State funding mechanisms for English language learners

By Maria Millard

January 2015

Research is clear that English language learners (ELLs) perform better academically and achieve greater language proficiency when they have high-quality English language instruction.¹ Like all supplemental services, these necessary supports require additional funding above the average per-student amount.

The federal government provides grant funding to states through Part A of Title III to help ELLs with language acquisition and meeting content standards. While Title III dollars offer some support, a 2012 [survey](#) found that Title III officials and district administrators believe the funds are helpful but insufficient for ELL services. To address such shortages, 46 states allocate additional state funding dedicated to supporting ELLs.

The mechanisms through which ELL funds are allocated can be confusing at best. Without a comprehensive understanding of school finance, it is difficult for policymakers to determine what changes are needed to better support their ELL students.

Familiarity with ELL funding allows policymakers to evaluate their own funding models against those from other states, make adjustments and use their state funds to further drive innovation.

This brief provides a clear and detailed description of the three ways in which states finance ELLs. Tables at the end of the document shows each state's ELL funding mechanism.

ELL funding mechanisms

46 states provide some additional funding for ELLs in three primary ways:

- **Formula Funding:** 34 states fund ELL programs through their state's primary funding formula. Of the states that use student weights in their formula, weights range from 9.6 percent (Kentucky) to 99 percent (Maryland) per ELL student.
- **Categorical Funding:** Nine states fund ELL programs through a line in the budget that exists outside of the state's primary funding formula.
- **Reimbursements:** Three states reimburse districts upon submission of the costs of educating ELL students.

Formula Funding

Thirty-four states allocate money for ELLs through their state's primary funding formula. Accounting for ELL students through adjustments in their formula provides equity, transparency and predictability to school districts. ELLs are accounted for in funding formulas three primary ways: weights, dollar amounts and teacher allocations.

- **Weights** are applied evenly across a state's school districts and are designed to provide fair levels of funding for all students. This model accounts for ELLs by multiplying a base funding amount per student (an amount deemed sufficient to educate a general education student to meet state standards) by an additional weighting factor. Weight factors vary depending on the perceived level of the student's educational needs.² Some states adjust their ELL weights based on student language proficiency levels or on the density of ELL students within a district. Weights for ELL students range from 9.6 percent (Kentucky) to 99 percent (Maryland).
- **Dollar amounts** are used to account for ELL students in the formula by setting a single amount per ELL. Although this strategy may appear to be a categorical expenditure (explained in the next section), these dollar amounts are part of the formula, not separate.
- **Teacher allocations** account for ELLs in their state's primary funding formula through staffing costs. For example, Tennessee's formula provides districts with funding for an additional teaching position for every 30 ELLs and an additional interpreter position for every 300 ELL students.

Considerations

Formula funding is a popular mechanism because funds tend to be more insulated from budgetary cuts. Formula funding is considered:

- Predictable
- Reliable
- Transparent
- Equitable
- Simple

Formula funding does not, however, always guarantee that the additional funds will be spent on ELLs. Most formulas do not contain mandates on how funds are spent. State formulas simply allocate funds to districts, and districts decide how ELL funds are used.

State Example

California's Local Control Funding Formula is a new and simplified funding formula that weights ELLs rather than relying on categorical funding (explained in the next section). It is drawing national attention for being transparent and straightforward, and for empowering local districts to choose how to best spend their resources.³

Categorical Funding

Nine states allocate funds for ELLs through categorical programs, which are provided outside of the state's primary funding formula and allot money for specific programs through line items in the budget. State distribution of categorical funds is like the distribution of gift cards. For example, a district will get a designated allocation from the state that can only be spent on ELLs.

Considerations

States have been moving away from categorical funding in recent years. A 2008 analysis found that ELL funding was one of the most common categorical programs. Since then, 29 states have decreased their

use of categorical funding generally, and ELLs are no longer one of the most common targets for categorical funds.⁴ States still using categorical funding for ELLs tend to do so because it guarantees that state funds earmarked for ELLs are being used accordingly.

While categorical funding for ELLs ensures that districts spend money to support student language acquisition, opponents argue the funding is too narrowly directed and thereby limits district and school flexibility. Critics argue that decisions on how to most appropriately use funds are more easily determined at the local level.⁵

A challenge faced by districts is that the amount of funding received depends on ever-changing state budgets, thereby creating uncertainty. Categorical funding is considered:

- Less transparent
- More unstable and unpredictable
- More complicated
- Rule oriented
- More paperwork

A 2012 [report](#) found that per-child funding through Title III totaled less than \$120 in seven states but exceeded \$300 in four states. The discrepancy is related to the way that ELL students are counted — through sampling rather than actual district or state counts.

