## About the Author

Erica Frankenberg is an assistant professor in the Department of Education Policy Studies in the College of Education at the Pennsylvania State University. Her research interests focus on racial desegregation and inequality in K-12 schools, and the connections between school segregation and other metropolitan policies. Prior to joining the Penn State faculty, she was the Research and Policy Director for the Initiative on School Integration at the Civil Rights Project/Proyecto Derechos Civiles at UCLA. She received her doctorate in educational policy at the Harvard University Graduate School of Education and her A.B., *cum laude*, from Dartmouth College.

She is the co-editor of *Lessons in Integration: Realizing the Promise of Racial Diversity in America's Schools* (with Dr. Gary Orfield), published by the University of Virginia Press (2007). In 2006, Frankenberg helped coordinate and write a social science statement signed by 553 social scientists filed with the Supreme Court regarding the benefits of integrated schools. Some of her work for the Civil Rights Project has been cited by the Supreme Court in their recent educational diversity cases, *Grutter v. Bollinger* and *PICS v. Seattle School District No. 1*. Her work has also been published in education policy journals, law reviews, housing journals, and practitioner publications.

The contents of this report were developed under a Mid-Atlantic Equity Center grant from the U. S. Department of Education. However, these contents do not necessarily represent the policy of the U. S. Department of Education and you should not assume endorsement by the federal government.

The Mid-Atlantic Equity Center operated the federally funded equity assistance center serving Delaware, the District of Columbia, Maryland, Pennsylvania, Virginia, and West Virginia from 2008-2011. Its mission is to promote academic rigor for students who have traditionally been denied educational opportunities and equal access to a quality education.

# The Public School Enrollment and Segregation of the Mid-Atlantic States

by Erica Frankenberg

Prepared for

The George Washington University Center for Equity and Excellence in Education

The nation and its public school enrollment are in the midst of dramatic racial change (Frey, 2001; Orfield, 2009). Soon, the nation's public schools will enroll a majority of non-White students, a demographic reality that has already occurred in the two largest regions of the country, the South and the West. As the nation's enrollment grows more diverse and complex—Latino students, for example, outnumber Black students nationally—segregation is also on the rise. Nearly 40% of the nation's Black and Latino students are in racially isolated schools, where there are few White students (Orfield, 2009). For Black students in particular, this level of segregation is higher than it has been in four decades, prior to the implementation of more wide-ranging desegregation efforts.

While the nation diversifies and segregated schools grow, conversely, we continue to learn more about the importance of integrated schools for students of all races, and the many ways in which segregated minority schools tend to concentrate disadvantage for students that lingers long after they leave school. In 2007, based on this evidence, the Supreme Court declared that there were compelling reasons that school districts would *voluntarily* want to create diverse schools and prevent racial isolation. Simply put, the social science evidence and experience of school districts suggests that students—White and non-White students alike—benefit from being in racially diverse schools by learning to think more complexly, having stereotypes challenged, and gaining vital skills that will make them more comfortable living and working in the diverse society of the 21<sup>st</sup> century (Brief of 553 Social Scientists, 2006; Mickelson, 2008). Further, schools with high concentrations of minority students, which almost invariably are also schools with high percentages of students from low-income families, tend to lack important educational resources, and not surprisingly, are much more likely to be schools in which lower percentages of students persist to graduation. The lack of educational preparation and credentials impairs students' chances at college and post-school work opportunities.

Given these demographic trends, and the implications of them for students and society, this paper explores the composition and segregation of schools in the mid-Atlantic region.<sup>1</sup> The data analyzed in this paper is from an annual dataset collected by the U.S. Department of Education's National Center for Education Statistics. In particular, data for the District of Columbia and the five states in the mid-Atlantic region are drawn from the 1990-91, 2000-01, and 2007-08 Common Core of Data, Public School Universe.<sup>2</sup> These data provide student enrollment counts for each school, as well as counts by race-ethnicity and eligibility for free or reduced price lunch (FRL). By merging data for each school, we are able to analyze enrollment and segregation changes from 1990 to 2007. In the body of the paper, school-level data is aggregated to the state level to describe enrollment, enrollment change, and segregation. In six

---

<sup>1</sup> The mid-Atlantic region, for the purposes of this paper, includes Delaware, the District of Columbia, Maryland, Pennsylvania, Virginia, and West Virginia.

<sup>2</sup> Virginia did not provide data in 1990-01, so throughout, 1992-93 data is substituted.

appendices (one per state<sup>3</sup>, Appendices B-G), these same measures are reported for each district/local education agency (LEA) within each state.

The paper first describes the racial and economic characteristics of students in schools and districts in the mid-Atlantic region. It also examines racial and enrollment change in the region over time. It next analyzes the extent of student segregation using several common segregation measures, first examining racial segregation and then economic segregation. The overlap of racial and economic segregation is also explored.

### Descriptive Characteristics of Public School Enrollment in the Mid-Atlantic Region

Overall as a region, the mid-Atlantic states have a disproportionately higher percentage of White students than the public school enrollment in the nation as a whole (see Figure 1). It is home to a state with an extremely high percentage of White students, West Virginia, and the District of Columbia, which has the lowest share of White students among all states in the nation (see Table 1). Further, in contrast to the nation overall, the major non-White diversity remains Black students—a group which, in fact, in the mid-Atlantic region is increasing at a higher rate than the entire nation. By contrast, while Latinos have become the second largest group of students in the nation’s public schools (21%), in the mid-Atlantic region, less than 8% of students are Latino, and the region’s growth in the percentage of Latino students 1990 to 2007 has lagged behind the nation.

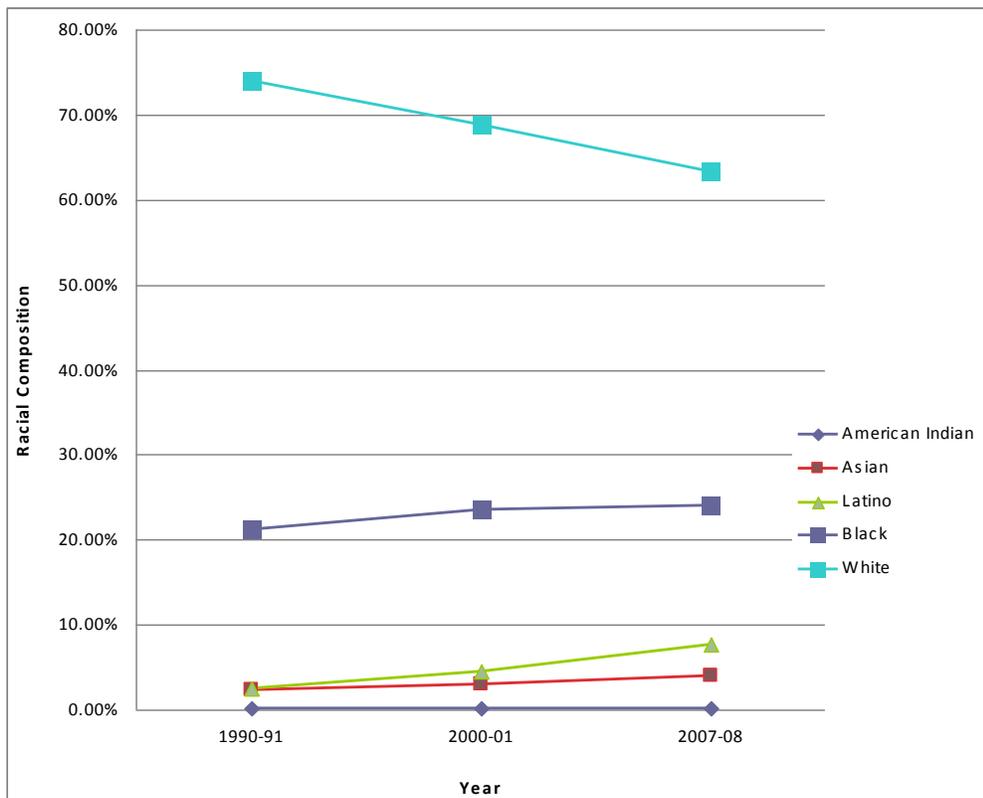

Figure 1. Racial composition in the mid-Atlantic region, 1990-2007.

