for concrete volumes of various components of a commercial building.	
	1.	Cald	culate concrete volumes for various construction components.	
	2.	Cald	culate concrete volumes for commercial building components.	
	3.	Des	cribe a sample material takeoff for concrete.	
I.	Cut an	d Fill (Calculations4 Hour	S
	Outco	ome:	Describe the calculations required to determine volumes for cut and fill and excavation requirements.	
	1.	Cald	culate the volume of excavation required to level or grade a site to a required slope.	
	2.	Cald	culate the volume of mass excavation required for a building.	
	3.	Cald	culate the volume of backfill and excess haul required for a building.	
J.	Concre	ete Sta	ir Calculations6 Hour	S
	Outco	ome:	Describe and calculate design dimensions and material requirements for concrete stairs.	
	1.	Perf	form and practice calculations for concrete stair design.	
	2.	Cald	culate quantities of concrete required for concrete stairs.	
	3.	Esti	mate materials required for concrete stair forming.	
K.	Interio	r Syste	ems Calculations4 Hour	s
	Outco	ome:	Produce a material takeoff for interior systems in a commercial setting.	
	1.	Des	cribe calculations using spacings.	
	2.	Cald	culate metal studs and plate material.	
	3.	Cald	culate gypsum board and resilient channel required.	
	4.	Cald	culate quantities of all components of a demountable partition system.	
	5.	Cald	culate quantities of grid components and tiles for a suspended ceiling system.	
	6.	Des	cribe a sample material takeoff for interior systems.	

FOURTH PERIOD TECHNICAL TRAINING CARPENTER TRADE COURSE OUTLINE

UPON SUCCESSFUL COMPLETION OF THIS PROGRAM THE APPRENTICE SHOULD BE ABLE TO PERFORM THE FOLLOWING OUTCOMES AND OBJECTIVES.

SECT	ION ONE:	
A.	Construc	ction Site Safety2 Hours
	Outcom	e: Be aware of and apply Occupational Health and Safety Regulations and safe work practices in the workplace.
	1.	Describe the safety roles and responsibilities of those involved in the construction industry.
	2.	Describe accident reporting requirements and first aid responses to common injuries.
	3.	Describe the requirements for personal protective equipment and power tool use.
	4.	Describe the requirements for work site safety and equipment.
	5.	Describe potential health hazards related to construction.
В.	Job Role	s and Coaching3 Hours
	Outcom	e: Describe construction site roles and coaching apprentices.
	1.	Describe the roles and responsibilities of participants in construction projects and the levels of reporting.
	2.	Prepare for the transition to journeyperson status with an overview of the apprenticeship program.
	3.	Describe techniques for coaching and mentoring apprentices.
C.	Job Sche	eduling3 Hours
	Outcom	e: Describe and perform job scheduling.
	1.	Describe the mechanics of bar charts.
	2.	Describe the mechanics of the Critical Path Method (CPM).
	3.	Describe the use of computer software for job scheduling.
D.	Material	Management2 Hours
	Outcom	e: Describe the management and handling of materials related to construction projects.
	1.	Describe procurement and delivery considerations.
	2.	Describe methods of construction material storage.
	3.	Describe methods of protecting completed projects from damage.

SECT	ION TWO):	INTERIOR FINISHES	75 HOURS		
A.	Cabine	t Insta	allation	2 Hours		
	Outcome:		Describe the materials used and the installation procedures for cabin storage units.	nets and		
	1. Des		cribe the planning and preparation for kitchen installation.			
	2.	Des	cribe installation procedures for pre-made and site-built cabinets.			
	3.	Ider	ntify and describe trim, accessories and hardware for cabinets.			
	4.	Des	cribe installation procedures for countertops.			
	5.	Des	scribe other cabinets and storage.			
В.	Trim In:	stalla	tion	2 Hours		
	Outco	me:	Describe the installation of trim and finishing systems.			
	1.	Ider	ntify and describe common types of trim.			
	2.	Des	cribe planning, preparation for trim installation and the main joints used.			
	3.	Des	cribe installation procedures for trim and other interior components.			
C.	Walle a	nd St	orage	1 Hou		
٥.						
	Outco	me:	Describe and select commercial interior wall finishes, shelving and streatments, and describe the professional installation techniques required.			
	1.		scribe the materials and installation methods used in the finishing of interior mmercial buildings, including solid wood, ceramic tile, plaster, metal and vin			
	2.	Des	scribe the materials, layout and installation methods used for architectural w	ood panelling.		
	3.		cribe the methods and materials used in the construction of storage room sated components.	helving and		
D.	Wood F	Wood Finishing1 Hour				
	Outco	me:	Describe the wood finishing process from surface preparation to seleapplication of a coating system.	ection and		
	1.	Des	cribe surface preparation procedures for wood surfaces that will receive a fi	nish.		
	2.	Ider	ntify and describe common finish materials and products.			
	3.	Des	cribe the methods of applying a coating material.			
	4.	Des	cribe common finishing sequences and application procedures for wood fin	ishes.		
E.	Floorin	g		2 Hours		
	Outco	me:	Describe the preparation for, and installation of, common flooring masystems.	aterials and		
	1.	Des	cribe substrates and underlayments for floor coverings.			
	2.		cribe storage, preparation requirements and basic installation steps for variverings.	ous floor		
	3.	Des	cribe the installation of wood strip and parquet flooring.			