Source: American Institutes for Research

State Example

The **Colorado** Department of Education determines the amount of money for each district based on number of ELLs and the amount of state appropriations.⁶

Reimbursement

Three states provide districts with ELL funding through reimbursements. Reimbursement funding is provided outside of the state's primary funding formula. Reimbursements are made to districts upon actual costs accrued. Reimbursements are made only upon the approval of the state superintendent. Reimbursement also tend to gives states the opportunity to limit funding to specified expenses. For example:

- Michigan requires that funds be used solely for instruction in speaking, reading, writing or comprehension of English.⁷
- Wisconsin requires that funds only be used for personnel salaries and special books and resources used in the program, or other expenses as approved by the state superintendent.⁸

Considerations

Through a reimbursement model, policymakers can account for how state money is being spent. Such a model also ensures:

- Higher reporting standards
- Better tracking of state funds

While such accountability may be appealing, there are several challenges with reimbursement models:

- Unstable: funding is subject to budgetary decisions
- Paperwork intensive
- There is no guarantee that all expenses will be reimbursed
- Restrictive

State Example

Illinois requires districts to keep an accurate, detailed and separate account of all monies paid out for ELL programs, including transportation costs, and must annually report the average per-pupil expenditure. School districts are reimbursed for the amount that exceeds the average per-pupil expenditure for children not in any special education program. At least 60 percent of transitional bilingual education funding received from the state must be used for the instructional costs of transitional bilingual education. Districts must submit applications to the state superintendent for preapproval.⁹

Discussion

As ELL populations continue to rise, states may need to make adjustments to their current funding strategies. Understanding how state dollars are allocated for ELLs is critical because it allows policymakers to make more informed school finance decisions. Whichever mechanism a state uses, the funding level must match the services students need to move them from ELL education to mainstream education. Equity and adequacy are critical for the successful implementation of ELL programs.

States with the largest share of ELL students

- Nevada: 31%
- California: 24.3%
- New Mexico: 18.5%

Total	34	9	3	4

* Delaware's Unit for Academic Excellence (UAE) funding program provides additional funding to districts based on their total student counts (for every 250 students, each district receives one teaching position). While the UAE funds can be spent on ELLs, they are not designated as ELL funds.

Table II provides a deeper look at the variations within states that fund ELLs through their state's primary funding formula. These states use one of three options: weights, dollar amount or teacher allocations.

- **Weights** (26 states) add an additional amount of funding. For example, Maryland's ELL weight of 99 percent means that an ELL student receives an additional 0.99 or 99 percent of the general education base amount.
- **Dollar amounts** (3 states) are a simple dollar allocation per ELL student. For example, Arkansas provides an additional \$305 per ELL.
- **Teacher allocations** (5 states) account for ELLs in their state's primary funding formula through staffing costs. For example, Tennessee's formula provides districts with funding for an additional teaching position for every 30 ELLs and an additional interpreter position for every 300 ELL students.

Table II: More Information on States with Formula Funded Allotments

State	Weight	Dollar Amount	Teacher Allocation
Alaska	20%		
Arizona	11.5%		
Arkansas		An additional \$305/ELL	
California	20%		
Connecticut	15%		
Florida	14.7%		
Georgia			ELL ratio 7:1
Hawaii	18%		
Iowa	22%		
Kansas	39.5%		
Kentucky	9.6%		
Louisiana	22%		
Maine	50% to 70%, depending on density of ELLs		
Maryland	99%		
Massachusetts	7% to 34%, depending on grade level		
Minnesota	\$700 times the greater of 20 or the number of eligible ELLs		
Missouri	60%		
Nebraska	25%		
New Hampshire		Additional \$684.45/ ELL	
New Jersey	50%		
New Mexico	50%		
New York	50%		
North Carolina			ELL ratio: 20 to 1
North Dakota	20% to 30%, depending on students' language ability		
Oklahoma	25%		
Oregon	50%		
Rhode Island			
South Carolina	20%		
South Dakota	25%		
Tennessee			ELL ratio: 30 to 1 plus an interpreter for every 300 ELLs
Texas	10%		
Vermont	45%		
Virginia			ELL ratio: 1,000 to 17
Washington		\$930/ELL student	
Wyoming			ELL ratio: 100 to 1

**Note: As categorical funding allotments are subject to change with each budget cycle, and reimbursement payments depend on expenditures and funding levels, Table II does not provide dollar amounts for those funding mechanisms.*