<sup>3</sup>The District of Columbia, for the purposes of this paper, is referred to as a state.

Table 1  
*Racial Composition and Enrollment, by State and Region, 1990-2007*

		American Indian %	Asian %	Latino %	Black %	White %	Student enrollment	N of schools
Delaware	1990-91	0.13%	1.60%	2.89%	27.40%	67.98%	99,658	173
	2000-01	0.26%	2.28%	5.96%	30.81%	60.68%	114,676	191

Nation	1990-91	1.02%	3.46%	12.39%	15.80%	67.33%	37,654,162	84,534
	2000-01	1.17%	4.12%	16.31%	17.19%	61.22%	47,027,143	93,273
	2007-08	1.21%	4.84%	21.13%	17.04%	55.78%	48,515,020	101,757

Most states in the mid-Atlantic region have had growing student enrollments during the time period studied. The number of students in Maryland, Virginia, and Delaware, for example, grew more than 15% from 1990-2007 (see Table 2). While the number of students in Pennsylvania in 2007 was larger than in 1990, the enrollment declined after 2000. Pennsylvania also had fewer schools in 2007. By contrast, the District of Columbia had a slightly smaller number of students in 2007 than in 1990, but saw a considerable increase in students and schools after 2000, which might have partially reflected the rise in charter school enrollment. West Virginia experienced steady and substantial decline in the number of students and schools after 1990. Notably, the two states with the highest percentages of White students were the two to have declining numbers of schools during the time period examined.

Table 2  
*Percentage Change in Student Enrollment by State and Region, 1990-2007*

	1990-91	2000-01	2007-08	Percentage change (1990 to 2007)
Delaware	99,658	114,676	122,574	18.7%
District of Columbia	80,694	68,925	78,108	-3.3%
Maryland	715,176	852,920	845,700	15.4%
Pennsylvania	1,666,477	1,814,311	1,787,813	6.8%
Virginia	1,031,853	1,144,770	1,230,809	16.2%
West Virginia	322,360	286,288	282,512	-14.1%
Region	3,916,218	4,281,890	4,347,516	9.9%

Except for the District of Columbia, which had a very small percentage of White students in 1990, each state had a declining percentage of White students from 1990 to 2007. The magnitude of the decline in percentage of White students varied, however. There was a relatively small decline in West Virginia (2.5 percentage points), which remained overwhelmingly White in 2007. By contrast, Maryland and Delaware experienced a substantial loss of White students during that same time period, nearly 15 percentage points between 1990 and 2007. The percentage of White students in Pennsylvania and Virginia each declined about 10 percentage points. By 2007, Delaware, Maryland, and Virginia had relatively similar percentages of White students.

The mid-Atlantic region includes the District of Columbia, which has the highest percentage of Black students of any state in the country. In 1990, nearly 90% of students were Black, and in 2007-08, more than 80% of students were Black. In every other state, the percentage of Black students rose over time, and in some states like Delaware and Maryland, increased by at least 5 percentage points from 1990 to 2007.

The non-Black minority population grew in the mid-Atlantic region (12%), but in 2007 it remained considerably lower than the national share of such students (27%). After 1990, each state experienced a rise in Asian and Latino students, although West Virginia still had relatively miniscule numbers of both. There was a particularly rapid rise between 2000 and 2007 in the percentage of Latino students in Delaware, Virginia, and Maryland. Each nearly doubled during this seven-year time span, and Latino students comprised almost 10 % of the public school enrollment by 2007-08. Further, more than 5% of the students in Maryland and Virginia were Asian. The entire region as well as each state had very low percentages of American Indians during the time period examined.

By 2007-08, each state except West Virginia had a sizeable percentage of LEAs (school districts and charter schools) that were predominantly minority (see Table 3; see Appendices B-G for more information). In fact, except for Pennsylvania, 25% or more of each of these states' LEAs had a majority of students of color. In the entire mid-Atlantic region, 23% of LEAs were majority non-White.

Table 3

*Number and Percentage of Predominantly Minority Local Education Agencies (LEAs), 2007*

	Number of predominantly minority LEAs	Percentage of state's LEAs that are predominantly minority
Delaware	12	33%
District of Columbia	56	100%
Maryland	6	25%
Pennsylvania	111	17%
Virginia	38	29%
West Virginia	0	0%
Region	223	23%

Taken together, these trends suggest that the mid-Atlantic region is demographically distinct from the rest of the country, although the District of Columbia and West Virginia are outliers on the opposite end of the spectrum in terms of racial composition. The country, as a whole, has a much larger share of non-Black minority students and in many places has students from three or more racial groups that comprise a sizeable share of the student enrollment (Orfield, 2009). However, as is the case nationally, there is a declining percentage of White students and increasing percentages of students of color in the mid-Atlantic region. These changes are due, in part, to a declining birth rate among White adults. The growth of Latino students may reflect higher birth rates, growing immigration, and the spreading of the Latino population to secondary immigration gateways and beyond.<sup>4</sup>

### Student Poverty

West Virginia and the District of Columbia have considerably higher levels of students eligible for FRL, the commonly used measure of students from low-income households (see Table 4).<sup>5</sup> In 2007-08, just under 50% of all public school students in these states were classified as low-income—which actually represented a *decline* from 2000-01. In the District of Columbia, the decline was particularly steep and may be due, at least in part, to the growth of charter schools, a substantial fraction of which do not report FRL numbers (Frankenberg, Siegel-Hawley, and Wang, 2010). The decline in West Virginia's percentage of low-income students was less than one percentage point.

By contrast, while the percentage of students from low-income households was lower in each of the other states, the percentage rose after 2000-01. In each, the percentage of low-income students rose between three and four percentage points between 2007 and 2008. Pennsylvania, Virginia, and Maryland each had about one in three students that were low-income, while Delaware had a slightly higher percentage of low-income students in 2007-08.

<sup>4</sup> Secondary immigrant gateways refer to metropolitan areas outside of the traditional immigrant gateways (e.g., New York, Florida, California) to which migrants to the U.S. are dispersing. Atlanta is one such example (see Frey, 2002).

<sup>5</sup> The number of students eligible for free or reduced price lunch likely underestimates the number of students from poor or near-poor households due to the fact that some eligible students may not return the required paperwork for a number of reasons. Further, this classification is based on the federal poverty line, which among other things does not consider the cost of living in classifying whether a family is poor or not (e.g., family income guidelines are the same regardless of geography).

