K-12 & SCHOOL CHOICE SURVEY

What Do Voters Say About K-12 Education?

Polling Paper No. 18
January 28, 2014

With questions on state performance, education spending, grades and preferences for different types of schools, and views on private schools, charter schools, school vouchers, tax-credit scholarships, and education savings accounts

Survey Project & Profile

Title:	Oklahoma K-12 & School Choice Survey
Survey Organization:	Braun Research, Inc. (BRI)
Survey Sponsor:	The Friedman Foundation for Educational Choice
Release Partner(s):	Oklahoma Council of Public Affairs (OCPA)
Interview Dates:	December 5 to 16, 2013
Interview Method:	Live Telephone 70% landline and 30% cell phone
Interview Length:	14 minutes (average)
Language(s):	English
Sample Frame:	Registered Voters
Sampling Method:	Dual Frame; Probability Sampling; Random Digit Dial (RDD)
Population Samples:	OKLAHOMA (statewide) = 606 Oklahoma City Metro = 301 Tulsa Metro = 204
Margins of Error:	OKLAHOMA (statewide) = ± 4.0 percentage points Oklahoma City Metro = ± 5.6 percentage points Tulsa Metro = ± 6.9 percentage points
Response Rates:	Landline (LL) = 13.3% Cell Phone = 13.8%
Weighting?	Yes (Landline/Cell, Age, Race/Ethnicity, Gender, and Region)
Oversampling?	No

Overview

The “Oklahoma K-12 & School Choice Survey” project, commissioned by the Friedman Foundation for Educational Choice and conducted by Braun Research, Inc. (BRI), measures Oklahoma registered voters’ familiarity and views on a range of K-12 education topics and school choice reforms. We report response levels and differences of voter opinion, as well as the intensity of those responses.

Where do Oklahomans stand on important issues and policy proposals in K-12 education? We attempt to provide some brief observations and insights in this paper.

A randomly selected and statistically representative sample of Oklahoma voters responded to 22 substantive questions and eight demographic questions. A total of 606 telephone interviews were conducted in English from December 5 to 16, 2013, by means of both landline and cell phone. Statistical results have been weighted to correct for known demographic discrepancies. The margin of sampling error for the statewide sample is ± 4.0 percentage points.

In this project we also included one split-sample experiment. A split-sample design is a systematic way of comparing the effects of two or more alternative wordings for a given question. The purpose of this experiment was to see if providing a new piece of information about education spending can significantly influence opinion on the topic — a salient issue in Oklahoma’s state politics and representing an undercurrent in education policy discussions.

Our polling paper has four sections. The first section summarizes key findings. We call the second section “Survey Snapshots,” which offers charts highlighting the core findings of the project. The third section describes the survey’s methodology, summarizes response statistics, and presents additional technical information on call dispositions for landline and cell phone interviews. The fourth section displays the survey questions and results (“topline numbers”), allowing the reader to follow the interview as it was conducted, with respect to question wording and ordering.

Key Findings

- ▶ **Clearly, the economy, jobs, and education are major concerns for Oklahoma voters. Nearly equal proportions of respondents pointed to the “economy and jobs” (25%) and “education” (24%) as state priorities.**

See Question 1

Certain demographic group responses stand out on education. More than one-third of school parents (35%) indicated education as their main focus. Urbanites (34%) and suburbanites (30%) are significantly different than rural voters (16%), placing more importance on education as a state issue. Democrats (29%) differ from Independents (20%). Young voters (30%) are substantially more concerned than older voters (20%). High-income voters (39%) rank education more highly than low-income (20%) and middle-income voters (26%). Women (30%) are more likely to say education than men (19%).¹

- ▶ **Oklahomans are much more likely to think that K-12 education has gotten off on the “wrong track” (56%), compared to about one-third of voters (35%) who say it is heading in the “right direction.”**

See Question 2

The negative sentiment runs across the board of demographics, except for one group – Independents. A plurality of Independents (45%) believe K-12 education is going in the “right direction,” while 43% of respondents in this group say “wrong track.” Statistically, this is a neutral result as the difference lies within the group’s

¹ For this paper, we use the label “school parents” to refer to those respondents who said they have one or more children in preschool through high school. We use the label “non-schoolers” for respondents without children, or who may have children that are not in the specific grade range PK-12. For terminology regarding age groups: “young voters” reflect respondents who are age 18 to 34; “middle-age voters” are 35 to 54; and “older voters” or “seniors” are 55 and older. Labels pertaining to income groups go as follows: “low-income” < \$40,000; “middle-income” ≥ \$40,000 and < \$80,000; “high-income” ≥ \$80,000.

combined margin of error. Independents respond in ways unlike Democrats and Republicans. That is a clear finding. Those who identify with the latter political parties are much more likely to be negative (64% and 58%, respectively).

