DIGEST OF EDUCATIONAL STATISTICS

1963 Edition

Division of Educational Statistics Bureau of Educational Research and Development

U.S. DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE . Anthony J. Celebrezze
Secretary
Office of Education Francis Keppel
Commissioner

Foreword

Digest of Educational Statistics first printed in October 1962. It is a compilation of significant statistical material pertaining to American education. It contains information on a variety of subjects within the broad field of educational statistics, including schools, enrollments, teachers, graduates, educational attainment, finances, Federal programs in the field of education, libraries, international education, and research and development. It should prove useful to persons interested in the nature and scope of education in the United States, and in particular to those individuals who are concerned with the formulation and conduct of educational policy.

The digest is divided into five chapters: (1) Elementary and secondary education, (2) higher education, (3) all levels of education, (4) Federal programs of education, and (5) miscellaneous statistics related to American education. Certain criteria were used in selecting the statistics to be incorporated in each chapter: for example, the data were required to be nationwide in scope and of current interest and value. The latest tabulations and estimates available in each series were used, even though some of these statistics have not yet been published. Series going back 10 years or more have been employed in many instances in order to provide a certain amount of historical background. Although most of the data were transcribed directly from original sources, they were sometimes regrouped or even retabulated to fit into the general pattern of this publication.

The material was assembled and arranged by Marie Fullam, Frances Ryan, Rose Marie Walker, W. Vance Grant, Wells Harrington, and Kenneth A. Simon of the Reference, Estimates, and Projections Section under the general direction of Louis H. Conger, Jr., director, Studies and Surveys Branch, Division of Educational Statistics. Recognition should also be given to Velma Southard and Muriel Hewitt for their assistance in compiling many of the data.

It is no less a pleasure to acknowledge with gratitude the courtesy of the many persons, both in the Office of Education and elsewhere, who have supplied data, offered suggestions, and otherwise contributed toward the bringing of this digest to completion.

RALPH C. M. FLYNT,

Associate Commissioner for

Educational Research and Development

VIRGIL R. WALKER,
Acting Director,
Division of Educational Statistics

Introduction

I presents a general picture of the structure of education in the United States. At the right side of the figure three levels of education are indicated: elementary, secondary (high schools), and higher (colleges, universities, and professional schools). The approxi-

mate age of persons in each level is given at the left side.

Three structural patterns below the college level are in common use. The pattern shown at the left is commonly called the 8-4 plan, meaning that after nursery school and kindergarten the pupils spend 8 years in the elementary school and 4 in the high school. The pattern in the center is generally called the 6-3-3 plan, meaning that after kindergarten the pupils spend 6 years in the elementary school, 3 in the junior high school, and 3 in the senior high school. The pattern at the right, called the 6-6 plan, means that pupils spend 6 years in the elementary school and 6 in the high school. All three plans lead to high school graduation at the age of 17 or 18 years.

High schools generally can be classified as comprehensive or specialized. The comprehensive high school provides two or more academic, vocational, technical, or general programs of education in the same school. The specialized high school concentrates on one type of program. Large city school systems tend to specialize the high schools, providing separate schools for vocational and technical programs. Vocational and technical high schools, however, sometimes offer the general subjects usually required for college entrance, so that a student who selects these courses can enter a college or university.

Graduates of the high school may enter a junior college, a technical institute, a 4-year college or university, or a professional school. The junior college normally offers the first 2 years of a standard 4-year college program and a broad selection of terminal-vocational courses. Academic courses offered by the junior colleges are transferable for credit to 4-year colleges and universities. The technical institute offers postsecondary technical training not leading to professional degrees.

Professional schools, as indicated at the upper right of the figure, begin at different levels and have programs of different lengths.

For example, medical students must complete at least 3 years of premedical studies at a college or university before they can enter the 4-year course of the medical school; engineering students, on the other hand, can enter an engineering school immediately upon the completion of the secondary school.

CHAPTER I

Elementary and Secondary Education

The United States has gone a long way toward providing universal elementary and secondary education for its citizens. While regulations differ somewhat from one jurisdiction to another, it may be said in general that free public education is available to all and that school attendance is compulsory between the ages of 7 and 16. Approximately two-thirds of our 5-year olds are now enrolled in school; from age 6 to 13 (the usual age for enrollment in the elementary grades), 99 percent of our children are attending school; and in the 14-to-17 age group (the usual high school age), 91 percent are enrolled in educational institutions. Approximately two-thirds of the young people graduate from high school today, and one-third of the young adults may be expected to enter college.

The largest segment of our school population is found in public elementary and secondary schools. Public school enrollments account for about 84 percent of the total enrollment in kindergarten through grade 8, and for 89 percent of the pupils enrolled in grades 9 through 12. In recent years, however, there has been a tendency for non-public school enrollments to grow at a somewhat faster rate than enroll-

ments in public schools.

The Office of Education obtains comprehensive data biennially on public elementary and secondary schools in its survey of State School Systems, and it supplements this study with an annual survey of Enrollment, Teachers, and Schoolhousing in Full-Time Public Elementary and Secondary Day Schools. Surveys of nonpublic elementary and secondary schools have been conducted at less frequent intervals, but a great deal of valuable information on these schools has been made available by the State education agencies, the National Catholic Welfare Conference, and the Bureau of the Census.

In general, the statistics in this section relate to the 48 States and the District of Columbia through the school year 1957-58, while the data for 1958-59 include Alaska, and those for 1959-60 and subsequent years include both Alaska and Hawaii. Since there are some exceptions to this general rule, it was deemed desirable to specify in each instance the extent of the territory comprised in each tabulation.

Table 1.—Number of pupils enrolled in full-time public elementary and secondary day schools, by organizational level and State: Fall 1962 and fall 1963

¹ Totals, while shown to the last digit, are not in fact precise to that degree but merely represent the sum of rounded and unrounded figures furnished by the various States.

