Abstract

The paper reports the first results of an experience of university teaching innovation in progress. It is based on multiple means of “Engagement”, “Representation”, and “Action & Expression” in the framework of the Universal Design for Learning (UDL) approach. The action repeats, with some improvements, a previous university experience of Flipped Classroom in distance learning, and it has been proposed in dual mode to second year students enrolled in a course on “Teaching and Learning” of the bachelor’s degree program in Education of the University of Bergamo, in Italy. The paper investigates the students' perception about: 1) the attractiveness of the proposal compared to more traditional approaches; 2) their own learning paths; 3) their motivation. A quantitative and qualitative survey detected the students' perception of the teaching methods for this course, with main focus on the use of active teaching aimed at breaking down learning barriers, in the UDL perspective.

Universal Design for Learning at University: Technologies, Blended Learning and Teaching Methods

Federica BARONI¹ and Marco LAZZARI

Department of Human and Social Sciences, University of Bergamo, Italy

Abstract. After almost 10 years from the first report on the diffusion of the Universal Design for Learning (UDL) in Europe, didactic planning related to the UDL is slowly spreading in Italy, while research is still in its infancy; there is a lack of documented experiences and impact assessments, especially for higher education. International research discusses the opportunities to redesign learning environments to create equal access to education for all in higher education courses. In this paper we report a university teaching experience based on multiple means of Engagement, Representation, and Action & Expression. We have experienced active and inclusive teaching methodologies in dual mode with second year students enrolled in a course on “Teaching and Learning” of the bachelor’s degree program in Education. The proposal repeats, with some improvements, a previous university experience of Flipped Classroom in distance learning. The paper reports the first results of the teaching innovation in progress. It investigates the students’ perception about: 1) the attractiveness of the proposal compared to more traditional approaches; 2) their own learning paths; 3) their motivation.

1. Universal Design for Learning

1.1. Principles of inclusive teaching

The Universal Design (UD), as discussed within the *United Nations Convention on the Rights of Persons with Disabilities*, is an inclusive design approach from the very beginning, as it supports methodologies that put the final users at the centre of the process. This approach “broadly defines the user. [...] Its focus is not specifically on people with disabilities, but all people” [1] and it does not imply a basic standardisation, but an enhancement of differences when proposing inclusive products, environments, and services. In the field of teaching, UD principles translate into Universal Design for Learning (UDL), that promotes flexible materials and alternative activities for students with different abilities. The goal of UDL is to improve and optimise teaching and learning for all people, by valuing everyone’s learning styles and supporting their different motivations.

Credit author statement: the authors contributed equally to the writing of the article as co-first authors; the project was conceived and led by FB.

In the 90's the Center for Applied Special Technology (CAST), a non-profit education research and development organization in the United States, theorised the three main principles of UDL [2]:

- support recognition learning: provide multiple, flexible methods of presentation (the “what” of learning);
- support strategic learning: provide multiple, flexible methods of expression and apprenticeship (the “how” of learning);
- support affective learning: provide multiple, flexible options for engagement (the “why” of learning).

By 2018 the Guidelines developed by CAST were translated into several languages, including Braille code. They have been updated on the ground of recent research in the areas of education, cognitive science, psychology, and neuroscience, so that the third principle has become the first one: in fact, research has amply shown the importance of engagement and self-efficacy in learning [3]. These principles aim to break down barriers to learning through flexible and diversified teaching methods and proposals: as in architecture, teaching accessibility consists in offering to students different, but equally valid ways to gain knowledge.

About “Engagement” the UDL Guidelines highlight that “there is not one means of engagement that will be optimal for all learners in all contexts” [4]: among the ten points of this guideline, for the experience described in this paper we emphasize the importance of “optimizing individual choice and autonomy” (checkpoint 7.1) and “fostering collaboration and community” (8.3).

About “Representation” the Guidelines highlight that “there is not one means of representation that will be optimal for all learners” [4]: among the twelve points, we stress the importance of “promoting understanding across languages” (2.4), “illustrating through multiple media” (2.5), as well as all the references of the Guideline 3 (named comprehension), which aims to build deep knowledge through an active process involving each student.

About “Action & Expression” the UDL Guidelines highlight that “there is not one means of action and expression that will be optimal for all learners; providing options for action and expression is essential” [4]: there are nine points for this guideline, but we report the importance of “using multiple media for communication” (5.1) and “building fluencies with graduated levels of support for practice and performance” (5.3).

How is this possible? As Rose and Meyer argue [2], methodological flexibility and content adaptation according to the characteristics and preferences of the students require multimodal instruments; in practice, the UDL implementation in educational contexts is possible through the use of digital technologies: hypermedia; modularity, variability and transcoding [5, 6] are the most important characteristics of digital media that allow content personalization and different language convergence.

1.2. Universal Design for Learning in Italy

In 2013, when one of the authors defended her doctoral thesis on UDL, there was already a good culture of UD in Italy, especially in the field of technologies and by researchers dedicated to inclusion issues. In the educational field, those years were characterized by the debate between the concepts of *integrazione* and *inclusione*, whose terms, in Italian, have specific cultural references: in Italy, in fact, the culture of inclusion in education has a 50-year history. However, the UDL approach was not known and there were no

documented experiences, except for a few descriptions of pioneer teachers in blogs or social web groups and except for the first academic studies [e.g. 7], as reported in the European study on the diffusion of UDL at that time [8].

Since 2016 several studies have been published in Italian by publishers known to teachers; scholars are integrating UDL's operational lines into the national cultural and educational landscape. At the same time, the Ministry of Education began citing UDL as a framework for the implementation of an inclusive school curriculum, and some refresher courses for teachers were started by universities and training centres.

