

2011 KIDS COUNT in Colorado!

COLORADO CHILDREN'S CAMPAIGN

Thank you for your support of 2011 KIDS COUNT in Colorado!

This report is generously supported by the Gay & Lesbian Fund for Colorado, founded in 1996 as a project of the Gill Foundation. The Gay & Lesbian Fund supports hundreds of nonprofits throughout the state, including the Colorado Children's Campaign, to build a better Colorado. Together.

The Annie E. Casey Foundation

2011 KIDS COUNT in Colorado!

The Impact of the Great Recession on Colorado's Children

KIDS COUNT in Colorado! is an annual publication of the Colorado Children's Campaign, which provides the best available state- and county-level data to measure and track the education, health and general well-being of our state's children.

KIDS COUNT in Colorado! informs policy debates and community discussions, serving as a valuable resource for policymakers, community leaders, advocates and citizens.

KIDS COUNT in Colorado! is part of the national **KIDS COUNT** project and is generously funded by the Annie E. Casey Foundation and the Gay & Lesbian Fund for Colorado.

The ***KIDS COUNT in Colorado!*** project is directed by Lisa Piscopo, Ph.D., Vice President of Research at the Colorado Children's Campaign.

Permission to copy is granted provided ***KIDS COUNT in Colorado!*** and the Colorado Children's Campaign are cited as the source.

STATE OF COLORADO

OFFICE OF THE GOVERNOR

Denver, Colorado 80203
(303) 866 - 2471
(303) 866 - 2003 fax

John Hickenlooper
Governor

March 10, 2011

Our administration is guided by a commitment to creating the brightest, most prosperous future for Colorado. Key to our state's success is the success of our children and our ability to capitalize on the opportunities of our future workforce, leaders, parents and citizens.

In my first State of the State address this year, we highlighted the clear link between education and economic development. Ask any business leader thinking of moving or relocating a business to another state, and she'll likely tell you that tax incentives and public subsidies matter less than a state's quality of life and the excellence of its schools. We must make the best use of resources we have available during this tough economic climate to support our schools and our educators.

This year's *KIDS COUNT in Colorado!* report provides valuable information as we work through Colorado's budget challenges. The state's budget is in crisis and after nearly a decade of rapidly increasing poverty rates and the recent economic downfall, families and children are in economic crisis as well. *KIDS COUNT* is a valuable resource in understanding the ramifications of the challenges families face and, even more important, in understanding where they can best be supported with the funding available.

A commitment to supporting our children is a commitment to our future, and credible data and research about child well-being is vital to ensuring policymakers and community leaders can make informed, thoughtful decisions on both. Thank you to the Colorado Children's Campaign for your leadership on children's issues and your continued work to ensure that we have the best information possible about our state's most important assets – our children.

Sincerely,

A handwritten signature in black ink that reads "John Hickenlooper".

John Hickenlooper
Governor

March 10, 2011

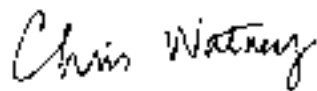

While economists proclaimed the end of the Great Recession more than a year ago, the end was nowhere in sight for many Colorado families, especially for many of our most vulnerable citizens, our children. Though economic indicators can change quickly, impacts on lives are often much longer-term. In fact, experts say the decline in family economics is likely to negate the progress made nationally in children's well-being over the last 30 years. In terms of impacts on health, education, safety, stability and other effects of added family stress, the economic crisis isn't just an adult problem; it is an even more critical challenge for many of our children. Without key supports and interventions, the recession is likely to create a crisis with long-term ramifications for not only a growing number of Colorado children, but for the state's economy, growth and future.

This report, "The Impact of the Great Recession on Kids in Colorado," contains some of the earliest data of its kind in Colorado and in the nation about the implications of the recession on children's lives. In addition to reporting some of the first available data on child well-being trends affected by the Great Recession, including child health, early childhood care and development and education, this year's *KIDS COUNT in Colorado!* also includes trends in participation in the programs and services that support Colorado kids. While demand for these programs is growing because of need, participation is limited by the diminishing state resources available to meet the need, and this combination will likely have an effect on our children's lives for years to come. When our children are not prepared to learn, when student achievement gaps persist, when children are more obese, less healthy and unable to access basic health care, kids and their families suffer and our state's ability to compete in a global economy is diminished.

The Great Recession has taken a toll on Colorado's families, their neighbors and their children. Coming on the heels of nearly a decade of significant poverty increases, many Coloradans were already especially vulnerable to its impacts. And while there are recent indications that economic factors, including employment rates, are improving, the implications on our children are ongoing and significant.

This year's *KIDS COUNT in Colorado!* report, the 18th of its kind produced by the Colorado Children's Campaign, provides a snapshot of data that can help us understand more specifically where there are challenges and where there are improvements, and ultimately an opportunity to learn from both. There is no doubt the Great Recession will leave an indelible mark on Colorado's children. But accurate data and information is the key to understanding the realities our kids are facing and for determining the best opportunities to protect them, securing not only their futures but the future of Colorado. We look forward to your partnership in using this data to find paths that ensure that the Great Recession is not a turning point without return for our children, but where new directions of hope and opportunity may be forged.

Sincerely,

Chris Watney
President and CEO

2011 KIDS COUNT in Colorado!

The Impact of the Great Recession on Colorado's Children

The Great Recession, which officially lasted from December 2007 to June 2009, took its toll on thousands of Coloradans, impacting families from a wide range of backgrounds, economic statuses and communities, including families who had not previously faced significant economic challenges. For those already experiencing the negative impacts of Colorado's dramatic rise in poverty since 2000, the ramifications were even more devastating.

For Colorado's kids, the effects of the Great Recession have been both immediate and far-reaching. From 2008 to 2009, the number of children living in poverty in Colorado rose by 31,000, a jump from 15 to 17 percent. Forty-seven thousand more children were living in families where no parent had regular, full-time employment.¹ Median annual income for families with children dropped from \$65,800 to \$64,000.² More children were likely to commit suicide or be victims of abuse or neglect. Fewer teenagers graduated high school or found jobs. Since 2008, the number of unemployed teens increased by 14,000, rising from 60 percent to 65 percent in Colorado.³ More children were likely to experience homelessness, hunger, food insecurity and obesity. These are the realities for many Colorado children of the Great Recession.

In Colorado, the impacts of the Great Recession were intensified because of the dramatic rise in childhood poverty the state experienced between 2000 and 2008, reported previously in *KIDS COUNT in Colorado!*. While the childhood poverty rate in Colorado currently remains below the national average, between 2000 and 2009 the number of children living in poverty in Colorado more than doubled, rising faster than any other state in the nation. Because poverty negatively influences almost every other aspect of a child's well-being, this has significant implications for our state's children and our future.

According to the Foundation for Child Development, "today children under 18 are the single largest group in America living in poverty. Research shows that children who slip into poverty, even for a short time, can suffer significant setbacks, even when their families regain their economic footing. These setbacks are particularly acute for children in their first 10 years of life."⁴

Eventually, the economy will recover, however, children, especially young children, may be affected by the recession for the rest of their lives. As a result of the Great Recession, these implications are reaching an even wider range of children, families and communities than before – implications reflected in nearly every indicator measured in this report and, more importantly, in lives across the state.

¹ The Annie E. Casey Foundation, KIDS COUNT Data Center: Data provided by: Population Reference Bureau, analysis of data from the U.S. Census Bureau, Census 2000, 2001 Supplementary Survey, 2002 through 2009 American Community Survey. The share of all children under age 18 living in families where no parent has regular, full-time employment in Colorado rose from 24 percent to 28 percent from 2008 to 2009. This is an increase of 16 percent, from 293,000 children to 340,000.

It's About Kids

It's About Kids (IAK) is the Colorado Children's Campaign's statewide, grassroots advocacy network. It is comprised of over 1,400 health, early childhood and K-12 education professionals, community and business leaders, legislative staff, parents and other engaged citizens joined together by their concern for the well-being of Colorado's children. IAK members advocate for Colorado children by staying informed about children's issues through the Children's Campaign's weekly electronic newsletter, KidsFlash, sending emails and making phone calls to their legislators during important public policy decisions impacting kids, participating in public events and rallies in support of kids, and sharing information about Colorado kids with their peers. The It's About Kids network is led by a dedicated group of volunteer community leaders who provide guidance and direction to their communities and to the Children's Campaign in a variety of ways, including:

- Voicing the unique needs and characteristics of the children in their communities
- Engaging in regular dialogue and information exchange with Children's Campaign policy staff to help shape and support our legislative agenda
- Establishing and maintaining relationships with policymakers and the media in their communities

Quotes or stories about children in different parts of Colorado were provided by members of our IAK community and are placed in purple boxes throughout 2011 KIDS COUNT in Colorado!

We are deeply grateful to these IAK community leaders. Together, we provide an influential voice for children across Colorado.

Colorado Child Demographics

According to the Colorado State Demography Office, in 2009 there were 1,242,976 children in Colorado.⁵ Although there was not a significant change in the child population since 2008 (Figure 1), Colorado remains in the top 10 states that experienced growth in its child population since 2000. As illustrated in Figure 2, 22 states (primarily in the southern and western regions) experienced growth in their child populations while 25 states experienced a decrease (primarily in the northern and eastern regions), and four states remained the same.⁶

Figure 1

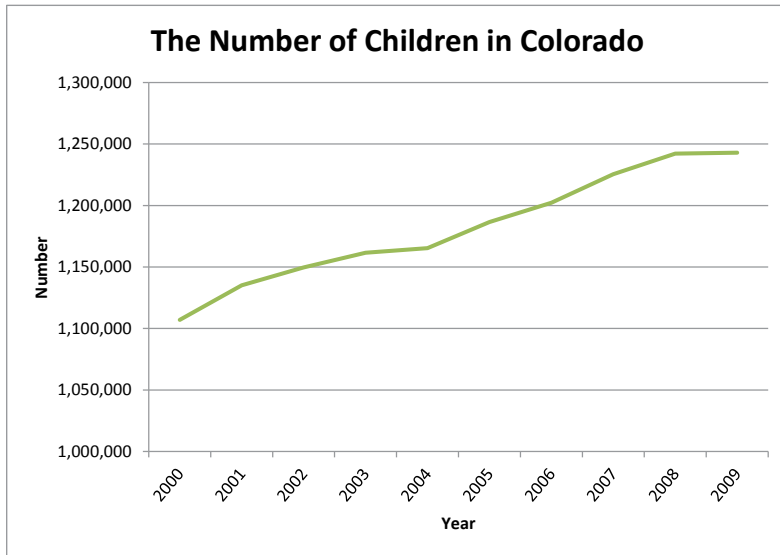

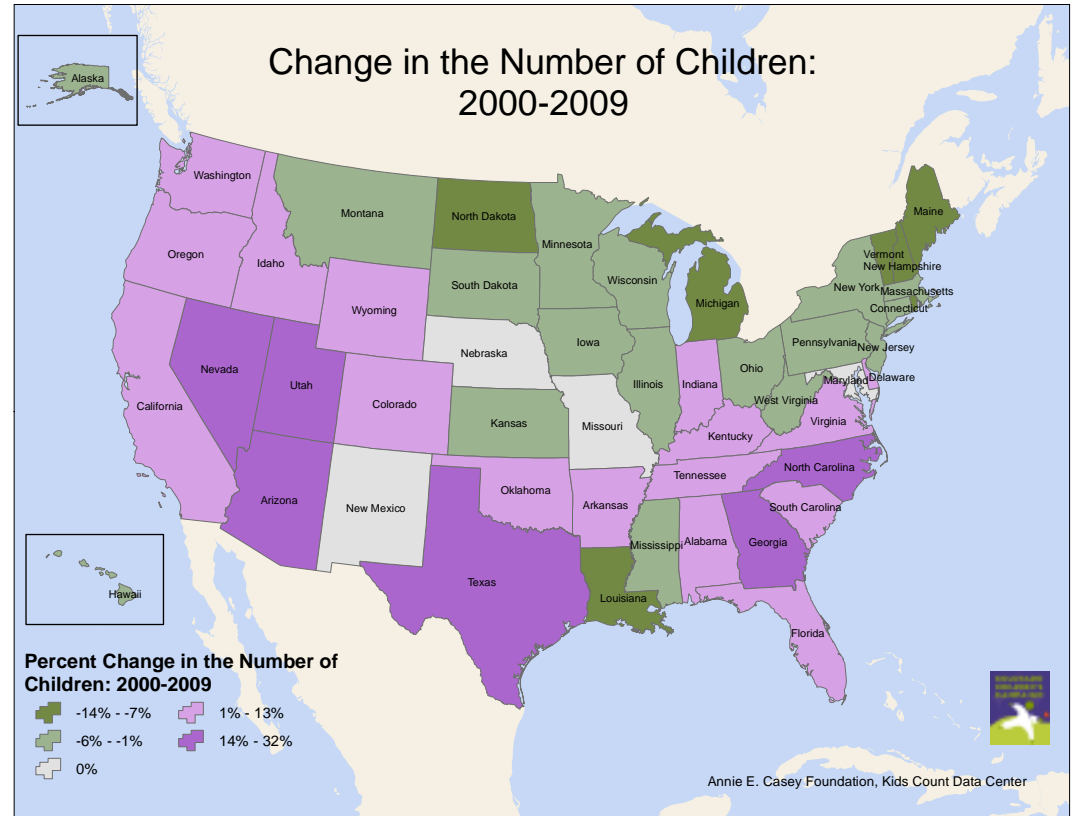

Figure 2

⁶ The Annie E. Casey Foundation: Data from the Population Division, U.S. Census Bureau. "State Single Year Age and Sex Population Estimates: April 1, 2000 to July 1, 2009".

In 2009, Colorado's child population included 30 percent Hispanic and 59 percent non-Hispanic white children (Figure 3). Since 2000, the proportion of non-Hispanic white children declined seven percent while the percentage of black and Asian children remained relatively constant. The Hispanic child population increased six percent.⁷

Figure 3

⁷The Annie E. Casey Foundation: Data from the Population Division, U.S. Census Bureau. "State Single Year Age and Sex Population Estimates: April 1, 2000 to July 1, 2009."

Colorado Families

In 2009, 889,000 children, or 73 percent under the age of 18, lived in a married-couple household in Colorado; 329,000 children, or 28 percent, lived in a single-parent household (Figure 4).⁸ The percentage of Colorado children living in single-parent families remains below the national average.

Approximately 45,000 children in Colorado were in the care of their grandparents in 2009, and 65,000 children lived with cohabitating domestic partners (Figure 5).⁹

⁹ Ibid.

Children in Immigrant Families

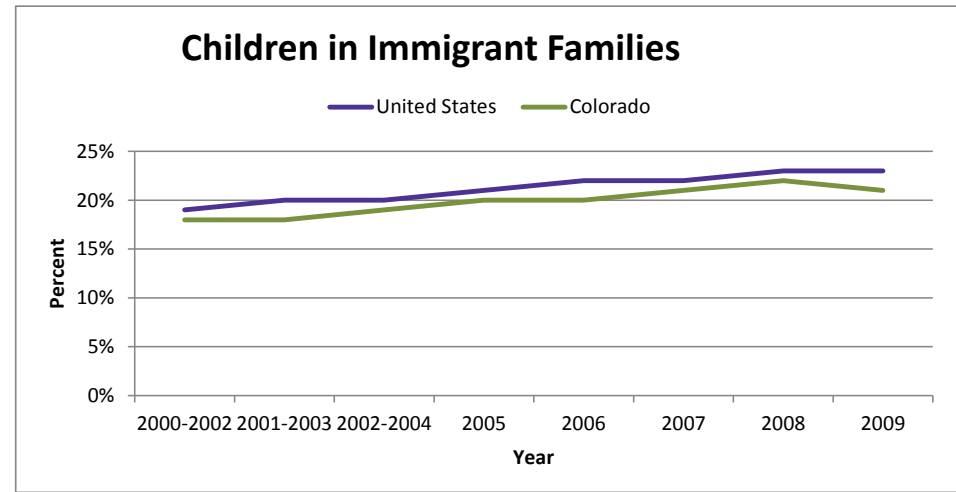

The U.S. Census Bureau defines children in immigrant families as children under the age of 18 who are either foreign-born or who have at least one foreign-born parent, regardless of citizenship status or year of arrival in the United States.¹⁰

The majority of immigrant families in Colorado are long-term residents of the United States. Only two percent, or approximately 5,000 children in immigrant families, had parents who arrived in this country less than five years ago.¹¹

Eighty-seven percent of children in immigrant families in Colorado were U.S. citizens born in the United States.¹² Many non-citizens are in the U.S. legally, including legal permanent residents, refugees, asylees, and people with student or work visas.¹³

Twenty-one percent (254,000) of Colorado children were living in immigrant families, compared to the U.S. rate of 23 percent in 2009 (Figure 6).¹⁴ This represents a slight decrease since 2008.¹⁵

Figure 6

“One of the issues in Weld County, which multiple agencies and the faith-based community are working on, is assisting the East African communities and Burmese/Karen communities to integrate into our larger community. As you can imagine, there are differences not only in languages, but different dialects within those languages. This situation presents unique challenges that come at a time when resources are already limited and needs high due to the economy. Weld County is struggling to keep up.”

— Jildi Gentry-Chacon,
Promises for Children Coordinator, Weld County

¹⁴ The Annie E. Casey Foundation, KIDS COUNT Data Center: Data provided by: Population Reference Bureau, analysis of data from the U.S. Census Bureau, Census 2000, 2001 Supplementary Survey, 2002 through 2009 American Community Survey. Due to small sample size, three year aggregations were used for the years 2000-2004.