¹ Estimated by Office of Education.

* Excludes kindergarten.

* Excludes vocational schools not operating as part of the regular public school system.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education, Circular No. 703, Fall 1962 Statistics on Enrollment, Teachers, and Schoolhousing in Full-Time Public Elementary and Secondary Day Schools.

⁴ Data for elementary and secondary schools are reported by grade-group; kindergarten through grade 6 for elementary, and grades 7 through 12 for secondary.

³ Data for elementary and secondary schools are reported by grade-group; kindergarten through grade 8 for elementary, and grades 9 through 12 for secondary.

Data for 1861-62 school year. Data for elementary and secondary schools are reported by grade-group; kindergarten through grade 8 for elementary, and grades 9 through 12 for secondary.

Data for elementary and secondary schools are reported by grade-group; kindergarten through grade for elementary, and grades 8 through 12 for secondary.

i Enrollment figures for a given State include pupils who enrolled for the first time in the United States during the school year and pupils who were previously enrolled in another State.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education, Statistics of State School Systems: 1969-60.

Enrollment not cumulative, but as of a specific date; hence, the ratio of attendance to enrollment is not strictly comparable with the ratios for other States.

A Represents minimum number of days schools must be in session.

Includes estimated data for kindergarten.

³ Because attendance in falifornia includes excused absences and enrollment is not cumulative, the ratio of attendance to enrollment is not strictly comparable with ratios for other States.

^{*} Estimated

¹ Data not available.

¹ Data for odd-numbered years taken from special studies or estimates.
² Estimated from preliminary data.

* Estimated from fall data.

Italicized figures, shown in diagonal progression, indicate enrollments in successive grades of the pupils who entered the first grade in 1951-52, including retarded and accelerated pupils. Because of retardation, school retention rates should not be calculated directly from first-grade enrollments.

¹ Less than 0.06 percent.

Norm.—Data for 1968-59 include Alaska; data for 1969-60 and subsequent years include Alaska and Hawaii. Because of rounding, detail may not add to totals.

Source: U.S. Department of Health, Education, and Weifare, Office of Education, Settstics of State School Systems: 1869-60; and unpublished date.

¹ Unless otherwise indicated, includes enrollment in subcollegiate departments of institutions of higher education and in residential schools for exceptional children. Beginning in 1949-50, also includes Federal schools.

NOTE:—Beginning in 1969-60, includes Alaska and Hawaii.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education, Biennial Survey of Education in the United States, chapters on Statistical Summary of Education; and unpublished data available in the Office of Education.

² Includes all persons residing in the United States, but excludes Armed Forces overseas. Data shown are actual figures from the decennial censuses of population unless otherwise indicated.

³ Excludes enrollment in subcollegiate departments of institutions of higher education and in residential schools for exceptional children.

⁴ Data for 1927-28.

^{*} Estimated by the Bureau of the Census as of July 1 preceding the opening of the school year.

Revised since originally published.

⁷ Preliminary data.

¹ Enrollment estimates based on sample survey.

³ Data from Bureau of the Census, Current Population Reports, Series P-25, No. 193.

NOTE.—Data are for 48 States and D.C.

^{*} Source: U.S. Department of Health, Education, and Welfare, Office of Education, Bulletin 1961, No. 5, Offerings and Enrollments in Science and Mathematics in Public High Schools, 1958.

Figure 2.—Proportion of public high school programs devoted to certain subject matter areas, by pupil ability level: United States, 1957-58

Note.-Data are for 48 States and the District of Columbia.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education, Bulletin 1962, No. 10, What High School Pupils Study.

Table 11.—Percent of the school program devoted to major subject fields in grades 9-12 of nonpublic secondary schools, and estimated number of teachers, by subject field: United States, 1961-62

| Subject Beki | Percent of school pro- gram devoted to subject field | Estimated number of teachers, by subject field ? |
|---|--|---|
| All fields | 100, 0 | 59,000 |
| English and language arts Social sciences. Religion. Foreign languages. Mathematics. Science | 16.5 14.4 12.8 10.9 11.3 | 9, 700 R, 500 7, 550 G, 450 G, 700 |
| Science Health and physical education Business education Music Art | 8. 5 10. 4 5. 8 5. 6 1. 5 | 5,000 6,150 3,400 3,300 900 |
| Home economics Industrial arts. All other. | 1.1 .7 .8 | 650 400 300 |

These percentages are based on the sum of all full-year enrollments plus one-half of the half-year enrollments for each subject included in each of the subject fields shown. Enrollment in subjects taught less than 8 days a week were accordingly reduced.

The enrollments used were reported in Surrey of Subject Offerings and Eurollments in Grades 9-12 of Non-public Secondary Schools, 1961-62 school year, to which 96.5 percent of the schools (including 96.7 percent of grades 9-12 nonpublic school enrollment) responded.

18

³ The 1980-61 Survey of Nonpublic Secondary Schools counted almost 59,000 teachers. About 3 percent of this number represents secondary teachers in grades below grade 9; the Office of Education estimated that the number of both public and nonpublic teachers would increase by 3 percent from 1961 to 1962. Hence the estimated total of 59,000 nonpublic secondary teachers for 1961-62. The estimates of teachers for each subject field are based on a constant pupil-teacher ratio for all subjects. This ratio was 18.8 pupils per teacher in

^{*}See NOTE below.

NOTE.—Instructional staff includes in addition to classroom teachers: principals, supervisors, librarians, guidance and psychological counselors, and related instructional workers. Superintendents on the one hand and building maintenance workers on the other are not included in instructional staff.

Estimates are based on reports from State departments of education and State education associations except for those marked with an asterisk, which are made by the N.E.A. Research Division on the basis of data from a variety of sources.