Compared to other approaches, we believe that UDL is having a fair diffusion in Italy thanks to its operability and strong connection with technologies, that make it appreciable for those who believe in the digital school opportunities.

To understand this interest, it must be considered that in 2020/21 there were more than 300,000 pupils with disabilities attending Italian schools (3.6% of those enrolled), around 4,000 more than the previous year (+2%)²: these figures have been growing in recent years, due to the increase in medical diagnoses and disability certifications. This increase prompts the school system to look for strategies and tools for everyday teaching. Moreover, inclusive education is among the priority goals of the 2030 Agenda (Goal 4) to “ensure inclusive and equitable quality education [...] for all”: it is an important issue for Italy, where 23% of people in the 18-24 age range have either dropped out of school or finished it without acquiring minimum basic skills³.

1.3. Application in higher education

Data on early school leaving prompt us to look for strategies to involve and include students in higher education. In 2008 the US Department of Education published *The Higher Education Opportunity Act* which refers to UDL to improve student outcomes and success. The document confirms the UDL principles, with some adjustments due to students being older than those originally imagined for UDL. The experiences documented in the literature and on the web concern the use of the UDL framework for teaching various disciplines, ranging from humanities to science and technology, not only for students with disabilities or learning disorders, but also to achieve each student's learning goals.

It is often thought that inclusion in higher education is mainly related to accessibility and that it is enough to offer accessible materials to students with sensory disabilities or learning problems. According to UDL, accessibility is a necessary but not sufficient condition for breaking down learning barriers: students must also be able to manifest what they have learned and also apply it. This means that courses must be designed with a variety of training proposals, in addition to lectures and the use of textbooks: technologies can help this process, but it is necessary to be aware that digital tools are a support for the students, not for the teacher (e.g., in the creation of multimedia materials).

For several years, students have been taking notes on their own personal devices, despite sometimes university classrooms are not properly equipped (electricity, appropriate desks, widespread connectivity); using computers to take notes encourages sharing and exchange between students, but also the personalization of study materials. The use of technology for personalisation must now be transferred from the level of the

³ Source: INVALSI. La dispersione scolastica in Italia 2021.

individual student to the course design by teachers: UDL can provide a framework, especially now that many courses are delivered in dual mode due to the health emergency.

The *UDL On Campus* website developed by CAST provides guidelines for developing curriculum and inclusive lessons from the course syllabus. An UDL-oriented syllabus clearly presents the lecturer and the course through different media (text, images, videos, ...). At the beginning, the lecturer makes explicit the accommodations, states each goal to increase students' awareness and motivation to learn, includes a variety of materials to increase the options of representation, provides clear assignments and assessments that consider possible barriers, states teacher's expectations and students' responsibilities. The website provides many other operational guidelines for designing a course according to the UDL perspective, e.g. on the definition of learning goals, on how to enhance learning by valuing its emotional dimension, on the evaluation of the learning process, on how to work on increasing the students' executive functioning, on how to promote peer learning, also in relation to the type of teaching environment (synchronous, asynchronous, face-to-face).

2. Universal Design for Learning in practice

2.1. Context

During a course on “Teaching and Learning” for the students of Education Sciences at the University of Bergamo, we have experienced active and inclusive teaching methodologies with students enrolled in their second year. The degree course is aimed at training professionals capable of accompanying the development of boys and girls in early childcare services: for the 2021/2022 academic year, 296 students are enrolled in the virtual classroom on Microsoft Teams, the digital platform used by our university to deliver courses in simultaneous dual mode due to the COVID emergency (some students attend in-person and others remotely). Among the students, there are people with a university personalised learning plan, students with Italian as L2, and working students.

The course consists of two modules for a total of 68 hours of lessons and workshop activities: this paper will focus on the first module “Methodologies and teaching in early childhood” (and workshop) which took place in autumn 2021. Among the general goals of the course: defining the concept of teaching, understanding strategies for the development of teaching with reference to the main collaborative and cooperative forms of organization of educational and teaching activities, exploring methodological and technological approaches for teaching, acquiring a scientific vocabulary in relation to teaching contents.

In addition to MS Teams, aimed at delivering lectures in synchronous mode and at archiving video recordings to facilitate working students or students with real-time connection difficulties, university lecturers may exploit the Moodle platform for e-learning course management. The critical health emergency and the possibility of dual mode lectures prompted most students to take advantage of distance learning, instead of attending lessons in person. This fragmented context imposed a flexible teaching approach and reflection on the quality of the use of digital tools in dual mode teaching.

2.2. Method

In the following we describe the teaching actions taken, based on the UDL approach at University: theoretical lessons supported by technologies; synchronous and asynchronous modes of attending lessons; use of different communication tools; active research on the website in real/virtual classrooms through a BYOD approach; sharing ideas and brainstorming activities; collaboration platforms; Social Networks.

The proposal repeats, with some improvements, a previous academic experience of Flipped Classroom (FC) in distance learning [9]. This time the FC methodology is envisaged as one of the teaching actions to propose different ways to support recognition learning, strategic learning, and affective learning. Others will be described in the "activities" section.

A quantitative and qualitative survey detected the students' perception of the teaching methods for this course, with main focus on the use of active teaching aimed at breaking down learning barriers, in the UDL perspective. The results deepen those of the 2020/2021 experience: at that time, 381 volunteer students participated in the FC project (out of a cohort of 513 enrolled) and 307 answered the questionnaire with encouraging results that prompted us to propose the experience to the students of the following year, with more focus on UDL practices. This year the students who took part in the FC project were 194, distributed in 56 groups; 163 volunteers responded to the anonymous questionnaire which was also open to those who did not take part in the FC-based group work (12 respondents among them).