Another stark contrast we see is comparing school parents with non-schoolers. Nearly two of three school parents (65%) gave the “wrong track” response, which is significantly different than the same response provided by non-schoolers (53%).

Seven of 10 high-income voters (69%) said that K-12 education is off on the wrong track. Likewise, 61% of female voters offered this negative response, which was 10 percentage points higher than male voters (51%).

- ▶ **Nearly six out of 10 voters gave negative ratings to the state’s public school system (39% said “good” or “excellent”; 58% said “fair” or “poor”).**

See Question 3

Some significant differences stand out among demographic groups. Urbanites and suburbanites are clearly more negative than their counterparts in small town and rural areas. The positive-negative margins for the former two groups were -44 points and -36 points, respectively, compared to milder negative margins among small-town voters (-5 points) and rural voters (-8 points). Along these lines, we also see young voters (-37 points) much more likely to give negative ratings to the public school system compared to older voters (-12 points).

A number of groups shared similar negative intensity ranging from -14 points to -17 points: Tulsa voters, school parents, urban and suburban voters, Democrats, middle-age voters, as well as low-income and high-income voters.

- ▶ **Based on open-end survey responses, and generally speaking, voters do not know how much is spent per student in Oklahoma’s public schools. There is a low awareness about public spending on K-12 education.**

See Question 4

More than \$7,600 is spent on each student in Oklahoma’s public schools, and only one out of five respondents (19%) could estimate the correct per-student spending range for the state (this dollar figure reflects “current expenditures” per student). About 29% of respondents thought that \$4,000 or less was being spent per student in the state’s public schools. Another 38% of voters said they “don’t know” and did not offer a spending number.

When considering “total expenditures” per student (\$8,514 in 2010-11), which is another definition for educational spending, voter estimates appear even more dramatically off target.²

Two-thirds of survey respondents (67%) either underestimated educational spending per student (for the low-end definition), or they could not give an answer or guess. No matter how one defines expenditures (per student), it is clear voters are poorly informed about how money is spent on K-12 education.

- ▶ **When given the latest per-student spending information, voters are slightly less likely to say public school funding is at a level that is “too low,” compared to answering without having such information.**

See Questions 5A and 5B

² “Current Expenditures” data include dollars spent on instruction, instruction-related support services, and other elementary/secondary current expenditures, but exclude expenditures on long-term debt service, facilities and construction, and other programs. “Total Expenditures” includes the latter categories.

See Stephen Q. Cornman, Revenues and Expenditures for Public Elementary and Secondary Education: School Year 2010–11 (Fiscal Year 2011) (NCES 2013-305). U.S. Department of Education. Washington, D.C.: National Center for Education Statistics (July 2013).

URL: nces.ed.gov/pubs2013/2013342.pdf

In an experiment, we asked two slightly different questions about the level of public school funding in Oklahoma. On version 5A, 62% of voters said that public school funding was “too low.” However, on version 5B, which included a sentence referring to data on per-student funding in Oklahoma (\$7,631), the proportion of voters saying “too low” shrank by four percentage points to 58%.

- ▶ **By a wide margin, a majority of Oklahomans (57%) prefer considering “total expenses” when it comes to school finance, a spending definition that includes items such as construction and capital costs, interest payments on debt, and pensions. Less than one-third of respondents (30%) said they would rather prefer “operating expenses” or “current expenses,” which exclude these finance items.**

See Question 6

School parents and suburbanites (65% each group) are most likely to want to see the more expansive definition of school expenditures. Republicans (64%) are not far behind in this desire – essentially a tie with the two previous groups.

- ▶ **Oklahoma voters are much more likely to give grades A or B to private/parochial schools in their communities, compared to the local public schools. When considering only those respondents who actually gave a grade, the local private schools (74% give an A or B) fare even better than public schools (45% give an A or B).**

See Questions 7A, 7B, and 7C

When examining all responses, we see approximately 43% of voters give an A or B to local public schools, while 53% give an A or B to local private/parochial schools. Only 3% of voters give a D or F grade to private schools, and 19% gave the same low grades to public schools. It should be noted that much higher proportions of voters did not express a view for private schools (30%) or charter schools (44%), compared to the proportion that did not grade public schools (4%).