¹⁵ Ibid.

How does the U.S. Census Bureau classify the population on the American Community Survey?

U.S. Citizen – Respondents who indicated that they were born in the United States, Puerto Rico, a U.S. Island Area, or abroad of American (U.S. citizen) parent or parents are considered U.S. citizens at birth.

Not a U.S. Citizen – Respondents who indicated that they were not U.S. citizens at the time of the survey.

Native – The native population includes anyone who was a U.S. citizen or a U.S. national at birth.

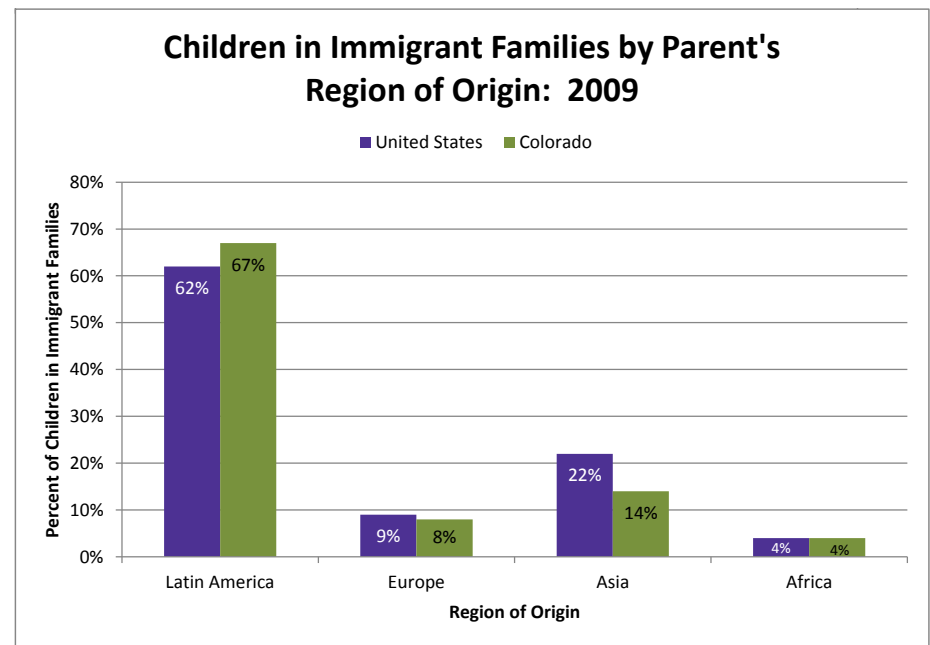

Foreign-born – The foreign-born population includes anyone who was not a U.S. citizen or a U.S. national at birth. This includes respondents who indicated they were a U.S. citizen by naturalization or not a U.S. citizen.

The American Community Survey questionnaires do not ask about immigration status. The population surveyed includes all people who indicated that the United States was their usual place of residence on the survey date. The foreign-born population includes naturalized U.S. citizens, Lawful Permanent Residents (immigrants), temporary migrants (e.g., foreign students), humanitarian migrants (e.g., refugees), and unauthorized migrants (people illegally present in the United States).

Characteristics of Children in Immigrant Families¹⁶

- Children in immigrant families have diverse national origins. In Colorado, 67 percent have parents from Latin America, eight percent from Europe, 14 percent from Asia, and four percent from Africa (Figure 7).
- Colorado children in immigrant families are more likely than children in U.S.-born families to live with two parents. Among children in immigrant families, 79 percent live in married-couple families compared to 70 percent in U.S.-born families.
- Nineteen percent of school-aged children in Colorado speak a language other than English at home.
- More than half, 57 percent, of children in immigrant families live in family-owned homes.
- The median family income among households with children is \$26,000 more for children in U.S.-born households than for those in immigrant households.

Table 1: 2010 Federal Poverty Guidelines ¹⁷

Persons in Family or Household	100 Percent of Poverty	150 Percent of Poverty	200 Percent of Poverty	250 Percent of Poverty	300 Percent of Poverty
1	\$10,830	\$16,245	\$21,660	\$27,075	\$32,490
2	\$14,570	\$21,855	\$29,140	\$36,425	\$43,710
3	\$18,310	\$27,465	\$36,620	\$45,775	\$54,930
4	\$22,050	\$33,075	\$44,100	\$55,125	\$66,150
5	\$25,790	\$38,685	\$51,580	\$64,475	\$77,370
6	\$29,530	\$44,295	\$59,060	\$73,825	\$88,590
7	\$33,270	\$49,905	\$66,540	\$83,175	\$99,810
8	\$37,010	\$55,515	\$74,020	\$92,525	\$111,030

The U.S. Department of Health and Human Services issues annual guidelines defining the level of income at the poverty level for the United States (Table 1). A percentage of the federal poverty level (FPL) is frequently used to determine eligibility for social service programs such as the Supplemental Nutrition Assistance Program (food stamps) and free or reduced price lunch programs.

The FPL, based on food costs and without consideration of variations in the cost of living from place to place, is widely recognized as outdated and inadequate. Because the average family’s spending patterns have changed since the measure was devised, food is no longer the greatest expense to an American household. Housing, transportation, health care and child care costs have risen dramatically. As a consequence, the federal poverty measure significantly underestimates the true cost of supporting a family. According to more realistic estimates, families need approximately twice the official poverty level to meet basic needs for their families (200 percent of poverty as indicated in Table 1).¹⁸

The Self-Sufficiency Standard for Colorado is a more comprehensive measure of what is necessary to support a family with the basic needs of housing, child care, food, transportation and health care without the aid of public assistance. The calculation of this standard takes into account all of these expenses as well as the geographic variability unaccounted for in the Federal Poverty Guidelines. Although a conservative estimate, the Self-Sufficiency Standard illustrates how difficult it is for families with incomes well above the FPL to make ends meet. Using the Self-Sufficiency Standard, it is estimated that it costs approximately 250 percent of the FPL to support a family in Colorado.¹⁹

The Cliff Effect

Families who earn low wages, even for full time work, struggle to make ends meet. Public benefits, or work supports, are essential programs that help families close the gap between earnings and the cost of basic family needs. When a family’s income increases, sometimes even slightly, or eligibility limits change, they lose these critical supports. Many times, families are worse off than before their income increased. This small increase in earnings and the resultant loss of benefits is called the “cliff effect”.

¹⁹ Colorado Fiscal Policy Institute. *The Self-Sufficiency Standard for Colorado 2008: A Family Needs Budget*.

Family Economics

Children and families across Colorado are experiencing the most serious economic downturn in recent history. In 2008, 179,000 children were estimated to be living in poverty in Colorado. By 2009, this number rose to approximately 210,000 children.²⁰ This 17 percent increase represents a significant change in child poverty in just one year.

As seen in Figure 8, not all states join Colorado with a statistically significant rise in the number of children in poverty from 2008-2009. This map illustrates how the Great Recession impacted child poverty in varying degrees, as measured by federal poverty guidelines.

Figure 8

“For Christmas, the teens in our program were asking for different things this year. They were asking ‘Santa’ for clothing, food, the basics... not the typically more extravagant adolescent requests such as electronics and music.”

– Kelly Kisling,
Program Manager of Youth @ Crossroads,
Chaffee County

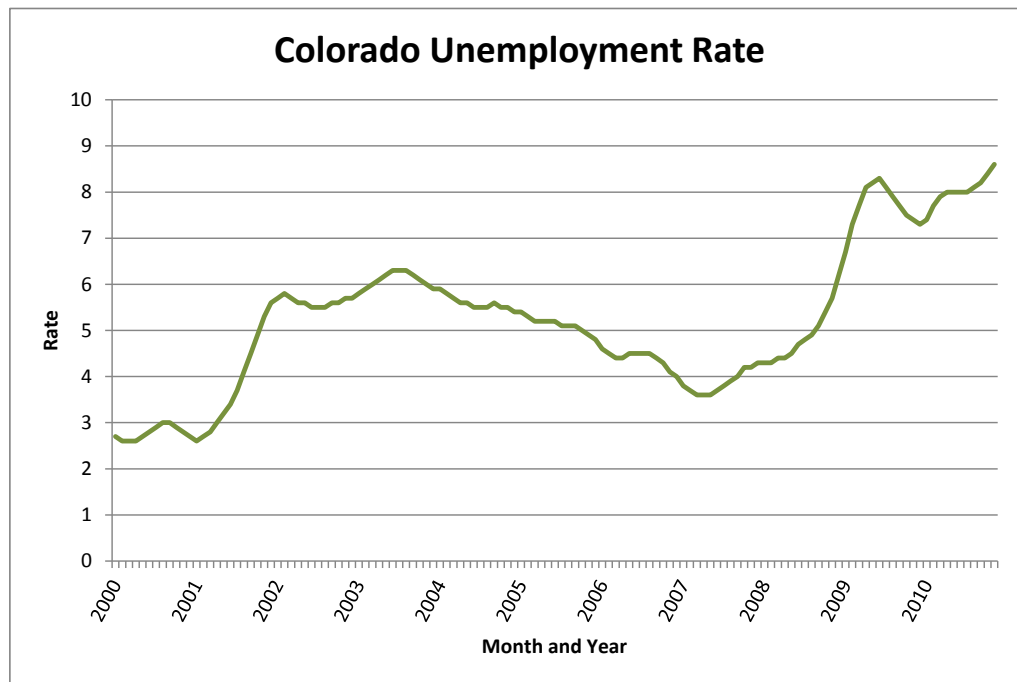

²⁰ The Annie E. Casey Foundation, KIDS COUNT Data Center: Data provided by Population Reference Bureau, analysis of data from the U.S. Census Bureau, Census 2000, 2001 Supplementary Survey, 2002 through 2009 American Community Survey.

The recession began in December of 2007 and Colorado's unemployment rate doubled from 4.3 percent to 8.6 percent by November 2010 (Figure 9).²¹ In 2009, 340,000 Colorado children were living in families where no parent was employed full-time.²² As a consequence, more families struggled to meet basic needs.

Many families experienced new stresses such as job loss, loss of health insurance, inability to find a job that pays a living wage, foreclosure, or moving to a new location in order to find work.

Some who experienced short-term poverty, due to job loss, for example, may have had resources available to mitigate increased challenges on family life and finances. These may include savings accounts, extended family nearby, safe and healthy neighborhoods, access to good schools, access to health care and mental health services, or job training or higher education to meet the demands of the changing job market. However, vulnerable families who were precariously close to poverty before the recession found they were no longer able to make ends meet because they had fewer resources available to help them through a time of crisis.

Figure 9

²¹ United States Department of Labor, Bureau of Labor Statistics. Unemployment Rates for Colorado, January 2000-November 2010.

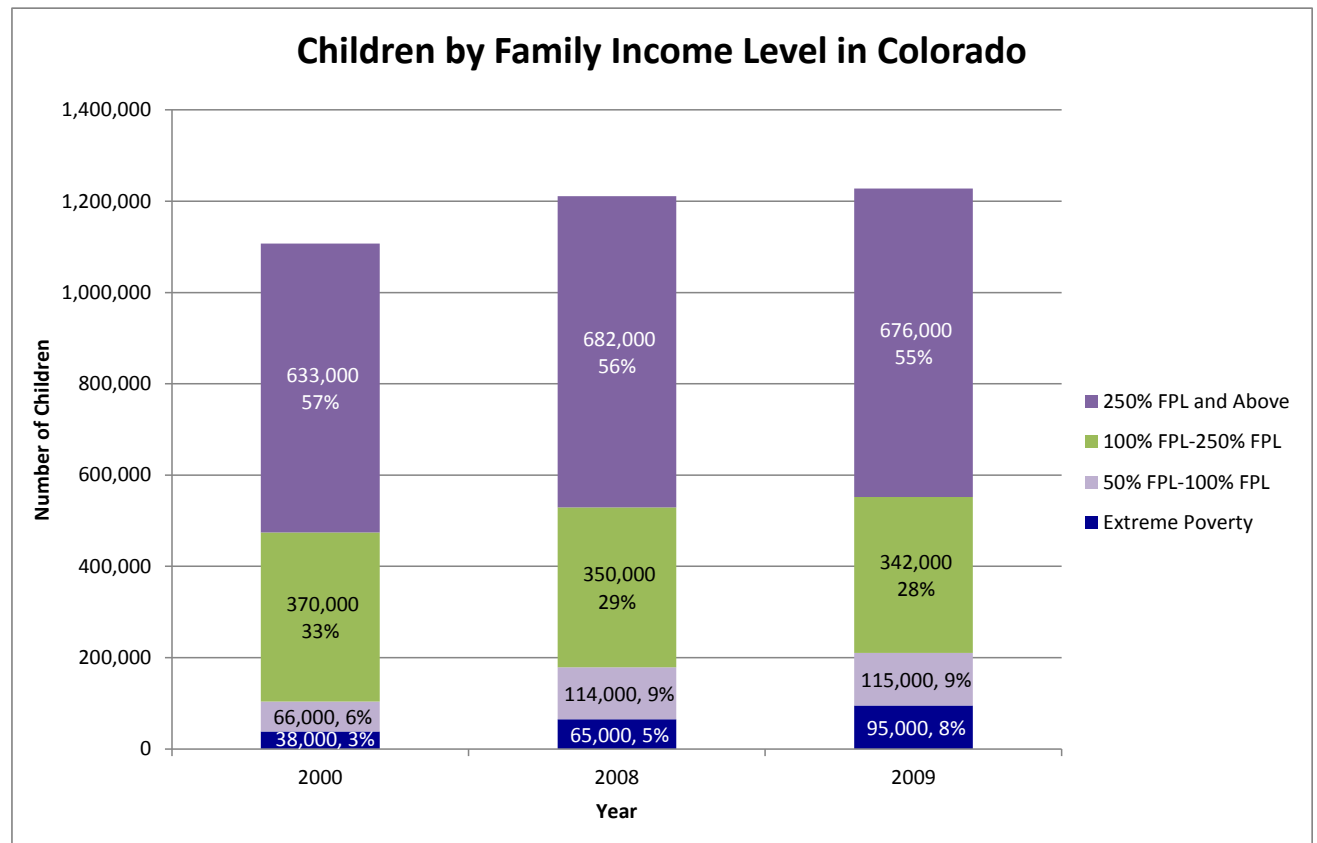

²² The Annie E. Casey Foundation, KIDS COUNT Data Center: Data provided by Population Reference Bureau, analysis of data from the U.S. Census Bureau, 2009 American Community Survey.

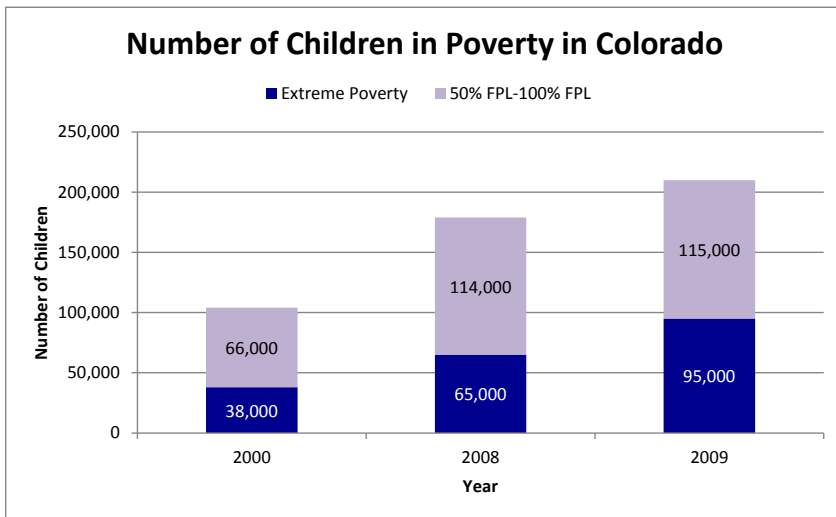

In Colorado, the number of children in families with incomes at 250 percent and above (\$55,125 annually for a family of four) the FPL is decreasing while the number of children whose families have fallen into extreme poverty (about \$11,000 annually for a family of four) is growing (Figure 10).²³ Families who earn low wages, even for full time work, struggle financially. Work support programs in Colorado help bridge the gap between wages earned and the cost of living. Unfortunately, families who rely on these programs are extremely vulnerable, especially during a recession.

Figure 10

²³ U.S. Census Bureau, American Community Survey, 2000, 2008-2009.