The questionnaire proposed three questions about the learning experience: the first one investigated the students' perception of the effectiveness of the course in general through answers to 8 items on a 5-point Likert scale (strongly agree, agree, undecided, disagree, completely disagree); the second one investigated the perception of the students who participated in the group work regarding the effectiveness of this approach (8 more items, same Likert scale); the third question, free and open, on the opportunities or criticalities of the course. At the end, three profiling questions (gender, age, length of professional experience in education). The data we propose in the next chapter have been analyzed with descriptive intent.

2.3. Actions

In order to guarantee a sound UDL proposal, the course included four kinds of action: 1) frontal theoretical lessons to provide the fundamentals of teaching and the basic vocabulary (with an introduction to the UDL framework); 2) brainstorming on collaborative platforms to stimulate student participation on educational issues; 3) group projects, according to the FC methodology, to study and try approaches and educational actions aimed at children in the 0-6 age range; 4) seminars and workshops with education professionals: a nursery coordinator, an expert in art and museum services for children, a musician in nursery schools, two technology experts (coding and educational robotics, inclusive technologies).

In general, to ensure the variability of the media, we used a wide range of the Microsoft Teams functions (audio, video, chat, emoticons), and of the Moodle e-learning functions, as well as collaborative platforms (Padlet, Google Drive), and a virtual reality environment (ArtSteps). To foster deeper knowledge building (Guideline 3), we set up a multimedia collaborative summary map to summarise the course key concepts and link

them together; the concepts were illustrated through multiple media (checkpoint 2.5), also through web videos in English with Italian or English subtitles (2.4).

In this paper we focus on Action 3: in continuity with the experience of the previous academic year, the direct goals were to encourage active participation by students, to support their interests, and to enhance the participants' professional and extra-academic experiences. The indirect goal was to experiment with an active teaching methodology and assessing the students' opinions on the perceived increase in knowledge, research and digital skills and on the possibility of expressing themselves according to their interests and preferred modes of expression.

The students were invited to participate in a project divided into three phases: 1) definition of topics; 2) group work; 3) presentation and discussion. Participation was optional and provided for the availability to work in self-managed groups formed of 3 to 6 members: 194 students took part, divided into 56 groups.

Through computer-mediated brainstorming techniques [10] the students, with the teacher as facilitator, identified 8 project macro-themes relevant to the 0–6 age group and the didactic perspective as constraints: environment and animal world; body and mind; inclusion and interculture; verbal and non-verbal communication; storytelling and reading; art, music and technology; sport; history and territory. The students were therefore asked to independently form interest groups and to register via an online questionnaire by communicating a project title referring to one of the 8 macro-themes. This action was aimed at optimising the individual choice and autonomy (7.1) and fostering collaboration and community (8.3): despite the dual mode of the lessons, thanks to the informal networks among the students and their ease of communication through social media, no organisational barriers were perceived, and teacher interventions were not necessary in this first stage.

In the second stage the groups worked independently, outside of scheduled class hours, to focus on the chosen theme and deepen the related topics both from a theoretical point of view (research of sources, analysis of documents, etc.) and from a practical one, with the possibility of proposing or documenting educational and teaching activities aimed at children aged 0 to 6.

In the following weeks (third stage), the groups publicly presented their work using tools of their own choice (5.1): PowerPoint or Prezi presentations; videos of activities conducted with children; self-produced videos with examples of educational and teaching proposals; photographs of materials, environments, and activity-related settings. At the end of each lesson dedicated to the presentation of the works, the teacher encouraged discussion with questions, requests for clarification, narration of experiences, inviting participants to do the same. The chat proved to be the favourite tool for questions, comments, or observations from peers. The presentations of the first students served as a model for subsequent performances: the teacher's suggestions on communication style and adjustments to the content gradually helped the subsequent groups to design their own presentations (checkpoint 5.3).

3. Results

At the end of the first part of the course, 163 students answered the questionnaire: 95.7% are women; 85.9% are aged 18-24, 12.3% are aged 25-34, 1.2% are aged 35-44; 0.6% are over 45 years old; 31.9% currently work in the educational field. With reference to professional experience, 45.4% of the students reported that they have never worked in

education; 15.3% have worked in the sector for less than a year; 27% have 1 to 3 years of experience; 9.2% have 3 to 6 years; 3.1% more than 6 years. Compared to the previous year, this sample has more men among its respondents (+3.6%), a greater proportion of the 25-34 age group (+ 2.5%) and less work experience in the educational field (+7% have never worked or have only this year started a professional activity in the field of education). In general, the students of this course are a heterogeneous group in terms of age and professional experience, with a strong female component.

Students' responses regarding their perception of the attractiveness of the proposal, the self-assessment of their own learning paths and their motivation show a general appreciation for the approach of the course: for 93% of the students the course increased their knowledge and offered useful insights for their studies; for 85.8% the workshop approach through group work favoured the active participation of students and facilitated the attendance of the course (78.5% strongly agree or agree; 17% undecided): the topics chosen by the colleagues were stimulating (97.5%) and made it possible to discover new things (100%).

Regarding the idea that the teacher's role as mediator has been enhanced by this teaching approach, students are more undecided (11%), but most of them agree with this hypothesis (86.5%). 94.4% think that mixed teaching methodologies (lectures, videos, sharing platforms, workshops with multimedia tools) favoured their learning: this is an interesting aspect that we decided to investigate this year, and which was not considered in the previous questionnaire.

