

# IESP POLICY BRIEF

## Undocumented College Students in the United States: In-State Tuition Not Enough to Ensure Four-Year Degree Completion

Dylan Conger and Colin C. Chellman

### Introduction

---

This brief provides a comparison of the performance of undocumented students to that of U.S. citizens and other legal migrants using restricted-access data from one of the largest urban public university systems in the U.S. where many undocumented students are eligible for in-state tuition. Overall, undocumented students perform well in the short-term, earning higher grades and higher rates of course and associate degree completion than their U.S. citizen counterparts. But undocumented students are less likely to earn their bachelor's degrees within four years. This finding suggests that, despite their earlier college successes and their access to in-state tuition rates, at some point after enrollment, undocumented students experience higher costs to completing their bachelor's degrees than they had anticipated upon enrollment. We offer a number of policy considerations for university officials and policymakers who aim to help undocumented college students succeed in postsecondary institutions.

### Policy Context

---

In June of 2012, President Obama and the U.S. Department of Homeland Security announced the "Deferred Action for Childhood Arrivals" program, which would shield eligible undocumented immigrant youth from deportation and provide them with a pathway to work authorization. An estimated 1.7 million

### Key Findings

- Undocumented students in UCSNY receive less financial aid and are less likely to enroll full-time than U.S. citizens.
- Undocumented students in UCSNY earn higher GPAs than U.S. citizens.
- Undocumented students in UCSNY earn higher credit completion rates than U.S. citizens.
- Undocumented students are less likely to complete their bachelor's degrees on-time than U.S. citizens.

undocumented youth who migrated to the U.S. with their parents before they were 16 years old may be eligible for the new program (Passel & Lopez, 2012). At the congressional level, the Development, Relief, and Education for Alien Minors (DREAM) Act, which goes several steps further to provide some undocumented students a pathway to permanent residency status and access to federal benefits, such as aid for college, has stalled on several occasions. Since Obama's reelection in November 2012, there has been renewed attention to immigration reform with several members of Congress joining forces with the White House to propose plans for a comprehensive overhaul of the immigration system. Some of these proposals include policies that provide pathways to permanent residency for undocumented individuals.

In the absence of federal policy providing undocumented youth with a pathway to legal status or ensuring the rights of undocumented youth to postsecondary education, state legislation ranges from banning undocumented immigrants from public colleges and universities to providing them with in-state tuition and state aid if they graduate from a state high school. Alabama and South Carolina are the only two states that currently ban undocumented immigrants from attending a public postsecondary institution. At the other end of the spectrum, one dozen states have passed legislation to extend in-state tuition benefits to eligible undocumented students.

Opponents of policies that mandate postsecondary access to undocumented youth or provide them with a pathway to legal authorization raise concerns about possible increases in the rate of illegal immigration and reductions in the amount of state aid available for legal citizens. Proponents argue that such supports to undocumented youth will help them succeed in school and the labor market, which provides for a stronger workforce and higher tax revenue. Despite the ample policy attention given to undocumented college students, there are few large-scale analyses of their achievements while in school. This information is absent from the policy debate primarily because we have been unable to accurately identify undocumented students in federally-sponsored surveys and other administrative data sources. In contrast, there is a relatively large quantitative literature on foreign-born students generally (irrespective of their immigration status), which often documents high levels of academic expectations and school performance, despite their limited familiarity with U.S. culture and norms (Kao & Tienda, 1995; Fuligni, 1997; Portes & Rumbaut, 2001; Glick & White, 2003; Glick & White, 2004; Schwartz & Stiefel, 2006; Conger, Schwartz, & Stiefel, 2007; Stiefel, Schwartz, & Conger, 2009). What remains unknown is whether immigrants who lack documentation, a status that restricts their access to a number of essential opportunities, such as legal employment, financial aid, driver's licenses, and other public benefits, have the same or different academic outcomes as their fellow immigrants and U.S. citizens.