Figure 11

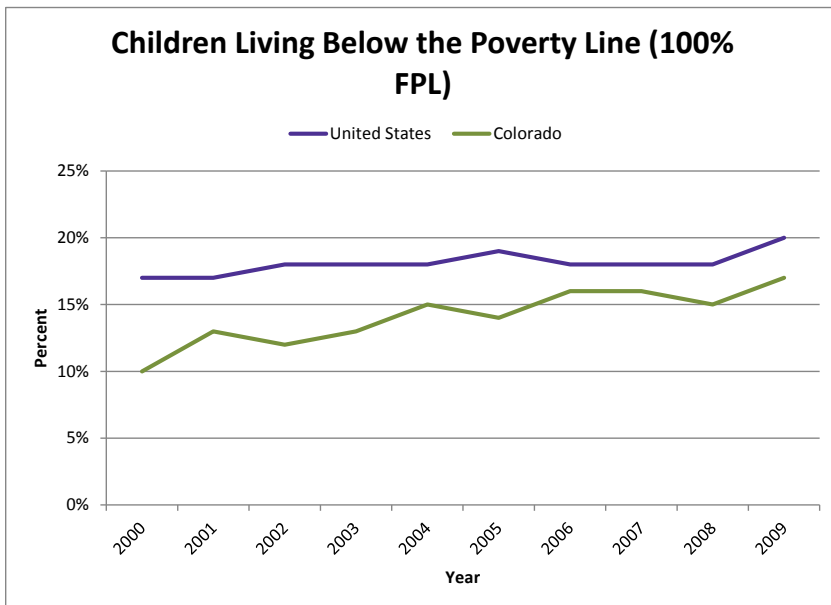

In Colorado, the number of children in poverty has more than doubled since 2000 and the number of children living in extreme poverty (approximately \$11,000 for a family of four) has increased 150 percent (Figure 11).²⁴

In such desperate conditions, children are susceptible to many negative outcomes. Poverty has profound effects on children’s physical, emotional, and cognitive health and development, with long-term implications for educational achievement, health, and behavior. Research shows that children experiencing even short-term poverty can be negatively impacted long after the recession is over.²⁵

Between 2000 and 2009, Colorado experienced the fastest growing number of children living in poverty in the nation. While the percentage of children in poverty remains below the national average (Figure 12), it was still high at the beginning of the recession with 179,000 children, or 15 percent, living below the FPL. By 2009, the number rose dramatically to 210,000 children, or one of every six children in Colorado.²⁶

Figure 12

Data Note: Data presented and analyzed in *KIDS COUNT in Colorado!* are from the most reliable data sources available. They are not, however, without limitations. Many of these data are estimates based on surveys collected by the U.S. Census Bureau; the number and percent used to help explain trends in child well-being are not exact, but estimates derived through statistically valid methods. The details regarding sampling error are available at the U.S. Census Bureau website.

Every year, data collection methods improve and data are available to more people faster; regardless, most of these data are one or two years old.

Some data are unavailable for small populations due to sample size errors. For example, data for the American Indian population are often excluded from Colorado racial disaggregation due to low population numbers.

²⁴ U.S. Census Bureau, American Community Survey, 2000, 2008, 2009.

²⁵ Foundation for Child Development, Duke University, June 8, 2010. 2010 Child and Youth Well-Being Index: Executive Summary.

²⁶ U.S. Census Bureau, American Community Survey, 2000-2009.

Although the entire state has been impacted economically by the Great Recession, some Colorado counties have been hit harder than others. Colorado Department of Education data for school districts across the state show the number of school age children eligible for the federal free or reduced-price lunch program between 2008 and 2009 (Figure 13).²⁷ To be eligible for free lunch, a child’s family must make less than 130 percent of the FPL. For reduced-price lunch, they must earn less than 185 percent.

These data are useful in helping identify where the children in poverty or in low-income families lived and how those numbers changed between 2008 to 2009. While these data only include school-age children enrolled in the program, not all eligible children, they provide another source of information on the state’s changing economic demographics for children.

In the corresponding map, districts in which there has been little or no change in the percentage of children eligible for free or reduced-price lunch are marked in yellow.

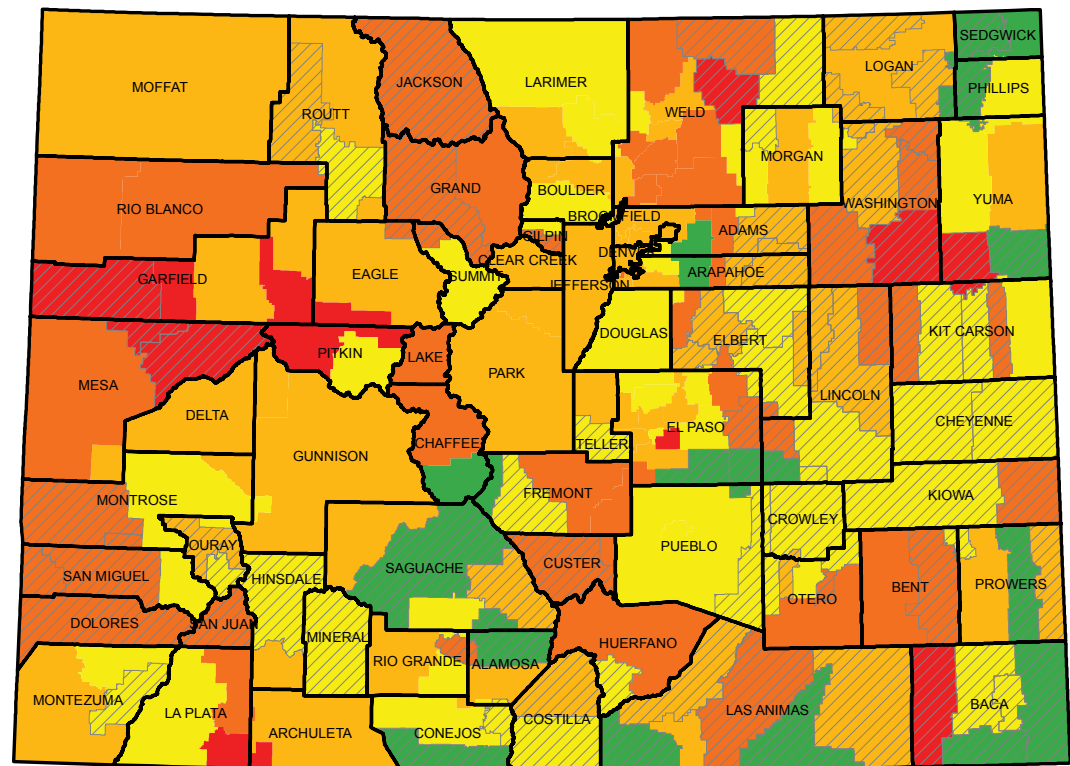

The districts shaded green have a lower percentage of children eligible for free or reduced-price lunch than they did in 2008. Most districts that show a decrease in the percentage of children in poor or near poor families are very small rural districts with a very small student population.

Districts with “hatch” shading indicate those with less than 500 students enrolled in 2009. The difference in the percent of students eligible for free or reduced-price lunch is more sensitive in these districts due to the low numbers of students enrolled.

Districts shaded in orange to red have experienced the most growth in the proportion of children eligible for free or reduced-price lunch from 2008 to 2009. According to this analysis, the areas most impacted by the economic changes caused by the recession are located on the Western Slope of Colorado.

Figure 13

Difference in the Percent of Students Eligible for Free and Reduced Price Lunch from 2008 to 2009

Difference in the Percent By School District

As in previous years, the counties with the highest poverty rates in Colorado are in the San Luis Valley and the urban core. The Denver Metro area has the highest number of children in poverty, with suburban counties experiencing dramatically increasing numbers of children and families in poverty over the past decade (Figure 14).²⁸

Figure 14

Percent of Children in Poverty by County

U.S. Census Bureau,
Small Area Income and
Poverty Estimates, 2009

“We’re seeing families frequently needing help in the off-season with rental assistance, or families who have never had utility shut-off notices are now getting those. Families who never thought they would need the food bank are having to go there.”

– Jenny Lindsay,
Roaring Fork Valley

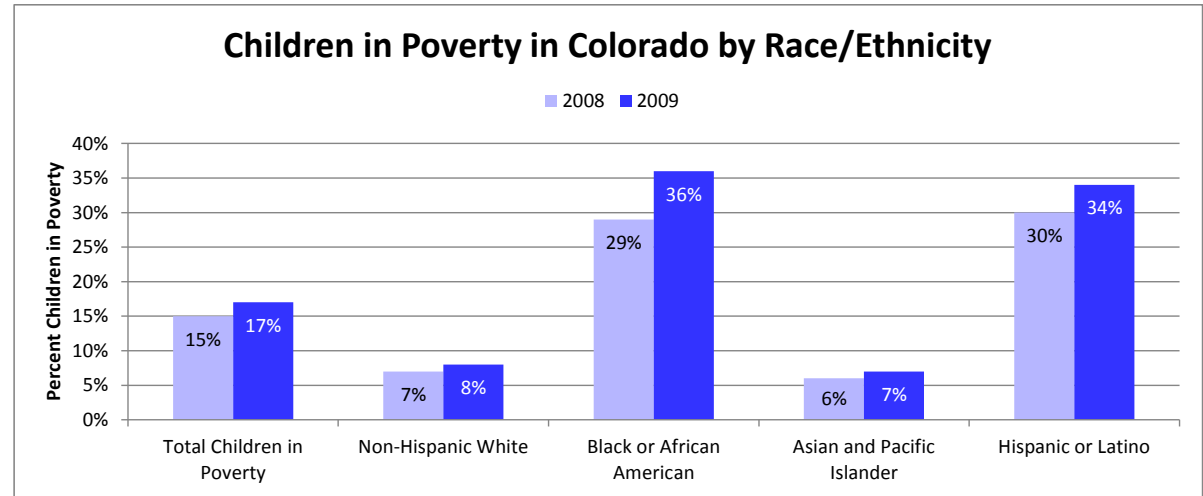

²⁸ U.S. Census Bureau, Small Area Income and Poverty Estimates, 2009.

Children in Poverty by Race and Ethnicity

Children in black and Hispanic families in Colorado have been impacted by the recession more severely than those in non-Hispanic white families. In one year, the number of all children in poverty increased from 179,000 children to 210,000 children, or 17 percent. The number of non-Hispanic white children in poverty increased 12 percent. The number of black children in poverty increased 27 percent, and the number of Hispanic children increased 17 percent (Figure 15).²⁹

Compared to their U.S.-born peers, children in immigrant families were almost twice as likely to live in poverty in Colorado (Figure 16).³⁰ In 2009, 45 percent of all children in immigrant families in Colorado lived in families with incomes above 200 percent of the FPL.³¹ In addition from 2008 to 2009, the number of children living in poverty in immigrant families decreased eight percent, or by 6,000 children (Figure 17).³² Conversely, the number of children in U.S.-born families living in poverty increased 35 percent, or by 37,000 children. Considering population change over the same period, the change is dramatic, rising from 11 percent to 15 percent of children in U.S.-born families in poverty compared to a decrease from 28 percent to 27 percent for children in immigrant families.³³

³² Ibid.

³³ Ibid.

In 2009, 40 percent of the children in poverty (82,000) lived in married-couple families. Sixty percent of children (about 123,000) lived in single-parent families with 53 percent in female-headed households and seven percent in male-headed households (Figure 18).³⁴

Since the recession began, children in all family types have experienced growth in poverty. However, the number of children living in married-couple families in poverty has increased the most with 29 percent more children living in poverty in 2009. The greatest number of children living in poverty was in female-headed households with an 11 percent increase, while the number of children living in male-headed households in poverty has increased by five percent (Figure 19).³⁵

Children in Safety Net Programs in Colorado

During the Great Recession, as the economy worsened, state revenues fell and the need for public assistance programs grew. Safety net programs were designed to mitigate the impacts of poverty on children by helping provide food, housing, health care and other resources to families with children. Public programs serving children and their families saw large increases in participation from 2008 to 2009.

In five major safety net programs combined, Colorado had the second greatest increase in participation, based on caseload, in the nation. Enrollment in Temporary Assistance to Needy Families (TANF), the Supplemental Nutrition Assistance Program (SNAP), Medicaid, the National School Lunch Program and the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) rose in 2009 (Figure 20).³⁶

Figure 20

“Because you’re homeless is not always a reason to lose your kids. We like to tie these families into other programs or resources...If we can assist with food costs, child care costs, or get kids on Medicaid or Child Health Plan+, it gives the family some of these community resources that can wrap around them.”

– Peg Mewes,
Health and Human Services,
Montrose County

³⁶ O'Hare, William and Florencia Gutierrez. *Children, the Recession and the Safety Net: Data from 2009*. The Annie E. Casey Foundation.

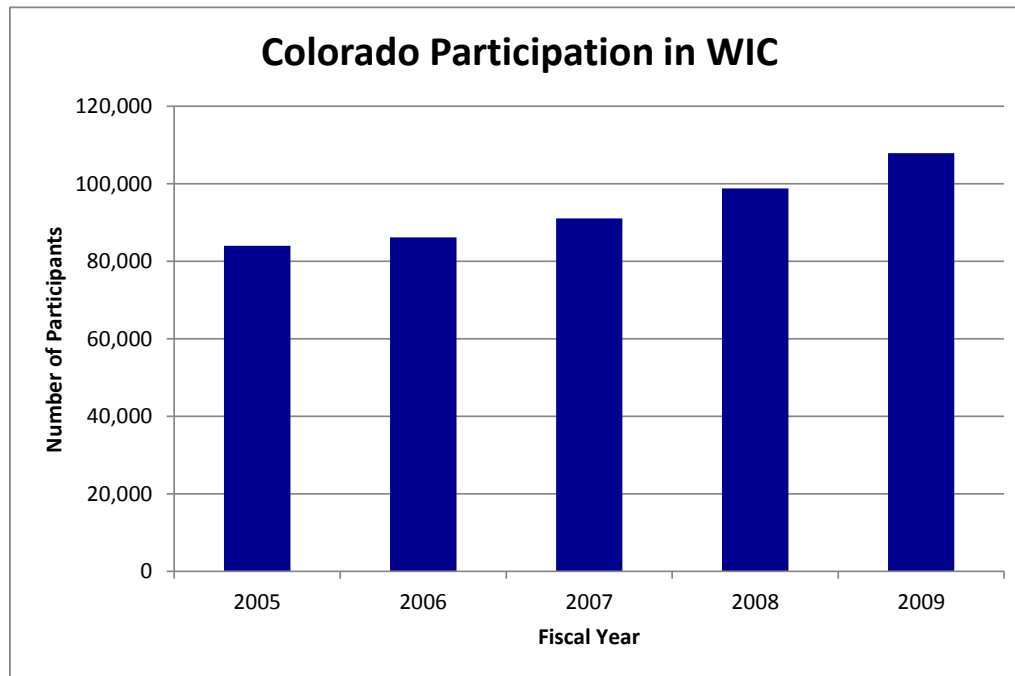

Special Supplemental Nutrition Program for Women, Infants and Children (WIC)

The federal WIC program provides nutrient-rich foods, health care referrals, and nutrition education for low-income pregnant, breastfeeding, and non-breastfeeding postpartum women, and to infants and children up to age five who are found to be at nutritional risk. To be eligible for WIC benefits, households must meet income eligibility criteria (at or below 185 percent of the federal poverty level, or approximately \$40,793 per year for a family of four), state residency requirements, and be determined to be at nutritional risk by a health professional.

In 2009, the number of pregnant women, infants and children receiving WIC benefits in Colorado was 105,888, an increase of more than 15,500 recipients since 2008.³⁷ Colorado increased the participation rate for pregnant women and children served by the WIC program by 28 percent since 2005, twice the rate of increase for the nation overall (14 percent). Colorado's participation in the WIC program increased by nine percent since 2008 (Figure 21).³⁸

Research shows that good nutrition during pregnancy and during the first three years of life is critically important to a child's future health and academic potential. Children in the WIC program are more likely to be in good health and have a decreased risk of developmental delays compared to those qualifying children who do not receive benefits.³⁹

³⁹ *Feeding our Future, Growing up Healthy with WIC*. Children's Health Watch, March 2009.

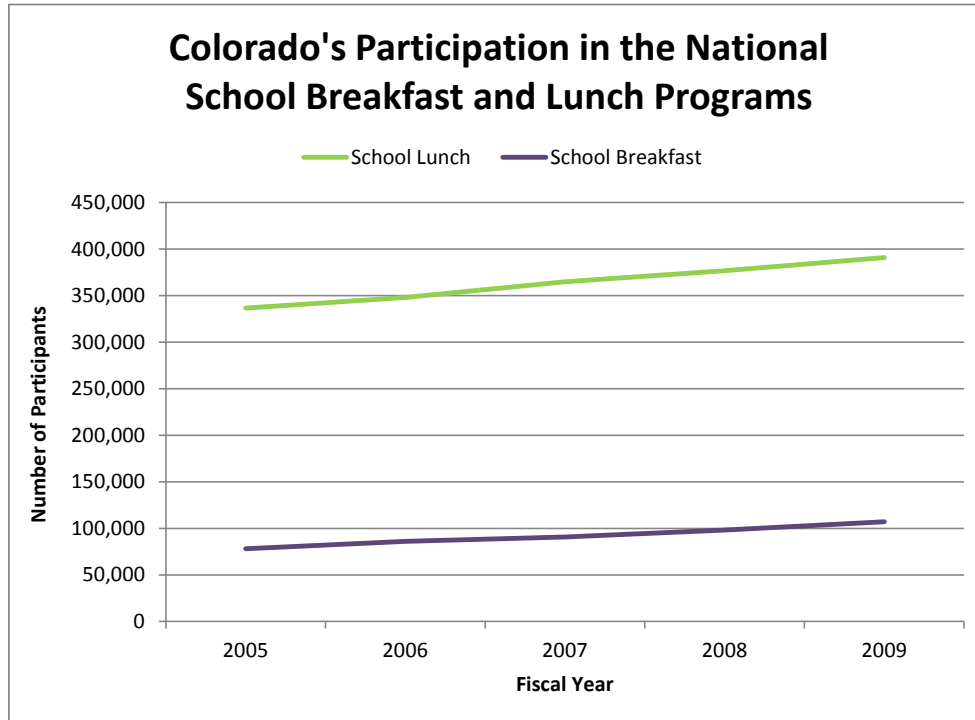

National School Breakfast and Lunch Programs

The federal government provides cash assistance to states to operate non-profit breakfast and lunch programs in schools and childcare institutions. These programs provide nutritionally balanced, low-cost or free meals to children each school day. Children from families with incomes below 130 percent of the federal poverty level, or \$28,665 for a family of four are eligible. Children living in families with incomes above 130 percent and below 185 percent of the federal poverty level, or \$40,793, are eligible for reduced price breakfast and lunch.