Specifically, for the group work 151 students responded: for 96% this proposal increased their knowledge and allowed them to deepen actions and didactic tools for children 0-6 years old. As far as the opportunities offered by group work to experiment with research actions and tools (defining the focus, searching for sources, etc.), 91.4% of the students agree, while they are not sure with the idea that this activity increased their digital skills (61.1% strongly agree/agree; 26.9% undecided; 11.8% disagree). Interesting results emerge from the perception that this method has enhanced the students' work and extra-university experience (78.1% strongly agree/agree; 18.5% undecided) and encouraged cooperation and discussion with colleagues (90.7% strongly agree/agree).

In percentage terms, the results of the questionnaire are in line with those of the last year, except for the data on the perceived increase in digital skills, for which it is possible to highlight a general decrease in the agreement in favor of slight increases in undecided or for those who disagree (-10.8% strongly agree/agree; +7.8% undecided; +3.7% disagree respect to last year); however, these differences are not statistically significant.

Two new questions, with more focus on the UDL framework, were added for the students who participated in the group work: "leaving space for my interests [the group work] kept my motivation high" (88.8% strongly agree/agree; 9.2% undecided; 1.9% disagree) and "[the group work] favoured personal and more functional ways of expression and communication for me" (90% strongly agree/agree; 10% undecided): these positive perceptions encourage us to continue these actions, addressing the improvable aspects that have emerged.

Among the challenges expressed by students in the qualitative section of the questionnaire: some respondents stated that some colleagues did not cooperate in the group work, some students would like more time for discussing the projects in the classroom, three students would prefer more face-to-face theoretical lessons and three others would prefer not so schematic slides, as well as their presentation according to the order of the book, others would like more student involvement.

We believe that some of these statements are conditioned by expectations that have adapted to a traditional way of teaching in higher education (frontal theoretical lectures, textbook, slides full of content, etc.), in any case, this once again demonstrates the variability of students and the challenge of findings solutions for all.

4. Conclusion

University students positively evaluate active teaching methods, both when the lessons are completely online (2020) and in dual mode (2021). The results show that active participation, discovery through confrontation with peers and freedom to choose the topics of greatest interest are significant aspects for students: this confirms the importance of the “engagement” and its variability, in UDL perspective. Even though all actions (both “presentation” and “expression”) were technology-mediated, only just over half of the students recognised that the activities carried out increased their digital skills. Probably teacher mediation and metacognitive teaching activities could make some key competences more explicit.

The main barrier reported by the students concerns the context rather than the method: the short time available to the groups seems to be the main limitation of this active learning experience. We are aware that the UDL approach requires system changes, however we have experienced a different way of designing a university course, maximizing the opportunities of various technologies. We still need to experiment with an effective way of encouraging student-teacher exchange and monitoring progress along the way (checkpoint 6.4), to improve the sense of self-efficacy: the large number of students enrolling in a lesson and the time required for teachers to coordinate the activities can limit the diffusion of UDL practices in universities, but it is an approach we want to follow.

Transforming our World through Universal Design for Human Development

*Proceedings of the Sixth International Conference
on Universal Design (UD2022)*

Editors: Ilaria Garofolo
Giulia Bencini
Alberto Arengi

An environment, or any building product or service in it, should ideally be designed to meet the needs of all those who wish to use it. Universal Design is the design and composition of environments, products, and services so that they can be accessed, understood and used to the greatest extent possible by all people, regardless of their age, size, ability or disability. It creates products, services and environments that meet people's needs. In short, Universal Design is good design.

This book presents the proceedings of UD2022, the 6th International Conference on Universal Design, held from 7 - 9 September 2022 in Brescia, Italy. The conference is targeted at professionals and academics interested in the theme of universal design as related to the built environment and the wellbeing of users, but also covers mobility and urban environments, knowledge, and information transfer, bringing together research knowledge and best practice from all over the world. The book contains 72 papers from 13 countries, grouped into 8 sections and covering topics including the design of inclusive natural environments and urban spaces, communities, neighborhoods and cities; housing; healthcare; mobility and transport systems; and universally-designed learning environments, work places, cultural and recreational spaces. One section is devoted to universal design and cultural heritage, which had a particular focus at this edition of the conference.

The book reflects the professional and disciplinary diversity represented in the UD movement, and will be of interest to all those whose work involves inclusive design.

TRANSFORMING OUR WORLD THROUGH
UNIVERSAL DESIGN FOR HUMAN DEVELOPMENT

Studies in Health Technology and Informatics

International health informatics is driven by developments in biomedical technologies and medical informatics research that are advancing in parallel and form one integrated world of information and communication media and result in massive amounts of health data. These components include genomics and precision medicine, machine learning, translational informatics, intelligent systems for clinicians and patients, mobile health applications, data-driven telecommunication and rehabilitative technology, sensors, intelligent home technology, EHR and patient-controlled data, and Internet of Things.

Studies in Health Technology and Informatics (HTI) series was started in 1990 in collaboration with EU programmes that preceded the Horizon 2020 to promote biomedical and health informatics research. It has developed into a highly visible global platform for the dissemination of original research in this field, containing more than 250 volumes of high-quality works from all over the world.

The international Editorial Board selects publications with relevance and quality for the field. **All contributions to the volumes in the series are peer reviewed.**

Volumes in the HTI series are submitted for indexing by MEDLINE/PubMed; Web of Science: Conference Proceedings Citation Index – Science (CPCI-S) and Book Citation Index – Science (BKCI-S); Google Scholar; Scopus; EMCare.