Source: National Education Association, Research Division, Estimates of School Statistics, 1962-63.

¹ Adjusted to exclude employer contributions to teacher retirement and social security which are included in salaries reported by the State department of education.

² No estimate available.

² Excludes salaries of kindergarten teachers.

⁴ Subject to possible increase by State legislature.

Footnotes at top of next page.

Footnotes for table 20.

- Includes supervisors, principals, teachers, and other instructional staff.
- Based on Consumer Price Index published by Bureau of Labor Statistics, U.S. Department of Labor.
- 3 Estimated by Office of Education.
- 4 Includes clerical assistants to instructional personnel.
- Includes attendance personnel.
- Includes administrators.
- ⁷ Excludes vocational schools not operated as part of the regular public school system.
- * Excludes kindergarten teachers.
- Data not available.
- ¹⁰ Because of the high cost of living in Alaska, salary data for this State cannot readily be compared with those for other States.

NOTE. - Data for 1949-50 are for 48 States and D.C.; data for 1959-60 include Alaska and Hawaii.

A school plant is defined as a site and buildings constituting the physical facilities used by a single school or by two or more schools sharing the use of common facilities. A plant with 90 percent or more of its membership at the elementary level is an elementary plant; similarly for a secondary plant.

² Plants with level not reported are mostly under construction, or serve predominantly the kindergarten or junior college level. The figures are included in the public and nonpublic totals, but are too small to show separately for the nonpublic pohoois (70 general-use facilities, 500 instructional rooms, 60 buildings and additions. 50 school plants, and 1,100 membership).

Data incomplete for buildings under construction.
 Fire-resistive is defined as a building constructed entirely of fire-resistive materials;

or a building with fire-resistive walls and partitions, floors, stairways, and cellings. Semi-fire-resistive exterior and tearing walls; and fire-resistive corridor and stairway walls, floors, and cellings. Combustible is defined as an all-frame building; a building with fire-resistive veneer on wood frame; or one with fire-resistive bearing walls, but otherwise of combustible construction. Includes 70,000 day membership of junior colleges sharing buildings during the day.

Norg. -- Detail may not add to totals because of rounding.

¹ Includes graduates of public and nonpublic schools.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education, Bienniel Survey of Education in the United States, chapters on Statistical Summary of Education; and unpublished data available in the Office of Education

¹ Estimated by State.

³ Includes persons granted high school equivalency certificates.

² Data from the Bureau of the Census.

³ Preliminary data.

Norz.—Beginning in 1959-60, includes Alaska and Hawaii.

*See Note below.

3 Includes receipts for public junior colleges.

NOTE.—Estimates are based upon reports from State departments of education and State education associations except for those marked with an asterisk, which are made by the NEA Research Division upon the basis of data from a variety of sources.

SOURCE: National Education Association, Research Division, Estimates of School Statistics, 1962-65.

 $^{^{1}}$ Includes revenue receipts from local and intermediate sources, and gifts and tuition and fees from patrons.

² In collecting this information no special effort was finde to include the money value of commodities distributed under the School Lunch Program. It is possible that many States have not included such moneys in reporting Federal revenue receipts.

⁴ Federal funds for vocational education and NDEA program have been included as State revenue.

⁴ Original figure adjusted by NEA Research Division to exclude income from the sale of meals.

Includes funds of city and county governments for debt service for school buildings amounting to \$19,000,000.

⁷ Original figures for revenue receipts have been adjusted by NEA Research Division to include funds for school lunch program not covered by the sale of meals.

¹ Includes a relatively minor amount from other sources (transportation fees and tuition from patrons, and gifts) which accounted for 0.5 percent of total revenue receipts in 1959-80.

NOTE.—Beginning in 1969-60, includes Alaska and Hawaii. Because of rounding, detail may not add to totals.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education, Statistics of State School Systems: 1969-60; and unpublished data.

Footnotes for table 32.

² Data not comparable with those before 1963-54 because of reclassification of items comprising "intermediate" and "local."

³ Revised since originally published.

⁴ Estimated.

¹ In thousands of dollars.

² Less than 0.06 percent.

³ Includes receipts not handled by custodians of school funds.

⁴ Includes an unknown amount for transfer between school districts.

⁵ Incomplete. Amount of local funds provided by the villages not available.

NOTE.—Because of rounding, detail may not add to totals.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education, Statistics of State School Systems: 1969-60.

Includes expenditures for administration at all levels.

³ Includes attendance services, health services, pupil transportation, food services, and extracurricular activities.

lincomplete for some States. Includes community services, summer schools, adult education, and community colleges.

* Not included in this table are capital outlays by State and local school building authorities which amounted to a total of Sisi marrow. States reporting such expenditures were: Georgia—81,473,000; India — 10,000,000; Rentucky—813,109,000; and Pennsylvania—8120,900,000.

Data not available.

* Excludes data for vocational schools not operated as part of the regular public school system.

' Incomplete; excludes expenditures by villages.

Norr.-Because of rounding, detail may not add to totals.

^{*}Bee NOTE below.

Footnotes continued top of next page.

¹ Does not include capital outlay by State and local school building authorities amounting to a total of \$117,000,000 in the following States: Indiana, \$47,000,000; Kentucky, \$15,000,000; and Pennsylvania, \$55,000,000.

³ ADA used in calculations for California exclude excused absences.

- 2 Original figure adjusted by NEA Research Division to include cost of administration at State level, State contributions to teacher retirement fund, and Federal funds for school lunch program.
- 4 Original figures adjusted by NEA Research Division to include expenditures for public junior college
- 3 Capital outlay expenditures by local school systems and State School Building Authority.
- Includes interest payments to holding companies.
- ⁷ Estimate not available.
- ⁴ ADA used in calculation includes tuition pupils at private schools.