In Colorado, there has been a steady increase in the number of children participating in the School Breakfast Program. The U.S. increased four percent in the number of children served by the free breakfast program since 2008, while the number of Colorado children increased more than twice as fast with a nine percent increase over the same period.⁴⁰

According to the United States Department of Agriculture, more than 54,000 additional children participated in the National School Lunch Program in Colorado in 2009 than in 2005 (Figure 22).⁴¹

Figure 22

⁴⁰ United States Department of Agriculture, Food and Nutrition Service. School Breakfast Program: Total Participation. <http://www.fns.usda.gov/pd/08sbfypart.htm>.

Food Insecurity and the Supplemental Nutrition Assistance Program (SNAP)

Households where there is an uncertainty of having, or an inability to acquire, enough food for all household members because of insufficient money or other resources are considered food insecure. Children in food insecure households have higher risks of health and developmental problems than children in similar, food secure, households.⁴²

The Supplemental Nutrition Assistance Program (SNAP), formally the Federal Food Stamp Program, helps mitigate the negative impacts of food insecurity on children. It is a federally funded program providing eligible households with coupons or cards that can be used to purchase food. The program is administered through state and local welfare offices. The American Recovery and Reinvestment Act (ARRA) provided increased SNAP benefits to low-income families in 2009.

The number of children living in households that were food insecure at some point during the year has grown 61 percent in Colorado since 2001-2003, to approximately 234,000 children by 2006-2008, or 20 percent of all Colorado kids (Figure 23). This percentage has recently surpassed the national rate of 19 percent.⁴³

For a variety of reasons, including inefficiencies in program administration, access, and outreach, not all people eligible for SNAP benefits receive them. Nationally, 66 percent of eligible people received benefits in 2007. Colorado's rate was one of the lowest in the nation with only 55 percent of eligible people receiving benefits.⁴⁴ However, from 2008-2009, participation grew 26 percent in Colorado (Figure 24).⁴⁵

Figure 24

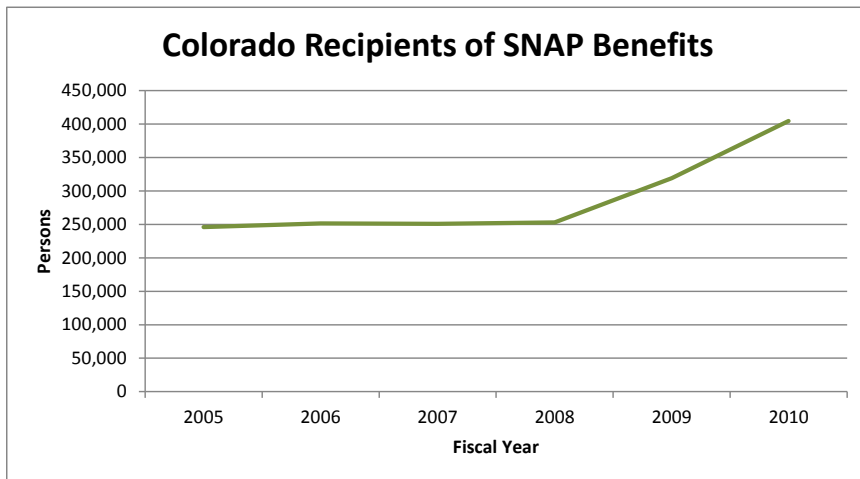

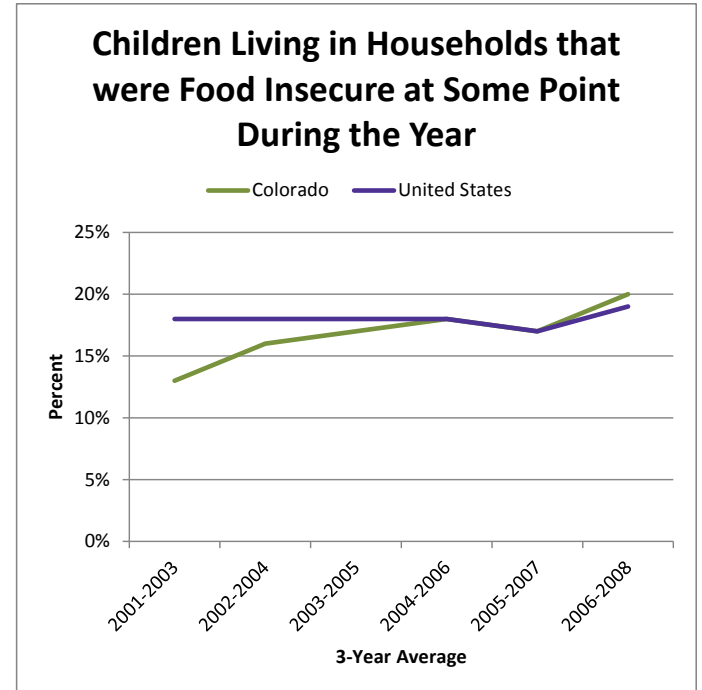

Figure 23

“Kids in our community are struggling. A young boy recently confided in me the challenges his family was facing explaining that his mom couldn’t buy groceries because she had no money, his uncle couldn’t find a job, and he wasn’t getting any Christmas presents this year. It’s hard out there for a lot of families and their kids are definitely impacted.”

⁴⁵ Supplemental Nutrition Assistance Program: Average Monthly Participation (Persons). <http://www.fns.usda.gov/pd/15SNAPpartPP.htm>.

Temporary Assistance to Needy Families (TANF)

The Temporary Assistance to Needy Families (TANF) program uses a federally-funded block grant, as well as state and county money, to provide time-limited assistance and work opportunities to needy families. The program is part of the welfare reform legislation of 1996 and is intended to help very low-income families achieve self-sufficiency. Funds are administered locally to assist needy families by providing child care subsidies, job preparation, education on preventing out-of-wedlock pregnancies and encouraging the formation and maintenance of two-parent families.⁴⁶ In addition to basic cash assistance and income support, counties often use a portion of their TANF funds to help finance child welfare, child care subsidies, and work-support programs. As the need for assistance rises, states and counties have to make decisions about where to allocate resources.

According to the *Colorado Works 2009 Annual Report*, in order to qualify for basic cash assistance, an adult-headed household of three cannot earn more than \$6,132 per year and must have less than \$15,000 in assets. As a consequence, TANF cash assistance most often serves the poorest families. The number of children living in extreme poverty, or 50 percent of the FPL, has increased 150 percent, or 57,000 more kids, in Colorado since 2000.⁴⁷ Even as need increased significantly since 2000, the percentage of children accessing benefits has declined, although from 2008 to 2009, children receiving TANF benefits in Colorado increased 15 percent (Figure 25).⁴⁸ Nationwide, TANF programs received a temporary influx of funding from the American Recovery and Reinvestment Act 2009. However, in FY 2011, the federal TANF funds available to Colorado are expected to fall by 17 percent.⁴⁹

Figure 25

“People use the food bank for a variety of reasons. Most have lost hours or lost their jobs all together, and the food bank is the only way they can eat. Others have left an abusive situation and are starting over from scratch. Some have experienced an unexpected situation, which caused them to use their savings, and now their paychecks can only cover the rent and electric bills. Most importantly, the food bank allows parents to keep nutritional food on the table for their children.”

Child Health

Unlike many other indicators highlighted in this report, some of the data related to child health indicate that trends are improving. For example, in Colorado the teen birth rate has been in steady decline from 2000 to 2009 and the percentage of women receiving early prenatal care has risen.⁵⁰ In addition, 2009 saw a decline in Colorado's number and rate of uninsured children, even as their parents' unemployment rate rose.

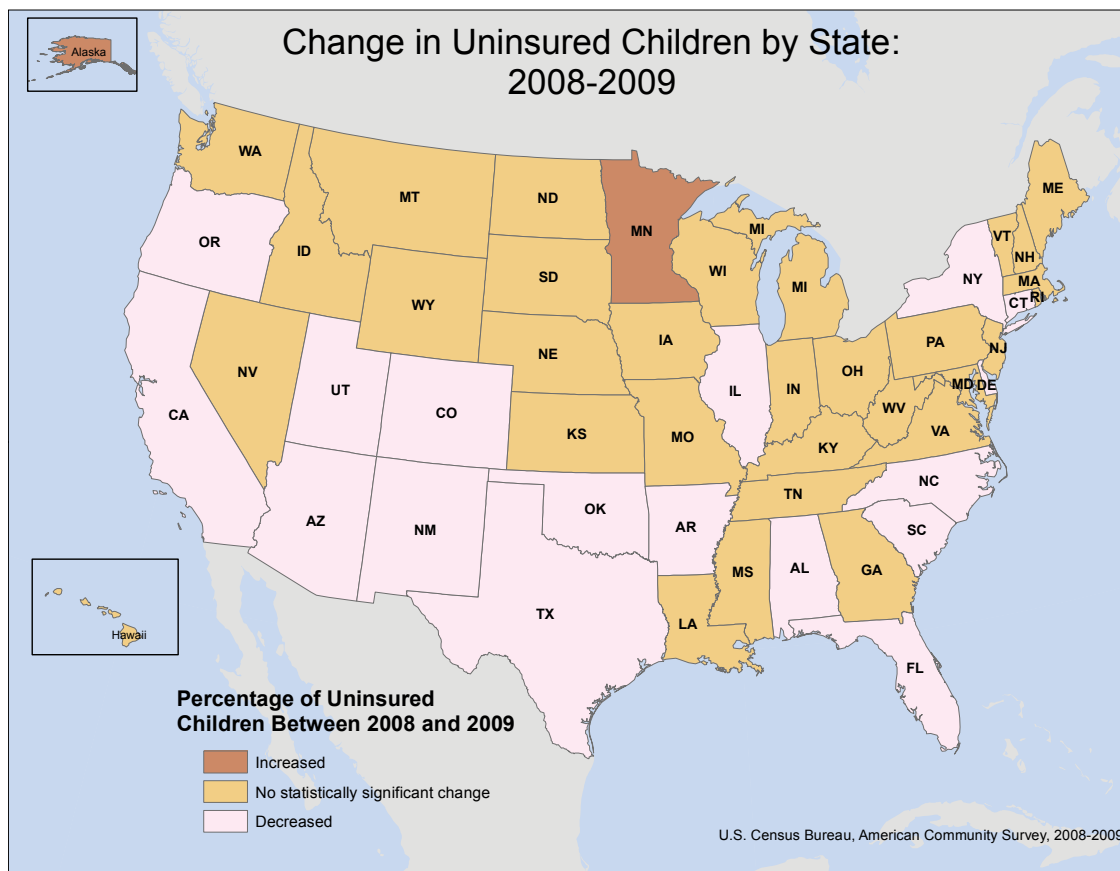

Health Insurance Coverage

Access to health care is an important service for children. Children with health insurance are more likely to access timely and cost-effective care. Healthy children have the best opportunities to grow and develop to their full potential. According to the U.S. Census Bureau American Community Survey, the number and percentage of uninsured children in Colorado has improved with approximately 42,000 fewer children uninsured since 2008 (Table 2).⁵¹

Initial analysis of data from several 2009 U.S. Census Bureau sources indicates that the uninsured rate for children in many states, including Colorado, dropped since the beginning of the recession (Figure 26). Causes for this change include:

- The increase in the poverty rate for children in Colorado, from 15 percent to 17 percent, means that more children who may not have qualified for public insurance programs in the past became eligible;
- Federal and state commitment to covering more kids;
- Improved outreach at the local level;
- Federal laws that increased access to public coverage such as the Child Health Insurance Reauthorization Act of 2009 and the American Recovery and Reinvestment Act of 2009; and
- State laws that also expanded access to public coverage such as Senate Bill 07-211-Covering All Kids, and Senate Bill 09-1293 - Colorado Health Care Affordability Act.

Figure 26

U.S. Census Bureau, American Community Survey: Uninsured Rate Estimates by County, 2008-2009.⁵²

According to these data, several large counties in Colorado have made significant gains in improving the number of insured children during the first full year of the recession.

Table 2

	2008 Percent	2008 Number	2009 Percent	2009 Number	Statistically Significant Change in the Number of Uninsured	Difference in the Number of Uninsured Children 2008-2009
Colorado	13.8%	165,912	10.2%	124,366	Yes	~42,000 fewer uninsured
Adams	14.8%	18,320	15%	18,666	No	
Arapahoe	14.3%	20,033	11.7%	17,052	No	
Boulder	10.5%	6,494	7.6%	4,909	No	
Denver	21.7%	32,025	13.1%	18,273	Yes	~14,000 fewer uninsured
Douglas	3.9%	3,157	2.8%	2,328	No	
El Paso	8.9%	13,682	5.9%	9,258	Yes	~4,400 fewer uninsured
Jefferson	11.3%	13,458	6.6%	7,848	Yes	~5,600 fewer uninsured
Larimer	5.9%	3,682	7.7%	4,843	No	
Mesa	15.3%	5,026	11.6%	3,957	No	
Pueblo	13.0%	4,849	7.4%	2,875	No	
Weld	16.1%	10,812	10.1%	7,184	Yes	~3,600 fewer uninsured

In Colorado, the percentage of uninsured children in 2008 was 12 percent (142,000 children). The rate of uninsured children has improved since 2000, with the most significant change since 2006 (Figure 27), though the Colorado percentage remained higher than the national uninsured rate for children of 10 percent.⁵³

Our youngest and most vulnerable children, birth to five, are also uninsured more often in Colorado than in the United States as a whole. In recent years, this statistic has improved (Figure 28).⁵⁴ However, despite these gains for our children, Colorado remains second to worst in the nation in insuring children living in poverty, with 28 percent uninsured in 2008 (Figure 29).⁵⁵

Figure 27

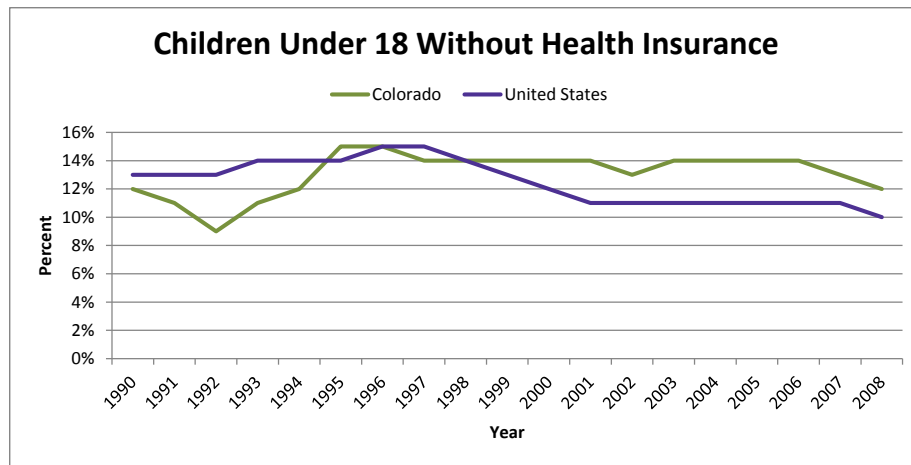

Figure 28

Uninsured Kids in Colorado

The Colorado Health Institute provides estimates of the percentage of uninsured children in Colorado by county based on analysis of the U.S. Census Bureau's American Community Survey for 2009. These estimates illustrate the regional variation in uninsured children in Colorado with the highest percentage of uninsured children living in the northwestern region and the lowest percentage in our more populated Front Range counties (Figure 30).⁵⁶

Figure 30

Percent of Children under 18 Uninsured by County

⁵⁶ Uninsured rates based on Colorado Health Institute (CHI) analyses of data from the 2009 American Community Survey (ACS). A child was counted as uninsured if his or her parent reported that the child did not have any form of health insurance at the time the ACS questionnaire was administered. These analyses were limited to Coloradans for whom ACS income data were collected.

CHP+ and Medicaid

Record-high enrollment in public health insurance programs has helped cushion the negative impact of lost employer-based insurance for children and families. During times of economic hardship, it is important to maintain access to government health care programs. These programs are essential supports to children and families, enabling recovery from the current recession. In 2009, 38 percent of kids in Colorado were enrolled in these programs (Figure 31).⁵⁷

Family Medicaid is a public health insurance program for Colorado children age 0-18 and for parents with dependent children. The program is funded jointly by a federal-state partnership and is administered by the Department of Health Care Policy and Financing. The Family Medicaid program serves:

- Financially qualified children ages birth to 18 and parents with dependent children;
- Children ages six to 18 whose family income is at or below 100 percent of the Federal Poverty Level;
- Children under the age of six and pregnant women whose family income is at or below 133 percent of the Federal Poverty Level; and
- Parents whose income is at or below 100 percent of the Federal Poverty Level.⁵⁸

Child Health Plan Plus (CHP+) is low-cost public health insurance for Colorado's uninsured children and pregnant women who earn too much to qualify for Medicaid, but cannot afford private insurance.⁵⁹ As of September 2010, CHP+ enrollment was 68,329 children and 1,644 pregnant women.⁶⁰

Figure 31

Obesity

Making healthy food choices and living an active lifestyle are essential to maintaining a healthy body weight. Although Colorado was ranked with the second lowest child overweight or obesity rate in the nation in 2003, by 2007 Colorado ranked 10th.⁶¹ According to the National Survey of Children's Health, Colorado's rate of childhood obesity has increased second fastest in the nation, behind Nevada. As shown in Figure 32, Colorado's rate rose from 22 percent in 2003 to 27 percent in 2007.⁶²

Barriers to healthy living and a healthy weight include lack of available and affordable healthy foods, as well as a lack of safe places to exercise. These obstacles occur more often in low-income neighborhoods and for racial and ethnic minorities.⁶³ Black and Hispanic children are more likely to be overweight or obese (41 percent) compared to their non-black or non-Hispanic peers (27 percent).⁶⁴

In the United States, 45 percent of children living in poverty were overweight or obese compared to 22 percent of children living above 400 percent of the federal poverty level.⁶⁵

Figure 32

Children with a body mass index (BMI) between the 85th and 95th percentiles are classified as overweight; those with a BMI at or above the 95th percentile are classified as obese.