- ▶ **A plurality of voters (45%) say that the homeschoolers they know receive a “good” or “excellent” education; 28% say the education is “fair” or “poor.” A substantial proportion of voters (27%) said that they did not know a home-school family or refrained from response.**

See Question 8

Rural voters are significantly more likely to give a response to this question than those Oklahomans who live in other types of communities. Just 14% of rural respondents declined to give a response. By comparison, roughly one-third of voters in other community types would not give a specific response or rating (urban=33%; suburban=32%; small town=29%). Republicans (27%) and Independents (21%) are more likely than Democrats (12%) to say the homeschoolers they know receive an “excellent” education.

- ▶ **When asked for a preferred school type, nearly equal proportions of voters would prefer to choose a regular public school (39%) or a private school (37%). Nearly one out of 10 voters (8%) would select a charter school for their child. An additional one out of 10 voters (11%) would like to homeschool their child. There is a gaping disconnect between school preferences and actual enrollment patterns in the state.**

See Questions 9 and 10

Only 4% of Oklahoma’s K-12 student population attend private schools, but in our survey interviews, more than one-third of survey respondents said they would select a private school as a first option. About 94% of the state’s students attend regular public schools, but a much lower percentage of the state’s voters would prefer a public school as a first choice. Approximately 2% of Oklahoma’s students attend a public charter school, but in our survey four times that

proportion said they would like to send their child to a charter school. Another 11% said home-schooling would be the best way to educate their child.

In a follow-up question, respondents in our survey prioritize “better education/quality” (23%) as the key attribute they are looking for in the selection of their preferred school. The second most cited school quality was “socialization/peers/other kids” (13%). Some caution is warranted when analyzing this question’s results. These characteristics appear to be a higher priority over others on the list. However, any of these qualities may or may not attract more urgency as a second or third priority, which we do not explore in this survey.

- ▶ **Charter schools are an attractive option to a majority of respondents in our survey. A solid majority (53%) say they favor charter schools, while 29% of respondents say they oppose charters. The margin of support for charter schools is large (+24 percentage points). We estimate that two out of five voters (42%) were initially unfamiliar with charter schools.**

See Questions 11 and 12

We asked a pair of questions about charter schools. The first question asked for an opinion without offering any definition. On this baseline question, 37% of voters said they favored charters and 21% said they opposed them. In the follow-up question, respondents were given a definition for a charter school. With this basic definition, support rose 16 points to 53%, and opposition increased eight points to 29%.

Considering the definition question, the initial positive margin of support grew even larger (from +16 points to +24 points) favoring charter schools. The intensity is somewhat mild in the positive direction (+7 points). Oklahomans are

more likely to say they “strongly favor” charter schools (21%) compared to those who said they “strongly oppose” (14%) such schools.

The proportion of “don’t know” responses shrinks by 24 points (42% to 18%) when comparing the baseline item to the definition item.

When examining the demographic breakouts, there are several distinct differences between comparison groups. School parents are clearly more attracted to charters than non-schoolers (62% favor vs. 50% favor, respectively). Urbanites (65%) and suburbanites (64%) are more supportive of charter schools than counterparts in small town (48%) and rural areas (45%). Republicans (60%) are more likely to favor charters than Democrats (47%). Young voters (65%) are more supportive than middle-age (52%) and older voters (49%).

The highest margins supporting charters, as well as greatest intensity, are also reflected among most of the same groups: school parents, urban, suburban, Republicans, Independents, and young voters.

- ▶ **A solid majority of Oklahoma voters (59%) said they support school vouchers, compared to 35% who said they oppose such a school choice system. The margin of support (+24 points) is equal to six times the survey’s margin of error. We estimate that two out of five voters (35%) were initially unfamiliar with school vouchers.**

See Questions 13 and 14

Similar to the pair of charter school questions, our interview asked baseline and follow-up definition questions about school vouchers. In the first question, respondents were asked for their views on vouchers without a definition or other context. On this baseline question, 41% of Oklahomans said they favored vouchers and 24% said they opposed such an education policy. In the follow-up question – using a basic definition for a school voucher system – voter support rose 18 points to 59%, and opposition increased 11 points to 35%.

Like the paired charter school questions, the positive margin of support increases quite a bit when considering the response changes moving from the baseline to definition question for vouchers (baseline = +17 points; definition = +24 points). Among registered voters, the intense opinion for vouchers (+10 points) is in the positive direction like it is for charter schools.