Note.-Estimates are based upon reports from State departments of education and State education associations except for those marked with an asterisk, which are made by the NEA Research Division on the basis of data from a variety of sources. Estimated capital outlay and estimated interest on school debt per pupil in average daily attendance were calculated from NEA figures by dividing the estimated amount given by the NEA by the estimated ADA given by the NEA and rounding the results appropriately.

CHAPTER II

Higher Education

Union and in all the larger and more populous outlying parts. About one-third of the entire group of approximately 2,000 institutions are under the control of State governments or of cities, counties, or other subdivisions of States. About a dozen are controlled by the Federal Government. The remaining two-thirds of the group are controlled by religious sects, organizations within one professional group or another, or self-perpetuating groups of public-spirited persons.

Institutions present the widest range imaginable in type of instruction offered. A typical junior college offers only the first 2 years of training at the college level; a university commonly offers, in addition to a full undergraduate course in liberal arts, graduate work leading to the doctorate as well as courses preparing for entrance into two or three of the learned professions. Between these two extremes there are innumerable colleges which reflect local needs and purposes.

The number, the character, and even the location of institutions vary from time to time. As a rule the total number increases somewhat from one year to another to keep pace with the normal increase in the number of persons desiring college training and the number of localities or groups needing higher education facilities.

The accompanying tabulations refer to the situation in higher education at the times the data carried in the several tables were assembled. The fact that they refer to different years and to varying numbers of institutions is primarily a reflection of the fact that a count of institutions correct at one time may be incorrect at another. It is also true that data become available on different phases of higher education at different times.

Most of the data here given refer to the entire United States: the 50 States, the District of Columbia, the Canal Zone, Guam, and Puerto Rico. Since this is not always the case, the coverage of each table is specified, either in the title or in a footnote to the table.

Land-Grant Colleges and Universities

The land-grant college, a designation peculiar to the United States, owes its inception to the farsightedness of a member of the Congress and a President who were not college graduates. In 1859, Justin S. Morrill, a Representative and subsequently a Senator from Vermont, sponsored legislation giving to each State 30,000 acres of land or its equivalent in scrip. This was to be set up as a permanent, irreducible endowment fund by the recipient State for the establishment and maintenance of: "... at least one college where the leading object shall be, without excluding other scientific and classical studies and including military tactics, to teach ... agriculture and the mechanic arts ... in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions in life."

First vetoed in 1859, this legislation was later passed by the Congress in

1862 and was approved by President Lincoln on July 2 of that year.

The provisions of the Morrill Act and its amendments have since been extended to other States as they were admitted to the Union. At present each of the 50 States has at least one land-grant institution; 17 States maintain two each. In addition, there is one in Puerto Rico, although there is none in the District of Columbia.

Land-grant colleges as a group have expanded more rapidly than higher education as a whole. The 68 institutions of this group now have approximately one-fifth of all higher education enrollment and an even greater proportion of operating funds and property. Many of them are classed as State universities; nearly all offer curriculums extending far beyond those specified in the original enactment.

CHAPTER III

All Levels of Education

THE TABLES in this chapter deal with all levels of education, from the nursery school and kindergarten to the university graduate school. Some tables show enrollment in all public and nonpublic educational institutions at the elementary and secondary and college and university levels; others show the number of teachers and amount of educational expenditures for all levels of education in the United States.

A few tables deal with economic factors, upon which the whole system of American education has an impact. For example, one table shows total educational expenditures from all sources as a percentage of personal income, and another shows State and local expenditures for education as a percentage of personal income. The relationship between education and lifetime earnings is also shown.

Several tables deal with general topics that are descriptive of the total educational picture in the United States. Examples are tables showing retention, percentage of persons enrolled in school, and

educational attainment.

Table 81.—Estimated fall enrollment in educational institutions, by grade level and by type of school: United States, 1962 and 1963

[In thousands]

| Grade level and type of school | Fall 1962 1 | Fall 1963 : |
|--|--------------------------|----------------------------------|
| Total, elementary, secondary, and higher education | 49, 813 | 51, 484 |
| Kindergarten through grade 8 | 34, 131 | 85,000 |
| Public school systems (regular full-time). Nonpublic schools (regular full-time). Other schools 1. | 28, 731 | 29, 400 5, 400 200 |
| ()rades 9 through 12. | 11, 506 | 12, 100 |
| Public school systems (regular full-time). Nonpublic schools (regular full-time) Other schools ! | 9.00 | 10, 700 1, 3 00 100 |
| Kindergarten through grade 12. | 45, 637 | 47, 100 |
| Public school systems (regular full-time) Nonpublic schools (regular full-time) Other schools s | 38, 837 6, 500 300 | 40, 100 6, 700 300 |
| lligher education: Universities, colleges, professional schools, junior colleges, normal schools, and teachers colleges (degree-credit enrollment) | 4,175 | 4, 386 |

¹ The 1962 figures for nonpublic and other elementary and secondary schools, and all 1963 figures are estimates. In the case of nonpublic elementary and secondary schools, the enrollment data come from a sample survey and are subject to sampling variation; consequently, the estimates for nonpublic schools are not as reliable as those for public schools or for higher education. The estimates for 1963 are derived from the increases expected from population changes combined within the long-run trend in school enrollment rates of the population.

² Includes Federal schools for Indians, federally operated elementary-secondary schools on posts, model and practice schools in teacher training institutions, subcollegiate departments of colleges, and residential schools for exceptional children.

NOTE.—These Office of Education estimates of fall enrollment are smaller than the figures for total enrollment during the school year.

