O P E N D O O R S is a long-standing, comprehensive information resource on the almost 565,000 international students in the United States in 2005/06 and on the nearly 206,000 U.S. students who studied abroad for academic credit in 2004/05. The Institute of International Education, one of the largest and most experienced U.S. higher education exchange agencies, has conducted an annual statistical survey of the internationally mobile student population in the United States since 1948, with support from the U.S. Department of State's Bureau of Educational & Cultural Affairs since 1972.

20 06 opendoors

New international student enrollment increased by 8% in 2005/06, while total enrollment remained virtually flat at 564.766 students.

Since 2001, graduate international students have outnumbered undergraduate international students.

** The College Board changed its data collection process in 1997.

	2004/05 Total	2004/05 % of Total	2005/06 Total	2005/06 % of Total	% Change	
Undergraduate	59,943	45.4	61,342	42.9	2.3	
Graduate	61,350	46.5	64,235	44.9	4.7	
Other	10,653	8.1	17,346	12.2	62.8	
Total	131,946		142,923		8.3	

Enrollment of new international students in U.S. higher education increased by 8% in 2005/06 from the previous year.

THE BIG PICTURE

According to the *Open Doors* International Student Census, after two years of modest declines, the number of international students studying in the U.S. in 2005/06 stabilized at 564,766 students, a 0.05% decline (not statistically significant) from the previous year's total of 565,039 students.

New International Student Enrollment

At the same time, the enrollment of new international students – that is, students enrolling for the first time at a U.S. campus – increased by 8% from 131,946 students in 2004/05 to 142,923 in 2005/06. Taken together, the stabilizing of total international student enrollment and the increase in new enrollments suggest that total international student enrollment is likely to increase in the near future.

Total International Enrollment by Academic Level

Although international students in the U.S. numbered over half a million, they constituted only 4% of the total U.S. higher education population. The representation of international students in U.S. higher education varied, however, by academic level. Not only did international graduate student enrollment surpass the enrollment of international undergraduate students, but international graduate students also constituted 12% of the total U.S. graduate student population.

India was the leading with 76,503 students

Rank	Place of Origin	2004/05	2005/06	2005/06 % of Int'l Student Total	2005/06 % Change

The leading four places of origin represented 42% of international students in the U.S.

place of origin, studying in the U.S.

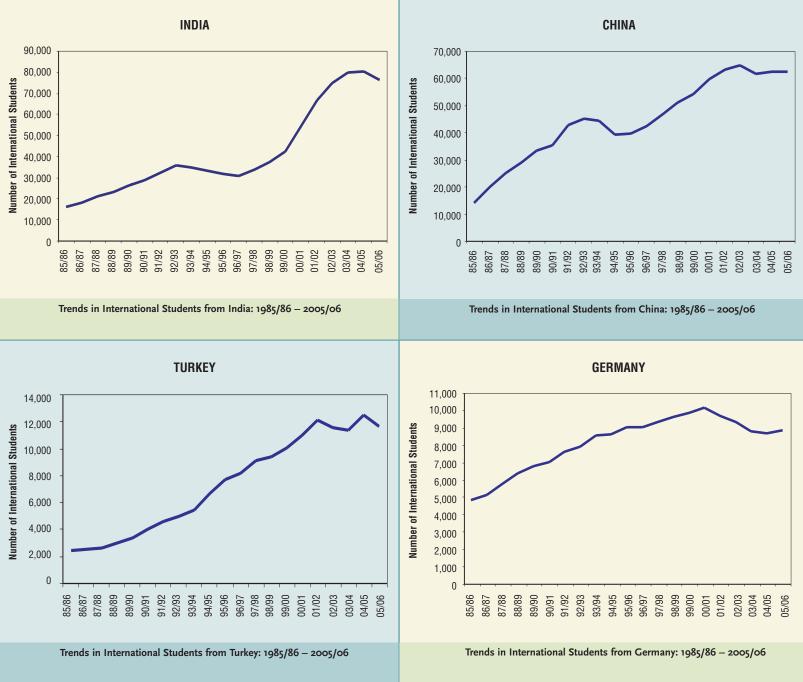

THEIR ORIGINS

n 2005/06, 14% of all international students in the U.S. were from India. India remained the leading place of origin for the fifth consecutive year, despite a 5% decline in the number of students from the previous year. As in the past, China, Korea, and Japan were the next three leading places of origin, and accounted for 11%, 10%, and 7% of total international enrollment, respectively. These four Asian places of origin comprised 42% of all international students in the U.S., with Canada in fifth position. Enrollment growth varied among these top five places: fewer students from India and Japan enrolled in 2005/06 compared with the previous year (a 5% and 8% decline, respectively); China and Canada saw small increases (0.1% and 0.2%, respectively); and Korea saw a large increase in enrollment (11%).