⁶⁴ 2007 National Survey of Children's Health.

⁶⁵ *Ibid.*

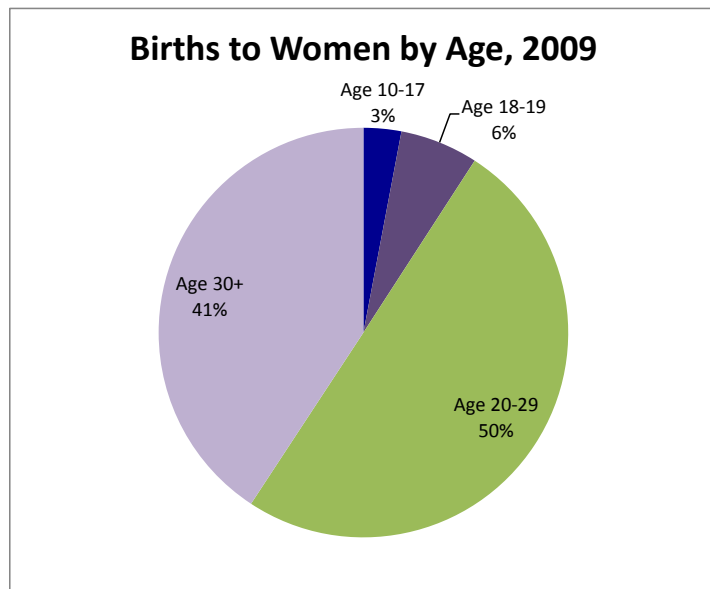

Colorado Births

In Colorado in 2009, 50 percent of babies were born to women between the ages of 20 and 29, 41 percent were born to women over the age of 30, six percent to 18 and 19 year-old women, and three percent were born to very young women between the ages of 10 and 17 (Figure 33). Overall, births to moms between the ages of 10 and 17 have gone down from 4.3 percent to three percent in 2009.⁶⁶

There is variation in birth rates by the age of the mother by county, as illustrated in Figure 34. Of the counties with over 100 total births, Rio Grande, Pueblo, and Prowers counties had the highest percentage of births to women ages 10-17 in 2009. The counties with over 10 percent of births to women 18 and 19 years are Rio Grande, Otero, Logan, Archuleta, Alamosa, Pueblo, Las Animas, and Fremont.⁶⁷

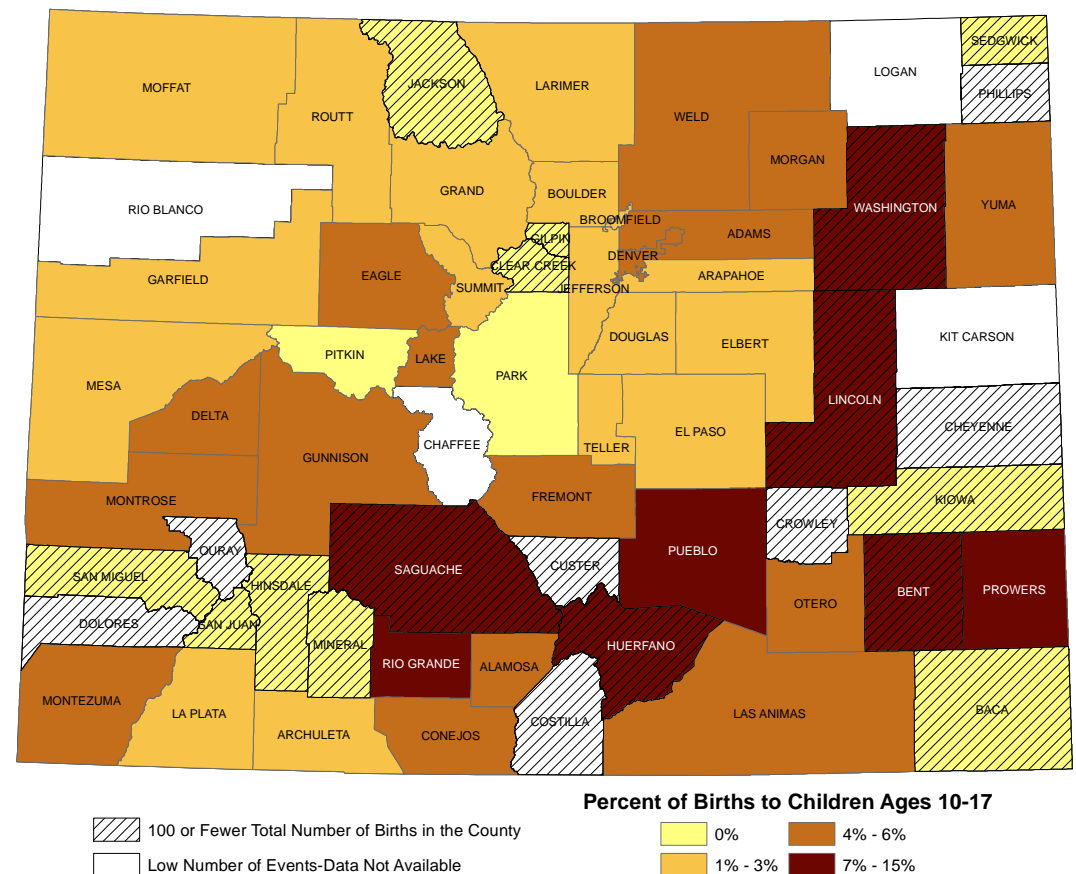

Conversely, the top 10 counties with the highest percentage of births to women age 30 and above are San Miguel, Pitkin, Douglas, Gunnison, Broomfield, Boulder, Summit, Clear Creek, Ouray, and Routt.

Figure 33

“Many of the teen parents we work with have been seriously looking for work for two years now. Some of them are beginning to settle into the unemployment lifestyle as they are too discouraged to believe they will find something, even though they keep applying.”
 – Jane Whitmer,
 Nurturing Parent Program Manager,
 Chaffee County

Figure 34

⁶⁶ Health Statistics Section, Colorado Department of Public Health and Environment.

⁶⁷ Ibid.

Very young parents are often not as emotionally, socially, and economically prepared to care for children as are older parents. Providing housing, nutritious food, and proper educational support requires economic stability, which many very young parents have not had the time or resources to establish. In addition, when children become parents, their own well-being, as well as their children's, may be compromised. It is more difficult to continue their education, which leads to lower-paying jobs and lower levels of economic opportunity over their lifetime. Compared to women who postpone childbearing until they are older, teenage mothers are more likely to drop out of school and to live in poverty.⁶⁸

According to data from the Centers for Disease Control and Prevention, births to teen mothers between the ages of 15 to 17 have been decreasing in Colorado since 2000. The rate per 1,000 females was 23 in 2007. This birth rate was slightly higher in Colorado than in the United States (Figure 35).⁶⁹

While pregnancy occurs among teenage girls of every ethnicity, race, socioeconomic status and geographic location, girls from low-income families are significantly more likely to give birth.⁷⁰

As children of teen moms grow older, they are more likely to drop out of school, become teen moms themselves, and experience homelessness, juvenile delinquency, and incarcerations.⁷¹ In all these ways, teenage childbearing exacts a high cost from both individuals and society at large.⁷²

Women Receiving Early Prenatal Care

High quality and consistent prenatal care is integral to a healthy pregnancy and a healthy baby. With regular prenatal care, women receive important screenings and tests, as well as information and education on healthy eating, exercise and behavior. From 2008 to 2009, there was a small gain in Colorado women receiving early prenatal care beginning in the first trimester. The percentage rose from 76.9 percent in 2008 to 77.7 percent in 2009 (Figure 36).⁷³

Figure 35

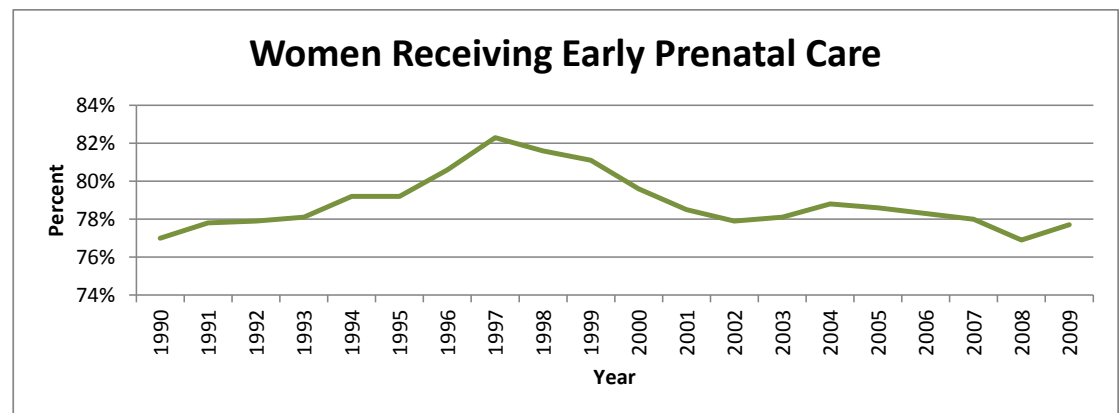

Figure 36

“KIDS COUNT data revealed that mothers in Weld County were not receiving prenatal care at the rates of mothers in other communities in this region. This data was a surprise to many in our community, and it resulted in the creation of a program we called “Go Before You Show” as a way to address the problem. For us, KIDS COUNT was not only a report, it was a call to action.”

Low Birth Weight Babies

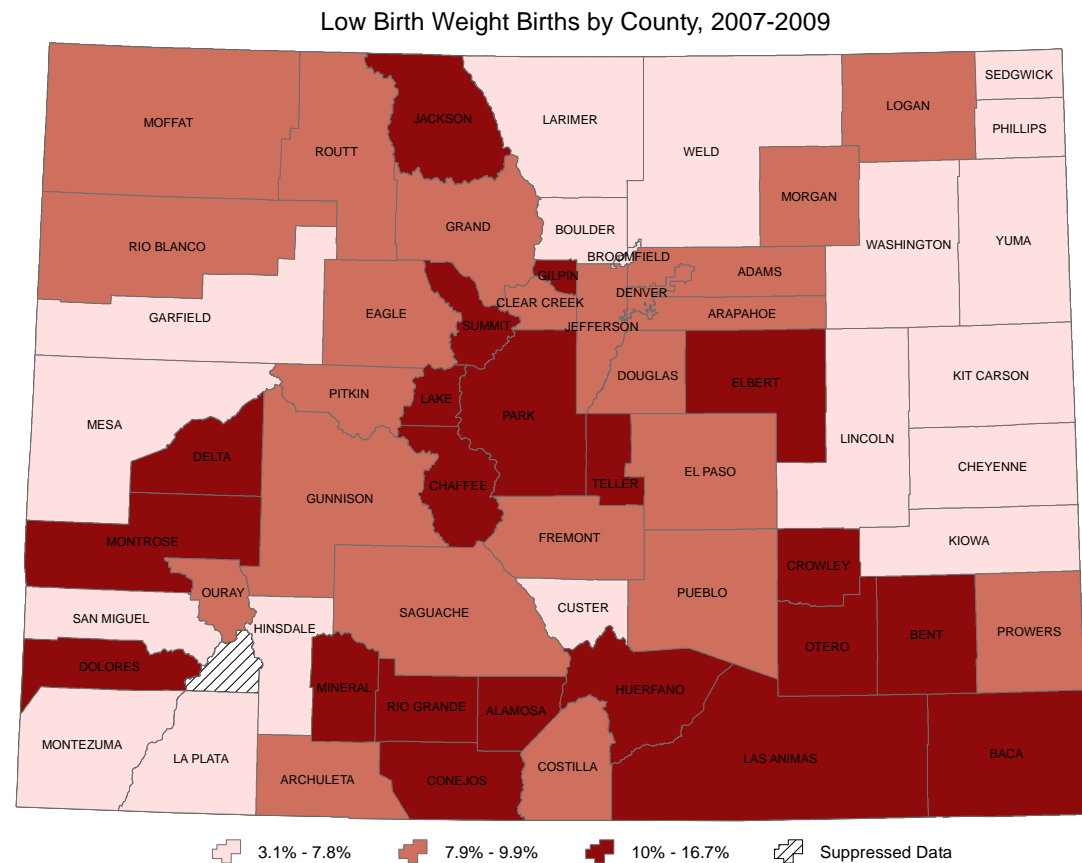

Low birth weight infants weigh five pounds, eight ounces or less at birth. Low birth weight does not simply mean a small baby; it indicates increased risk for greater medical needs after delivery and sometimes throughout life. Ramifications can include the need for neonatal intensive care, increased risk of illness, long-term learning problems, and dependence on programs that serve individuals with special needs. Babies born with low birth weights begin their lives with a greater risk of life-long physical, cognitive and behavioral disabilities.⁷⁴

In 2009, 8.8 percent of Colorado live births were classified as low birth weight. Over the past two decades, the percentage of low birth weight births has ranged between 8 percent (1990) and 9.3 percent (2005). In 2009, black infants had the highest proportion of low birth weight at 13.6 percent. This is approximately 1.6 times higher than white non-Hispanic and white Hispanic infants.⁷⁵

Low birth weight also varies geographically. Among the 63 counties with low birth weight data, 19 counties (30 percent) meet the new Healthy People 2020⁷⁶ target of 7.8 percent or below (Figure 37).⁷⁷ The remaining 44 counties experience a wide range of higher values.

In a recent analysis of single-baby births in Colorado (2007–2009)⁷⁸, two leading preventable causes of low birth weight were found: inadequate maternal weight gain and maternal smoking during pregnancy. Inadequate weight gain during pregnancy (not gaining enough weight according to the woman’s body mass index) is the largest contributor to the number of low weight births, accounting for one out of every eight low weight births or 12.9 percent.⁷⁹ This contribution was unchanged from a prior analysis of 1995–1997 births.⁸⁰ Prenatal smoking is another major contributor to low birth weight in Colorado. In 2007–2009, one in 14 low weight births (7.1 percent) could be attributed to smoking. This was a sharp decline from nearly one in eight low weight births (11.9 percent) in 1995–1997. The decline is associated with a drop in smoking prevalence among pregnant women, from 11.6 percent in 1995–1997 to 8.7 percent in 2007–2009.

Immunizations

Childhood immunizations protect children from many infectious and once-common diseases like polio, measles, diphtheria, pertussis (whooping cough), rubella (German measles), mumps, tetanus, and *Haemophilus influenzae* type b (Hib). It is much easier to prevent children from catching one of these diseases through vaccination than to treat them later. Immunizing children against vaccine-preventable diseases results in fewer doctor visits, hospitalizations, and premature deaths.⁸¹ Healthier children also mean fewer missed school days and less unplanned time off for working parents. In addition, children who are vaccinated are much less likely to spread these illnesses throughout the greater community. While the percentage of 2-year-olds who were immunized was steadily increasing in Colorado from 2002 to 2008, the rate dropped from 74.4 percent to 65.2 percent from 2008 to 2009 (Figure 38).⁸²

Figure 38

“Prowers County Public Health and Health Care Providers do an amazing job ensuring our children are receiving their immunizations on time...we couldn’t do it without them.”

Mental Health

National research indicates that the stress families feel during an economic recession particularly impacts children. The mental health of children is threatened by increased economic pressure and its corresponding negative changes in parental mental health, marital interaction, and parenting quality.⁸³ In addition, job loss and foreclosure lead to higher-mobility families which, in turn, lead to lower student achievement, higher stress, and loss of social connectedness. All of these conditions increase stress in the lives of Colorado kids.

“As the clinical counseling team supervisor, one of the concerning things I have heard in the past year to year-and-a-half is that some people who have an insurance plan that includes mental health benefits often choose not to seek therapy because they cannot afford their co-pay.”