The proportion of “don’t know” responses shrinks by 29 points (35% to 6%) when comparing the baseline item to the definition item.

The demographic groups that are most likely to favor school vouchers are school parents (margin=+40 points), Republicans (margin=+44 points), young voters (margin=+49 points), and low-income earners (margin=+33 points). Relatively speaking, the groups that are the least likely to support vouchers are Democrats (margin=+3 points) and seniors (margin=+6 points). No observed group shows a negative margin of support-opposition.

Young voters (+30 points) and Republicans (+28 points) are the most enthusiastic about school vouchers. On the other hand, Democrats (-7 points) are more inclined than other groups to exhibit a negative intensity for vouchers.

- ▶ **By more than a two-to-one margin, voters support the school choice policy financing “tax-credit scholarships.” The percentage of those who favor (63%) is much greater than the proportion of voters who say they oppose such a school choice reform (28%). The margin of support is very large, roughly +35 percentage points. Likewise, voters are more likely to be intensely favorable toward tax-credit scholarships (+12 points).**

See Question 15

A few contrasts stand out when comparing demographic groups. School parents (69%) are significantly more likely to favor tax-credit scholarships than non-schoolers (61%), and the former is much more intensely positive (+21 points vs. +9 points, respectively). Republicans (76%) are more likely to favor such a school

choice policy, compared to Democrats (53%) and Independents (60%). The positive intensity among Republicans is very high (+27 points). Young and middle-age voters are also very favorable toward tax-credit scholarships (73% and 68%, respectively); older voters relatively less so (53%). The positive intensity among female voters (+22 points) is much higher than among male voters (+2 points).

One out of 10 respondents (10%) did not express an opinion on this question.

- ▶ **A solid majority of Oklahomans (56%) said they support an “education savings account” system (“ESA”). Because the margin of support is large (+22 points), it is clear that voters are much more likely to favor ESAs rather than oppose such a system – just one-third (34%) said they oppose ESAs.**

See Questions 16 and 17

The demographic groups most likely to support ESAs are school parents (63%), urban voters (60%), Republicans (65%), young voters (67%), low-income earners (59%), and high-income earners (62%). Older voters represent the demographic that is least likely to favor ESAs, though the margin of support is still positive by +11 percentage points (50% favor vs. 39% oppose).

The groups having the highest margins of support for ESAs are school parents (+32 points), urban voters (+29 points), Republicans (+38 points), young voters (+43 points), and high-income earners (+32 points). No observed demographic expressed a net-negative sentiment toward ESAs.

The intensity for ESAs follows pretty closely with the demographic margins of support. Most intensely favorable groups are school parents (+21 points), Republicans (+21 points), and young voters (+22 points). Two groups expressed a mildly negative intensity: Democrats (-3 points) and seniors (-2 points).

Approximately 10% of respondents did not have an opinion regarding ESAs.

In a follow-up and open-ended question, we asked for the reason why a respondent chose his/her view regarding ESAs. The top two categories reflected “other positive” and “other negative” responses that did not fit in our coding and category framework. These positives outnumbered the negatives 144 to 96 (or 26% vs. 17%) out of the total set of open-end responses to this question. In terms of responses that could fit the coding framework, the most frequently cited reason was some combination of “choice,” “freedom,” or “flexibility.” About 11% of respondents mentioned one or more of these terms.

► **Oklahomans prefer universal access to ESAs rather than limited eligibility that is based solely on financial need.**

See Questions 18 and 19

Six out of 10 voters (58%) said they agree with the statement that “ESAs should be available to all families, regardless of incomes and special needs.” Approximately 37% of respondents “strongly agree” with that statement. One-third (32%) of voters disagree with that statement; 19% said they “strongly disagree.”

We observe nearly the opposite result when we asked if Oklahoma voters agree with the statement that “ESAs should only be available to families based on financial need.” Just over one-third of respondents (37%) agreed with that statement; 17% of respondents said they “strongly agree” about means-testing ESAs. A majority (53%) of respondents said they disagree with means-testing such a funding system, and 35% said they “strongly disagree.”

► **We asked two questions that suggested separate proposals for funding preschool education. Oklahomans sent mixed messages on competing proposals. An initial impression is that voters prefer simple funding increases for existing public preschool providers. However, after examining the data on both questions, it does appear**

Oklahomans are quite open to an ESA funding system to support preschoolers and their future education.