PRINTED IN THE NETHERLANDS

Preface

“All over the world, people are struggling for a life that is fully human, a life worthy of human dignity. Countries and states are often focused on economic growth alone, but their people, meanwhile, are striving for something different: they want meaningful human lives.” (Martha C. Nussbaum, 2012. *Creating Capabilities*, p. 1, Cambridge, Massachusetts and London, UK, Harvard University Press)

From its first edition in 2012, the journey of the international conference on Universal Design has been the story of an expanding intellectual and practical movement. The aim of this movement is to put into practice the aspirations and goals of human-centred approaches to sustainable development founded on human rights, human development and equality for all, such as those encoded in the United Nations Sustainable Development Goals and the Convention on the rights of Persons with Disabilities (UNCRPD).

After the first meeting in Norway (Oslo, 2012), which was organised by several enlightened governmental bodies in the Scandinavian region as a forum for the exchange of views and sharing of good practice in Universal Design, the second edition in Lund in 2014 saw the entry of academia, with wide participation from across academic disciplines, setting the stage for UD practitioners, researchers and educators to connect directly and to share ideas, research and practice.

The role of academic institutions in organising the UD conference (York, 2016, Dublin, 2018 and Helsinki, 2021) has persisted across successive editions, strengthening over time, as universities have increasingly recognised and taken on board their responsibility as primary actors in working towards societies that are founded on equity, justice and sustainable development for all human beings through their research, educational and outreach activities.

The 2022 edition, held in the historic town of Brescia, Italy, marks another landmark in the journey of the UD movement, as it crosses the alps to be hosted in southern Europe for the first time. Three Italian Universities – the Universities of Brescia, Trieste, and Ca’ Foscari University of Venice – have joined forces to make this edition possible, opening up a space for conversations between researchers, educators and policy-makers in a truly multi-disciplinary vision for UD.

The title: *Transforming our World for Human Development* is intentionally aimed at realising broad sustainable development goals from a person-centred UD perspective by engaging delegates in a conversation across cultural, geographical, and disciplinary boundaries about what sustainable development really means. This was eloquently put by our dear colleague and friend Elio Borgonovi:

“There is much talk about renewable energies, resources and circular economies. Most of the time, however, we forget that human beings, with their characteristics and capabilities, provide the most precious renewable energy of all. Human capabilities develop with age and grow through education and experience. People flourish when they are given the chance to exercise their potential. This potential is exercised in social and natural environments when human beings can contribute

with their physical, intellectual, rational and emotional participation, by people, with people and for people.” (Address delivered at the University of Brescia, December 17th, 2020).

The sessions of the 2022 edition are characterised by their multi-disciplinary and multi-perspective nature, with sessions aimed at the design of inclusive natural environments and urban spaces, communities, neighbourhoods and cities, housing, healthcare, and educational facilities, mobility and transport systems, moving on to universally-designed learning environments, work places, cultural and recreational spaces. Contributions come from 13 different countries and various continents (Africa, Australia, Central America, East Asia, Europe, North America, South Asia) once again demonstrating that this is a growing international movement.

Our special thematic session is dedicated to Universal Design and Cultural Heritage. We believe that cultural heritage is part of what makes our lives human and meaningful. Providing full access for all human beings to cultural heritage combines two fundamental values crucial for human development and flourishing: cultural heritage provides each and every person with the possibility to engage meaningfully with their cultural and historical past, and at the same time it develops the awareness in each human being of the value of conserving the past so that we can better live in and understand the present.

A distinctive characteristic of the UD conference is the coming together of academic, governmental and professional communities under one roof. Our wish and invitation for the conference is for openness to others and to perspectives and experiences that may be different from our own, letting go of professional and disciplinary barriers, engaging with each other with empathy and curiosity. The experience of being so long deprived of face-to-face interaction due to the Covid-19 pandemic has made everyone more aware of the value of coming together during live conferences, in formal and informal ways.

The professional and disciplinary diversity represented in the UD movement is what allows us to transcend current existing separations between communities of knowledge and communities of practice, as well as existing separations between academic disciplines. Only when knowledge, practice and research from different disciplines are allowed to engage meaningfully and to feed into each other in a virtuous circle, can the power of ideas and actions become truly transformational.

Brescia, September 2022

Ilaria Garofolo, University of Trieste
Giulia Bencini, Ca' Foscari University of Venice
Alberto Arengi, University of Brescia

About the Conference

Conference Co-chairs

Alberto Arenghi	Department of Civil, Environmental, Architectural Engineering and Mathematics, University of Brescia
Giulia Bencini	Department of Linguistics and Comparative Cultural Studies, Ca' Foscari University of Venice
Ilaria Garofolo	Department of Engineering and Architecture, University of Trieste

Conference Organisation

Barbara Rita Barricelli	University of Brescia
Mariachiara Bonetti	University of Brescia
Elena Bortolotti	University of Trieste
Elisa Cacciaguerra	University of Trieste
Barbara Chiarelli	University of Trieste
Carlotta Coccoli	University of Brescia
Simone Fanti	RCS MediaGroup, Milan
Daniela Fogli	University of Brescia
Michaela Mae Vann	Ca' Foscari University of Venice
Martina Pucci	Ca' Foscari University of Venice

Scientific Committee

Francesc Aragall	President Foundation Design for All, Barcelona, Spain
Giuseppe Arconzo	Associate Professor of Constitutional Law, University of Milan, Italy
Alberto Arenghi	Associate Professor of Building Technology, University of Brescia, Italy
Luca Baraldi	Head of Corporate Identity & Public Affairs Ammagamma, Modena, Italy
Giulia Bencini	Associate Professor of English Language and Linguistics, Ca' Foscari University of Venice, Italy
Elio Borgonovi	Senior Professor of Economics and Management of Public Administration, Bocconi University, Milan, Italy
Jane Bringolf	Chair of Centre for Universal Design Australia, Sydney
Anna Cardinaletti	Professor of Linguistics, Ca' Foscari University of Venice, Italy

