STATISTICS OF THE EDUCATION OF NEGROES, 1929-30 AND 1931-32

INTRODUCTION

THE PURPOSE of this report is to bring together important facts concerning the education of Negroes in the United States in general, and in the 17 States and the District of Columbia where separate schools are maintained for the colored and white races, in particular. Most of the statistics appearing here may be found in the various chapters of the biennial surveys of education in the United States for the years under consideration. Many inquiries are received by the Office for information on the education of Negroes from practically every State in the Union, the outlying parts of the United States, and from foreign countries. In order to facilitate the furnishing of desired information, and in order to provide a convenient source of data for students and others interested in the subject, this report is compiled.

The statistics presented in this report relate to all levels and types of education in the 17 Southern States and the District of Columbia where separate schools for the colored and white races are maintained (hereinafter referred to as "the 18 States"). Certain facts bearing on the enrollment of Negro children in the public schools of many Northern, Eastern, and Western States where it was possible to obtain the data are also included. Some of the data are based on estimates furnished by the United States census, but most of the information was furnished by the State officers of education, and by individual schools and colleges, both public and private.

ENROLLMENT IN PUBLIC SCHOOLS

The total number of Negro pupils enrolled in public elementary and secondary schools of the 18 States during the year 1931-32 was 2,353,320 (table 1)—an increase of 377,165, or 19.1 percent, over the enrollment in 1917-18, which was 1,976,155. The increase in the population of school age (5 to 17) during the same period was 1.5. This increase in school enrollment when the school population remained almost static is a reflection of the improvement in educational conditions and facilities for Negroes, which is probably the result of at least three factors, namely: (1) Improvement in the Negroes' economic status; (2) increased interest on the part of Negroes in their own education; and (3) the changed attitudes of public officials toward the education of Negroes.

Ratio of enrollment to population.—The percentage of the total Negro population in the 18 States enrolled in public elementary and secondary schools in 1931-32 was 24.5, while the percentage of the total Negro population 5 to 17 years of age, inclusive, enrolled in public elementary and secondary schools was 81 (figure 1). For the

FIGURE 1.—Percentage of Negro population of school age, 5-17, enrolled in school, in 18 States, 1931-32 (Based on population estimates of the Bureau of the Census, 1932.)

country as a whole the percentage of the total population enrolled in public elementary and secondary schools was 21.1, and the ratio of the total enrollment to the population of school age (5 to 17) was 82. The fact that the percentage of the Negro population enrolled in school is greater than that for the country as a whole probably is due to the fact that there are more Negroes of school age. The respective percentages of Negroes and of the total popula-

tion, 5 to 17 years of age, inclusive, are 26 and 21.7.¹ The percentage of the Negro population enrolled in public schools increased from 68.6 in 1917-18 to 81 in 1931-32 (table 1).

Enrollment by grades.—In the first and second grades there is a general tendency for the enrollments to decrease from year to year, beginning with 1921 (table 2). This tendency is fairly pronounced in the first grade, and is consistent in the second grade, there being a decrease here in each succeeding year from 1921 to 1932. In the other grades there are fluctuations. Beginning with the sixth grade and through the seventh and eighth, however, enrollments have increased from year to year, the only exception being in 1929 and 1930 in the sixth and eighth grades. For each grade in the high schools the increases in enrollments from year to year are marked. The increased enrollments in the upper grades may be the result of several causes, among which are: (1) Improvement in grade distribution, and (2) increased enrollment of children in the upper grades who were enrolled in private schools. Another important reason is that pupils go to school a greater number of years because of the diminishing amount of child labor, stringency of compulsory attendance laws, and general social pressure. The decrease in enrollment in the lower grades probably is due to a decrease in the birth rate. According to the United States census the birth rate for Negroes decreased from 23.6 to 21.2 from 1927 to 1931. Also, the Census shows that the number of Negro children under 5 years of age per 1,000 Negro women 15 to 44 years of age decreased from 429 in 1920 to 393 in 1930.

Elementary school enrollment.—From 1922 to 1927 the enrollment of Negro pupils in elementary schools decreased (table 2). A year of gain was followed by another period of decreasing enrollments in 1929 and 1930. Then the trend turned upward again. The total increase in elementary school enrollment of Negro pupils in 1932 over 1921 was 89,431, or 4.2 percent.

High-school enrollment.—From 1917-18 to 1931-32 the high-school enrollment of Negro students increased from 19,242 to 135,981. This is an increase of 607 percent. The percentage of increase of Negro enrollment in each high-school grade for the years 1922 to 1932 over 1921 is shown in figure 2.