See Questions 20 and 21

On the first question, a plurality of voters (29%) indicated they would like to see an increase of directly funding public preschool providers. However, about 26% of respondents said they would equally favor the latter or a proposal establishing an ESA system for four-year-old children in Oklahoma. An additional 17% stated they would prefer structural reform – the ESA system – over simple funding increases.

The follow-up question asked to what extent respondents would favor or oppose a pilot ESA program for Oklahoma’s four-year-olds. Considering this proposal on its own merits, well more than half of respondents (55%) said they would favor such a limited ESA program, compared to 32% saying they would oppose the preschool ESA system. The margin of support (+23 points) is considerable, nearly six times the poll’s margin of error. Intensity goes moderately in the positive direction (+4 points). The demographics most likely to support such a program are: school parents (65%), urbanites (62%), suburbanites (62%), young voters (68%), middle-age voters (60%), and low-income earners (62%). Rural residents (45%) and older voters (44%) are the least likely to back this plan.

- ▶ **For most voters, the ESA topic is not a make or break issue. Approximately 58% said that it would not make them more or less likely to vote for a political candidate who supports ESAs. However, if a voter has an opinion on this issue, he or she is more likely to vote for the pro-ESA candidate (19% “more likely” vs. 14% “less likely”).**

See Question 22

Some demographics are worth noting for their position on this question. The groups “more likely” (ML) to be swayed to support a pro-ESA candidate are: school parents (ML=21% and margin=+8 points), urban residents (ML=24% and

margin=+15 points), Republicans (ML=26% and margin=+14 points), Independents (ML=24% and margin=+12 points), young voters (ML=23% and margin=+17 points), and women (ML=20% and margin=+8 points). Some groups appear “less likely” (LL) to support the ESA candidate: rural residents (LL=19% and margin=-3 points), Democrats (LL=19% and margin=-6 points). Small-town voters, young voters, and low-income earners all stand out as most indifferent toward the ESA candidate (each 66% saying “no difference”).

■ More Likely

■ No Difference

■ Less Likely

FRIEDMAN FOUNDATION FOR EDUCATIONAL CHOICE, *Oklahoma K-12 & School Choice Survey, Q22.*

Methods Summary

The “Oklahoma K-12 & School Choice Survey” project, commissioned by the Friedman Foundation for Educational Choice and conducted by Braun Research, Inc. (BRI), interviewed a statistically representative sample of registered voters in the state of Oklahoma. Methodology included probability sampling and random-digit dial. The statewide sample includes a total of **606** telephone interviews completed in English from December 5 to 16, 2013, by means of both landline and cell phone. Statistical results were weighted to correct known demographic discrepancies.

The margin of sampling error for the statewide sample is ± 4.0 percentage points.

BRI’s live callers conducted all phone interviews. For this entire project, a total of **7,200** calls were made in Oklahoma. Of these calls, **2,551** were unusable phone numbers (disconnected, fax, busy, non-residential, or non-answers, etc.); **3,891** were usable numbers but eligibility unknown (including refusals and voicemail); **65** cell phone numbers and **72** landline numbers were usable but not eligible for this survey; **15** people did not complete the survey. The average response rate of the landline interviews was **13.3%**. The average response rate of the cell phone interviews was **13.8%**.

Details on call dispositions, landline and cell phone response rates, and weighting are discussed in the following sections.

Sample Design

A combination of landline and cellular random-digit-dial (RDD) samples was used to represent registered voters in Oklahoma who have access to either a landline or cellular telephone. Both samples were provided by Survey Sampling International, LLC (SSI) according to BRI specifications.

SSI starts with a database of all listed telephone numbers, updated on a four- to six-week rolling basis, 25 percent of the listings at a time. All active blocks—contiguous groups of 100

phone numbers for which more than one residential number is listed—are added to this database. Blocks and exchanges that include only listed business numbers are excluded.

Numbers for the landline sample were drawn with equal probabilities from active blocks (area code + exchange + two-digit block number) that contained three or more residential directory listings. The cellular sample was not list-assisted, but was drawn through a systematic sampling from dedicated wireless 100-blocks and shared service 100-blocks with no directory-listed landline numbers.

Contact Procedures

Interviews were conducted from December 5 to 16, 2013. As many as eight attempts were made to contact every sampled telephone number. The sample was released for interviewing in replicates, which are representative subsamples of the larger sample. Using replicates to control the release of the sample ensures that complete call procedures are followed for the entire sample. Calls were staggered over times of day and days of the week to maximize the chance of making contact with potential respondents. Each phone number received at least one daytime call.