Overall, the composition of the top ten places of origin in 2005/06 was similar to the previous year with a few shifts worth noting. New to the top 20 was Nepal, replacing Malaysia. Places of origin that saw large increases of 5% or more included: Mexico (7%), Taiwan (8%), Hong Kong (9%), Korea (11%), and Nepal (25%). In contrast, the following countries saw a decline of 5% or more: India (5%), Turkey (7%), Colombia (7%), Japan (8%), and Pakistan (9%).

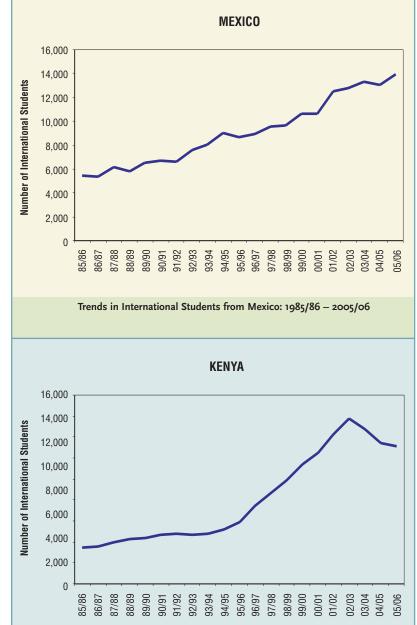

The distribution of international students in the U.S. from across various world regions in 2005/06 remained the same as in the previous year. At 58% of the total, students from Asia vastly outnumbered students from all other regions. The second largest group of international students was from Europe (15%).

Twenty-Year International Student Selected Leading Places

Note: Totals for 1985/86, 1986/87, and 1987/88 are the sums of the totals for the Federal Republic of Germany (West Germany) and the German Democratic Republic (East Germany).

Trends in Enrollment for of Origin

Trends in International Students from Kenya: 1985/86 - 2005/06

LEADING PLACE OF ORIGIN TRENDS

nternational student flows from various places of origin fluctuate due to a variety of economic, political, and academic factors both in the home country and the U.S. This section presents international student enrollment trends over a two-decade period for selected leading places of origin.

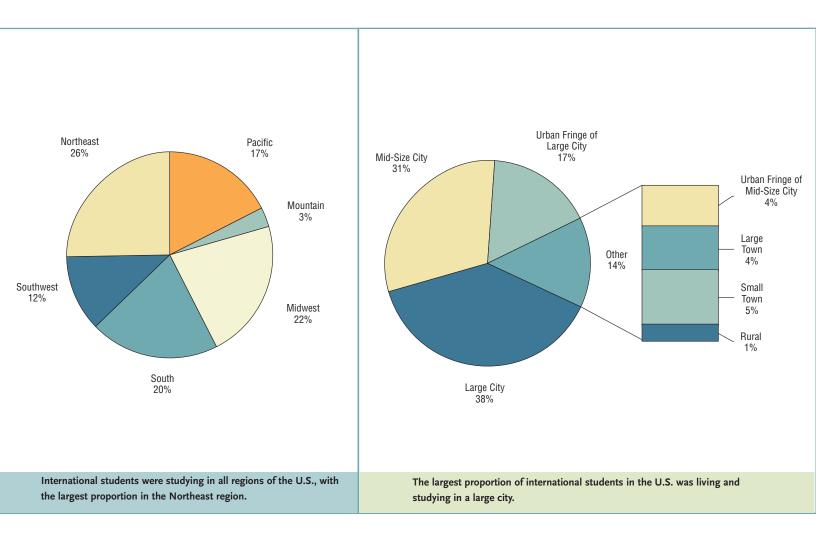

India has remained the largest sending place of origin since 2001/02. Students from India increased steadily between 1996/97 and 2004/05, then declined by 5% in 2005/06. The previous year – 2004/05 – saw the highest ever enrollment at 80,466. After a period of steady growth since 1995/96, enrollment from **China** declined somewhat in 2003/04 and then began to rebound. Enrollment peaked at 64,757 in 2002/03.

Despite occasional small dips, the number of students from **Mexico** has increased steadily over the past two decades, with an enrollment peak in 2005/06 of 13,931 students.