Table 4

*Percentage of Free or Reduced Lunch Students, by State and Region, 2000 and 2007*

	2000-01	2007-08
Delaware	32.93%	36.05%
District of Columbia	69.41%	49.05%
Maryland	30.00%	33.36%
Pennsylvania	28.12%	31.34%
Virginia	27.97%	31.43%
West Virginia	50.11%	49.18%
Region	30.72%	33.37%

A number of charter schools across the country did not report the number of FRL students in 2007-08, which may have influenced the aggregate state-level percentage of students as seen in Table 4 (see Frankenberg, Siegel-Hawley, and Wang, 2010 for further discussion). An alternative way to calculate the state-wide poverty rate in the public schools is to include only the schools for which we have a value in the number of FRL students. When we do so, we see somewhat higher poverty rates in several states, and a considerably higher poverty rate in the District of Columbia (see Table 4.1). In comparing the 2007-08 figures to those of 2000-01, it suggests a larger increase in low-income students in Pennsylvania and a much lower decline in low-income students in the District of Columbia schools.

Table 4.1

*Alternate Measure of Poverty\**

	2007-08
Delaware	37.05%
District of Columbia	62.61%
Maryland	33.51%
Pennsylvania	34.27%
Virginia	31.60%
West Virginia	49.18%
Region	34.84%

\*Schools that did not report a value for free or reduced lunch are excluded.

### School-Level Change

Having examined the changing nature of each state and the region's public school enrollment, we next turn to an examination of what these demographic shifts portend at the school level. This analysis examines school-level change, both in enrollment and in the percentage of White students. This part of the analysis will give a sense of changing dynamics over time, which augments the one-point-in-time measures just described.

### Rate of Racial Change

After matching data for schools in 2000 and 2007, the racial composition of 6,890 schools existed at both points in time, or approximately 89% of schools operating in 2007-08. Racial change here was measured by the decline in the percentage of White students from 2000 to 2007. The median percentage change in White students in this subset of schools in the mid-Atlantic region was a decline of 2.7 percentage points from 2000-01 to 2007-08.

Racial change varied substantially by state and by locale. Schools in Delaware and Maryland experienced sharp declines in the percentage of White students during this period: more than eight percentage points, on average, for Delaware schools and 7.6 percentage points in Maryland (see Table 5). West Virginia, on the other hand, saw minimal racial change in its schools, on average, particularly outside of its metropolitan areas. Although the District of Columbia had a slight increase in the percentage of White students, schools in suburban District of Columbia, by contrast, experienced large declines in the percentage of White students. In fact, overall, in the mid-Atlantic region, racial change was most significant in magnitude in schools in suburban regions. Particularly for larger metropolitan areas—less so for small metropolitan areas—the average school-level decline in the percentage of White students was larger in the suburbs than in the central cities of the metropolitan areas.

Table 5  
*Average White Percentage Change by State and Locale*

	Locale Code	2000-2007

Locale Code	2000-2007
Suburb, mid-size or small urbanized area	-2.23
Town	-0.81
Rural	-0.95
Total	-1.27
Region	
Large city (population of 250,000 or more)	-3.42
Mid-size or small city (population < 250,000)	-5.43
Suburb, large urbanized area	-8.16
Suburb, mid-size or small urbanized area	-6.17
Town	-2.42
Rural	-1.71
Total	-4.90

To calculate categories of racial change, we used the national percentage decline of White students, which has been approximately 0.6 percentage points per year; over the seven-year period examined here, that would be approximately 4.2 percentage points from 2000 to 2007. Using this norm, categories of racial change are constructed, that define

- *rapid* as three times this change or greater (e.g., decline of at least 12.8 percentage points);
- *moderate* as two to three times the decline (e.g., 8.4-12.8 White percentage decline);
- *normal* as White percentage change that is between zero and 8.4 percentage points; and
- *increasingly White*, any school that has an increase in the percentage of White students.

Nearly one thousand schools in the mid-Atlantic region experienced rapid racial change (i.e., decline in percentage of White students of at least 12.8%); these one thousand schools accounted for approximately 14% of schools for which we have data. An even larger number of schools experienced an increase in the percentage of White students, even as overall the percentage of White students declined.

Not surprisingly, for a state that remains overwhelmingly White, West Virginia had a very low percentage of schools (4.4% combined) experiencing rapid or moderate racial change (see Table 6). What is somewhat surprising—given how high the White percentage was in 2000—is the fact that more than 25% of schools had an increasing percentage of White students after 2000. On the other end of the spectrum, the District of Columbia also had similar patterns of school racial change as West Virginia: quite low percentages of rapidly or moderately transitioning schools and more than 30% of schools with an increasing percentage of White students.

Among the other four states, Maryland and particularly Delaware had larger shares of schools that experienced a moderate or rapid loss of White students between 2000 and 2007. In both states, nearly 25% of schools were categorized as rapidly changing, meaning that their decline in the percentage of White students was three times the norm. An additional 20% of Delaware’s schools experienced moderate racial change. Virginia had slightly higher shares of both schools experiencing rapid change (17%) and schools with increasing White percentage

(23.8%) than was the case among the entire region's schools (14% and 19.7% respectively). Pennsylvania had a disproportionately higher share of schools in the normal range: nearly 2 out of 3 schools (63.4%) in the state showed relatively little change in the percentage of White students after 2000.

Table 6  
*School Level Racial Change, by State and Region, 2000 to 2007*

		School-level White percentage change				Total
		Rapid (12.8% or greater decline in White percent)	Moderate (8.4-12.8% decline in White percent)	Normal (0-8.4% decline in White percent)	Increasing White (increase in White percent)	
Delaware	Count	45	35	73	25	178

## Enrollment Change

Just as we saw the decline in the number of White students in suburban schools, when examining shifts in the overall number of students, geographic differences emerged in the location of schools with growing enrollments. Almost 40% of schools in the mid-Atlantic region had an increasing enrollment this decade (see Table 7). The suburbs in smaller metropolitan areas had a particularly high percentage of schools with an increasing enrollment from 2000 to 2007. In metropolitan areas both large and small, schools in the suburbs were more likely to be experiencing a rising number of students than those schools in the cities, which was likely a reflection of the continuing suburbanization of the overall population. This trend of enrollment change was even more significant when viewed over a longer period of time, from 1990. It is also especially high in Virginia, where more than half of suburban schools experienced increasing enrollment between 1990 and 2007.

There appeared to be a geographic overlap between school-level trends of growing enrollment and racial change. Suburban areas that had higher shares of schools that had an increasing enrollment also had schools experiencing larger average declines in the percentage of White students (Delaware, Maryland, Virginia). The two states on opposite ends of the demographic spectrum—the District of Columbia and West Virginia—had the lowest percentage of schools with increasing enrollment 1990-2007 and the lowest rate of racial change, although in the District of Columbia this did not capture the explosion of charter schools during that time.