## Methodology

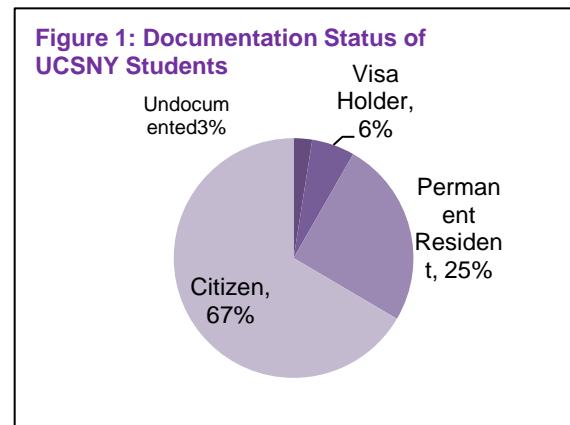

---

In this brief, we take an unprecedented look at the educational achievements of undocumented students who make it to college. We rely on a unique dataset from the Urban College System in New York (UCSNY), a large urban university system educating more than 480,000 students in over 20 colleges and institutions that records students' immigration status, validates students' self-reports by requiring them to submit documentation, and centrally gathers this information from all colleges in the system. With records on entrants to UCSNY between the years 1999 and 2004, our analyses compare the academic achievements of students who are undocumented to those who are visa holders, permanent residents, and

U.S. citizens.<sup>1</sup> In addition to providing new information on achievement differences between undocumented students and students with the full benefits of citizenship, our inclusion of immigrants with valid visas and those who have become permanent residents also reveals how undocumented immigrants fare relative to other immigrants with greater security and opportunity. Permanent residents and visa holders are protected from the threat of deportation and able to engage in the formal labor market. Permanent residents are also eligible for federal financial aid, such as the Pell program, which provides low-income students with grants of up to \$5,500 per year. The analyses provided in this brief shed light on at least one important question underlying the debate over federal and state policies that remove barriers to postsecondary institutions and the labor market for undocumented immigrant youth: in a state with a relatively favorable attitude and policy climate towards undocumented youth, do they succeed?

In addition to tracking academic choices and outcomes in the university system, the UCSNY data record students' citizenship or immigration status in the U.S. for the purpose of tuition determination.<sup>2</sup>

Undocumented students comprise nearly 3% of the 161 thousand students who enrolled in associate and bachelor's degree programs at UCSNY from 1999 to 2004 (see Figure 1). Students with valid visas comprised another 6%, with permanent residents and U.S. citizens making up the remaining 25% and 66% respectively. Just under two-thirds of the students who enroll in UCSNY choose one of the six community colleges in the system, with the remainder opting for one of the 11 bachelor's degree-granting institutions within the system.

## Findings

### Finding #1: Undocumented Students in UCSNY Receive Less Financial Aid and are Less Likely to Enroll Full-Time than U.S. Citizens

The largest difference between immigrant students and U.S. citizens is in financial aid receipt: undocumented students and visa holders are ineligible for federal Pell aid and the New York TAP program and, as a result, receive no funding from these programs (see Table 1). In contrast, over three-quarters of permanent residents receive Pell funds and two-thirds receive TAP funds. U.S. citizens also have high rates of Pell and TAP receipt, at 57% and 60% respectively. Undocumented youth are also unlikely to receive support from other sources as they are ineligible for most sources of college-based or private financial aid. Perhaps due to their lower likelihood of obtaining financial support from state, federal, and private sources and their need to work while

<sup>1</sup> A U.S. citizen is an individual who either was born in the U.S. or obtained citizenship through the process of naturalization. Permanent residents (also known as a green card holders) are defined by the U.S. Citizenship and Immigration Services as "any person not a citizen of the United States who is residing in the U.S. under legally recognized and lawfully recorded permanent residence as an immigrant" (USCIS 2012). Visa holders are individuals who reside in the U.S. temporarily for a specific purpose, including those with work visas or student visas. Finally, an undocumented or unauthorized immigrant is one who does not have legal authority to live or work in the U.S. This status is achieved either by entering the country illegally, or by violating the terms of a legal visa.

<sup>2</sup> To be considered for in-state tuition, undocumented students must complete a residency form showing that they either received a GED issued by New York State or attended (for 2 years) and graduated from a New York state high school. The form also includes an affidavit in which students pledge that they have already or will file an application to legalize their status.