Table 85.—Estimated number of classroom teachers in public and nonpublic elementary and secondary schools, and total instructional staff for resident degree-credit courses in institutions of higher education: United States, 1962-63 and 1963-64

[Includes full-time and part-time teachers and staff]

| Item - | Estim | ated |
|---|-------------------------|-------------------------|
| | 1962-63 | 1963-64 |
| Total | 2, 978, 900 | 2, 152, 000 |
| Classroom teachers in public and nonpublic elementary and secondary schools! Instructional staff for resident degree-credit courses in institutions of higher education? | 1, 744, 000 334, 000 | 1, 807, 000 345, 000 |

¹ Includes elementary and secondary classroom teachers in regular public and nonpublic schools and other schools, such as Federal schools for Indians, federally operated schools on posts, practice schools in teacher-training institutions, subcollegiate departments of colleges, and residential schools for exceptional children.

Estimates are based on actual and expected enrollments, and continuation of 1961-62 pupil-teacher ratios.

Includes full-time and part-time staff with the rank of instructor or above, and junior instructional staff such as graduate assistants, for resident instruction in degree-credit courses.

Estimates are based on actual and expected enrollment, and on expected slight increases in 1961-62 student-staff ratios.

Includes universities, liberal arts colleges, teachers colleges and other independent professional schools, and junior colleges.

- ¹ Data as of October 1959, supplied by the National League for Nursing, Inc.
- 4 Estimated.
- ⁴ Data refer to number of school buildings distributed by level of school housed.
- ⁶ Represents number of school districts instead of number of schools.

- Data for 1968-59.
- * Excludes vocational schools not operated as part of the regular public school system.
- 10 Georgia has 198 school districts; however, one independent (city) district operates as part of the county in which it is located.
- 11 Number of schools with grade 7 and above.
- 13 Number of accredited schools only.

SOURCES: U.S. Department of Health, Education, and Welfare, Office of Education, Statistics of State School Systems: 1959-60 and Total Enrollment in Institutions of Higher Education, First Term, 1969-60; and the National League for Nursing, Inc., New York.

² Includes regular 4-year high schools, junior high schools, senior high schools, and junior-senior high schools.

⁷ Data as of September 1960. In those instances where two or more school districts have organized into jointures for purposes of operating schools, the larger operating unit (jointure) is the administrative unit counted here.

¹ Rates for the 5th grade through high school graduation are based on enrollments in successive grades in successive years in public elementary and secondary schools and are adjusted to include estimates for nonpublic schools. Rates for first-time college enrollment are based on data supplied to the Office of Education by institutions of higher education.

Notz.-Data are for 48 States and D.C.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education, Biennial Surrey of Education in the United States, chapters on Statistical Sunfanary of Education; and unpublished data available in the Office of Education.

²5th grade in 12-grade systems; 4th grade in 11-grade systems.

¹ Excludes expenditures for residential schools for exceptional children, Federal schools for Indians, and Federal schools on Federal installations. Expenditures for Federal schools are shown separately below.

SOURCES: Estimated by the Office of Education on the basis of preliminary data from 1961-62 surveys of Statistics of State School Systems and Financial Statistics of Institutions of Higher Education; and National Education Association, Research Division, Estimates of School Statistics, 1962-63. Private elementary and secondary school expenditures are estimated on the assumption that the expenditure per pupil is the same as in public school systems.

³ Includes expenditures for interest. In public schools, interest payments amounted to an estimated \$600,000,000 in 1961-62 and \$630,000,000 in 1962-63.

³ Includes auxiliary enterprises, estimated at \$1,177,000,000 in 1961-62, and student-aid expenditures, estimated at \$236,000,000 in 1961-62.

[!] Excludes expenditures for residential schools for exceptional children and for schools of nursing not affiliated with colleges and universities.

² Estimated on the basis of expenditure per pupil in public elementary and secondary schools.

Excludes schools of nursing not affiliated with colleges and universities.

Note.—Because of rounding, detail may not add to totals.

Sources: U.S. Department of Health, Education, and Welfare, Office of Education, Statistics of State School Systems, 1959-60, and Financial Statistics of Institutions of Higher Education, 1959-60; U.S. Department of the Interior, Bureau of Indian Affairs; and unpublished data available in the Office of Education.

² Excludes expenditures for Federal schools for Indians, Federal schools on Federal installations, and residential schools for exceptional children. Expenditures for Federal schools are shown separately below.

[•] Distribution between grade-groups (kindergarten-grade 8 and grades 9-12 and postgraduate) estimated on the basis of average teacher's salary and pupil-teacher ratio at the elementary and secondary levels. Expenditure per pupil in grades 9-12 and postgraduate was calculated as 1.462 times expenditure per pupil in kindergarten-grade 8.

^{*} Excludes \$177,350,000 expended for plant expansion directly from current funds (\$102,681,000 by publicly controlled and \$74,669,000 by privately controlled institutions).

CHAPTER IV

Federal Programs of Education

CUPPORT OF EDUCATION is basically the responsibility of State and local governments. The Federal Government, however, has from its earliest days been concerned with improving educational services. It has through the years developed a variety of programs to help support, in one way or another, the educational activities of the States and of educational institutions. These programs serve a number of purposes. They may be for the purchase of research and training services of educational institutions in the interest of national welfare and defense, for support of individuals for whom there is a special Federal responsibility, for support of schools in areas where Federal activities would result in undue burdens on school services without such support, for support of education in special areas such as vocational education, or for other purposes. Regardless of the specific purpose involved, these programs affect the financing of educational programs and services and the development of the manpower resources of the Nation.