Table 7

*Percentage of Schools by State and Locale That Have Increasing Enrollment*

	Locale code	1990-2007	2000-2007
DC	Large city (population of 250,000 or more)	24.82%	27.03%
	Total	24.82%	27.03%
DE	Small city (population of 100,000 or less)	10.00%	62.50%
	Suburb, large urbanized area	36.36%	26.74%
	Suburb, small urbanized area	36.36%	66.67%
	Town	47.50%	48.08%
	Rural	28.57%	60.00%
	Total	37.24%	41.76%
MD	Large city (population of 250,000 or more)	23.49%	22.01%
	Small city (population of 100,000 or less)	57.14%	68.00%
	Suburb, large urbanized area	49.05%	32.21%
	Suburb, mid-size or small urbanized area	48.00%	46.26%
	Town	33.33%	35.71%
	Rural	47.24%	43.92%
	Total	45.08%	35.41%
PA	Large city (population of 250,000 or more)	30.22%	36.16%
	Mid-size city (population < 250,000)	56.68%	50.24%
	Suburb, large urbanized area	48.84%	38.94%
	Suburb, mid-size or small urbanized area	54.40%	46.51%

	Town	37.36%	38.18%
	Rural	40.62%	40.66%
	Total	43.18%	39.96%

Comparing the characteristics of schools that increased in enrollment from 2000-2007 to those that decreased, we find that there were, on average, distinctions in the student composition by race and poverty, but notably, these distinctions did not widen over this time period. Sixty percent of schools in the mid-Atlantic region for which we have 2000 and 2007 data experienced a decline in their enrollment since 2000.

Schools that have grown in the beginning of the 21<sup>st</sup> century had a disproportionately high percentage of White students and disproportionately low percentage of Black students at both the beginning and end of the time period examined (see Tables 8a and 8b). Somewhat surprisingly, there were not substantial differences in the percentage of Latino or Asian students, which might reflect the fact that there were relatively low percentages of these groups in many of the districts across the region. Schools with an increasing enrollment also had, on average, a lower percentage of low-income students. Taken together, these trends suggest that schools with increasing enrollments had student compositions that may be perceived as more “advantaged” economically on average, which may account for their growing enrollment.

Table 8a

*Student Characteristics of Schools in 2000, by Enrollment Change, 2000-07*

	Mean percentage of school students				
	Latino	Black	Asian	White	Low-income
Decreasing enrollment, 2000-2007 (N=4,149)	4.03%	24.20%	2.31%	69.23%	37.49%
Increasing enrollment, 2000-2007 (N=2,761)	4.17%	18.76%	2.60%	74.27%	29.46%

	Mean percentage of school students				
	Latino	Black	Asian	White	Low-income
Decreasing enrollment, 2000-2007 (N=4,149)	6.70%	25.48%	2.94%	64.65%	43.79%
Increasing enrollment, 2000-2007 (N=2,761)	7.19%	19.91%	3.60%	69.05%	35.29%
Region (n=6,910)	6.90%	23.25%	3.21%	66.41%	40.40%

### Racial Concentration of Students

School-level concentration of students by race is one commonly-used measure of segregation. To measure the concentration of students, I calculate the percentage of students in schools that are predominantly minority (50-100% minority), racially isolated minority (90-100% minority), or racially isolated White (90-100% White). Conceptually, 90-100% is used to signify “one-race” schools because schools that are 90% or greater minority students have been shown overwhelmingly to be schools with high concentrations of poor students, and linked to important educational disadvantages (Linn and Welner, 2007; Orfield and Lee, 2007). Likewise, both 90-100% minority schools and 90-100% White schools indicate only a token presence of

Whites or non-Whites, respectively, in such schools. White concentration has been studied less often, but is important to consider due to research showing that students of all races benefit from diverse educational settings—benefits not available to students in schools of White concentration (Brief of 553 Social Scientists, 2006).

In 2007-08, overall, White segregation, as measured by the percentage of students in 90-100% White schools, declined but remained higher in the mid-Atlantic region than the percentage of students attending racially isolated minority schools (90-100% students of color). Delaware, over the time period studied, had extremely low percentages of students in segregated White or minority schools, perhaps attributable, at least in part, to its comprehensive desegregation plan that was in place through the mid-1990s.

Counter to the national resegregation trend, as measured by the percentage of students in intensely segregated minority schools, there has been a relatively small rise in minority concentration in schools in the mid-Atlantic region since 2000 (see Figure 2). During this period, unsurprisingly, West Virginia had no students in 90-100% minority schools. The District of Columbia had an extremely high percentage of students in intensely segregated non-White schools, a result attributable to the high percentage of students of color in District of Columbia schools. A lower percentage of students in 2007 (87.3%) were in 90-100% minority schools in the District of Columbia than in 1990 (89.5%), and though this was due to a decline during the 1990s, this trend reversed somewhat since 2000. Virginia, Maryland, and Pennsylvania all experienced rising minority concentration, particularly during the 1990s, which may have been a result of the end of some court-ordered desegregation plans in Virginia and Maryland. By 2000, in Maryland, there was a higher percentage of students in intensely segregated minority schools than in segregated White schools, while the reverse pattern was true in 1990. Delaware, which had little minority concentration and had an extensive desegregation plan through the mid-1990s, saw a slight rise since 2000, while Virginia experienced a slight decline in the percentage of students in 90-100% minority schools since 2000.

The District of Columbia and Delaware had few students in 2007-08 in intensely segregated White schools. After West Virginia, Pennsylvania had the highest percentage of students in intensely segregated White schools, and a promising trend was that there was a sharp decline in White segregation in Pennsylvania, from nearly 70% of students in 1990 to less than 50% in 2007. The decline was less sharp in Maryland, Virginia, and West Virginia. Nearly 80% of West Virginia's students were in schools where at least 90% of the enrollment was White in 2007. Yet, this represented a decline from 1990 when 87% of students were in intensely segregated White schools. West Virginia's high levels of White segregation almost match the District of Columbia's levels of minority segregation.