The proportion of the total Negro school population enrolled in high school increased markedly from 1917-18 to 1931-32, as shown in table 1 and figure 3. The ratio increased from 0.97 percent in 1917-18 to 5.78 percent in 1931-32, due principally to three causes: (1) Increase in high-school facilities; (2) influence of the development of Negro land-grant colleges; and (3) increased popularization of secondary

¹ U. S. Census Report, 1930.

education among Negroes. The percentages of Negro and white enrollments that were in high schools in 1932 in 18 States are shown in figure 4.

FIGURE 2.—Percentage increase of Negro enrollment in each high-school grade from 1922 to 1932, over 1921.

According to data received from all sources and from all States there is a total of 157,515 Negro youth enrolled in high schools (table 5). The enrollment of girls is 53.4 percent greater than that of boys. The enrollment of girls in the fourth year of high school is 74 percent greater than that of boys. These data emphasize one of

the major problems in the education of Negroes—that of reducing the elimination of boys from elementary and high school.

Enrollment by States.—The distribution of the Negro population of school age and the number of Negroes enrolled in 18 States for 1931-32 are shown in table 3. Significant differences exist among the States in the percentages of the Negro population of school age enrolled in school as shown in figure 1, ranging from 70.6 in Alabama to 113.8,² in the District of Columbia (figure 1). The State ranking next highest to the District of Columbia is Oklahoma with a percentage of 101.8.²

Although the percentage the total Negro high-school enrollment is of the total Negro population is 5.78, there are considerable differ-

FIGURE 3.—Percentage of total Negro school enrollment in high school, biennially, 1917-18, to 1931-32.

ences among the States in this matter also, with percentages ranging from 1.95 in Mississippi to 16.3 in the District of Columbia. Approximately 15 times as great a proportion of the Negro population is enrolled in high school in the District of Columbia as in Mississippi. Missouri, with a percentage of 13.2, ranks next to the District of Columbia.

Details concerning the enrollment by grades and types of schools are presented in table 4.

Night schools and summer schools.—Reports were received from 7 States regarding night schools and from 2 States regarding summer schools. It is believed that there are many more night schools and summer schools for Negroes in the 18 States than reported, but it is difficult to obtain reports from them. Such data as are available on the subject are presented in table A.

² More than 100 percent due to population estimate being too low.

SCHOOL ATTENDANCE AND TERM LENGTH

Attendance in relation to enrollment.—The number of Negro pupils in average daily attendance in public elementary and secondary schools in 1931-32 was 1,802,928. From 1917-18 to 1931-32 the number in average daily attendance increased 513,135, or 39.8 percent,

FIGURE 4.—Percentages Negro and white high-school enrollments are respectively of Negro and white total enrollments, 1931-32.

while the enrollment increased during the same period 19.1 percent. This marked increase in attendance over the increase in enrollment is probably due to increased interest and better administration of the compulsory attendance laws as they affect Negroes, as well as to improved educational services. Even with this great increase in attendance 550,392 were out of school each day. However, the average daily attendance of Negro children is increasing year by year.

In 1917-18 the percentage of enrolled pupils in average daily attendance was 65.7; in 1931-32 it was 76.6 (table 1).

TABLE A.—PERSONNEL AND COST OF INSTRUCTION IN PUBLIC NIGHT AND SUMMER SCHOOLS FOR NEGROES IN 7 STATES, 1931-32

State	Public night schools			Public summer schools		
	Teachers	Students	Total cost of instruction	Teachers	Students	Total cost of instruction

¹ Includes 5 teachers in part-time schools.
² Includes 111 students in part-time schools.
³ Estimated basis, other States.

The average daily attendance of white children in the States maintaining separate schools in 1932 was 81 percent of the enrollment. The corresponding percentage for all children for the country as a whole for the same year was 84.7. Between Negro and white children in the States maintaining separate schools there is a difference in the percentage of enrolled pupils in daily attendance of 4.4 in favor of the white children. The corresponding difference between Negro children in the same States and all children in the country as a whole was 8.1. The percent of enrolled Negro pupils in daily attendance in 1917 was approximately the same as that for all children in the country as a whole in 1890.³ While the disparity between the two groups in this matter has gradually decreased, it is still great. The percentage of enrolled Negro pupils in daily attendance in 1932 was approximately the same as that for all children in the country as a whole in 1915.³

Attendance by States.—The average daily attendance of and the aggregate days attended by Negro pupils in 1931-32 are given in table 6; and in figure 5 is shown the average number of days attended per pupil enrolled in the different States. There are marked differences among the States as shown by the ranges. The averages range from 73.9 days for Mississippi to 153.4 days for Delaware; a difference of 79.5 days or 4 school months. It should be noted that in

³ Biennial Survey of Education, 1930-32. Washington, Government Printing Office. U. S. Office of Education, Bulletin, 1933, No. 2

only 3 States did the colored children attend school as much as an average of 145 days. There were 5 States in which the average days attended was less than 100 days, and in only 1 State did it reach an average as high as 150 days.