Tiziano Cattaneo	Researcher and Professor of Architectural and Urban Design, University of Pavia, Italy and Tongji University, Shanghai, China
Carlotta Coccoli	Associate Professor of Architectural Restoration, University of Brescia, Italy
Gerald Craddock	Chief Officer of Centre for Excellence in Universal Design – National Disability Authority, Dublin, Ireland
Stefano Della Torre	Professor of Architectural Restoration, President of Società Italiana per il Restauro dell’Architettura, Polytechnic University of Milan, Italy
Giuseppe Di Bucchianico	President EIDD - Design for All Europe, Italy
Oana Diaconescu	Associate Professor of Architectural and Urban Design, Ion Mincu University of Architecture and Urbanism, Bucharest, Romania
Onny Eikhaug	Former President EIDD - Design for All Europe, member of the Board IAUD, Chair of Selection Committee for the IAUD International Design Award Founder Innovation for All AS, Norway
Simone Fanti	Journalist RCS MediaGroup, Milan, Italy
Fabio Ferrucci	Professor of Sociology of Culture, University of Molise, Campobasso, Italy
Alenka Fikfak	Associate Professor, Head of the Chair of Urbanism, University of Ljubljana, Slovenia
Daniela Fogli	Professor of Computer Science and Engineering, University of Brescia, Italy
Ilaria Garofolo	Professor of Building Technology, University of Trieste, Italy
Emanuele Giorgi	Professor of Architectural and Urban Design, Tecnológico de Monterrey, Mexico
Per-Olof Hedvall	Certec Director, Lund University, Sweden
Pete Kercher	Ambassador EIDD - Design for All Europe, Italy
Antonio Lauria	Professor of Technology of Architecture, Head of the Interdepartmental Laboratory Florence Accessibility Lab, University of Florence, Italy
Inger Marie Lid	Professor of Rehabilitation and Public Health, VID Specialized University, Oslo, Norway
Elena Marchigiani	Associate Professor of Urban Planning, University of Trieste, Italy
Iva Mrak	Head of the Department for Transportation Engineering, Construction Management and Technology and Architecture, Representative at EIDD – Design for All Europe, University of Rijeka, Croatia

Laura Nota	Professor in Psychology of Inclusion and Psychology of Career Counseling, University of Padova, Italy
Gisella Paoletti	Professor of Experimental Pedagogy, University of Trieste, Italy
Marisa Rosalba Pavone	Professor of Special Education and Didactics, University of Torino, Italy
Marcello Pelillo	Professor of Computer Science, Ca' Foscari University of Venice, Italy
Helen Petrie	Professor Emerita of Human Computer Interaction, University of York, UK
Michèle Pezzagno	Associate Professor of Town and Regional Planning, University of Brescia, Italy
Giovanni Ramponi	Professor of Electronics, University of Trieste, Italy
Camilla Ryhø	Research Director, BEVICA Fonden, Denmark
Oddbjørn Sørmoen	Senior Adviser for Cultural Heritage, Church of Norway, Oslo
Ira Verma	Researcher in Architecture, Aalto University, Helsinki, Finland

Preface	v
<i>Ilaria Garofolo, Giulia Bencini and Alberto Arenghi</i>	
About the Conference	vii
Section 1. Ethical and Philosophical Perspectives in Universal Design	
The Emancipatory Design Manifesto: Let's Suppose That Disability Does Not Exist	3
<i>Jon Dag Rasmussen and Anne Britt Torkildsby</i>	
Understanding Person-Environment Relationships as Criteria to Support the Operationalization of Universal Designing	12
<i>Oskar Jonsson</i>	
State of Art and Perspectives of Universal Design: The Libyan Approach	20
<i>Ahmed El Rida Al Sharif</i>	
'Frontrunners" Understanding of Universal Design in Architecture	28
<i>Sidse Grangaard and Victoria Linn Lygum</i>	
User Insights for Better and More Inclusive Online Public Services: A Survey Study	36
<i>Till Halbach, Kristin Skeide Fuglerud and Mikael Snaprud</i>	
Methodologies for the Design of University Teaching Spaces in Covid/19 Regime. A BIM Oriented Approach, Defined for the Case Study of the Buildings of the Department of Architecture of the University of Florence (DiDA)	44
<i>Luca Marzi and Shirin Amini</i>	
Understanding the Quality of Life of Indian Elderly During COVID-19 Pandemic from Universal Design Perspective	53
<i>Iram and Gaurav Raheja</i>	
Public Space Accessibility in Vulnerable Areas in Post-Covid Times	61
<i>Deborah Guadalupe Garay Gutiérrez, Emanuele Giorgi and Virginia del Socorro Aceves Tarango</i>	
The Missing Voices of Disabled People	69
<i>Masashi Kajita and Emil Ballegaard</i>	
Making Research More Inclusive: Is Universal Design of Research the Answer?	77
<i>Gerd Berget and Birgit Kvikne</i>	
Towards 3rd Generation Universal Design: Exploring Nonclusive Design	85
<i>Per-Olof Hedvall, Margaret Price, Johnna Keller and Stina Ericsson</i>	
Adaptive Refurbishment for Aging in Place: Design Scenarios of Case Studies in Turin, Italy	93
<i>Elena Montacchini, Silvia Tedesco and Lorenzo Savio</i>	