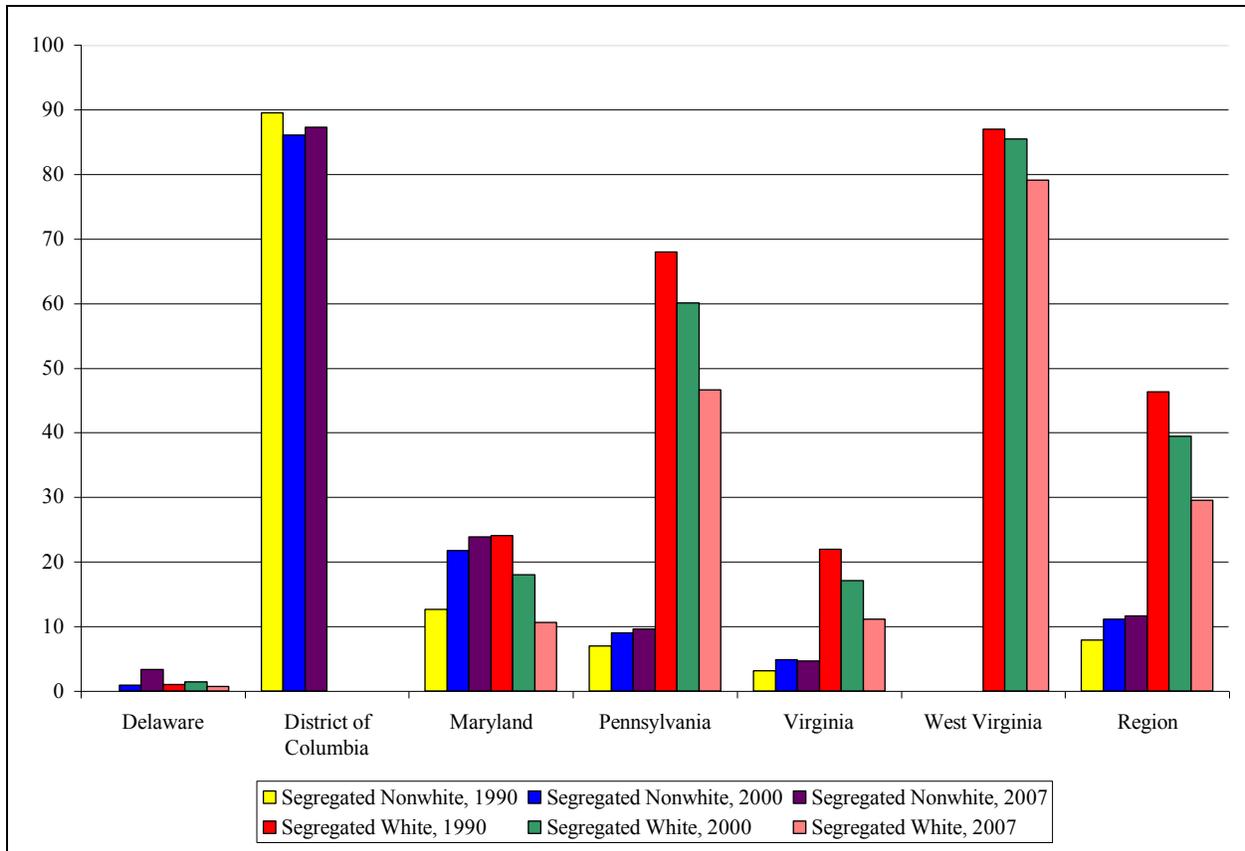

Figure 2. Percentage of students in racially isolated schools by state and year<sup>6</sup>.

Higher percentages of schools were classified as racially isolated White (see Table 9a) than the percentage of students in such schools (see Table 9b) in each state. A similar pattern holds for racially isolated non-White schools. The differences are rather small, however. Yet this analysis *does* reveal the vast number of intensely White schools in the region during the period studied. There were nearly 2,700 schools in the entire region that had less than 10% students of color, including more than 1,600 in Pennsylvania. In fact, intensely segregated White schools were more numerous than predominantly minority schools. (By definition, predominantly minority schools include all schools that are racially isolated non-White.)

When examining the number of racially isolated White or non-White schools, Delaware appeared to have relatively low segregation—just 5% of all schools fell into one of these two extremes. Yet, more than 40% of the state’s schools were classified as predominantly minority, which is higher than several other mid-Atlantic states. Likewise, a small percentage of Virginia’s schools (6%) were 90-100% minority in 2007, but more than 35% were majority non-White.

Virtually all of the District of Columbia’s schools were predominantly minority—all but 3% were predominantly minority, and most of those were 90-100% minority. On the other end of the spectrum, West Virginia only had seven predominantly minority schools, which accounts for

<sup>6</sup> Total for 1990 includes 1992-93 for Virginia.

1% of schools in 2007-08. Further, a majority of Maryland's schools were 50-100% minority and almost half of these schools were 90-100% minority.<sup>7</sup>

Table 9a  
*Number and Percentage of Schools, by Category of Racial Concentration, 2007*

		Racially isolated non-White (90-100% minority) schools	Predominantly minority (50-100% minority) schools	Racially isolated White (90-100% White) schools
Delaware	Count	9	88	2
	%	4.3%	42.5%	1.05%

	%	13.5%	30.5%	35.1%

Table 9b  
*Percentage of Students by Racial Concentration of School, 2007*

	Percentage of students in:		
	Racially isolated non-White (90-100% minority) schools	Predominantly minority (50-100% minority) schools	Racially isolated White (90-100% White) schools
Delaware	3.31%	30.74%	.72%
District of Columbia	87.29%	96.67%	0.0%
Maryland	23.87%	49.49%	10.62%
Pennsylvania	9.64%	19.93%	46.62%
Virginia	4.68%	35.46%	11.16%
West Virginia	0.0%	0.55%	79.04%
Region	11.60%	30.74%	29.56%

Finally, we examine the extent to which the racial composition of schools closely approximates the racial composition of the district. If a school's racial composition varies significantly from that of the district, it would be indicative of intra-district segregation. This method was frequently used by federal courts to assess progress with school desegregation; if a school's White, or sometimes Black, percentage deviated a certain amount (often, 10 percentage points) from the district composition, it was considered a racially imbalanced school.

Here, we extend this method to examine the extent to which each racial group, for each school, is balanced in comparison to its district. A more in-depth look at the district level is in

<sup>7</sup> Tables showing racial concentration in 1990 & 2000 are in Appendix A, Tables A1 through A4.

Appendices B-G, but Table 10 displays the share of schools in each state that are balanced for each racial group. States with small districts are likely to have a higher percentage of balanced schools, and groups that comprise a small share of students within a district are also more likely to be balanced. Thus, it is not surprising to see, for example, that Pennsylvania’s schools had high shares of racial balance for each of the four groups.

Table 10  
*Percentage of Schools Within 10 Percentage Points of District’s Racial Composition, by Race, 2007*

	White	Black	Latino	Asian
Delaware	63.83%	69.15%	84.57%	99.47%
District of Columbia	90.16%	24.59%	57.92%	97.81%
Maryland	51.13%	42.52%	78.42%	95.98%
Pennsylvania	83.78%	85.93%	90.98%	98.61%
Virginia	60.71%	72.57%	87.60%	96.08%
West Virginia	86.30%	88.77%	99.73%	99.86%
Region	71.62%	72.59%	87.61%	97.59%

*Note.* Calculated including local education agencies with at least two schools.

### Racial Exposure

Racial exposure is another way to measure a dimension of school segregation. The exposure index is a weighted average of the percentage of students of group X encountered by students of group Y; if schools were perfectly integrated then exposure to a certain group should be equal to that group’s share of the enrollment in a given district or state.<sup>8</sup> For example, in a school system that was 75% White, if the district were completely integrated, the exposure of Black or Latino students in that district to Whites would be 75%. White exposure to Whites would also be 75% under a scenario of complete integration. If the exposure index to White students varied substantially for any of these groups, it would indicate segregation. In particular, exposure is helpful for understanding the average racial composition of schools for students of each race. In this paper, exposure is calculated at the school level and aggregated to compose a state-wide exposure index (exposure is aggregated to the district level in Appendices B-G).

Examined across the entire mid-Atlantic region, there were considerable differences in interracial exposure by student race in 2007-08. Similar to national trends, White students experienced extremely high levels of isolation: 80% of the students in the typical White student’s school were also White. This was noticeably higher than the exposure of any other group to White students, particularly for Blacks, which was the second largest racial group in this region. Black students attended schools with less than 30% White students, on average.

Recall that Black students comprised approximately 24% of students in the region in 2007-08. If Black students were perfectly integrated, each group of students would have been exposed to 24% Black students in their school. Table 11 shows that Black students were considerably over-exposed to Blacks: the typical Black student went to a school that was 58% Black (see also Figure 3). By contrast, White students were substantially under-exposed to Black students (11.3%). In other words, the typical White student in this region went to a school where

<sup>8</sup> The isolation index is calculated the same as the exposure index except that it refers to the exposure of students of group X to their own group. Both are used below and referred to as exposure.

just 11% of students were Black, even though the Black share of the region’s public school enrollment was more than twice that (24%).

The isolation of Latino and Asian students was not as high as that of Black or White students, although each was exposed to higher percentages of same-race students than was their share of the region’s enrollment. Latinos and Asians both attended schools that, on average, had higher percentages of White students than was the case for Blacks in the region. The typical Latino student, for example, attended a school where 38% of students were White. As is the case nationally, Asian students in the mid-Atlantic region were in schools that appear the most integrated, and most closely parallel the racial composition of the region’s schools.