Length of school term.—The average term lengths for each of the 17 States studied in schools for colored and white children for each of

FIGURE 5.—Average number of days attended per Negro pupil enrolled in 18 States compared with length of school term, 1931-32.

the years 1919-20 to 1931-32 are shown in table 7. The trends in term lengths for the 17 States combined for the same period are shown in figure 6. In schools for white children the term length in 1919-20 was 145 days and in 1931-32 it was 164 days. In schools for Negroes it was for the respective years, 120 days and 135 days. The increase for white children during this period was 19 days, for Negro children

15 days. The difference between the term lengths for the two groups of children in 1919-20 was 25 days, while in 1931-32 the difference had widened to 29 days.

The number of Negro pupils enrolled in public day schools of given term lengths in 6 States is shown in table B. Of the 922,160 pupils enrolled in these 6 States, 50 percent are in schools having term lengths of 150 days or less. Those enrolled in schools with term lengths of

FIGURE 6.—Trends in average term lengths in days for colored and white children for 17 States for the years 1919-20 to 1931-32.

90 days or less numbered 107,641, or 11.6 percent of the total. These pupils are seriously handicapped as far as opportunity to attend school is concerned. In competition with the pupils who are enrolled in schools having longer terms they will be at a great disadvantage.

Proportion of school term used.—The average number of days each Negro pupil attended school in 1931-32 was 102. The average each white pupil attended in the same States for that year was 145 days. This means that Negro children took advantage of 74.8 percent of the 135 days offered. For white children the corresponding percentage

was 88.4 of the 164 days offered. The term lengths in schools for Negroes from 1917-18 to 1931-32 and the average number of days attended per Negro pupil in average daily attendance in 18 States are given in figure 7.

Length of school term by States.—The differences among the States in term lengths in schools for Negro children are shown in table 7. In 1919-20 the range was from a term of 84 days in South Carolina to one of 181 days in Delaware. In 1931-32 the range in term lengths was from 105 days in Mississippi to 185 days in Delaware (fig. 5). From 1929-30 to 1931-32 the school term decreased for Negroes in 5 States. The range of decrease was from 2 days in Tennessee to 15 days in Arkansas and in Georgia. In only 5 States was the school term as long as 164 days in 1931-32, while in 7 States the term length was less than 140 days.

TABLE B.—ENROLLMENT OF NEGRO PUPILS IN EACH OF 7 STATES IN PUBLIC DAY SCHOOLS DISTRIBUTED ACCORDING TO THE LENGTH OF THE SCHOOL TERM OFFERED, 1931-32

State	90 days or less	91 to 110 days	111 to 130 days	131 to 150 days	151 to 170 days	171 to 190 days	191 to 210 days	Total enrollment

STUDENTS AND DEGREES CONFERRED IN INSTITUTIONS OF HIGHER LEARNING

Eighty-three institutions of higher learning for Negroes reported in 1931-32 to the Office of Education. These institutions had a total enrollment in the regular session of 30,499 students. Of this number 7,285, or 23.9 percent, were classified as preparatory. Men constituted 13,685, or 44.8 percent of the total enrollment. Sixty of the 83 institutions reporting were 4-year colleges. In these 4-year colleges a total of 24,576 students were enrolled during the regular session (table 8). Of this number 14,778, or 60.1 percent, were in 39 privately controlled institutions, and 9,798, or 39.9 percent, were enrolled in 18 publicly controlled institutions. There were 11,784 men and 12,792 women.

Enrollment in publicly controlled 4-year institutions.—Of the 9,798 students in the publicly controlled institutions 4,515, or 46 percent, were men, 2,771, or 28.3 percent, were classified as preparatory, and

1,768, or 18 percent, were classified as professional students. The relatively large preparatory enrollment was probably due to the large number of institutions which still offered high-school work, either in a regularly organized high school or for the purpose of correcting the deficiencies of many entering students. Trends in enrollment of Negroes in institutions of higher learning are shown in figure 8.