Section 2. System and Standards for Universal Design

Can I Get There? Can I Play? Can I Stay? Creating an Inclusive Playspace Guide in Australia	103
<i>Jane Bringolf and Phillipa Carnemolla</i>	
Accessible-to-All Cities. A Project of Networking Italian Experiences to Raise Awareness and Promote Universal Design	111
<i>Francesco Alberti and Barbara Chiarelli</i>	
Universal Design in Exhibit	120
<i>Mark Trieglaff</i>	
360-Degree Films for Cognitive Inclusion at Workplaces	127
<i>Håkan Efring and Sara Kjellstrand</i>	
Mapping Accessibility in Norway – A Tool and Method to Register and Survey the Status of Accessibility in Urban Areas and Recreational Areas	135
<i>Sven Michaelis and Kathrin Bögelsack</i>	
Personalised Solutions for Universal Goals. A Home Adaptation Project for Disabled People in Italy	143
<i>Antonio Laurià, Paolo Costa and Leonardo Chiesi</i>	
Universal Design in Housing in Australia: An Example of People Power	151
<i>Margaret Ward and Jane Bringolf</i>	
Housing Development for All? Learnings from the Ars Longa Case	159
<i>Antti Pirinen</i>	
Perspectives on Accessibility and Its Users Amongst Practicing Danish Landscape Architects	167
<i>Marcus Tang Merit and Marie Christoffersen Gramkow</i>	

Section 3. Universal Design for Inclusive Communities and Urban Spaces

Systemic Approach to Universal Design of Urban Spaces – Case Study of Trbovlje, Slovenia	177
<i>Kristijan Lavtižar, Janez Grom, Neli Zajc and Alenka Fikfak</i>	
SMARTAGING in Venice. Toward a Definition of Age-Friendly Neighbourhood	185
<i>Rosaria Revellini</i>	
Aging Neighborhood and Social Inclusion – A Case Study	193
<i>Ira Verma</i>	
«Progetto di Vita» and Universal Design for Persons with Disabilities	201
<i>Cristiana Perego, Ilaria Oberti and Angela Silvia Pavesi</i>	
Communities, Sport, Inclusion. Strategies for Parish Complexes — Social Reactivation Through Sport Practice Promotion	209
<i>Francesca Daprà, Erica Isa Mosca, Marco Gola, Andrea Rebecchi, Maddalena Buffoli, Marika Fior, Maria Pilar Vettori and Stefano Capolongo</i>	

Rethinking Play Environments for Social Inclusion in Our Communities <i>Michela Dalpra</i>	218
A “Best Practice” for Inclusive Art Cities: The Case Study of the I-Access Project <i>Aldo R.D. Accardi and Renata Prescia</i>	226
Everyone Inside. Transformation of an Inaccessible Heterotopy. The Case of Buoncammino’s Prison <i>Francesca Musanti</i>	235
Section 4. Urban Scale, Mobility and Service Planning in a Universal Design Perspective	
Policies and Processes for Accessibility from a UD Perspective: The Integrated Approach Supported by the Friuli Venezia Giulia Region (IT) <i>Amanda Burelli and Consuelo Simone</i>	247
Beyond the Norm, the PEBA to Live in Udine <i>Christina Conti, Silvia Cioci and Teresa Sambrotta</i>	255
The City of Lecce (ITA) Accessibility Plan. The Innovative Experience of the Municipal Accessibility Lab <i>Francesca Raimondi, Monica Bercigli, Dora Uricchio and Giuseppe Gaballo</i>	263
Plans for the Removal of Architectural Barriers (PEBAs) from a UD Perspective. An Interdisciplinary Process in the Italian Region Friuli Venezia Giulia <i>Elena Marchigiani, Barbara Chiarelli, Valentina Novak and Andrea Peraz</i>	271
Improving Accessibility and Usability in the Built Environment. Case Study: Guide Lines by the Lombardy Region, Italy <i>Isabella Tiziana Steffan, Armando De Salvatore and Fulvio Matone</i>	280
The Level of Inclusiveness of Current 15-Minute City Models. A Qualitative Analysis on How Far City of Proximity Strategies and Design for All Are Merging <i>Alba Ramirez Saiz, Delfin Jiménez Martín, Patxi Lamiquiz and Andrea Alonso</i>	288
Inclusive Path Through Pavia: A Study to Link the Langobardic Heritage <i>Alessandro Greco, Valentina Giacometti and Elisa Bifano</i>	296
Metropolitan MaaS and DRT Schemes: Are They Paving the Way Towards a More Inclusive and Resilient Urban Environment? <i>Ilaria Delponte and Valentina Costa</i>	304
Section 5. Universal Design for Healthcare	
Interpreting Inclusion for Sanitation Perspectives from India: A Contextual Approach to Universal Design <i>Divyang Purkayastha and Gaurav Raheja</i>	315