Table 11  
*School-Level Racial Exposure, Mid-Atlantic Region, 2007-08*

	Exposure of students to:			
	White	Black	Latino	Asian
White	80.38%	11.30%	4.63%	3.45%
Black	29.82%	58.28%	8.31%	3.32%
Latino	38.37%	26.07%	29.44%	5.88%
Asian	55.32%	20.17%	11.37%	12.87%
Region Percentage	63.28%	23.98%	7.64%	3.95%

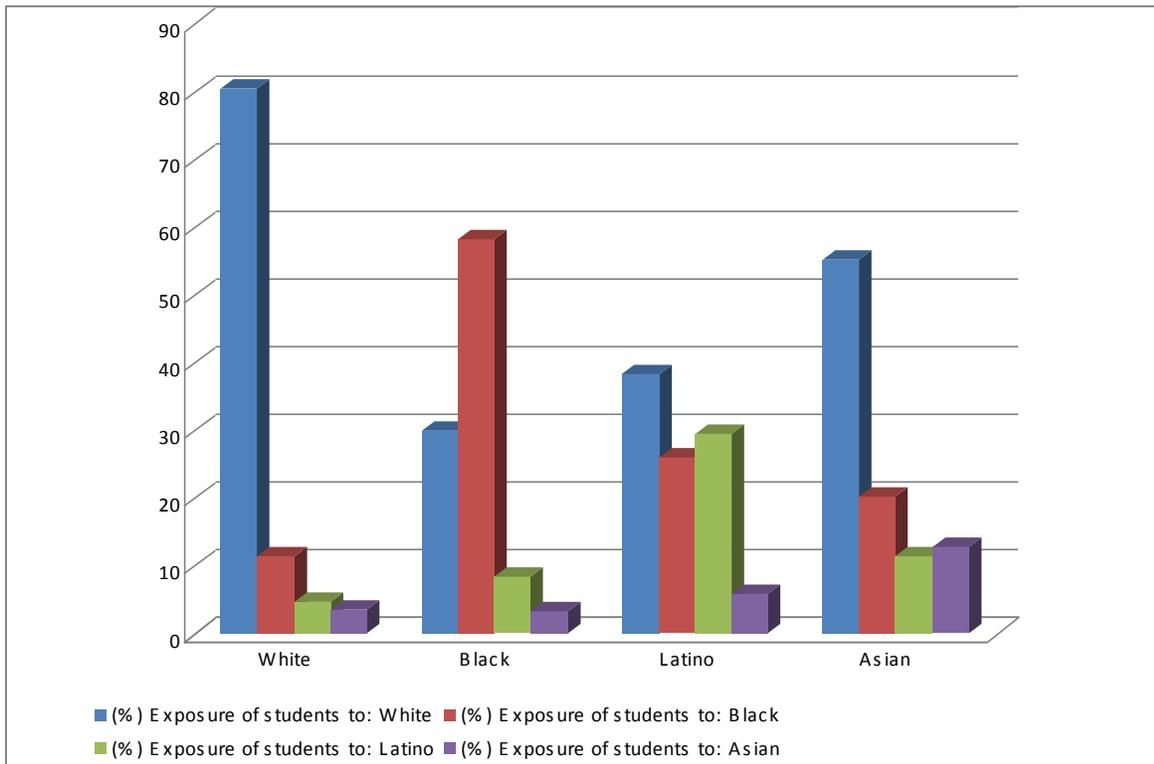

Figure 3. School-level racial exposure, mid-Atlantic region, 2007-08.

Reflecting national and regional trends, in all states but the District of Columbia, White isolation was greater than 50, meaning that the typical White student in each state went to a majority White school (see Table 12). In fact, in all states except for Delaware, the typical White student attended a school that was at least 70% White. Black students in every state but the District of Columbia were the second largest group of students in the typical White student's school (in the District of Columbia, exposure of White to Black and White students was nearly identical). Despite the fact that Black students were the second largest group of students, White exposure to Blacks was below 20% in most states, which indicates the lack of substantial interracial exposure for White students in these states. White exposure to Latinos was higher than to Asians, although only in the District of Columbia was White-Latino exposure greater than 10%.

Aside from West Virginia, which had an extremely high percentage of White students, Black exposure to Whites was quite low. The typical Black student in Delaware and West Virginia attended schools where Blacks were not the largest racial group in the school, while in all other states Black students comprised the largest percentage of any group. In Maryland, 65% of students in the typical Black student's school were Black. Black exposure to Asians was low in most states (higher in states containing suburban District of Columbia), and Black exposure to Latinos was highest in Delaware and Pennsylvania.

In 2007, nearly 75% of the Pennsylvania public school enrollment was White. Just over 15% of the state's enrollment was Black. Yet the typical Black student in 2007 attended a school that was more than 57% Black, and only 30% White (see Table 12). By contrast, the typical White student in Pennsylvania attended a school where less than 7% of students were Black. This suggests that the schools that the average White and Black student attend in Pennsylvania varied substantially in terms of student racial composition. These trends were likely influenced by the concentration of Black students in Pennsylvania's largest cities, and are indicative of striking segregation at the state level.

Table 12  
*School Level Racial Exposure of White and Black Students, by State and Region, 2007-08<sup>9</sup>*

	Exposure of White students to:				Exposure of Black students to:			
	White	Black	Latino	Asian	White	Black	Latino	Asian
Delaware	60.13%	27.63%	8.50%	3.37%	44.31%	42.30%	10.22%	2.84%
District of Columbia	40.68%	40.90%	11.41%	6.78%	2.65%	90.18%	6.28%	0.84%
Maryland	70.62%	17.70%	5.64%	5.64%	21.93%	65.20%	8.53%	3.96%
Pennsylvania	87.15%	6.46%	3.78%	2.45%	30.22%	57.18%	9.40%	3.03%
Virginia	70.23%	17.64%	6.69%	5.12%	38.82%	49.69%	7.60%	3.59%
West Virginia	94.00%	4.41%	0.81%	0.67%	78.48%	18.48%	1.71%	1.16%
Region	80.38%	11.30%	4.63%	3.45%	29.82%	58.28%	8.31%	3.32%

Because Latinos and Asians represented relatively small percentages of the enrollment in these states, these exposure indices should be interpreted cautiously. Although not as extreme as for Black students, Latinos in all states except West Virginia were exposed to low percentages of White students in 2007-08 (see Table 13). In most states, Latinos were exposed to a higher percentage of Black students than Latinos. One exception is Pennsylvania, where Latino

<sup>9</sup> See Tables A5 and A7 in Appendix A for exposure indices for White and Black students in 1990 and 2000.

isolation was 37% even though Latinos only comprised 7% of the enrollment. In Pennsylvania the typical Latino student attended a school where the percentage of Latino students (37%) was almost equal to the percentage of White students (39%), and was higher than the percentage of Black students (21%). This significant variance from the state racial composition demonstrates that, like White and Black students just described, Latino students were concentrated in schools quite unlike the overall enrollment in the state.