After steady growth from 1985/86 to 2002/03, the number of students from **Turkey** began to fluctuate, with no clear pattern emerging. Following a two-year decline, enrollment peaked in 2004/05 at 12,474 students, but declined again in 2005/06. The number of students from **Germany** increased steadily and reached a peak of 10,128 in 2000/01. This was followed by four years of small declines, with an enrollment increase in 2005/06.

The number of students from **Kenya** declined in 2003/04 following a period of steady growth and a peak of 7,862 in 2002/03.

Note: Due to changes made by OMB in 2003 in the county compositions for many Metropolitan Statistical Areas, as well as the creation of Micropolitan Statistical Areas, comparisons with data prior to that in *Open Doors 2004* are not feasible.

Almost half of all international students in the U.S. were studying in just 20 metropolitan areas.

U.S. DESTINATIONS

Ithough international students were living and studying in all 50 states and in the territories of Guam, Puerto Rico, and the U.S. Virgin Islands, they tended to be highly concentrated in metropolitan areas within a small number of states.

The top ten Metropolitan Statistical Areas (MSAs)* hosted over a third (36%) of all international students in the U.S. in 2005/06. The top 20 hosted nearly half (48%) of all international students in the U.S. The leading MSA, New York City, hosted 50,542 international students, a 2% increase from the previous year, followed by Los Angeles (3% increase), Boston (no change), Washington, DC (7% decline), and Chicago (6% increase). As in past years, four of the top ten MSAs were located in the Northeast on the East Coast stretch from Boston to Washington, DC; two were on the West Coast; three were in the South, and one in the Midwest.

International students' preference for urban areas was reflected in the proportion of students attending institutions in these areas in 2005/06: 90% were in a city, with 55% in a large city or urban fringe of a large city and 35% in mid-size city or urban fringe of a mid-size city. Only 10% were in a town or rural area.

In 2005/06, as in the previous year, California, New York, Texas, Massachusetts, and Florida were the leading host states for international students. Together, these five states accounted for 240,602 or 43% of all international students.

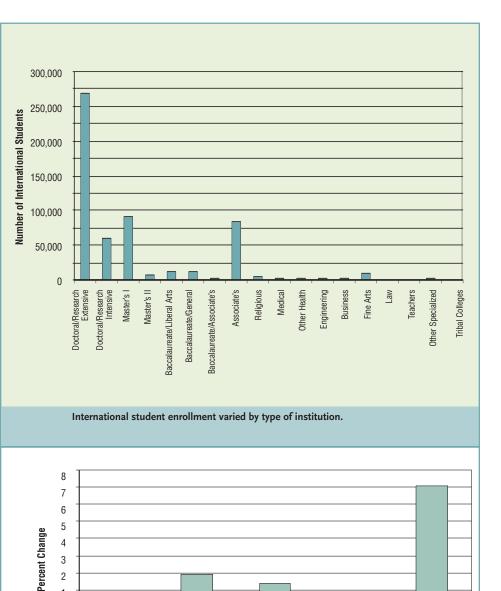

^{*}The United States Office of Management & Budget defines these areas as a core area containing a large population nucleus, together with adjacent counties having a high degree of economic and social integration with that core.

Specialized

COLLEGES AND UNIVERSITIES

ith several thousand accredited institutions of all types offering a wide variety of programs and degrees, the U.S. higher education system has the capacity to accommodate a vast number and range of domestic and international students. Although international students were enrolled in all types of higher education institutions in 2005/06, they tended to be concentrated in a relatively small number of institutions.

Of the 564,766 international students in 2005/06, 299,665 or 53% of students attended just 143 of the 1,913 institutions that reported enrolling international students. These institutions were generally large Doctoral/Research institutions, each of which hosted more than 1,000 international students. The leading 25 institutions, all large Doctoral/Research institutions located in just 14 states, hosted 18% of all international students. In addition, many Master's and Associate's institutions also hosted large numbers of international students.

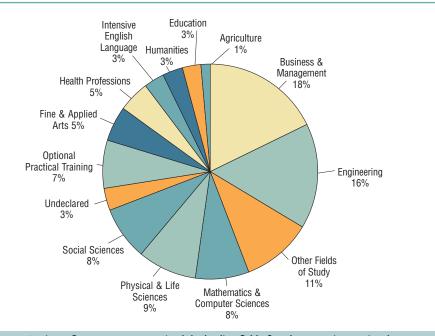

There were some shifts in 2005/06 in the enrollment of international students in specific types of institutions. Even though Doctoral/Research institutions still enrolled the largest proportion of international students, they saw a decline of 1% in enrollment compared with the previous year. Associate's institutions also saw a decline of 1%, while Master's and Baccalaureate institutions saw an increase of 2% and 1%, respectively. Institutions specializing in fields such as medicine, fine arts, religious studies, and law, among others, saw an overall increase of 7% in international enrollment.