We have noticed in recent years that response rates have been declining for consumer polls. Generally, running surveys over a longer period of time will boost these response rates. However, lower response rates do not lead to lower reliability of the data. For example, polls with a sample size of 1,200 respondents run over a two-day period with response rates of 3% or 4% have been acceptable for public release.

The survey's margin of error is the largest 95% Confidence Interval for any estimated proportion based on the total sample—the one around 50%. The overall margin of error for this survey is $\pm 4.0\%$. This means that in 95 of every 100 samples drawn using the same methodology, estimated proportions based on the entire sample will be no more than 4.0 percentage points away from their true values in the population.

It is critical to note that the margin of sampling error (MSE) is higher when considering the number of respondents for a given demographic subgroup. For example, the MSE for a subgroup of 150 respondents is ± 8.0 percentage points.

In addition to sampling error, question wording, ordering, and other practical difficulties when conducting surveys may introduce error or bias into the findings of public opinion research.

Call Dispositions and Response Rates

Weighting Procedures and Analysis

Weighting is generally used in survey analysis to compensate for sample designs and patterns of non-response that might bias results. In this study, the sample demographics were balanced to population parameters. Using weighting targets, we weighted to registered voter statistics for the state of Oklahoma: we used the dual landline/cell weighting method first; then, we weighted on Age, Race/Ethnicity, Gender, and Region.

The weighted and unweighted data are available on request.

All weighting measures are based on Census Bureau statistics for the state of Oklahoma.

Special note: We calculated age distributions from date-of-birth information on file from the state's respective registered voter database, as supplied by Aristotle International.

About the Author

Paul DiPerna (paul@edchoice.org) is Research Director for the Friedman Foundation for Educational Choice in Indianapolis. He joined the foundation in September 2006. DiPerna's research interests include surveys and polling on K-12 education and school choice policies. He also directs and manages all other research projects commissioned by the foundation. DiPerna has traveled to 27 states for his work, presenting survey research findings and discussing various school choice policies for audiences including public officials, policy professionals, advocates, and academics.

Previously, DiPerna served as the assistant director for the Brown Center on Education Policy at the Brookings Institution in Washington, D.C. His six years at Brookings included projects evaluating the federal Blue Ribbon Schools Program and analyzing student achievement in charter schools. DiPerna was a research analyst for the first five issues of the Brown Center Report on American Education (2000-2004). He also managed and coordinated the activities of the National Working Commission on Choice in K-12 Education (2001-2005).

A native of Pittsburgh, DiPerna earned an M.A. in political science from the University of Illinois (2000) and B.A. from the University of Dayton (1996).

Acknowledgements

A number of people made significant contributions during the course of this survey project. Brandon Dutcher and our friends at the Oklahoma Council of Public Affairs provided us with important insights and context at the local/state level. We would like to thank the team at Braun Research who assisted in project development, and for their excellent work in conducting the interviews and collecting the data. I appreciate the time and commitments from Paul Braun, Cynthia Miller, and Dave Oshman. Finally, we are of course grateful to the respondents who generously agreed to participate in our survey interviews.

About the Survey Organization

Braun Research, Inc. (BRI)

The Braun Research network of companies, founded in 1995, combined employ 37 full-time and more than 267 part-time employees engaged in data collection via telephone, and internet for various survey research firms, government and advertising agencies, local community organizations, local and national business groups, foundations, universities and academic entities, as well as religious organizations. In 18 years, Braun Research has conducted more than 9,000 research projects by telephone, internet, and mail worldwide.

Nationally-known research firms have hired Braun Research, including the Gallup Organization, the Pew Research Center, the Eagleton Poll, Mathematica Policy Research, and *The Washington Post*. Braun Research has worked for the New Jersey Department of Health and Human Services, as well as other government agencies including the United States Departments of the Treasury and Defense, and the Center for Disease Control.

Braun Research is a well-respected firm employing techniques and standards approved by various survey research academic organizations and other affiliations including those with whom Braun is an active member, including AAPOR (American Association for Public Opinion Research), MRA/CMOR (Market Research Association/Council on Marketing and Opinion Research), and CASRO (Council on American Survey Research Organizations).

Braun's services on behalf of other research firms are up to standards required by various professional associations where Braun enjoys membership, and in some cases, participates actively. Paul Braun is a member of the MRA/CMOR committees on response rate improvement and in launching a seal of quality for the industry. Paul Braun is recognized as a leader in the field by colleagues who asked him to serve on these committees. He has served as President of the New Jersey Chapter of AAPOR.