Asian students, by contrast, had higher exposure to White students (see Table 13). In four of the six states, the typical Asian student attended a majority White school and except for the District of Columbia, Whites were the largest racial group of students in the typical Asian’s school. Asian isolation was highest in Maryland and Virginia, which might reflect patterns in metropolitan Washington, DC. In both states, Asian students comprised less than 6% of the enrollment. It should be emphasized, however, that Asian isolation was considerably lower than the isolation of any other group in any state.

Table 13  
*School Level Racial Exposure of Latino and Asian Students, by State and Region, 2007-08<sup>10</sup>*

	Exposure of Latino students to:				Exposure of Asian students to:			
	White	Black	Latino	Asian	White	Black	Latino	Asian
Delaware	43.23%	32.40%	21.62%	2.47%	55.92%	29.45%	8.06%	6.25%
District of Columbia	6.18%	52.42%	38.11%	3.16%	24.39%	46.59%	21.00%	7.80%
Maryland	29.41%	35.89%	26.67%	7.67%	46.97%	26.66%	12.25%	13.77%
Pennsylvania	39.14%	20.79%	37.04%	2.88%	65.31%	17.28%	7.42%	9.81%
Virginia	44.58%	23.02%	23.19%	8.92%	53.45%	17.04%	13.96%	15.25%
West Virginia	84.70%	10.02%	3.94%	1.16%	86.76%	8.52%	1.45%	3.06%
Region	38.37%	26.07%	29.44%	5.88%	55.32%	20.17%	11.37%	12.87%

### Poverty Concentration and Exposure

Next, we examine students’ segregation by socioeconomic background. Students’ eligibility for FRL is the only available measure of family economic status. This section explores the concentration of low-income students and the exposure to low-income students by students’ racial and socioeconomic backgrounds.

As described previously, the percentage of low-income students in the mid-Atlantic region rose from 2000 to 2007, and this was also the trend in four of the six states. Thus, it is not entirely surprising to see that there were also rising percentages of schools where a majority of students were from low-income households. For every state except West Virginia, there was an increase in the percentage of schools that had a majority of students eligible for FRL since 2000 (see Figure 4).

West Virginia and the District of Columbia, which had considerably higher shares of low-income students, also had the highest percentage of schools with a majority of poor students and the lowest percentage of schools that were low-poverty (e.g., 0-25% students from low-

<sup>10</sup> See Tables A6 and A8 in Appendix A for exposure indices for Latino and Asian students in 1990 and 2000.

income households). By 2007, more than 80% of schools in the District of Columbia had a majority of poor students, although the percentage of extreme poverty schools (those that were 75-100% FRL) declined sharply from more than 60% of schools to less than 40%. Sixty percent of West Virginia's schools in 2007 had a majority of poor students, but less than 10% had extreme concentrations of poverty. Delaware also experienced a substantial increase in the percentage of majority low-income schools from 2000 to 2007.

Pennsylvania had the highest percentage of low-poverty schools, with nearly 40% of the state's schools in 2007 having less than 25% of low-income students. Pennsylvania also saw the sharpest decline in the percentage of low-poverty schools since 2000, when more than 50% of schools were low-poverty. More than 30% of Maryland and Virginia's schools were also low-income in 2007.

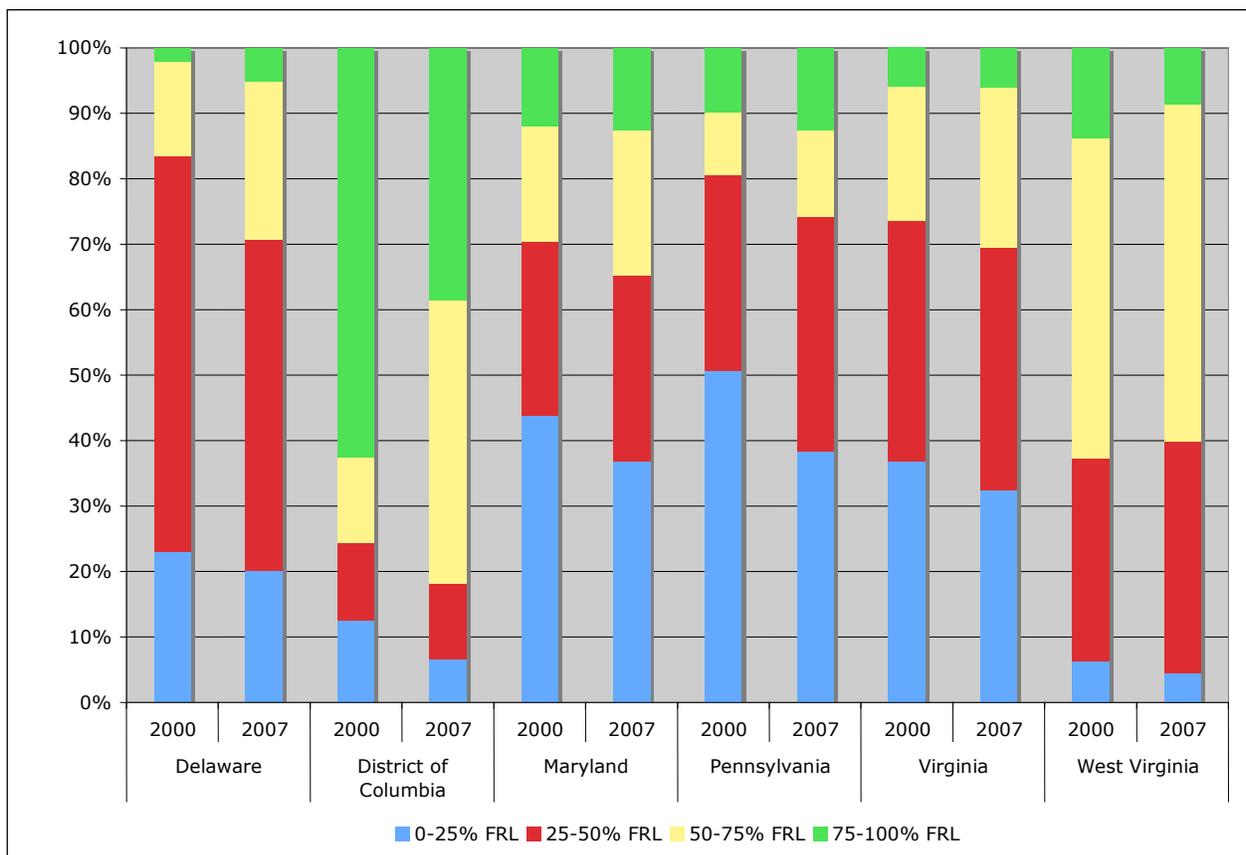

Figure 4. Percentage of schools by poverty concentration, 2000-01 and 2007-08.

An analysis of the exposure of poor and non-poor students to poor students revealed considerable differences in the mid-Atlantic region in 2007 (see Table 14). In each state, exposure to poor students was higher for other poor students than it was for non-poor students—with particularly large gaps in Maryland, Pennsylvania, and Virginia. In other words, the typical poor student in Pennsylvania went to a school where 53% of students were from low-income families, while the typical non-poor student went to a school where less than 25% of students were poor. In fact, the typical poor student in every state but Virginia and Delaware attended a school with a majority of poor students. Conversely, in most states, the vast majority of students

in a non-poor student's school are also non-poor in four states, more than 68% of students are, on average, non-poor (see Table 14, far right column).