F.	Interior Finish					
	Outco	me:	Layout and install interior finish.			
	1.	Insta	all site built or modular cabinet units.			
	2.	Dev	elop sloping; irregular shapes:			
		a) b) c)	displays for store interiors architectural features on building exteriors alcoves, arches			
		d) _	decorative louvered panels for window			
	3.		elop panel work for interiors: mouldings, battens, valances.			
	4.		pare jigs, templates for specified operations and full scale layouts.			
	5.	Insta a)	all a range of hardware: concealed hinges			
		b)	door closers			
		c)	sliding hardware			
G.	Practica	al Exa	ımination	26 Hours		
	Outco	те:	Construct a practical project approved by the Carpenter Provincial App Committee.	renticeship		
rep	resentativ	es fro	rill be required to build an in-shop practical project. This project will be assesse m industry and the marks obtained will be a major consideration in awarding colourneyperson status.			
ECT	ION THRE	E:	EXTERIOR FINISHES	8 HOURS		
A.	Comme	rcial	Doors and Windows	2 Hours		
	Outco	me:	Identify and describe installation procedures for exterior commercial dewindows.	oors and		
	1.	Des	cribe residential window and door terminology and installation procedures.			
	2.	Des	cribe residential interior door terminology and installation procedures.			
	3.	Des	cribe installation procedures for commercial window units and associated hard	dware.		
	4.		cribe installation procedures for light- and heavy-duty commercial doors and advare.	ssociated		
В.	Comme	rcial	Exteriors	5 Hours		
	Outco	me:	Describe the various materials used on the exteriors of commercial but the layout and construction of arch support templates used for masonr			
	1.	Iden	ntify common commercial exteriors.			
	2.	Des	cribe layout and construction procedures for masonry arch templates.			

C.	c. Commerc		nercial Roofs1 Hour			
	Outcon	ne:	Describe basic low slope roofing systems and how to prepare the roof for the roofing installers.			
	1.	Des	cribe low slope roof systems.			
	2.	Des	cribe the carpenter's role in preparation for roofing application.			
SECTI	ON FOUR	R:	ROOF FRAME AND STAIRS55 HOU	RS		
A.	Advance	ed Ro	oof Framing4 Ho	urs		
	Outcon	ne:	Identify roof types and terminology and describe the procedures for the calculation layout and assembly of unequal slope intersecting roofs, dormers, turrets and other roof framing features.			
	1.	Des	cribe roof framing technology.			
	2.	Des	cribe roof framing calculations and layout.			
	3.	Des	cribe framing unequal slope, gable and interesting roofs.			
	4.	Des	cribe framing advanced roof features and intersections.			
В.	Housed	Stair	zs2 Ho	urs		
	Outcon	ne:	Describe housed stairs and balustrade construction.			
	1.	Des	cribe the construction of a flight of housed stairs.			
	2.	Des	cribe the installation of balustrades.			
C.	Winder	Stair	s2 Ho	urs		
	Outcon	ne:	Describe the requirements for winder stair systems and determine the rough opening and layout for their construction.			
	1.	Des	cribe winder stair components and code requirements.			
	2.	Mak	te calculations involving winder stairs.			
	3.	Des	cribe the layout and construction of winder landings.			
	4.	Des	cribe tapered treads and code requirements.			
D.	Curved	Stair	s2 Ho	urs		
	Outcon	ne:	Describe the building code requirements, calculations and construction technique required to build a set of curved stairs.	es		
	1.	Des	cribe curved stairs and code requirements.			
	2.	Mak	te calculations involving circular stairs.			
	3.	Des	cribe the construction of a circular stair.			
E.	Stairs		27 Ho	urs		
	Outcon	ne:	Layout and construct stairs.			
	1.	Buil	d housed stringers and stair balustrade.			
	2.	Buil	d winder stairs.			
	3.	Buil	d circular stairs and circular stair form.			