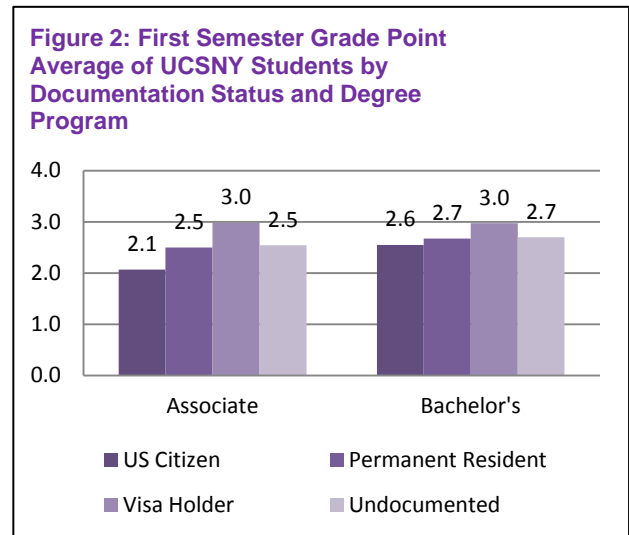

attending school, undocumented youth are far less likely than the other three groups of students to enroll in their degree programs full-time (also shown in Table 1).

**Table 1: First Semester Aid and Enrollment by Documentation Status**

	Undocumented	Visa Holder	Permanent Resident	U.S. Citizen
Pell receipt	0%	0%	76%	57%
New York State TAP Receipt	0%	0%	67%	60%
Full-time attendance	83%	90%	93%	92%

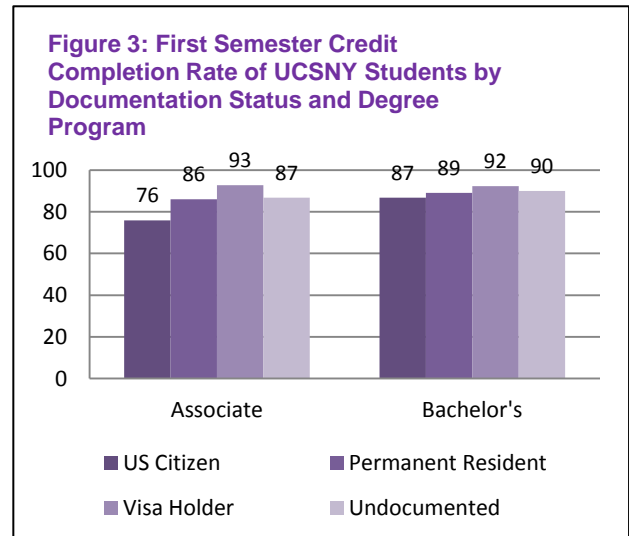

**Finding #2: Undocumented Students in UCSNY Earn Higher GPAs than U.S. Citizens**

Undocumented students in the associate degree programs earn an average GPA of 2.5 compared to 2.0 for U.S. citizens in their first semester (see Figure 2). In the bachelor's degree program, the difference between undocumented students and U.S. citizens is smaller (0.15 of a GPA point), but still favors undocumented students. In fact, all three of the immigrant groups outperform U.S. citizens on first semester GPA, with visa holders earning the highest GPAs in their first semester of college. This pattern of early success for undocumented students is one that is repeated for other measures of early college momentum, perhaps due to the select group of undocumented students who were motivated enough to make it to this point in their academic careers.

**Finding #3: Undocumented Students in UCSNY Earn Higher Credit Completion Rates than U.S. Citizens**

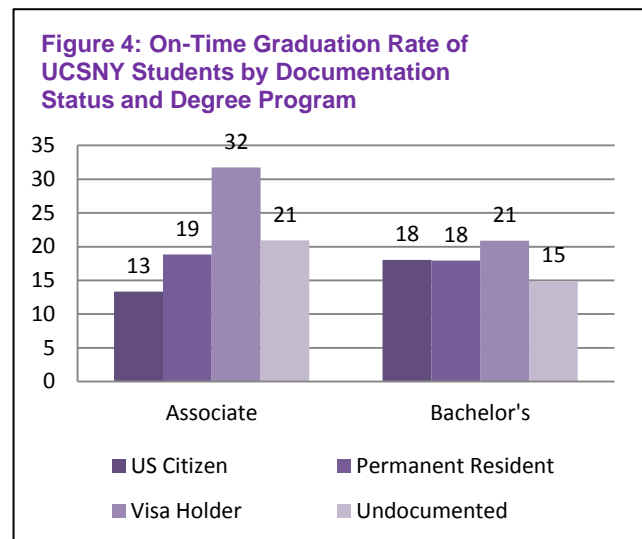

On credit completion rates (the percent of all credits attempted that are earned with a passing grade), undocumented students in both degree programs again fare well relative to their U.S. citizen classmates (see Figure 3). In the bachelor's degree programs, undocumented students complete their courses at a rate of 90% compared to 87% for U.S. citizens. In the associate degree program, undocumented students and those with visas earn equally high rates (approximately 88% for both), with U.S. citizens at a low of 77% course completion.