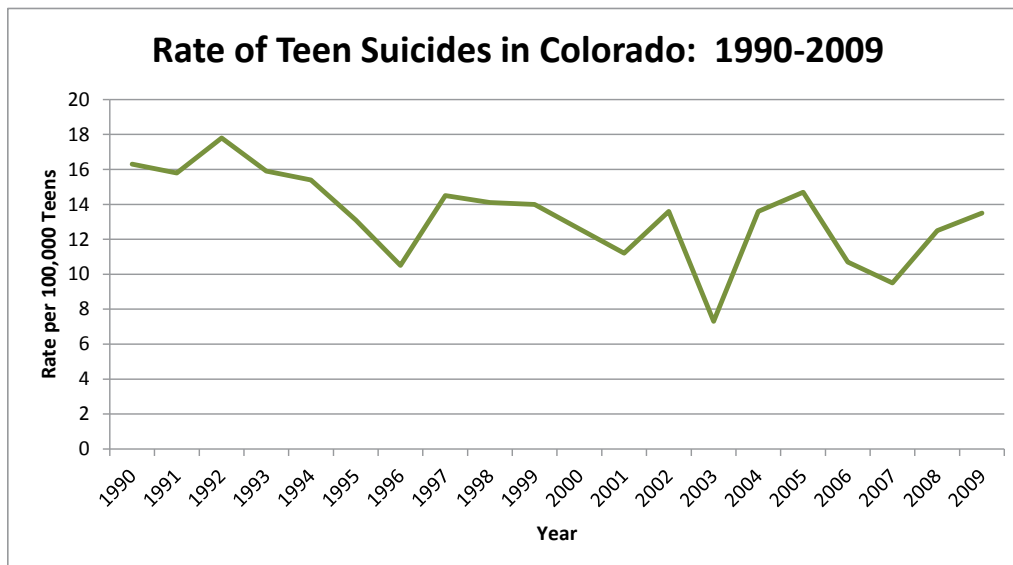

– Marsha Phelps,
Family Counseling Program, Catholic Charities, Diocese of Pueblo,
Pueblo County

Teen Suicide

Many teenagers experience feelings of stress, self-doubt, confusion, and fear, while growing up.⁸⁴ Financial uncertainty of the family, higher mobility, and parental stress caused by the current economic recession can add to these fears. The teen suicide rate of 13.5 per 100,000 teens was up in 2009 with 49 teen deaths due to suicide (Figure 39).⁸⁵

According to the 2009 Youth Risk Behavior Survey, about 14 percent of high school students seriously considered suicide. This estimate is down from the 16 percent estimate in the 2007 survey. Rates continue to be higher for Hispanic children compared to their white peers and higher for girls compared to boys.⁸⁶

Risky Behaviors by Teens

Cigarette, marijuana, and illicit drug use among our teens are declining in Colorado. The rate of teenagers' binge drinking, however, has not declined since 2002 in Colorado, while the national rate continues to drop. Colorado teens participate in these risky behaviors more often than their peers nationwide (Figures 40-43).⁸⁷

Figure 40

Figure 41

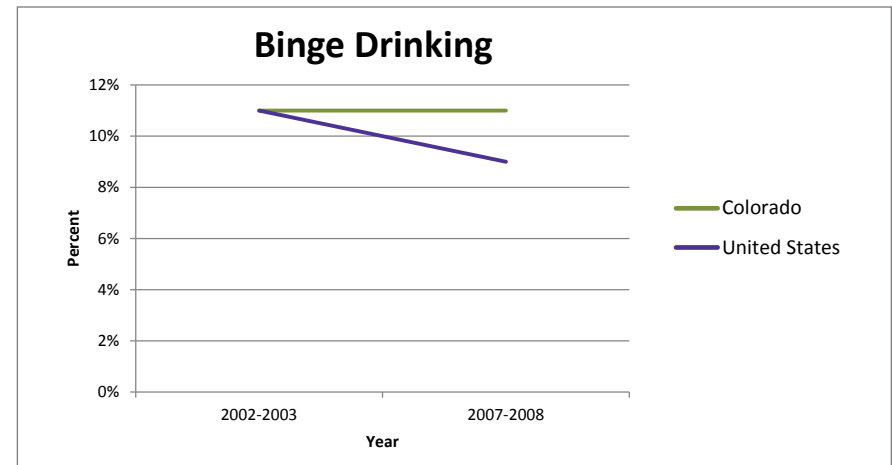

Figure 42

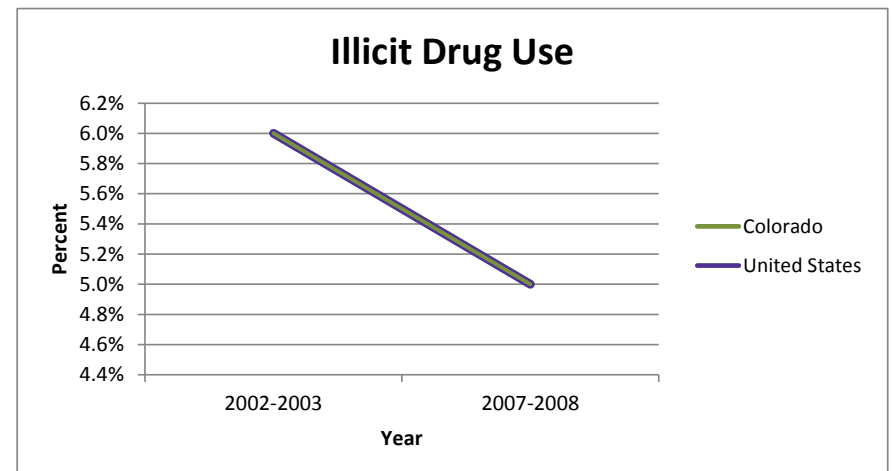

Figure 43

Child Abuse and Neglect

Children suffer many different forms of maltreatment including medical neglect, general neglect, sexual abuse and physical and/or psychological abuse. Seventy-one percent of maltreated children in Colorado experienced neglect.⁸⁸

According to the U.S. Department of Health and Human Services Administration for Children and Families, the national rate of child abuse and neglect decreased in the years leading up to the recession. Colorado, however, has had a steady increase in rates of abuse and neglect over the same period (Figure 44).⁸⁹

Analysis of rates after previous U.S. recessions shows rates of child abuse and neglect increased after both the 1990-1991 and 2001 recessions.⁹⁰ In Colorado, data from the Colorado Department of Human Services show a rise in child maltreatment from 8.6 per 1,000 children in 2008 to 9.1 per 1,000 children in 2009.⁹¹

“A young mom in Fremont County has endlessly been looking for a job and if she can’t find one, she will soon lose her young child because she can’t support him. Another young, single mom is working two jobs but can’t make ends meet.”

– Brenda Aguirre,
Home Visitation Manager,
Fremont County

Child neglect is often defined as the deprivation of basic necessities such as food, clothing, housing, or care.⁹² It is more difficult for a family in poverty to provide these resources to their children. Research shows that the condition of poverty and the associated stresses can add to parental stress, substance abuse, and domestic violence, further increasing risks to child safety and instances of child maltreatment.⁹³

Figure 45 shows that poverty and child abuse and neglect trend closely in Colorado.⁹⁴ As the number of children in poverty has increased, so has the number of abused and neglected children.

Early Childhood Care and Development

Young children are most at risk from the devastating effects of poverty. According to the American Academy of Pediatrics, “children exposed to a poor-quality environment, whether at home or outside the home, are less likely to be prepared for school demands and more likely to have their socioemotional development derailed.”⁹⁵

As the economic recession impacted jobs in Colorado, the number of children under six living in families with no parent in the labor force increased 26 percent from 2008 to about 29,000 children in 2009.⁹⁶ A parent’s ability to provide basic needs, such as food and housing, is dependent on their ability to get and keep a job that pays a living wage.

Quality child care is important to working families and child care subsidies are especially important for children in struggling families. Child care assistance not only allows parents to look for and accept work, it helps provide children with consistent, positive and supportive environments.

High-quality child care includes a safe environment, a high staff-to-child ratio, continuity of care, an emphasis on proper nutrition, and parental involvement.⁹⁷

Figure 46: In 2009, about 90,000 Colorado children under five were living in poverty. This number is up 190 percent since 2000. Nationally, the number increased 56 percent over the same period.⁹⁸

“While being poor doesn’t always undermine a child’s development, it can. The stresses some children living in poverty experience can impact memory function, brain development and a child’s overall mental health.”

– Michael Anziano,
Fort Lewis College Psychology Professor,
La Plata County

Cost of Child Care

Since 2000, the cost of child care has increased twice as fast as the median income of families with children in the United States.⁹⁹ Child care rates in Colorado are some of the highest in the country, making it a significant financial burden for families. Colorado was the fourth least-affordable state for full-time infant care in a center and fifth least-affordable state for 4-year-old care in a center in 2009 (Figures 47-48).¹⁰⁰ For a married-couple family with children under 18, the average amount paid for full-time child care for an infant in a center is 15 percent of the family's income. Full-time care for an infant in a center for a female single parent is, on average, 44 percent of household income.¹⁰¹

The economic recession made child care choices even more difficult for parents. As incomes decrease, parents who must move their children from licensed programs to more informal, less expensive child care programs of unknown quality could be sacrificing health and safety standards for lower cost.

Figure 47

Figure 48

High-quality child care is not a luxury for Colorado's working families, it is a necessity. Affordable, consistent and quality child care is essential to allowing parents to work to support their families. In addition, research shows that children who have quality early child care have greater success in school, higher graduation rates, and lower rates of juvenile crime and teen pregnancy.¹⁰² In order for Colorado's kids to reach their full potential, they must have a strong and healthy start.

Colorado Child Care Assistance Program (CCCAP)

With an increasing number of Colorado's children in need, more children are at risk, not just today as children, but in the future as adults. Quality early care and learning provides the foundation for success throughout a child's lifetime. By helping provide quality child care to low-income households, the CCCAP program helps support Colorado families in providing the best start for their children. The program encourages and aids families in finding safe, developmentally-stimulating child care settings where their children can learn and grow.¹⁰³ CCCAP is managed by the Colorado Department of Human Services, Division of Child Care and administered by individual county departments of social services. It is a federally, state and county funded program that provides assistance to low-income families that need child care support. Counties reimburse participating local child care providers according to county-defined, pre-determined rates. In addition to the various government funding sources, participating families are responsible for a portion of the cost. Individual counties also set program eligibility requirements, but they have a federal mandate to serve families making 130 percent or less of the federal poverty guideline. While aspects of the strict eligibility requirements vary between counties, eligible families are required to be working, searching for employment, training or enrolled in the Colorado Works Program (Colorado's TANF program) and have an income between 130 and 300 percent of the federal poverty guideline (amount varies by county).

Figure 49

After a general decline in the number of children enrolled in CCCAP from 2000 to 2007, program participation has been increasing since 2008. In FY 2009-2010 the program served 40,474 children (Figure 49). Seventy-nine percent of these kids attended licensed child care centers and 17 percent were cared for in licensed child care homes.¹⁰⁴

Unfortunately, while need continues to increase, subsidies for child care decrease. Since 2000, total funding for the CCCAP program in Colorado has dropped nearly five percent.¹⁰⁵ In order to adjust to smaller budgets, many counties have had to lower provider reimbursement rates, further restrict eligibility and carry wait-lists. One consequence for Colorado kids is a change in available care. As child care centers lose enrollment because families can no longer afford to send their children to a licensed center or counties reduce the reimbursement rate paid to child care providers, some centers have had to close, leaving families with fewer child care options.

“The Children’s Garden, the largest child care center in the San Luis Valley, nearly had to shut its doors recently. The center’s fiscal agent could no longer justify supporting the center. With very little advance planning, the Early Childhood Council of the San Luis Valley stepped in and took over lease of the facility. They brought together a community board to raise funds, engage in public relations, and hopefully put the center on the path to self-sufficiency. It’s only one example of how the community is pulling together to try to minimize the consequences and help ensure that families experience as little disruption of early childhood services as possible.”

– Sherri Valdez,
Executive Director, Early Childhood Council of the San Luis Valley
San Luis Valley

¹⁰⁵ The Colorado Children’s Campaign, Colorado Children’s Budget 2010.

As less money is available for the program and some counties change their eligibility requirements (Figure 50), it is increasingly difficult for families to qualify for services.¹⁰⁶ These families can become victims of what is known as the cliff effect, not because of a rise in wages, but because of a decrease in eligibility. When low-income households lose their eligibility for child care assistance, it adds even more economic, job and child care stress. For many low-income working families, the child care assistance program is a necessary service that supports working parents while ensuring a quality care setting for their children. As child care is often the most costly expense for a family, the loss of this assistance may be the factor that pushes a family into poverty rather than self-sufficiency.

- Seven Colorado counties raised their eligibility limit since 2008.
- Twenty-one Colorado counties have had to reduce their eligibility rate between November 2008 and November 2010, seven of them lowering their rate to the minimum allowed by the federal government, 130 percent of the FPL, or \$28,665 a year for a family of four.
- Even with the reduced eligibility, on November 18, 2010, there were still 5,205 eligible Colorado children waiting for services.¹⁰⁷

Figure 50

“Due to the impact of having to lower the poverty level requirement, we have seen some families who are having to rely on families and friends for care.”

Education

The recession has increased state budget shortfalls and decreased K-12 education funding. Statewide, school districts have had to make tough choices about how to allocate dwindling resources. Closing schools, increased class size, reduced staff, employee furlough days, and reduced bus service are some of the options to help lower districts' costs.

Smaller budgets are not the only challenge facing Colorado's public schools. Schools are also dealing with increasing numbers of children living in poverty and the challenges associated with providing these children with a quality education. Childhood poverty can lead to lower proficiency on state assessments, widened achievement gaps, lower graduation rates and higher dropout rates.

Early Childhood Education

Head Start

Early Head Start and Head Start are federally funded programs intended to provide comprehensive child development services to children in low-income families. Early Head Start serves children birth to three years and Head Start serves children three to five years old. These programs promote school readiness by enhancing the social and cognitive development of children through educational, health, nutritional, social, and other services to enrolled children and families.

In Colorado, enrollment in these programs increased by 20 percent since 2000, with more than 13,200 children enrolled in 2010 (Figure 51).¹⁰⁸

Figure 51

“There are reasons someone from an economically disadvantaged home may struggle more in class, including less access to printed materials and trips to educational places. These gaps have nothing to do with intelligence. It has everything to do with experience you bring to the game of learning... When you don't have much income, are you paying rent or buying a book? Going to Denver to the aquarium or buying food?”

– Andy Laase,
Executive Director of Elementary Schools in District 51,
Mesa County

Preschool

Attending a high-quality preschool helps children build the skills they need to be ready to learn by the time they begin elementary school. It also helps prepare children for a lifetime of successful learning. Preschool participants are less likely to require special education or be retained a grade, and more likely to become proficient readers and graduate from high school and college.¹⁰⁹

Colorado Preschool Program

The Colorado Preschool Program, or CPP, provides high-quality preschool to qualified young children. Eligibility is determined by a variety of factors, including low family income, foster care, violence/neglect in the home, parent's education level and delays in language and social development. For children living in poverty, the program helps bridge the achievement gap by providing a positive and stimulating preschool experience. Children have access to educational resources as well as social and learning opportunities.

Benefits of the Colorado Preschool Program continue beyond early childhood. When comparing CPP graduates with their at-risk peers who did not participate in the program:

- The percentage of third graders scoring at or above grade level on the 2008 Colorado Basic Literacy Act assessment was almost seven percentage points higher for CPP graduates than for at-risk students that did not participate in CPP.¹¹⁰
- Graduates of CPP in 2004 and 2005 had consistently higher scores than at-risk children who did not participate in CPP on the 2008 Colorado Student Assessment Program (CSAP).¹¹¹

Participation in the program is limited, with 20,160 slots available. The Colorado Preschool Program Legislative Report 2010 estimates that in the 2008-2009 school year, at least 8,600 additional slots were still needed to serve eligible children.¹¹²

Full-day Kindergarten

Quality, full-day kindergarten programs can help children continue the academic and social gains they began in preschool. The benefits of a full-day program include greater academic success, improved social skills, and a more stable daily schedule with fewer transitions and transportation to and from school.

- Children in full-day kindergarten tend to have more success in literacy, math, general learning skills, and behavior.¹¹³
- Children in full-day kindergarten programs tend to perform better on standardized achievement tests, both in kindergarten and beyond.
- When compared with half-day programs, children in full-day kindergarten have lower grade retention and special education referral rates.¹¹⁴
- Full-day kindergarten can reduce the likelihood that children will drop out of school when they are older.¹¹⁵
- Full-day programs can reduce the financial burden of child care on a family.

The number of children attending full-day kindergarten in Colorado has increased 70 percent since 2007, to 41,729 students.¹¹⁶ In 2010, 64 percent of all kindergarteners were enrolled in a full-day program (Figure 52).¹¹⁷

K-12 Enrollment in Colorado Schools

In 2010, 843,316 students were enrolled in Colorado public schools, a five percent increase since 2007. Minority students made up 40 percent of the K-12 enrollment in 2010. The state student body was 57 percent white, 32 percent Hispanic, five percent black, three percent Asian, one percent American Indian and three percent for two or more races (Figure 53). In addition, the number of immigrant students in Colorado public schools dropped 24 percent since 2007.¹¹⁸

There are a variety of enrollment options and special programs available to students in Colorado. Trends include:

- Private, parochial and independent schools have seen enrollment decrease by 18 percent since 2007, to 50,209 students;
- The number of online students increased from 9,222 in 2007 to 15,249 in 2010;
- The number of students in home-schooling has decreased six percent since 2007 to 6,462 students. Since 2000, there has been a 31 percent reduction in the number of students in home school;
- The number of students enrolled in public schools outside of the district in which they live increased 29 percent between 2007 and 2010, totaling 66,296 students;
- Between 2007 and 2010, the number of special education students increased four percent, to 81,213 students; and
- The number of English Language Learner (ELL) students increased 10 percent since 2007, to 117,369 students.¹¹⁹

Title I

Title I provides federal funding to schools and districts based on the poverty rates of enrolled students. The Title I program directs resources to schools and districts with the greatest need. It addresses the needs of a school's lowest performing students by providing funds that can be used in a variety of ways, including additional instructional staff, professional development and extended-day programs. According to the Colorado Department of Education, Title I focuses on school-wide reform in high poverty schools, providing students with access to scientifically-based instructional strategies and challenging academics.¹²⁰ The number of Colorado schools receiving Title I funding increased from 619 in 2007 to 709 in 2010.¹²¹

Figure 53: Pupil Enrollment in 2010

Homeless Students

Homelessness greatly increases stress on families and children. It could be said that a child’s “job” is to go to school, learn, grow and prepare for their future as adults. The instability of not having reliable, safe housing makes a homeless child’s job much more difficult. Children whose families are homeless may need additional supports in order to continue in, let alone succeed, in school.