There is no single total for Federal funds for education that is meaningful for all purposes, but there are many totals to be built around particular concepts and to serve particular needs. Part I of table 100, "Federal Funds Supporting Education in Educational Institutions . . .," has been developed by the Federal Education Programs Branch for legislative use and includes programs which the Office of Education feels are in the same general category as Federal-aid-to-education legislation. Part II of this table shows data that are reported in the Office of Education publications on Federal funds for education and related activities and the National Science Foundation publication, Federal Funds for Science XI, but which are not in the same general category as Federal-aid-to-education legislation. Table 102 reports Federal funds for education by field of study in 1960-61, and the other tables in this chapter show detailed information about programs that the Office of Education helps to administer.

| | 42 | 42 |

¹ Based on preliminary estimates of Federal agencies and budget documents. Programs included are those within the scope of the Office of Education survey of Federal education and related activities. Included are (1) funds, commodities, or services to educational institutions and agencies and (2) funds for support of education and training to educational institutions, agencies, or individuals. Research data are from Federal Funds for Science, XI, National Science Foundation.

Footnotes continued on page 109.

108

³ Part I of the table excludes (1) funds for services rendered to the Federal Government and (2) funds for education and related activities outside educational insitututions. These items are included in Part II, "Other Federal Funds for Education and Related Activities". Included in Part I are funds for education in educational institutions, including payments for education of nonresident enrollees; payments for services essential to the conduct of education in educational institutions, and funds which are an integral part of the educational process.

Footnotes continued from page 108.

- ² Amount understates actual total because amounts for some program areas are not available. See footnotes 5 and 14.
- 4 Estimated amount for schools represents 50 percent of total shared revenues for roads and schools.
- Data on payments for education of dependents of other Federal personnel overseas are not available.
- ⁸ Includes District of Columbia, Canal Zone, AEC facilities, National Parks, territories, and depend-
- ⁷ Funds are for teaching and teacher development programs. The latter may include training at higher education levels, but data are not available for such allocation of funds.
- Includes elementary-secondary level activities at PHS hospitals, Gallaudet College, and for the American Printing House for the Blind.
- Funds for "basic research in U.S. education institutions proper" are included in Part I because these funds support the basic research function of institutions of higher education. Although some of the basic research and research facilities funds are not for the purpose of supporting education, such as those for health research and research facilities, they are included in Part I of the table because of the integral relationship of research and training in educational institutions. Funds for applied whearch and development in educational institutions and university-managed research centers are included in Part II.
 - Includes Educational Exchange Program study grants.
- 11 Includes funds for Howard University, Gallaudet College, instruction in land-grant colleges, language and area centers (NDEA), and NSF institutional grants.
- 17 Includes advisory grants for training of foreign students and research grants under the Educational Exchange Program.
- 13 Includes special training programs of AEC, NSF, and PHS; training at Saint Elizabeths Hospital; Medical Education for National Defense program (DOD).
- 14 Includes training at Federal or non-Federal educational institutions. Totals reported here probably underestimate considerably funds provided for this purpose.
- 15 Includes university teaching grants, Educational Exchange Program, and miscellaneous grant and contract funds for training and related activities.
- 16 Estimated actual value of surplus real and personal property at time of transfer for educational uses.
- Data incomplete. Amounts reported are for dependents of Navy personnel.
- ¹⁶ Data not available on all programs for training Federal personnel.
- 18 Included in this category because of obligation for military service of participants in the program.
- Includes general library services, exclusive of intramural agency library services. Amounts for Library of Congress include general and basic services and the Books for the Blind program.
- ²¹ Data incomplete. Includes (1) projects in the field of education and (2) training in labor and allied fields, aviation, and meteorology supported through transfer of funds to other agencies.
- Data not available on an annual basis or cannot be identified separately from other activities in currently available sources.
- 22 Payments to educational institutions for training of inmates.

Source: Compiled by Penrose B. Jackson and Dolores M. Steinhilber, Federal Education Programs Branch, Office of Program and Legislative Planning, U.S. Department of Health, Education, and Welfare. Based on budget documents and reports of Federal agencies to the U.S. Office of Education in its surveys of Federal funds for education and related activities.

| Research and development not reported by field | 361, 131 | 518.401 |

Based primarily on preliminary data from a questionnaire survey of Federal agencies by the Office of Education. Includes grants, payments, and loans to States, institutions, or individuals.

¹ Estimated by respondent.

s Reported as "field of study not applicable" by respondents. Includes estimated actual value of surplus property transferred for educational purposes, school lunch programs, and college housing loans.

⁶ Research and development at educational institutions and research centers operated by them as reported with adjustments in Federal Funds for Science X of the National Science Foundation. These funds were not reported to the Office of Education. Other research funds are included in the amounts by specific fields as were reported by respondents.

¹ Operated on transfer funds.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education. Compiled by Federal Education Programs Branch, Office of Program and Legislative Planning, based on fiscal records of payments to State and local units and to individuals.

Includes amounts reported in combined fields (such as biological and physical sciences) or areas not listed under specific fields such as law and trade and industry.

⁴ Includes assistance for education such as P.L. 874 and 815, Indian education, the education of dependents of military personnel overseas, and the U.S. military academies.

² Includes supplementary grant to Hawaii.

Includes loans to non-profit, private schools. 4 Includes title VIII of NDEA, Technical education.

Source: Compiled from U.S. Department of Health, Education, and Welfare, Office of Education reports on Federal grants-in-aid and payments to individuals. Data reflect amendments to reports as of June 24, 1982.

Notes for Federal grants and loans administered by the Office of Education (numbers in parentheses refer to column numbers in preceding table):

(2) Two annual appropriations are divided among the States for support of the 68 land grant colleges (agriculture and mechanic arts colleges). Under one appropriation of \$2,550,000, equal shares of \$50,000 go to each State and Puerto Rico. Under the other appropriation of \$8,194,000, the minimum grant is \$90,000, with the rest divided on the basis of population. Of the \$6,000,000 appropriation authorized to Hawaii in lieu of a land grant under the Hawaii Omnibus Act, P.L. 86-624, \$3,775,000 was made available as an addition to the endowment of the college of agriculture and mechanic arts of the State in 1962.