F.	Roof Fram	ing18 Hours
	Outcome	: Layout cut and assemble advanced roof framing.
	1. F	rame unequal slope gable and interesting roof.
	2. F	rame specialty roof systems (dormer, domed, vaulted, turrets etc.).
SECT	ION FIVE:	BUILDING DESIGN AND RENOVATIONS10 HOURS
A.	Renovatio	ns4 Hours
	Outcome	: Describe contracting, planning and sequences in renovations.
	1. lo	dentify the roles and responsibilities of a renovation contractor.
	2.	Pescribe a typical renovation sequence.
	3. С	escribe residential renovations and typical situations that arise.
	4. C	escribe commercial renovations and typical situations that arise.
В.	Additions	2 Hours
	Outcome	: Describe construction of additions.
		Describe preparation considerations for additions.
		Describe the sequence and special concerns for adding to the footprint of a building.
		Describe concerns when adding a storey to a building.
C.	Architectu	ral Design and Planning2 Hours
	Outcome	: Identify concepts of architectural design and the use of space.
	1. lo	dentify and describe concepts of design in architecture.
	2. lo	dentify and describe the concept of function in architecture.
D.	Barrier-Fre	ee Design & Ergonomics2 Hours
	Outcome	: Identify concepts of ergonomic and barrier-free design.
	1. lo	dentify and describe standards of ergonomic design.
	2. lo	dentify and describe barrier-free design.
SECT	ION SIX:	ENERGY EFFICENCY AND BUILDING SCIENCE18 HOURS
A.	Energy Ef	ficient Construction2 Hours
	Outcome	: Identify past and current changes in construction materials and methods that are making housing more energy-efficient.
	1. [Describe the evolution of Canadian housing technology.
		Describe how energy is lost or gained in houses.
	3. lo	dentify the economics of low-energy homes.

B.	Energy Efficient Framing2 Hour					
	Outcome	e: Identify energy-efficient floor, wall and roof framing systems.				
		dentify different approaches to constructing insulated wall and floor systems with effective barriers to air and moisture flow.				
	2. I	dentify general design considerations for roof systems and ways to avoid common problems.				
C.	Energy Ef	ficient Housing Design2 Hours				
	Outcome	: Describe energy efficient design principles and equipment.				
	1. I	dentify factors you should consider during the design process.				
	2.	Describe the principles of space conditioning.				
	3. I	dentify approaches and equipment that can be used to satisfy various ventilation requirements.				
D.	Insulation	and Air Barriers4 Hours				
	Outcome	e: Identify insulation and air barrier systems, materials and their application.				
	1. [Describe various insulation materials and their important characteristics.				
	2.	Describe insulation techniques for foundations.				
	3. [Describe the materials and assembly methods for various air barrier systems.				

NOTE: Due to extensive course material and time lines to Energy Efficient Construction it may be necessary to provide exposure to existing models as opposed to actual construction and personal hand skill involvement of apprentices. Methods and procedures may be provided in the form of demonstrations.

Energy Efficient Construction......8 Hours

- 1. Identify and describe an air/vapour barrier as per energy efficient standards.
- 2. Apply:
 - a) film, foil, paints
 - b) sealants
 - c) polypans, vapour hats, beam bags
- 3. Prepare beams set in concrete.
- 4. Seal air leakage at floor joists.
- 5. Install vapour barrier at top plates.
- Install door and window units.
- 7. Construct an attic hatch.
- 8. Prepare cantilever treatment for air tightness.
- 9. Install (or make provision for) mechanical ventilation from an airtight structure.
- 10. Erect a high heeled truss.
- 11. Erect a scissors truss.