Homeless students in Colorado are entitled to certain rights and access through the federal McKinney-Vento Homeless Assistance Act and the programs run through Title X, part C of No Child Left Behind. These rights are in place to help to ensure educational access, school stability and academic success for homeless children and youth. They include:

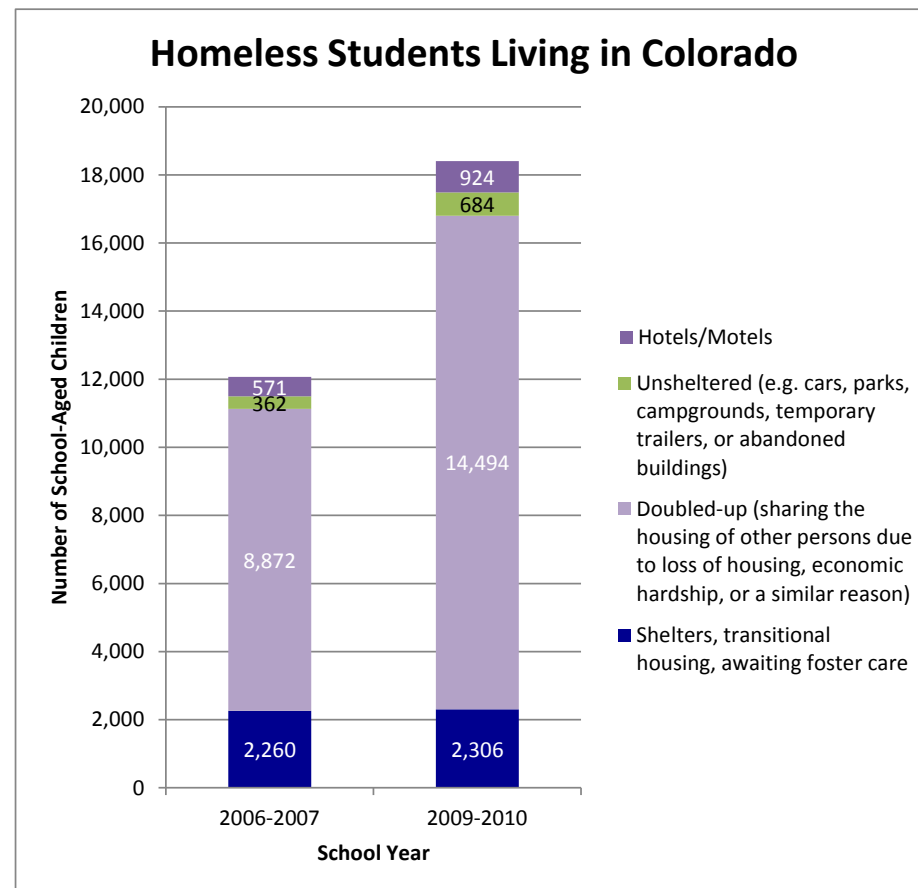

- The right to immediate enrollment in school, even without the paperwork normally required for enrollment;
- The right to attend school in his/her school of origin, if requested by the parent and is feasible, or the school in the attendance area where the family or child is currently residing;
- The right to transportation to his/her school of origin, if requested by the parent;
- The right to services comparable to those received by non-homeless schoolmates, including transportation and supplemental educational services; and
- The right to attend school with non-homeless children. Homelessness as a basis for segregation is strictly prohibited.

Figure 54 shows the increase in the number of homeless students in Colorado and where they are living. In 2010, there were more than 18,400 homeless students enrolled in public schools in Colorado. This was a 53 percent increase since the 2006-2007 school year.¹²²

“In Nurturing Parenting, we are working with a family who has been homeless for four months now. It is hard to implement nurturing routines and family rules when your whole family is living in a small one-room motel room.”

– Jane Whitmer,
Nurturing Parent Program Manager
Chaffee County

Figure 54

The Importance of Fourth Grade Reading Proficiency

Whether or not a child is proficient in reading by the beginning of fourth grade is an important indicator of future academic success. By fourth grade, children reach a point where they stop learning to read and start reading to learn. When children who are not proficient in reading have to read in order to succeed in other subjects, they often fall further behind their proficient peers.¹²³

Another measure of proficiency is the National Assessment of Educational Progress (NAEP). Because it is a national test, it allows for nationwide comparisons. According to this assessment, 40 percent of Colorado fourth graders were proficient in reading compared to the national average of 32 percent. While still above the national average, 60 percent of Colorado's fourth graders were not reading at grade level, hindering their ability to attain new information, think critically and problem solve (Figure 55).¹²⁴

Figure 55

Graduation Rates

In 2010, more than 45,000 Colorado high school students earned diplomas. The state graduation rate was 72.4 percent (Figure 56).¹²⁵

Annual earnings are often dependent on educational attainment. According to the U.S. Bureau of Labor Statistics, workers with a high school diploma earned approximately \$9,000 more per year than those without (Figure 57).¹²⁶

Figure 56

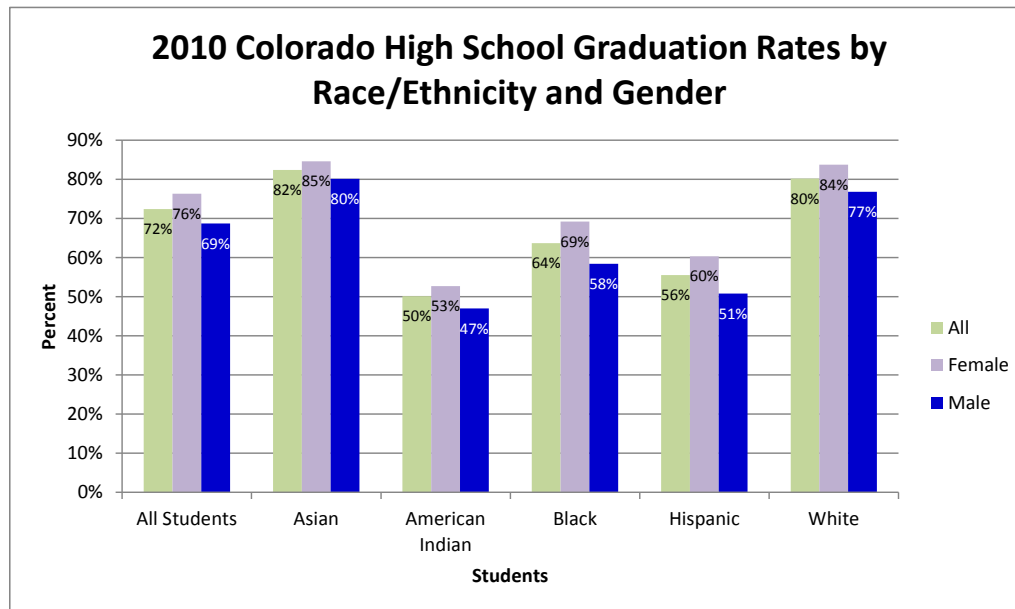

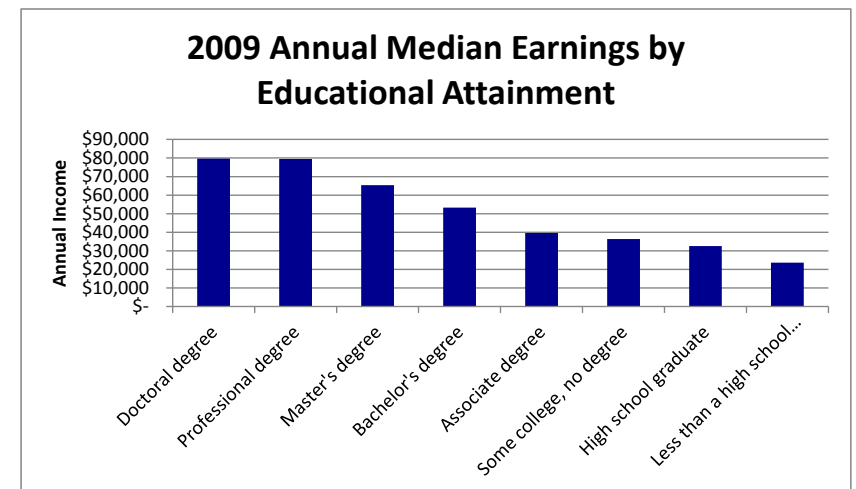

Figure 57

The High Cost of Dropouts

Too many students are leaving school without the knowledge and skills they need to meet the demands for employment in their communities. The costs of dropping out have always been high, but with the economic challenges facing today's young adults, a high school diploma is more important than ever. The Annie E. Casey Foundation research shows that "over the past three decades, people without a high school diploma have seen an absolute decline in real income and have dropped further behind individuals with more education."¹²⁷

According to the Colorado Department of Education, a person is considered a dropout if he or she leaves school without subsequently attending another school or educational program. Since the 2004-2005 school year, the dropout rate in Colorado has been declining (Figure 58). In 2010 the dropout rate was 3.1 percent.¹²⁸

The Center for Labor Market Studies reports that "over their working lives, the average high school dropout will have a negative net fiscal contribution to society of nearly -\$5,200, while the average high school graduate generates a positive lifetime net fiscal contribution of \$287,000. The average high school dropout will cost taxpayers over \$292,000 in lower tax revenues, higher cash and in-kind transfer costs, and imposed incarceration costs relative to an average high school graduate."¹²⁹

Student Achievement

The Colorado Student Assessment Program (CSAP) is one measure of student achievement in Colorado. The CSAP is used to track student performance in reading, writing, math and science. In 2010, 55 percent of Colorado students scored proficient or advanced in math, up from 41 percent in 2003. Scores also improved in reading, going from 66 percent proficient or advanced in 2003 to 68 percent in 2010. During the same time, science proficiency dropped slightly, going from 49 percent to 47 percent. Students scoring proficient or advanced in writing remained constant at 53 percent (Figure 59).¹³⁰

An achievement gap exists when one group of students out-performs another in average test scores. According to CSAP data, there continue to be significant gaps in performance based on race/ethnicity and income level. Closing these gaps is important because lower academic achievement is associated with lower rates of high school and college graduation, greater need for remediation, lower career earnings, increased incarceration rates, increased need for public assistance and increased poverty.¹³¹

Figure 60

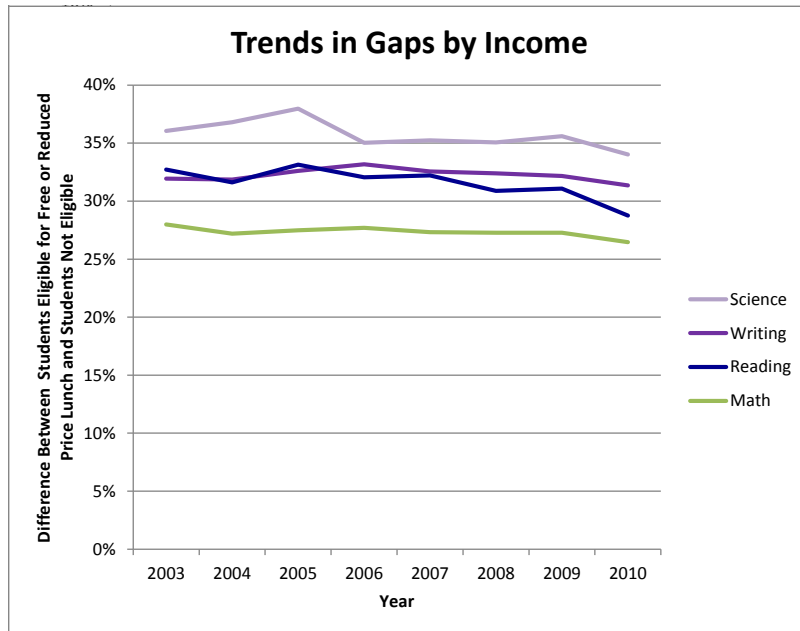

Figure 59

Figure 60 summarizes the low-income achievement gap by subject area. The chart shows the difference in CSAP scores between higher income students and lower income students. In 2003, the gap between higher and lower income students on reading was 33 percent; in 2010 the gap decreased slightly to 29 percent. In writing, the gap remained about the same, 32 percent in 2003 and 31 percent in 2010. The achievement gap between higher and lower income students decreased slightly on science and math proficiency scores. In 2003, the science achievement gap was 36 percent dropping to 34 percent in 2010. In math, the gap went from 28 percent in 2003 to 26 percent in 2010.¹³²

“There are reasons someone from an economically disadvantaged home may struggle more in class, including less access to printed materials and trips to educational places. These gaps have nothing to do with intelligence. It has everything to do with experience you bring to the game of learning. . . When you don’t have much income, are you paying rent or buying a book? Going to Denver to the aquarium or buying food?”

– Andy Laase,
Executive Director of Elementary Schools in District 51,
Mesa County

¹³¹ McKinsey & Company. (2010). *The Economic Impact of the Achievement Gap in America’s Schools*. http://www.mckinsey.com/App_Media/Images/Page_Images/Offices/SocialSector/PDF/achievement_gap_report.pdf.

¹³² Colorado Department of Education, Percent of students scoring proficient or above on the CSAP 2003-2010.

The following charts (Figures 61-68) detail student proficiency by ethnicity and income in reading, writing, science and math CSAP scores. Between 2003 and 2010, CSAP proficiency scores increased moderately for all students with minorities seeing the largest increases. Math proficiency scores increased substantially for all students with minority students making greater gains. Nevertheless, a large achievement gap continues to exist by race/ethnicity and by income as measured by free or reduced lunch enrollment. Consistently, Asian and white students have higher CSAP scores in all subject areas than do blacks, Hispanics and American Indians and higher income students score higher in all subject areas than do lower income students.¹³³

Reading Proficiency

In 2010, more than three-quarters of Asian (76 percent) and white (79 percent) students were proficient in reading compared to about half of all black, Hispanic and American Indian students'. Between 2003 and 2010, the percentage of proficient Hispanic readers increased from 41 percent in 2003 to 49 percent in 2010. Among black students 47 percent were proficient in 2003 compared to 53 percent in 2010. Asian students reading proficiency also increased from 69 percent in 2003 to 76 percent in 2010. Reading proficiency among white students increased slightly, from 77 percent in 2003 to 79 percent in 2010.¹³⁴

Figure 61

Figure 62

¹³³ Colorado Department of Education, Percent of students scoring proficient or above on the CSAP 2003-2010.

¹³⁴ Ibid.

Writing Proficiency

Overall, writing scores increased only slightly between 2003 and 2010. There was a slight dip in writing proficiency scores in 2008 among all students. A writing achievement gap by race/ethnicity and by income continues to exist. In 2010, 64 percent of Asian and white students were proficient in writing compared to 37 percent of black students, 33 percent of Hispanic students and 37 percent of American Indian students. In 2010, approximately two-thirds (65 percent) of higher income students were proficient in writing compared to 34 percent of lower income students.¹³⁵

Figure 63

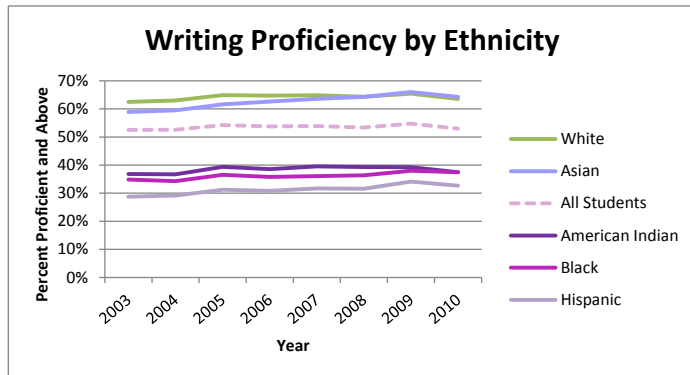

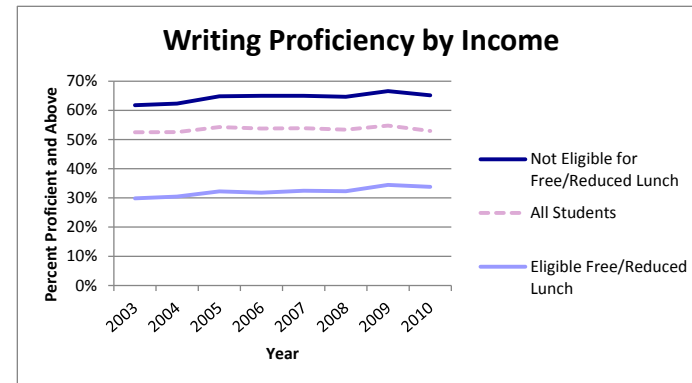

Figure 64

Science Proficiency

Science proficiency scores decreased slightly among white students and increased slightly among minority students since 2003. The same pattern can be seen among higher- and lower- income students. In 2004 and 2005, student science proficiency scores peaked and then dropped to their lowest point in 2006 before beginning a gradual increase. In 2003, 54 percent of Asian and 61 percent of white students were proficient in science. In 2010, 57 percent of Asians and 60 percent of whites were proficient in science. In 2003, 23 percent of black, 20 percent of Hispanic and 34 percent of American Indian students were proficient. Scores increased slightly in 2010 for black and Hispanic students, 36 percent black and 23 percent Hispanic were proficient in science in 2010. American Indian scores remained relatively flat since 2003. The science proficiency achievement gap between higher- and lower- income students is dramatic. In 2010, nearly two-thirds of higher income students were proficient compared to 26 percent of lower income students.¹³⁶

¹³⁶ Ibid.