(3) Grants for expansion of rural library services are made on a matching basis, with a minimum of \$40,000 going to each State and Puerto Rico (\$10,000 to the Virgin Islands and Guam) and the balance determined on the basis of the rural

population.

(4) Grants for traditional programs in co-operative vocational education (including home economics, trade and industrial education, practical nurse training, vocational agricultural courses, and distributive education) are allotted to States on a dollar for dollar matching basis. An additional expenditure for technical education, provided under Title VIII of the National Defense Education Act, was \$11,582,781, and is included in the total in Col. 7.

(5) Under this program grants are provided for fellowships to institutions of higher education and to State Educational agencies for the training of leadership personnel in the education of the mentally retarded. In addition, during fiscal 1962, payments were made to colleges and universities for four stimulation grants to provide opportunities for training that would be distributed geographically over the country. Thus far, all States but one have participat in the four years of the program.

(6 and 7) In the period 1961-62, the program of grants to federally affected areas aided in construction of 56,586 classrooms housing about 1,645,200 students.

(8) Under the National Defense Education Act, passed in 1958, the Office of Education provides Federal assistance to the States and to institutions of higher education for a variety of educational programs. The \$181,358,520 expenditure for 1962 was broken down as follows:

\$73,831,984 to institutions of higher education for the establishment or maintenance of student loan funds. An additional \$676,645 went for loans to institutions to help them meet the requirement that every \$9 of Federal money be matched by \$1 of institutional funds. Another \$23,095 was used to reimburse institutions for their share of loan cancellations.

\$38,984,285 was spent in grants to States and \$615,727 in loans to private non-profit schools to help them strengthen instruction in mathematics, science, and languages. The sum of \$36,328,063 was allocated for equipment and remodeling, and \$2,656,222 for supervision of administration through State specialists. The number of State specialists in these three fields has increased from 33 since the inception of the NDEA program to 221 in 1962. They are engaged, in developing State standards determining teacher qualifications, conducting local and regional workshops for teachers working on local curriculum projects, and demonstrating equipment and effective teaching techniques.

An additional \$13,381,763 was made available for use in language development programs. This figure included fellowships awarded to 1,040 graduate students at a cost of \$3,222,476 for advanced study in critically needed modern foreign languages such as Arabic, Russian, Spanish and Hindi-Urdu. It also included \$1,727,029 to help support 53 language and area centers at 33 colleges and universities, and \$2,335,017 for language research and studies projects.

Institutes conducted to improve the teaching of modern foreign languages were attended by 4,418 elementary and secondary school teachers of French, Spanish, German, Russian, Italian and Chinese.

\$14,064,317 was made available to the States for strengthening their school guidance and counseling programs. An additional \$5,864,695 was provided for counseling and guidance training institutes enrolling 2,567 teachers or counselors.

\$11,582,781 was distributed among the States for vocational training of workers in highly skilled technical fields.

\$3,773,809 was expended for experiments in the use and development of communications media such as radio, TV, tape recorders, and motion pictures.

\$17,3\(pm_2\),820 provided graduate fellowships for potential college teachers and assistance to the new or expanded graduate programs in which they were enrolled.

\$1,246,598 was paid to the various States to assist them in improving their school statistical services.

Miscellaneous Educational Programs:

(9) From the beginning of the Cooperative Research program in 1957 through fiscal year 1962, a total of 473 projects has been approved; 129 colleges and universities and 17 State departments of education have taken part in these studies in 45 States, the District of Columbia, Guam, and Puerto Rico. \$3,696,560 was spent on the Cooperative Research program during fiscal 1962.

(10) Federally financed education programs for Cuban refugees, including loans for students, totaled \$5,195,011 in 1962.

Amounts reported are actual obligations for 1962 and estimated obligations for 1963 and 1964. 1964 data include estimates for proposed programs based on budget requests. NASA and NSF training grants are included in the table because they support graduate students working toward degrees in the same way as fellowship programs.

² Office of Education estimate.

³ These figures do not include resignations submitted after the end of the fiscal year. Since fellowships vacated by resignation cannot be reawarded, the program is not operating at full authorization.

CHAPTER V

Selected Statistics Related to Education In the United States

THE TABLES in this chapter were selected because they are closely I related to education in the United States and are of general interest. They are arranged in four main groups: (1) employment - of high school graduates and dropouts, (2) international education, (3) libraries, and (4) research and development.

The first group of tables shows U.S. Department of Labor statistics on the college enrollment and employment status of 1962 high school graduates and a comparison of the occupations of high school gradu-

ates with those of school dropouts

The first two tables of the second group show statistics reported by the Institute of International Education on American college students abroad and foreign students enrolled in American institutions. Two other tables of this group show data from the United Nations Educational, Scientific, and Cultural Organization (UNESCO) on population and school enrollment for the world, continents, and selected countries. They show general magnitude figures only and are suitable for making only very rough comparisons among countries. The projections and enrollment estimates were prepared in various ways for different years, and the enrollment groupings by level for the various countries are not strictly comparable from one country to another.

The third group of tables shows Office of Education statistics on public libraries, libraries in schools and colleges, and special libraries. The first table of this group shows estimates of the number of fulltime professional librarians in all libraries, and the others show more detailed information about public libraries and librarians in schools

and colleges.

The fourth and last group of tables shows National Science Foundation data on research and development. The first table of this group shows the number of persons employed for research and development in all sections of the economy and the two succeeding tables show details on the ones employed in colleges and universities.

These two tables also show data on all scientists and engineers employed in colleges and universities. The last four tables show the amounts and sources of funds used for research and development. One of these tables deals only with basic research. Another table showing details of Federal funds for research and development is not included with this group but is included in chapter IV.

¹ First-level includes elementary school enrollment where the main function is to provide basic instruction in the tools of learning. Preschool, kindergarten, and special education enrollments are excluded.