SECT	ION SEVE	N:	ESTIMATING AND PLANS	64 HOURS
A.	Drawing Standards			6 Hours
	Outcome:		Use basic drawing guidelines and interpretation skills to create the views, sectional views and details for a shop project.	orthographic
	1.	Des	scribe line types used in orthographic drawings.	
	2.	Den	nonstrate correct dimensioning methods and techniques.	
	3.	Des	scribe page layout and centring techniques.	
	4.	Des	scribe sections and details and the use of material symbols.	
	5.	Des	scribe orthographic and pictorial drawing basics.	
В.	Practical	l Pro	ject - Computer Desk	9 Hours
	Outcom	ne:	Using the drawing and shop skills acquired during your trades train build a computer desk as specified.	ing, draw and
	1.	Des	scribe the Practical Project supplied plans.	
	2.	Des	scribe the Practical Project materials, hardware and specifications.	
	3.	Des	scribe the Practical Project evaluation procedure.	
	4.	Pro	duce shop drawings and a material cutting list for the Practical Project.	
C.	Blueprin	t Re	ading Principles	10 Hours
	Outcom	ne:	Describe and interpret a set of working drawings.	
	1.	Des	scribe and interpret the paper language used in reading a set of drawings.	
	2.		ntify and interpret the information contained in the different views presented awings.	d in a set of
	3.	Des	scribe the steps used to navigate through a set of drawings.	
D.	Advance	ed Co	ommercial Blueprint Reading	15 Hours
	Outcome:		Read and interpret complex commercial blueprints that use alternat common drawing and referencing practices.	ive or less
	1.		ctice blueprint reading skills relating to a complex set of commercial drawing ealternative drawing conventions.	ngs including
E.	Trade Ma	ath -	- Part A	3 Hours
	Outcom	ne:	Perform pure math calculations related to trade-based problems.	
	1.	Per	form and perform calculations based on basic math concepts and skills.	
	2.	Per	form and perform calculations for perimeter, centreline perimeter, areas an	nd volumes.
	3.		form and perform calculations for ratio and proportion, mechanical advanta rcentage.	ige and
	4.	Per	form and perform calculations for spacings.	
	5.	Per	form calculations pertinent to and in preparation for fourth-year math modu	ıles.
	6.	Per	form calculations for beam/column reactions.	

F.	Trade N	/lath – Part B	.3 Hours
	Outco	me: Perform pure math calculations related to trade-based problems.	
	1.	Perform calculations based on basic math concepts and skills.	
	2.	Perform calculations for perimeter, centreline perimeter, areas and volumes.	
	3.	Perform calculations for ratio and proportion, mechanical advantage and percentage.	
	4.	Perform calculations for spacing.	
	5.	Perform calculations pertinent to and in preparation for fourth period math modules.	
	6.	Perform calculations for beam/column reactions.	
G.	Interior	Finish Calculations	.4 Hours
	Outco	me: Perform calculations related to interior finishes.	
	1.	Describe calculations using set spacings.	
	2.	Perform calculations related to floor, ceiling and wall finishes.	
	3.	Calculate lineal lengths of mouldings and trim.	
	4.	Calculate material quantities for cabinets, countertops and hardware.	
	5.	Produce cutting lists for storage units, built-in cabinets and storage room shelving.	
	6.	Describe a material takeoff list for interior finish components.	
Н.	Project	Costing	.3 Hours
	Outco	me: Demonstrate filling in the components of an estimate.	
	1.	Describe various methods of preliminary pricing.	
	2.	Describe a detailed estimate.	
	3.	Estimate material costs and describe waste factors.	
	4.	Estimate labour costs.	
	5.	Estimate general expenses.	
	6.	Produce a summary sheet.	
I.	Roof Ca	alculations	.6 Hours
	Outco	me: Perform calculations for framing equal and unequal slope roofs.	
	1.	Describe material quantities using spacings, slope gain factors and comparison of trian	gles.
	2.	Calculate line lengths of rafters for equal slope gable, hip and intersecting roofs.	
	3.	Calculate line lengths of rafters for unequal slope gable, hip and intersecting roofs.	

J. Advanced Stair Calculations 5 Hours

Outcome: Calculate the required dimensions for openings and stairs working within the limits imposed by building codes, existing openings, limited headroom and floor space.

- 1. Perform and practice calculations for straight-flight stairs.
- 2. Perform and practice calculations for multi-flight stairs.
- 3. Perform calculations related to winder stairs.
- 4. Perform calculations related to curved stairs.
- 5. Perform calculations related to balusters and balustrades.

Excellence through training and experience