#### **Finding #4: Undocumented Students are Less Likely to Complete Their Bachelor's Degrees On-Time than U.S. Citizens**

Undocumented students in the associate programs are more likely than U.S. citizens to complete their degrees "on-time" (defined by UCSNY as within two years). However, those in the bachelor's degree program are less likely to complete on-time, which is defined by UCSNY as within four years of enrollment (see Figure 4). The difference between the on-time completion rates for the two degree programs suggests that undocumented students in the bachelor's degree programs experience greater costs to completing their degrees.

All of the comparisons made above are statistically significant at a level of 5 percent. In additional analyses not shown here, we also use regression analysis to determine whether the differences shown in Figures 2 through 4 are driven by differences in the characteristics of students and the academic choices they make upon enrollment. That is, we hold constant students' demographic characteristics, high school achievement, entry year, college, and college major to isolate the college performance gaps between students by their documentation status. While some differences are slightly attenuated and others widen, the direction and statistical significance of the performance gaps remains the same. In another analysis, we examine the gaps in graduation rates within six years of enrollment for bachelor's degree students and find the same results as those in the four-year graduation analysis.

#### **Summary**

In this brief, we use data on the census of undocumented students in one of the nation's largest urban college system where they are eligible to in-state tuition to determine whether undocumented students fail or succeed relative to their peers once they make it to college. The results reveal some complexity in the answer.

The undocumented college students in UCSNY are less likely than their documented classmates to enroll full-time or to receive state or federal financial aid. These two differences reflect the fact that undocumented students are ineligible for such aid, which perhaps necessitates enrolling part-time. At the same time, undocumented college students fare relatively well in the first semester of college, earning higher GPAs and college credit completion rates than U.S. citizens. In the associate degree programs, which are less selective than bachelor's programs and require fewer credits to earn a degree, undocumented students are also more likely than U.S. citizens and permanent residents to complete their degrees on time. Indeed, on many indicators, undocumented college students look much like permanent residents, earning similar GPAs, credit completion rates, and graduation rates. The findings here are consistent with the research on U.S. immigrants who, perhaps due to their selectivity, tend to outperform native-born with similar demographic profiles. These quantitative results also square with previous qualitative studies, which often find undocumented students reporting high levels of resiliency and optimism about their studies. Our study suggests that, despite the

barriers that the absence of documentation likely pose, immigrant students without authorization are perhaps just as positively selected and resilient as those with documentation.

There is, however, one area where students who are undocumented do not outperform their classmates: they have the lowest rates of on-time graduation in the bachelor's degree programs. This is true even in a city that has a strong history of immigration and provides some undocumented students with in-state tuition. And this finding holds even when we control for choice of college, college major, full-time enrollment, high school achievement, and other background characteristics. The results suggest that, despite their earlier college successes, at some point after enrollment, undocumented students experience higher costs to completing their degrees than they had anticipated upon enrollment. These costs could be in the form of credit constraints created by undocumented students' ineligibility for financial aid; incorrect information from university staff regarding their eligibility; stressful interactions with classmates or university staff; or in the increasing realization that their labor market opportunities, even with a diploma, will be extremely restricted. In fact, undocumented students have reported that they extend their time in school deliberately in the hopes that the DREAM Act will pass and provide them a legal entry into the labor force (Suárez-Orozco et al., 2011).

## Policy Implications

---

This brief is unable to predict what would happen if colleges were made accessible to a much larger, and potentially different, population of undocumented students.<sup>3</sup> However, we can offer the following insight for those policymakers and practitioners who would like to see undocumented youth succeed: Simply offering in-state tuition may not be sufficient for undocumented youth to earn their bachelor's degrees. At the federal level, undocumented students would likely benefit from access to Pell grants and other loan programs. Yet there are a number of additional strategies that state policymakers and higher education officials in New York and other states could pursue.