SOURCE: UNESCO, Basic Facts and Figures 1960, Paris, France, 1961.

² Second level includes general, vocational, and teacher-training enrollment at the secondary school level. Entrance to secondary schools requires at least four years previous instruction at the first level. Special and adult education enrollments are excluded.

³ Third level includes colleges and universities that require the successful completion of education at the second level as a minimum entrance requirement. Adult education enrollments are excluded.

⁴ Includes Central America, the Caribbean Area, and Greenland.

¹ First level includes preschool and elementary school enrollment where the main function is to provide basic instruction in the tools of learning.

² Second level includes general, vocational, and teacher training enrollment at the secondary level. Entrance to secondary schools requires at least four years previous instruction at the first level.

³ Third level includes colleges and universities that require the successful completion of education at the second level as a minimum entrance requirement.

⁴ Data for North America include Central America, Caribbean, and Greenland. 1 Less than 500.

⁶ Excludes primary and secondary education for working rural youths, adults, and special education, with enrollments totaling 2,905,000.

SOURCE: UNESCO, Busic Facts and Figures 1990, and Current School Enrollment Statistics, Paris, France: 1961 and 1962.

Table 114.—Estimated number of full-time professional librarians, by type of library in which employed: United States, fiscal years 1959 through 1963

| Type of library | 1969 | 1980 | 1961 | 1962 | 1963 |
|---|------|---|--|---|--|
| Public elementary and secondary school. Nonpublic elementary and secondary school. College and university. Public library. Special library. | | 20,000 3,200 2,000 19,500 9,800 | 20, 600 3, 400 1 9, 700 19, 800 9, 900 | 21, 300 3, 500 210, 300 20, 200 10, 000 | 22, 100 3, 700 11, 300 20, 400 10, 200 |

¹ Includes the number of full-time equivalents of part-time professional librarians. Excludes 15,000 to 20,000 part-time and partly trained librarians.

METHOR OF ESTMATION: The estimates are based upon actual and estimated data for number of librarians, population, and school entollment for the fiscal years 1969 through 1963. It is assumed that the ratio of librarians to population or enrollment remained constant throughout the period. The ratios used for each type of library are as follows:

Public elementary and secondary school libraries—0.0569 percent of enrollment. (Actual data for 1958–59.)

Nonpublic elementary and secondary school libraries.—Same ratio as used for public school libraries.

(The 1962 Office of Education school building inventory indicates that the average number of pupils per intralized school library for nonpublic schools is almost the same as for public schools.)

College and university libraries—0.2707 percent of enrollment. (Actual data for 1960-61.)

Public libraries—0.0108 percent of the total July 1st population. (Actual data for 1969-80.)

Special libraries—0.0064 percent of the total July 1st population. (Estimated for fiscal year 1962 by the Library Services Branch of the Office of Education.)

SOURCE: "Library Services" by Wilbur J. Cohen and John G. Lorenz in the December 1982 Health, Education, and Welfare Indicators.

² Actual data from an Office of Education survey.

^{*} Estimate based on survey of libraries serving population of 35,000 or over.

¹ Included are the 306 colleges and universities granting graduate degrees in one or more fields of the engineering, natural, or social sciences or psychology. Data include Federal contract research centers and agricultural experiment stations with their associated colleges of agriculture.

² Almost all (99%) of scientists and engineers employed for R & D and other activities are in institutions granting graduate degrees. Therefore the number employed as teachers in all institutions may be derived by subtracting the R & D and other figures shown here from the appropriate figures in the preceding table.

Note: Detail may not add to totals because of rounding. Percentages are based on the unrounded figures.

APPENDIX

Functions and Structure of the U.S. Office of Education

A CHARACTERISTIC of the American system of education is its decentralized control. Final authority and responsibility on most matters in this field rest with the individual States, which have in turn delegated this authority and responsibility to local situations.

responsibility to local city, county, or district school boards.

Thus, until recent years the function of the United States Office of Education was considered to be that of fact-finding and reference work, rather than the administration of an educational program: Within the last few years, however, certain responsibilities connected with the administration of Federal programs of education, especially those transcending State lines, have been assigned by the Congress to the Federal Office of Education.

The Office has been organized to meet these responsibilities and at the same time carry on its original fact-finding and fact-disseminating duties. The accompanying chart depicts the present organizational structure of the Office.

At the head of the Office stands the Commissioner of Education, appointed by the President with the advice and consent of the Senate. The Commissioner is assisted by a Deputy Commissioner, three Associate Commissioners, and a staff of approximately 1,200 other employees, practically all of whom are employed and compensated in accordance with Civil Service rules and regulations.

The program operations of the Office are grouped into three bureaus, each under the supervision of an Associate Commissioner. The Bureau of Educational Research carries out most of the legal responsibility, specified in the original law of 1867, of collecting and disseminating "statistics and facts" on education. In some cases the data series set up in the early days of the Office have continued unbroken to the present, thus providing a wealth of factual material on which to base studies of various sorts. In administering this bureau, the Associate Commissioner works through five Division Chiefs, of whom two have the rank of Assistant Commissioner.

The Bureau of International Education carries on the dual responsibilities of (1) fact-finding in the field of education outside the United States, and (2) rendering assistance to Americans interested in studying or teaching abroad, or to foreigners interested in these activities in this country. The work of this bureau is handled by an Associate Commissioner, who functions through two Division Chiefs.

The Bureau of Educational Assistance Programs is responsible for the administration of most Federal grants-in-aid handled by the Office. These include Vocational and Technical Education, School Assistance in Federally Affected Areas, State Grants, and College and University Assistance. In administering these programs, the Associate Commissioner works through four Division Chiefs, one of whom carries the rank of Assistant Commissioner.