Healthcare Facilities and Dementia Development of a Framework to Assess Design Quality	323
<i>Silvia Mangili and Stefano Capolongo</i>	
Designing Hospitals Through the Lens of Universal Design. An Evaluation Tool to Enhance Inclusive Healthcare Facilities	331
<i>Erica Isa Mosca, Jonathan White, Edward Steinfeld and Stefano Capolongo</i>	
Developing Innovative Solutions for Universal Design in Healthcare and Other Sectors	340
<i>Jonathan White and Erica Isa Mosca</i>	
Home-Based Primary Care: Adaptability Criteria for the Bedroom Layout and the Furnitures/Technological Equipments	348
<i>Cristiana Cellucci</i>	
Section 6. Universal Design in Products and Information and Communication Technologies	
Developed an Innovative Handbike Fork Made of Composite Material	359
<i>Luigi Solazzi, Giuseppe Schinetti and Riccardo Adamini</i>	
A Pattern Language for Inclusive Design: A Set of Patterns for Designing Reusable Accessible Solutions	367
<i>Stefano Valtolina and Alessandro Vivian Sisto</i>	
Unidirectional Tactile Paving: Circulation for the Visually Impaired	375
<i>Juan Fernández González and Ankit Gongal</i>	
Toward an Inclusive and Independent Fruition of Architecture: The Use of Scale Models and Augmented Reality	383
<i>Federico Cavalieri, Marianna Rotilio and Pierluigi De Berardinis</i>	
Towards eXtended Universal Design	391
<i>Joschua Thomas Simon-Liedtke and Rigmor Baraas</i>	
Technology Use and Familiarity as an Indicator of Its Adoption in Museum by People with Intellectual Disabilities	400
<i>Marilina Mastrogioseppe, Leandro Soares Guedes, Monica Landoni, Stefania Span and Elena Bortolotti</i>	
A Multisensorial Storytelling Design Strategy to Build Empathy and a Culture of Inclusion	408
<i>Janice Rieger and Marianella Chamorro-Koc</i>	
Section 7. Universal Design and Cultural Heritage	
Does Pure Contemplation Belong to Architecture? The Denied Ramps at the Church of San Salvatore in the Santa Giulia Museum in Brescia	419
<i>Alberto Arengi and Carlotta Coccoli</i>	

World Heritage-Universal Heritage. The Commitment of Brescia Museums Foundation and Brescia Council to Enhance Museums and Public Archaeological Areas	427
<i>Francesca Morandini</i>	
How Can We Ensure Accessibility of Cultural Heritage? Toward Better Utilization of Existing Assets in Japanese Context	435
<i>Satoshi Kose</i>	
The Accessibility of Cultural Heritage. A New Perspective Between Relational Gaze and the Philosophy of Gesture	443
<i>Fabio Ferrucci</i>	
Outside, Around, Inside. New Paths to Discover San Michele Castle (Cagliari, Sardinia)	451
<i>Raffaele Argiolas, Elisabetta Mannai and Valentina Pintus</i>	
Universal Design and Interoperable Digital Platforms Between Conservation and New Fruition Opportunities. The Case Study of Arianna's Domus in Pompeii	459
<i>Renata Picone</i>	
NEAR PROJECT – Accessibility Plan for the Monumental Complex of the Opera di S. Maria del Fiore in Florence. Accessibility as an Element of Social	467
<i>Luigi Vessella</i>	
Values-Based Conservation in Practice – Accessibility at Akershus Castle	475
<i>Christian Ebbesen and Marianne Brenna</i>	
Usability of Visiting Routes in Heritage: The Case Study of Mercati di Traiano	483
<i>Luigi Biocca, Teresa Villani and Federica Romagnoli</i>	
The Economic Impact of Universal Design on Cultural Heritage Contribution to SDGs: Evidence from Italian Museums	491
<i>Renato Camodeca, Alex Almici and M. Cristina Vannini</i>	
Urban Accessibility in World Heritage Cities. Accessibility Considerations in Pedestrian Routes in Historic City Centres	499
<i>Delfín Jiménez Martín, Alba Ramírez Saiz and Miguel Angel Ajuriaguerra Escudero</i>	
Improving the Accessibility of Cultural Sites During Pandemic Through Microclimate Control. The Case of CapsulART Applied to the MANN Museum in Naples	507
<i>Marco Pretelli, Leila Signorelli and Maria Antonietta De Vivo</i>	
Innovative Accessibility Data Inventory Tools for Urban Environments in Historic Sites	515
<i>Daniele Treccani and Sebastiano Marconcini</i>	

Section 8. Universal Design to Create Inclusive Educational Environments

Universal Design in Primary Schools <i>Karine Denizou</i>	525
Towards a More Inclusive Learning Environment: The Importance of Providing Captions That Are Suited to Learners' Language Proficiency in the UDL Classroom <i>Shamira Venturini, Michaela Mae Vann, Martina Pucci and Giulia M. L. Bencini</i>	533
Universal Design for Learning at University: Technologies, Blended Learning and Teaching Methods <i>Federica Baroni and Marco Lazzari</i>	541
The Future of eXtended Reality in Primary and Secondary Education <i>Joschua Thomas Simon-Liedtke and Rigmor Baraas</i>	549
Challenges in Implementing Universal Design of ICT Among Teachers in Higher Education in Norway <i>Adil Hussain and Norun Christine Sanderson</i>	557
Accessible University: Architectural Design for Special Needs Users Integration. Design Proposals for Politecnico di Torino <i>Angela Lacirignola, Cristina Azzolino and Lorenzo Savio</i>	565
Higher Education and Universal Design in Tanzania. A New Model of Inclusion and Sustainable Development <i>Mariachiara Bonetti and Martin Noel</i>	573
UNIVERCITY. The University as a Metaphor for the City. Processes, Methods, and Tools for Contemporary Design <i>Cognigni Marta, Faroldi Emilio and Vettori Maria Pilar</i>	581
Accessibility Improvement of Public Schools Through User Involvement in JAPAN <i>Maiko Sugawara</i>	589
Evaluation Methodology for Inclusive Schools Environments. A Comparative Analysis Towards Goals and Strategies for Urban Design <i>Maddalena Buffoli, Marika Fior, Federica Delogu, Chiara Donato and Erica Isa Mosca</i>	597
Subject Index	605
Author Index	609