## Financial Aid

Policies that provide undocumented students with access to state financial need and merit-based aid and other tuition-reduction programs are a natural place to start. Several states, including California, New Mexico, and Texas, already provide eligible undocumented students with both in-state tuition and access to the state financial aid programs. Until recently, New York City operated the Vallone scholarship, a publically-supported scholarship program that was available to undocumented students.<sup>4</sup> Funding for the Vallone scholarship was based on tax revenues and in 2010, the award amount dipped to a low of \$250 per student. The City Council determined that such awards were too small to provide meaningful aid and decided to eliminate the program in

---

<sup>3</sup> The findings in this brief are influenced by a number of factors. First, the setting is one of the largest cities in the U.S. with a relatively diverse student population (of both natives and immigrants) and a relatively unique immigrant population (fewer immigrants from Mexico, for instance). Thus, the undocumented students in this college system may not be typical of undocumented students across the nation. Second, while there are selective universities within this college system, none are as selective as some of the top schools in the U.S. If undocumented students are better served by more selective colleges, the findings could differ. Third, there is the possibility of differential selection into college; for instance, the undocumented student who makes it to college may be more motivated than the typical U.S. citizen who makes it to college. Differential selection patterns suggest that if postsecondary education were made accessible to a larger population of undocumented students, we might observe them earning lower GPAs, credit completion, and graduation rates than what we have presented in this analysis.

<sup>4</sup> See details and criteria, [www.cuny.edu/vallonescholars](http://www.cuny.edu/vallonescholars); see also testimony of Michael Fabricant, Professional Staff Congress/CUNY, to the Joint City Council Hearing of the Higher Education and Immigration Committees of the New York City Council, <http://psc-cuny.org/psc-testifies-support-nyc-council-resolution-supporting-nys-dream-act>.

2010.<sup>5</sup> As the only scholarship program available to undocumented students, the City Council could reinstate the program and increase the amounts of the scholarships by reducing the number of recipients.

Officials at UCSNY could also offset the elimination of Vallone scholarships through college-based tuition waivers. These waivers were recently used by public systems to offset tuition increases for those students most in need.<sup>6</sup> Because the waivers, which are essentially tuition revenue expenditures, would be provided through colleges directly to undocumented students, there would be no restrictions seen with state or federal sourced aid. And with greater attention to the lack of resources available to undocumented students, private sources of scholarships could be encouraged to fill the gap left by government. In addition, Teranishi et al. (2011) recommend that community colleges themselves raise funds to provide scholarships for undocumented students from alumni and from local businesses.

### **Information and Institutional Awareness**

Though our study did not directly document the everyday experiences of undocumented students on college campuses, we know from interviews with undocumented students that they can experience isolation on college campuses and, sometimes, incorrect advice from university professionals (e.g. Contreras, 2009). Most college students are likely to obtain incorrect information on occasion, yet for undocumented students, the fear of deportation can prevent them from reaching out to other university staff or their peers for accurate information. These kinds of barriers can be addressed with more professional development for university staff and faculty regarding undocumented students' eligibility for existing benefits and the stresses that they face in college. Contreras (2009) also suggests frequent auditing of institutions and individuals responsible for implementing in-state tuition to undocumented students to ensure that the programs are complying with state mandates. Muñoz and Maldonado (2012) further suggest that institutions of higher education create task forces and develop university policies designed to address the needs of undocumented students. As part of this process, universities may also benefit from connecting with individuals and institutions in the local community that work with undocumented students and fostering partnerships with the existing diversity offices and Latino student groups on campus. Universities may also support undocumented students by ensuring that the information that is distributed to their parents is translated into their native languages (Suárez-Orozco et al., 2011).

### **Federal Legislation**

Ultimately, while the efforts just described should lower the costs to bachelor's degree completion for undocumented students, they will continue to face barriers in their attempts to persist through college and secure jobs upon graduation in the absence of clear federal policy. In the K-12 system, undocumented students are guaranteed the right to a public education as a result of the 1982 ruling by the Supreme Court in *Plyer vs. Doe*. There is no comparable legislation that governs postsecondary education, which results in a wide range of state policies that either restrict or enable undocumented students' access to college and tuition support while in college. Prior research suggests that in-state tuition policies increase undocumented students' likelihood of enrolling in college, which is clearly the first step to ensuring that they obtain diplomas (Kaushal, 2008; Flores, 2010). Yet if the barriers to employment are sufficiently large as to dissuade students from

<sup>6</sup> See "Partial Tuition Waivers", [www1.cuny.edu/portal\\_ur/cmo/i/9/14/index.html](http://www1.cuny.edu/portal_ur/cmo/i/9/14/index.html)

graduating even after they choose to enroll in college, then efforts to increase aid and loans to undocumented students will be insufficient to close the graduation gap. Removing the threat of deportation and providing opportunities to legal employment as the Deferred Action Program and DREAM Acts aim to do may minimize these further barriers.