Although a gap in the exposure of poor and non-poor students to poor students remained in the District of Columbia, the typical poor and non-poor students were exposed to a majority of poor students in their school in 2007 (see Table 14). However, a poor student attended a school where almost 70% of students were poor, on average, which represents extremely high poverty exposure. West Virginia, which also had a high share of poor students, had less economic segregation: the gap in exposure to poor students was smaller for poor and non-poor students than in any other state in 2007.

Table 14  
*School-Level Socio-Economic Exposure, by State and Region, 2007-08*

	Exposure to low-income students		Exposure to non-FRL students	
	Low-income students	Non-poor students	Low-income students	Non-poor students
Delaware	46.20%	31.66%	53.80%	68.34%
District of Columbia	69.78%	50.61%	30.22%	49.39%
Maryland	50.64%	24.87%	49.36%	75.13%
Pennsylvania	53.27%	24.51%	46.73%	75.49%
Virginia	46.79%	25.51%	53.21%	74.49%
West Virginia	53.77%	44.74%	46.23%	55.26%
Region	51.30%	26.40%	48.70%	73.60%

Comparing exposure in 2007 to that in 2000, we find that in most states, exposure to poor students rose (see Table 15 for 2000-01 data). This was the case in each state for non-poor students and in three states for poor students as well. Change from 2000 was particularly extreme in the District of Columbia, where the exposure of low-income students to other poor students dropped substantially, although it was quite high in 2000 (82.5%). In the District of Columbia, the exposure of non-poor students to poor students rose, however, which indicates a narrowing of the gap in exposure to poor students, or lower segregation by income. The exposure of low-income and non-poor students to poor students, on average, was closer in 2007 than in 2000. In Delaware, by contrast, exposure to FRL students widened over time, as the exposure to low-income students increased for the typical low-income student much more than for the typical non-poor student from 2000 to 2007.

Table 15  
*School-Level Socio-Economic Exposure, by State and Region, 2000-01*

	Exposure to FRL students		Exposure to non-FRL students	
	Low-income students	Non-poor students	Low-income students	Non-poor students
Delaware	38.43%	30.96%	61.57%	69.04%
District of Columbia	82.51%	42.72%	17.49%	57.28%
Maryland	51.55%	22.08%	48.45%	77.92%
Pennsylvania	51.92%	20.15%	48.08%	79.85%
Virginia	45.71%	24.34%	54.29%	75.66%
West Virginia	56.89%	42.70%	43.11%	57.30%
Region	51.73%	23.17%	48.27%	76.83%

In general, the exposure of White and Asian students to low-income students was considerably lower than the exposure of Black and Latino students (see Table 16). In every state except Delaware and Pennsylvania, Black students had the highest exposure to poor students, and in three states (the District of Columbia, Pennsylvania, and West Virginia) the typical Black student attended school with a majority of students from low-income households. In two states--the District of Columbia and Pennsylvania-- the exposure of Latino students to poor students was similarly high.

By contrast, in four states, the typical White student's school had 27% or less low-income students. In the District of Columbia, Maryland, and Pennsylvania, the typical White student's school had half the percentage of low-income students as did the typical Black student's. The difference in poverty exposure for Whites and Blacks was particularly large in the District of Columbia. In the mid-Atlantic region, West Virginia was an anomaly in that almost 50% of students in the typical White student's school were low-income. White exposure to poor students in West Virginia was also higher than for both Latino and Asian students, but recall that these groups comprised very small percentages of West Virginia's public school enrollment. Asians also had lower exposure to poor students than did Whites in Virginia and Delaware.

Table 16  
*School-Level Exposure to Race and Poverty, by State and Region, 2007-08*

	Exposure to FRL students				Exposure to non-FRL students			
	White	Black	Latino	Asian	White	Black	Latino	Asian
Delaware	31.23%	41.26%	46.38%	28.61%	66.69%	55.05%	50.79%	68.86%
District of Columbia	18.81%	51.08%	50.70%	34.51%	66.19%	26.50%	29.29%	50.86%
Maryland	21.83%	46.64%	43.76%	23.49%	77.81%	52.77%	55.81%	76.37%
Pennsylvania	25.19%	51.68%	53.70%	27.43%	68.13%	31.43%	37.72%	65.00%
Virginia	27.06%	44.39%	36.31%	22.41%	72.52%	54.78%	63.08%	77.22%
West Virginia	49.05%	53.81%	43.98%	39.04%	50.95%	46.19%	56.02%	60.96%
Region	27.59%	47.48%	45.47%	24.58%	68.97%	45.98%	50.37%	72.90%

Overall, Black and Latino student exposure to FRL-eligible students fell somewhat, driven by drops in Pennsylvania and the District of Columbia (see Table 17 for 2000-01 data). Overall White exposure to poor students, on the other hand, rose since 2000-2007, although it declined slightly in three states, including the District of Columbia, which even in 2000 had the lowest poverty exposure for White students.

Table 17  
*School-Level Exposure to Race and Poverty, by State and Region, 2000-01*

	Exposure to FRL students				Exposure to non-FRL students			
	White	Black	Latino	Asian	White	Black	Latino	Asian

Region	24.99%	49.78%	46.27%	24.84%	73.70%	47.83%	52.72%	73.61%

## Conclusion

This paper has provided a descriptive analysis of the public schools of the mid-Atlantic region. The region experienced increasing enrollment and diversity from 1990 to 2007, although this varied across states and by geography. In some states, 25% or more of local education agencies (districts or charter schools) had a majority non-White enrollment in 2007-08. At the same time, due to the relatively small percentages of non-Black minority students, the region—and West Virginia and Pennsylvania, particularly—had a considerably more homogenous student enrollment than the nation overall. Given the recent increases in minority groups in the region—and nationally—it will be important to monitor how continued influx of these students changes the nature of school and district-level enrollment and segregation patterns.

Students in the mid-Atlantic region in 2007-08 attend segregated schools, regardless of how racial segregation is measured. The typical Black student, for example, attended a school with vastly different racial composition than did the typical White student. One such place where differences were particularly extreme was in Pennsylvania, which has hundreds of small school districts that may be limiting interracial exposure by creating small, homogeneous and racially distinct school districts that exist in close proximity to one another. A growing share of students in the region attended racially isolated minority schools, although this growth slowed somewhat since 2000. One positive trend was the decline in the percentage of students attending racially isolated White schools after 1990, although White isolation and segregation remained quite high by 2007-08.

As is the case nationally, the mid-Atlantic region (and every state except West Virginia, which already had high levels of poverty concentration) had increasingly high shares of students in schools of concentrated poverty. What's more, this analysis has shown that students experienced vastly different levels of exposure to poor students. The typical poor student attended school with nearly twice the share of other low-income students as was the case for the typical non-poor student. Similar differences were seen by race, as Asian and White students attended schools, on average, with strikingly low percentages of poor students. Somewhat promisingly, these gaps declined after 2000.

As illustrated in the appendices, many of the racially isolated schools were charter schools, and the growth of charter schools in several mid-Atlantic states is cause for concern regarding racial segregation. A number of these schools did not report data about low-income students, but monitoring how charter schools affect poverty concentration is important.

This paper has examined segregation in different ways, and illustrates that even within a relatively small geographic region, demographic context and segregation vary considerably. Although school enrollment is affected by societal trends beyond the control of local districts, educators *can* take actions to address the within-district segregation that exists, and consider working with other school districts to provide students with diverse learning opportunities. Such efforts might help to mitigate the high levels of segregation reported here and to help prepare students for the racially diverse society they will live in as adults.