About the Survey Sponsor

The Friedman Foundation for Educational Choice

The Friedman Foundation for Educational Choice is a 501(c)(3) nonprofit and nonpartisan organization, solely dedicated to advancing Milton and Rose Friedman’s vision of school choice for all children. First established as the Milton and Rose D. Friedman Foundation in 1996, the Foundation continues to promote school choice as the most effective and equitable way to improve the quality of K-12 education in America. The Foundation is dedicated to research, education, and outreach on the vital issues and implications related to choice in K-12 education.

Commitment to Methods & Transparency

The Friedman Foundation for Educational Choice is committed to research that adheres to high scientific standards, and matters of methodology and transparency are taken seriously at all levels of our organization. We are dedicated to providing high-quality information in a transparent and efficient manner.

All individuals have opinions, and many organizations (like our own) have specific missions or philosophical orientations. Scientific methods, if used correctly and followed closely in well-designed studies, should neutralize these opinions and orientations. Research rules and methods minimize bias. We believe rigorous procedural rules of science prevent a researcher’s motives, and an organization’s particular orientation, from pre-determining results. If research adheres to proper scientific and methodological standards, its findings can be relied upon no matter who has conducted it. If rules and methods are neither specified nor followed, then the biases of the researcher or an organization may become relevant, because a lack of rigor opens the door for those biases to affect the results.

Our authors take full responsibility for research design, analysis, charts, and any unintentional errors or misrepresentations. They welcome any and all questions related to methods and findings.

About the Survey Release Partner

Oklahoma Council of Public Affairs (OCPA)

Oklahoma Council of Public Affairs (OCPA) was founded in 1993 as a public policy research organization focused primarily on state-level issues. OCPA has been part of an emerging, national trend of free-market, state-based think tanks. The founders, led by Dr. David Brown, envisioned an organization that was capable of affecting the state's public policy similar to national level think tanks, such as the Heritage Foundation. Throughout its 20 years of existence, OCPA has conducted research and analysis of public issues in Oklahoma from a perspective of limited government, individual liberty and a free-market economy. OCPA has promoted the conclusions from its research through an array of media that have steadily increased in breadth, scope and ultimately, effectiveness.

Oklahoma K-12 & School Choice Survey Questions and Results

Interview Dates: December 5 to 16, 2013
Sample Frame: Registered Voters
Population Samples: OKLAHOMA (statewide) = 606
Oklahoma City Metro = 301
Tulsa Metro = 204

Margins of Error: OKLAHOMA (statewide) = ± 4.0 percentage points
Oklahoma City Metro = ± 5.6 percentage points
Tulsa Metro = ± 6.9 percentage points

Displayed numbers in tables are percentages, unless otherwise noted.

Due to rounding, percentage totals for a given question may be slightly greater or less than 100%.

“For this brief interview, if you are completely unsure about your answer or have no feelings for an answer, you can say ‘I Don’t Know.’” [ENTER AS “DK”]

[CODE GENDER OF RESPONDENT; DO NOT ASK, UNLESS GENDER IS IN QUESTION]

	Male	Female
OKLAHOMA	50	50

1. Which of the following do you see as the most important issue facing the state of Oklahoma right now?

[RANDOMIZE RESPONSES 1-9 TO AVOID BIAS]

[IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

	Crime	Economy & Jobs	Education	Environment	Healthcare	Housing	Immigration	Values Issues	Taxes
OKLAHOMA	4	25	24	2	18	1	5	8	4
OKC Metro	3	21	24	2	21	2	5	9	5
Tulsa Metro	5	31	26	1	14	0	4	8	4

2. Do you feel things in Oklahoma’s K-12 education system are generally going in the right direction, or do you feel things have generally gotten off on the wrong track?

[IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

	Right Direction	Wrong Track	DK/Ref (VOL.)
OKLAHOMA	35	56	8
OKC Metro	37	55	9
Tulsa Metro	34	60	6

3. How would you rate Oklahoma’s public school system?

[IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

	Excellent	Good	Fair	Poor	DK/Ref (VOL.)
OKLAHOMA	5	34	42	16	3
OKC Metro	5	32	45	14	4
Tulsa Metro	5	34	39	20	1

4. How much do you think is spent per year on each student in Oklahoma’s public schools? Your estimate (to the nearest thousand dollars) will represent the combined expenditures of local, state, and federal governments.