Math Proficiency

Of all subject areas, the greatest gains in proficiency rates occurred in math. While a notable achievement gap between Asian and white and black, Hispanic, and American Indian students continues, increased math proficiency scores are apparent for all race/ethnicity categories. In 2003, about half of Asian (52 percent) and white (50 percent) students were proficient. In 2010, 70 percent of Asians and 65 percent of white students were proficient in math. Black student CSAP math scores increased from 18 percent in 2003 to 36 percent in 2010; Hispanic student scores increased from 19 percent in 2003 to 37 percent in 2010 and American Indian scores increased from 25 percent in 2003 to 41 percent in 2010. The achievement gap between higher and lower income students decreased slightly. In 2003, 49 percent of higher income students were proficient in math and 21 percent were proficient in 2010. Among lower income students, 21 percent were proficient in math in 2003 and 39 percent were proficient in 2010.¹³⁷

YUMA COUNTY

2011 KIDS COUNT in Colorado!

COUNTY DATA DEFINITIONS

The Colorado Children's Campaign relies on data from federal, state and local agencies. These sources are the final authority relating to the quality of any data. Please note that all vital statistics data are reported by place of residence, not place of birth or death.

POPULATION

Total Population (number)

Population estimates provided by the Colorado Demography Section, Colorado Department of Local Affairs. Estimates collected on October 25, 2010.

Child Population (number)

Population estimates by age provided by the Colorado Demography Section, Colorado Department of Local Affairs. Estimates collected on October 25, 2010.

Children as a Percentage of Total Population (percent)

Population by age provided by the Colorado Demography Section, Colorado Department of Local Affairs. Calculations performed by the Colorado Children's Campaign. This statistic shows the proportion of a county that is less than 18 years of age.

Young Child Population (number)

Number of children less than 5 years of age provided by the Colorado Demography Section, Colorado Department of Local Affairs. Population total collected on October 25, 2010.

School-Aged Population (number)

Number of children 5 through 17 years of age provided by the Colorado Demography Section, Colorado Department of Local Affairs. Population total collected on October 25, 2010.

VULNERABLE FAMILIES

Births to Single Women (percent)

Births to unmarried women per 100 births provided by the Health Statistics Section, Colorado Department of Public Health and Environment. Low number of events (LNE) indicates fewer than three births to single women in the county.

Births to Women with Less than 12 Years Education (percent)

Births to women who have less than 12 years education per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health and Environment. Low number of events (LNE) indicates fewer than three births to women with less than 12 years education in the county.

Teen Births (rate per 1,000 female teens ages 15-17)

Live births to girls ages 15 through 17 per 1,000 female teens of that age (age-specific fertility rate) provided by the Health Statistics Section, Colorado Department of Public Health and Environment. Low number of events (LNE) indicates fewer than three teen births in the county.

Three Risk Factor Births (percent)

Births to unmarried women under 25 years of age with less than 12 years education per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health and Environment. Low number of events (LNE) indicates fewer than three births in this category in the county.

COUNTY DATA DEFINITIONS (continued)

2009 Out-Of-Home Placements (rate per 1,000)

Number of children removed from their homes by the Department of Human Services per 1,000 children under age 18 provided by the Child Welfare Services Division, Colorado Department of Human Services. Out-of-home placements include family foster care, specialized group homes, residential child care facilities, independent living situations, foster care with relatives, residential treatment centers, and both emergency and non-emergency placements or shelters.

FY 2009-10 Students Served by the McKinney-Vento Homeless Education Program (percent)

Number of P-12 public school students served by the McKinney-Vento Homeless Education Program during the 2009-10 school year provided by the Colorado Department of Education, based on Colorado school district submissions. The McKinney-Vento Homeless Education Program serves homeless children and youth, which they define as “individuals who lack a fixed, regular, and adequate nighttime residence...; and includes (i) children and youths who are sharing the housing of other persons due to loss of housing, economic hardship, or similar reason; are living in motels, hotels, trailer parks, or camping grounds due to the lack of alternative accommodations; are living in emergency or transitional shelters; are abandoned in hospitals; or are awaiting foster care placement; (ii) children and youths who have a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings...(iii) children and youths who are living in cars, parks, public spaces, abandoned buildings, substandard housing, bus or train stations, or similar settings; and (iv) migratory children who qualify as homeless for the purposes of this subtitle because the children are living in circumstances described in clauses (i) through (iii).” Please note that this indicator is derived only from school or school district records. This does not represent the total number of homeless children and youth in these communities, which would include both those children who were enrolled during the year and those who were not. Additionally, children and youth in homeless situations are difficult to identify for many reasons. High mobility, fear of stigmas, and invisibility of populations not living in shelters or accessing other service agencies are examples of reported identification barriers. While the data above are based on continual district efforts in identifying students who are homeless, the complexity regarding identification challenges would indicate the actual numbers of students who are homeless in Colorado school districts and counties are most likely higher than those reported.

FAMILY ECONOMICS AND SUPPORTS

Children Qualifying for Free or Reduced Price Lunch (percent)

Percent of children in public school grades PK-12 who qualify for free or reduced price school lunches. Data provided by the Colorado Department of Education. Public school children qualify for free lunches if their family’s income is less than 130 percent of the federal poverty level. Public school children qualify for reduced price lunches if their family’s income is between 130 percent and 185 percent of the federal poverty level.

Children Qualifying for Free Lunch (percent)

See above.

Children Qualifying for Reduced Price Lunch (percent)

See above.

Median Household Income (dollars)

Median household income in 2009 provided by the U.S. Census Bureau, Small Area Income and Poverty Estimates (SAIPE).

Children (Under 18) in Poverty (percent)

Number of children under age 18 living in families with incomes below poverty level in 2009 per 100 children, provided by the U.S. Census Bureau, Small Area Income and Poverty Estimates (SAIPE).

COUNTY DATA DEFINITIONS (continued)

School-Aged Children (Ages 5-17) in Poverty (percent)

Number of children ages 5 through 17 living in families with incomes below the Federal poverty level in 2009 per 100 children, provided by the U.S. Census Bureau, Small Area Income and Poverty Estimates (SAIPE).

Children Receiving TANF Basic Cash Assistance Payments (percent)

Percentage of children (under age 18) receiving Basic Cash Assistance payments as a part of the Temporary Assistance for Needy Families (TANF) program during the calendar year. Caseload data by individual children is provided by the Colorado Department of Human Services. Calculations performed by the Colorado Children's Campaign.

Children Under 5 Receiving WIC (percent)

Percentage of children under age five served by the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) during the calendar year. Number reflects unduplicated count of children. Data provided by the Colorado Department of Public Health and Environment. Calculations performed by the Colorado Children's Campaign. Note: Some county WIC programs provide services to children from other counties. Conejos, Gilpin, Hinsdale, Mineral and San Juan counties did not have a WIC program in 2009 and children in these counties were served by neighboring counties. Children in Conejos, Costilla, Denver, Rio Grande and Weld counties are served both by WIC and CSFP (Commodities Supplemental Food Program), depending on the child's age. Cheyenne and San Juan County data is based on specific data counts by participant ID, and the program used counts this ID only once (not the number of times the participant ID is tied to a food instrument).

CHILD AND MATERNAL HEALTH

Low Birth Weight Births (percent)

Babies born weighing 5.5 pounds or less (less than 2500 grams) per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health and Environment. Low number of events (LNE) indicates fewer than three low birth weight births in the county.

Early Prenatal Care (percent)

Births in which prenatal care was initiated in the first trimester of pregnancy per 100 live births with known start of prenatal care provided by the Health Statistics Section, Colorado Department of Public Health and Environment. Low number of events (LNE) indicates fewer than three births to mothers receiving early prenatal care in the county.

Women Smoking During Pregnancy (percent)

Births in which women reported smoking during pregnancy on infant's birth certificate per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health and Environment. Please note that these data are most likely underreported on birth certificates across the state due to mothers knowing they shouldn't smoke during pregnancy. Low numbers of events (LNE) indicates fewer than three births to women smoking during pregnancy in the county.

Inadequate Maternal Weight Gain (percent)

Percentage of women who gained an inadequate amount of weight during pregnancy provided by the Health Statistics Section, Colorado Department of Public Health and Environment. Maternal weight gain status is determined using Institute of Medicine-based pre-pregnancy body mass index (BMI) and fetal gestational age-specific maternal weight gain recommendations among births of 23+ weeks gestation.

COUNTY DATA DEFINITIONS (continued)

Child Abuse and Neglect (rate per 1,000)

Incidence of maltreatment of children younger than 18 (including physical abuse, sexual abuse emotional abuse and/or neglect) provided by the Division of Child Welfare Services, Colorado Department of Human Services. The value is the number of unique substantiated cases per 1,000 children.

Infant Mortality (rate per 1,000)

Deaths in the first year of life per 1,000 live births provided by the Health Statistics Section, Colorado Department of Public Health and Environment. Low number of events (LNE) indicates fewer than three infant deaths in the county.

Child (Ages 1- 14) Deaths (rate per 100,000)

Deaths per 100,000 children ages 1 through 14 in Colorado provided by the Health Statistics Section, Colorado Department of Public Health and Environment. The data include deaths from natural causes (such as illness or congenital defects) and injury (including motor vehicle deaths, homicides and suicides). Low number of events (LNE) indicates fewer than three child deaths in the county. Note: This indicator differs from KIDS COUNT reports prior to 2001 to be more consistent with the Colorado Vital Statistics series of reports.

Teen (Ages 15-19) Deaths (rate per 100,000)

Deaths per 100,000 teens ages 15 through 19 in Colorado provided by the Health Statistics Section, Colorado Department of Public Health and Environment. The data include deaths from natural causes (such as illness or congenital defects) and injury (including motor vehicle deaths, homicides and suicides). Low number of events (LNE) indicates fewer than three teen deaths in the county. Note: This indicator differs from KIDS COUNT reports prior to 2001 to be more consistent with the Colorado Vital Statistics series of reports.

Child (Ages 1- 14) Deaths Due to Injuries (rate per 100,000)

Deaths due to intentional and unintentional injuries per 100,000 children ages 1 through 14 in Colorado provided by the Health Statistics Section, Colorado Department of Public Health and Environment. The data include deaths due to homicide, suicide and accidents. Low number of events (LNE) indicates fewer than three child deaths in the county.

Teen (Ages 15-19) Deaths Due to Injuries (rate per 100,000)

Deaths due to intentional and unintentional injuries per 100,000 teens ages 15 through 19 in Colorado provided by the Health Statistics Section, Colorado Department of Public Health and Environment. The data include deaths due to homicide, suicide and accidents. Low number of events (LNE) indicates fewer than three teen deaths in the county.

FY 2009-10 Children (0-18) Enrolled in CHP+ (percent)

Estimated number of children ages 0 through 18 enrolled in Child Health Plan Plus (CHP+) during fiscal year 2009-10 per 100 children. Data provided by the Colorado Department of Health Care Policy and Financing. Data for counties with fewer than 30 clients are not reported, which is indicated by low number of events (LNE). Rate calculated by the Colorado Children's Campaign. Children under 19 years old with family incomes up to 200 percent of the federal poverty level (FPL), who do not qualify for Medicaid, are eligible for CHP+. The statistic reported in this table is the percentage of the population ages 0 through 18 who were enrolled in CHP+ at any point during FY 09-10. Important Note: The numbers used to calculate this rate include a unique count of all clients who had eligibility at any time over the course of the year. The Child Health Plan Plus numbers reported in this table do not match official budget numbers. Official budget numbers reflect an average monthly caseload over the course of a year. The official budget numbers are lower than the numbers reported in this table. The official budget numbers are a fairly stable monthly average, while this table reports every individual served at any point during the year.

COUNTY DATA DEFINITIONS (continued)

FY 2009-10 Children (0-18) Enrolled in Medicaid (percent)

Estimated number of children ages 0 through 18 enrolled in Medicaid during fiscal year 2009-10 per 100 children. Data provided by the Colorado Department of Health Care Policy and Financing. Data for counties with fewer than 30 clients are not reported, which is indicated by low number of events (LNE). Rate calculated by the Colorado Children's Campaign. Children up to the age of 6 who are in families with incomes below 133 percent of the federal poverty level (FPL) are eligible for Medicaid. Children ages 6 through 18 years old in families with incomes below 100 percent of the FPL are also eligible for Medicaid. The statistic reported in this table is the percentage of the population ages 0 through 18 who were enrolled in Medicaid at any point during FY 09-10. Important Note: The numbers used to calculate this rate include a unique count of all clients who had eligibility at any time over the course of the year. The Medicaid numbers reported in this table do not match official budget numbers. Official budget numbers reflect an average monthly caseload over the course of a year. The official budget numbers are lower than the numbers reported in this table. The official budget numbers are a fairly stable monthly average, while this table reports every individual served at any point during the year.

Uninsured Children (percent)

Uninsured rates based on Colorado Health Institute (CHI) analyses of data from the 2009 American Community Survey (ACS). A child was counted as uninsured if his or her parent reported that the child did not have any form of health insurance at the time at which the ACS questionnaire was administered. These analyses were limited to Coloradans for whom ACS income data were collected; income and poverty data are not available for foster children and individuals living in group quarters. CHI applied a method developed by the University of Missouri to apportion ACS geographic strata to Colorado counties in order to yield county-level estimates. Due to several counties being part of the same ACS stratum, uninsured rates will be similar for several rural counties.

EDUCATION

K-12 Pupil Enrollment (number)

Number of children enrolled in public schools provided by the Colorado Department of Education.

Kindergarteners in Full-Day Program (percent)

Number of kindergarteners enrolled in full-day kindergarten programs divided by the number of students enrolled in all public kindergarten programs provided by the Colorado Department of Education. Calculations performed by the Colorado Children's Campaign.

English Language Learners (percent)

Number of students classified as English Language Learners divided by total enrollment provided by the Colorado Department of Education. Calculations performed by the Colorado Children's Campaign.

Immigrant School Aged Children (percent)

The term "immigrant children" means individuals who are ages 3-21, were not born in any state, and have not been attending one or more schools in any one or more states for more than 3 full academic years. This data was collected by the Colorado Department of Education and is available on-line at: <http://www.cde.state.co.us/cdereval/rv2010pmlinks.htm>

High School Graduation Rate (percent)

Percentage of students that graduated from high school four years after entering ninth grade. Data provided by the Colorado Department of Education. Calculations performed by the Colorado Children's Campaign.

The Class of 2010 data is the first that uses the on-time graduation rate. Therefore, this rate cannot be compared to graduation rates from previous years.

COUNTY DATA DEFINITIONS (continued)

3rd Grade Students Scoring Proficient or Above on Math CSAP (percent)

Percent of students who scored proficient or advanced on the 2010 Colorado State Assessment Program (CSAP) assessment in math provided by the Colorado Department of Education (CDE). CDE does not report CSAP data if the number of students taking the test is too small; suppressed data are indicated by low number of events (LNE). County data are based on scores from the districts that comprise each county.

3rd Grade Students Scoring Proficient or Above on Reading CSAP (percent)

Percent of students who scored proficient or advanced on the 2010 Colorado State Assessment Program (CSAP) assessment in reading provided by the Colorado Department of Education (CDE). CDE does not report CSAP data if the number of students taking the test is too small; suppressed data are indicated by low number of events (LNE). County data are based on scores from the districts that comprise each county.

3rd Grade Students Scoring Proficient or Above on Writing CSAP (percent)

Percent of students who scored proficient or advanced on the 2010 Colorado State Assessment Program (CSAP) assessment in writing provided by the Colorado Department of Education (CDE). CDE does not report CSAP data if the number of students taking the test is too small; suppressed data are indicated by low number of events (LNE). County data are based on scores from the districts that comprise each county.

8th Grade Students Scoring Proficient or Above on Math CSAP (percent)

Percent of students who scored proficient or advanced on the 2010 Colorado State Assessment Program (CSAP) assessment in math provided by the Colorado Department of Education (CDE). CDE does not report CSAP data if the number of students taking the test is too small; suppressed data are indicated by low number of events (LNE). County data are based on scores from the districts that comprise each county.

8th Grade Students Scoring Proficient or Above on Reading CSAP (percent)

Percent of students who scored proficient or advanced on the 2010 Colorado State Assessment Program (CSAP) assessment in reading provided by the Colorado Department of Education (CDE). CDE does not report CSAP data if the number of students taking the test is too small; suppressed data are indicated by low number of events (LNE). County data are based on scores from the districts that comprise each county.

8th Grade Students Scoring Proficient or Above on Writing CSAP (percent)

Percent of students who scored proficient or advanced on the 2010 Colorado State Assessment Program (CSAP) assessment in writing provided by the Colorado Department of Education (CDE). CDE does not report CSAP data if the number of students taking the test is too small; suppressed data are indicated by low number of events (LNE). County data are based on scores from the districts that comprise each county.

Note: Education data for Broomfield County is not available because there are no school districts headquartered in Broomfield County. Data on school districts that partially fall within Broomfield County is captured in data for the following counties: Adams (Northglenn-Thornton 12 and Brighton 27] school districts), Boulder (St.Vrain Valley RE-IJ school district), Jefferson (Jefferson County R-I school district) and Weld (Fort Lupton RE-8 school district).

ACKNOWLEDGEMENTS

The Colorado Children's Campaign thanks the following people and organizations that helped provide data for this *2011 KIDS COUNT in Colorado!* report, and that dedicate themselves to the well-being of Colorado's children every day. We sincerely thank you for your generous contribution of time, data and advice.