FIGURE 7.—Length of school term and average number of days attended per Negro pupil in average daily attendance in 18 States, from 1917-18 to 1931-32.

Enrollment in privately controlled 4-year institutions.—Of the 14,778 students enrolled in the privately controlled institutions 7,269, or 49.3 percent, were men (table 8). Those classified as preparatory constituted 2,441, or 16.5 percent; 1,701, or 11.5 percent, were classified as professional students. The privately supported institutions enrolled 306 graduate students during 1931-32. Two-thirds of these, or 205 were in Howard University, 69 in Atlanta University, and 24 in Fisk University. The professional students enrolled in the pri-

vately controlled institutions numbered 1,395, of whom 730 were in the various departments of Meharry Medical College and the professional schools of Howard University.

FIGURE 8.—Percentage increase in collegiate enrollment of Negro men and women biennially from 1919-20 to 1931-32, over 1917-18.

Enrollment in other institutions.—Students enrolled in the regular sessions of the 14 teacher-training institutions reporting numbered 3,713 (table 9), of whom 1,047, or 28.2 percent, were men. Fourteen junior colleges reported 2,210 regular session students for 1931-32.

Of this number 854, or 38.6 percent, were men. The preparatory enrollment in the junior colleges numbered 1,073 (table 11).

Enrollment in summer sessions and extension courses.—The in-service training of Negro teachers is largely the task of summer schools and extension courses. These have been important agencies in improving the education of Negro teachers. In the summer of 1932 there were 14,803 students enrolled in the college departments of 39 institutions reporting to the Office of Education (tables 9, 10, and 11). Of this number 6,454 were in publicly controlled institutions. In view of the fact that most of these students were public-school teachers, it is interesting to note that only 2,158, or 14.5 percent, were men. The ratio of Negro men to the total summer school enrollment represents a smaller ratio than they bear to the total number of Negro public-school teachers, which is 17.2 percent (calculated from teaching positions shown in table 12). This situation may be due to the fact that they were better trained,⁴ and hence are not required to attend summer schools in order to renew their certificates. Also, it may result from a relatively larger number of men public-school teachers attending the summer schools of eastern and northern universities.

There were 6,828 students enrolled in extension courses⁵ (tables 9, 10, and 11), of whom 4,593 were enrolled in publicly controlled institutions. There was an enrollment of 490 in correspondence courses of 4-year colleges. Publicly controlled institutions enrolled 420 students in "short courses" of 4 days or more.

Degrees conferred.—In 1931-32 there were 2,577 degrees granted by 58 4-year institutions of higher learning for Negroes. Of this number 1,215 were granted to men. The 4-year colleges granted 1,948 degrees in collegiate departments, 517 of which were from publicly controlled institutions. In addition, the publicly controlled institutions granted 195 degrees from the respective professional departments. These added to the 277 degrees from the professional departments of privately controlled institutions make 472 professional degrees for that year, 200 of which were from Howard University and Meharry Medical College. Teachers colleges granted 128 degrees; graduate departments of other types of institutions, 29 (tables 8 and 9).

TEACHERS AND ADMINISTRATIVE OFFICERS

Teaching positions in public-school systems.—The total number of teaching positions in the public schools for Negroes in 18 southern States in 1931-32 was 54,712. Of this number 9,410, or 17.2 percent,

⁴ Education of Negro teachers in the United States. (U. S. Office of Education. Bulletin, 1933, No. 10, vol. IV.) Washington, Government Printing Office, 1933.

⁵ Extension and correspondence courses are grouped together in the teacher-training institutions.

were high-school positions (table 12). Trends in the percentages of increase in the number of Negro male and female teachers in public elementary schools from 1917-18 to 1931-32 are shown in figure 9. The number from which these percentages were calculated is given in table 1. Trends in the number of teaching positions in public elementary schools for Negroes from 1917-18 to 1931-32 are shown in table 1 and figure 10.

Teachers in public high schools.—The total number of teachers in 715 public high schools reporting to the Office of Education for

FIGURE 9.—Percent of increase in number of Negro male and female public elementary school teachers from 1919-20 to 1931-32, over 1917-18.

1929-30 was 4,185 (table 13). This is far below the actual number of Negro high-school teachers as indicated by the total high-school positions reported by State school officials for 1931-32 (table 12). This difference is due to the fact that the 715 individual high schools reporting on teaching personnel did not represent all the high schools considered by State school officials in reporting teaching positions.