[OPEN-END. BASED ON RESPONSE, SELECT ONE OF THE FOLLOWING CATEGORIES]

[IF DEPENDS, PROBE ONCE, OFFERING RANGE CATEGORIES. IF STILL DEPENDS, ENTER AS "DK"]

	Less than \$4,000	\$4,001 – \$8,000	\$8,001 – \$12,000	\$12,001 – \$16,000	Over \$16,000	DK/Ref (VOL.)

“For the remainder of this interview, if you are completely unsure about your answer or have no feelings for an answer, feel free to say ‘I Don’t Know.’” [ENTER AS “DK”]

11.Based on what you know, or have heard from others... In general, do you favor or oppose “charter schools”?

[PROBE:] Would you say strongly or somewhat favor/oppose?

[IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

	Strongly Favor	Somewhat Favor	Somewhat Oppose	Strongly Oppose	DK/Ref (VOL.)
OKLAHOMA	14	23	9	12	41
OKC Metro	16	26	12	10	36
Tulsa Metro	13	21	7	11	45

12. Charter schools are public schools that have more control over their own budget, staff, and curriculum, and are exempt from many existing public school regulations. In general, do you favor or oppose charter schools?

[PROBE:] Would you say strongly or somewhat favor/oppose?

[IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

	Strongly Favor	Somewhat Favor	Somewhat Oppose	Strongly Oppose	DK/Ref (VOL.)
OKLAHOMA	21	32	15	14	18
OKC Metro	20	37	15	12	15
Tulsa Metro	21	31	13	13	21

13. Based on what you know, or have heard from others... In general, do you favor or oppose “school vouchers”?

[PROBE:] Would you say strongly or somewhat favor/oppose?

[IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

	Strongly Favor	Somewhat Favor	Somewhat Oppose	Strongly Oppose	DK/Ref (VOL.)
OKLAHOMA	21	20	9	15	34
OKC Metro	18	20	9	14	37
Tulsa Metro	23	19	8	16	33

14. A school voucher system allows parents the option of sending their child to the school of their choice, whether that school is public or private, including both religious and non-religious schools. If this policy were adopted, tax dollars currently allocated to a school district would be allocated to parents in the form of a “school voucher” to pay partial or full tuition for their child’s school. In general, do you favor or oppose a school voucher system?

[PROBE:] Would you say strongly or somewhat favor/oppose?

[IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

	Strongly Favor	Somewhat Favor	Somewhat Oppose	Strongly Oppose	DK/Ref (VOL.)
OKLAHOMA	34	25	11	24	6
OKC Metro	36	23	14	22	4
Tulsa Metro	30	30	6	26	7

15. A “tax credit” allows an individual or business to reduce the final amount of a tax owed to government. Some states, including Oklahoma, give tax credits to individuals and businesses if they contribute money to nonprofit organizations that distribute private school scholarships. A “tax-credit scholarship system” allows parents the option of sending their child to the school of their choice, whether that school is public or private, including both religious and non-religious schools. In general, do you favor or oppose a tax-credit scholarship system?

[PROBE:] Would you say strongly or somewhat favor/oppose?

[IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

	Strongly Favor	Somewhat Favor	Somewhat Oppose	Strongly Oppose	DK/Ref (VOL.)
OKLAHOMA	29	34	11	17	10
OKC Metro	25	39	10	16	10
Tulsa Metro	34	28	11	17	10

16. An "education savings account" – often called an ESA – allows parents to take their child out of a public district or charter school, and receive a payment into a government-authorized savings account with restricted, but multiple uses. Parents can then use these funds to pay for private school tuition, online education programs, private tutoring or saving for future college expenses. In general, do you favor or oppose this kind of “savings account system”?

[PROBE:] Would you say strongly or somewhat favor/oppose?

[IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

	Strongly Favor	Somewhat Favor	Somewhat Oppose	Strongly Oppose	DK/Ref (VOL.)
OKLAHOMA	29	27	13	21	10
OKC Metro	29	27	14	19	10
Tulsa Metro	29	26	10	24	10

17. What is the most important reason that would cause you to choose ESAs?
Please use one word, or a very short phrase.

[OPEN-END. IF DEPENDS, PROBE ONCE. IF STILL DEPENDS, ENTER AS “DK”]

Top 10 | Specific impressions offered by respondents in the statewide sample. Numbers represent counts (n), not percentages.