Pupil-teacher ratio.—The number of Negro pupils enrolled per teacher⁶ in 18 States in 1931-32 was 43. The pupil-teacher ratio for all children of the entire country for that year was 30.4.

⁶ Calculated on the basis of teaching positions (tables 4 and 12).

Variation among the States in pupil-teacher ratio for Negroes is shown in figure 10. The range is from 50.5 for Louisiana and Mississippi to 25.6 for West Virginia.

Salaries.—Because the reports from many States do not have the financial data segregated by race it is difficult to obtain complete

FIGURE 10.—Number of Negro pupils enrolled, per teacher in 18 States in 1932.

information concerning salaries of Negro teachers. The data that are available are shown in table 14. The average salary of Negro teachers in 15 States in all types of public schools in 1931-32 was \$462. The average salary of Negro elementary school teachers in 13 States was \$433; for teachers in regular and vocational high schools of 10 States, \$758.

Administrative and instructional staff in universities and colleges.—A total of 2,947 teachers and administrative officers was employed

in 83 institutions of higher learning for Negroes in 1931-32. Of this number, 1,736, or 58.9 percent, were men (tables 15 and 16). There were 795 teachers and administrative officers in the publicly controlled 4-year institutions and 1,595 in the 39 privately controlled 4-year institutions. In the 4-year institutions and junior colleges there were 657 administrative officers and 1,008 summer school teachers. There were 238 teachers employed in the summer schools of the 14 teacher-training institutions (table 16).

FIGURE 11.—Cost per Negro and white pupil in average daily attendance for 9 States. (Based on current expenses), 1931-32.

EXPENDITURES FOR NEGRO PUBLIC SCHOOLS IN 15 SOUTHERN STATES, 1931-32

Because of the fact that many of the States maintaining separate schools for the colored and white races do not segregate the financial statistics by race, considerable difficulty is experienced in obtaining facts relating to the expenditures for schools for Negroes. Data received on this subject for Negro public schools in 15 States in 1931-32 are shown in table 17.

Cost per pupil.—The annual cost per Negro pupil in average daily attendance based on current expenses for 1931-32 in nine southern States was \$15.14. The annual cost per white pupil in average daily attendance for that year in the same States was \$49.30. For all children in the country as a whole it was \$81.36. In the nine States reporting, the range for Negro children was from \$8.08 in South Carolina to \$57.81 in Maryland. The range for white children was from \$32.52 in Arkansas to \$83.50 in Maryland (fig. 11).

PROPERTY, RECEIPTS, AND EXPENDITURES FOR COLLEGES
AND UNIVERSITIES FOR NEGROES

The total revenue receipts of 76 institutions for higher education of Negroes reporting to the Office of Education in 1931-32 was \$16,921,868. For 66 institutions reporting, the value of buildings and grounds amounted to \$44,257,732.

Property and receipts of public institutions.—The value of buildings and grounds of 26 publicly supported institutions of higher learning for Negroes in 1931-32 was \$16,260,882, and the total receipts from all sources, \$4,866,212 (29 institutions). Twenty-eight institutions reported 202,741 bound volumes in the libraries (tables 18 and 19).

Property and receipts of private institutions.—The value of the buildings and grounds of 48 privately supported institutions of higher education in 1931-32 was \$27,996,850, and the total receipts from all sources amounted to \$12,055,656 (47 institutions). The number of bound volumes in the libraries was 562,896. Detailed items respecting property and receipts for the individual institutions are given in tables 18 and 19.

Expenditures.—The total current expenses of 20 publicly supported institutions for 1931-32 was \$2,894,638; the corresponding amount for 46 privately controlled institutions was \$5,729,894. Expenditures for instructional salaries for these two groups of schools were, respectively, \$1,006,129 and \$2,219,772. Expenditures for administration for the publicly and privately supported institutions reporting were, respectively, \$310,443 and \$865,582; and for capital outlay \$610,462 and \$4,321,029 (table 20). Expenditures for the 10 publicly supported teacher-training institutions reporting for 1931-32 (table 21) were for the indicated items: Current expenses, \$747,990; instructional salaries, \$313,674; and administration, \$102,121.

OTHER INSTITUTIONS

Information concerning students and instructors in 38 institutions reported as having college students, but which did not answer the inquiry for 1931-32, is shown in table 22. The data given were collected from various sources. A total of 6,835 students and 358 instructors were reported.