20 06 opendoors

Business & Management and Engineering, the leading two fields of study, accounted for 340/0 of all international students.

Most fields of study saw an increase in international student enrollment in 2005/06.

FIELDS OF STUDY & STUDENT PROFILE

Fields of Study

International students were enrolled in all fields of study in 2005/06, but were concentrated in two fields: business & management and engineering. These two fields accounted for 189,341 or 34% of all international students. As in past years, business & management continued to be the leading field of study, with 100,881 or 18% of all international students. Engineering was selected by 88,460 or 16% of students. Other popular fields included physical & life sciences (9%), mathematics & computer sciences (8%), and social sciences (8%). While engineering remained the second most popular field of study, it declined by almost 5% in 2005/06, for a third consecutive year of declines. Mathematics & computer sciences remained a leading field, but the number of international students enrolled in this field declined by 10% from the prior year, continuing a trend of decline that began in 2002/03.

Profile

In terms of their personal characteristics, international students in 2005/06 were very similar to cohorts of previous years. Since the 1970s, international students have been primarily single (86%), and have arrived in the U.S. on an F (Student) Visa (87%). Unlike the marital and visa status, however, the gender balance of international students has changed substantially since the 1970s, with more female students each decade. Whereas three decades ago almost 70% of international students were male, 44% were female in 2005/06.

International students in the U.S. made a considerable contribution to the economy through tuition payments and cost of living expenditures.

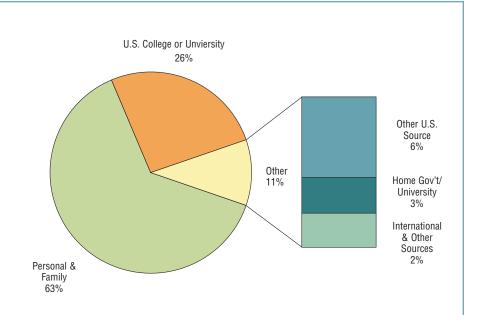

1. 2005/06 tuition, living, and miscellaneous expenses data obtained from College Board. These expenses are computed separately for undergraduate and graduate students and the sum of the two groups is reported here.

2. See p. 55 for *Open Doors* estimate of percent of international students who are married. The number of spouses in the U.S. is approximated at 85% of the number of married students. The number of children is estimated to be six for every ten couples in the U.S. The presence of a spouse increases living expenses by 25%. The presence of a child increases living expenses by 20%.

3. U.S. funding support (mainly campus-based funding) level is computed based on the institution's Carnegie Type.

Analysis prepared for NAFSA: Association of International Educators by Jason Baumgartner and Lynn Schoch of Indiana University – Bloomington using enrollment data from the Open Doors 2005/06 International Student Census.

contributed almost the U.S. economy.

Nearly two-thirds of international students relied on personal and family funds for their U.S. studies.

Primary Source of Funds	2005/06 % of Total	% Under- graduate	% Graduate	% Other	
Personal & Family	63.4	81.5	46.1	56.0

The overwhelming majority of undergraduate international students relied on personal & family funds for their U.S. education, while less than half of graduate international students relied on personal & family funds.

FINANCIAL CONTRIBUTIONS

nternational students contribute not only to campus life and to dialogue within classrooms, but also to the U.S. economy at the local, state, and national levels. In 2005/06, international students contributed almost \$13.5 billion to the U.S. economy through living expenses for themselves and accompanying dependents, as well as through expenditures on tuition, books, fees, and other education-related expenses. At the state level, international students' contributions ranged from almost \$8.8 million to over \$2 billion. Of the states that benefited the most, California received over \$2 billion and New York almost \$1.8 billion.

International students fund their studies in a variety of ways. Nearly two-thirds (63%) of international students relied on personal & family funds as their primary source of funding; another 26% relied on U.S. college or university funding as their primary source. The latter source of funding includes federal government research grants and teaching assistantships that are disbursed through institutions to students. A small number of international students primarily supported their studies through other sources, such as a U.S. or foreign private sponsor.

International students' sources of funding varied by academic level. Undergraduate international students were most likely to rely on personal & family funds (82%), with only a small proportion relying on U.S. college or university funding (11%). Graduate international students, on the other hand, relied almost equally on personal funds (46%) and on funds from their U.S. university (47%).

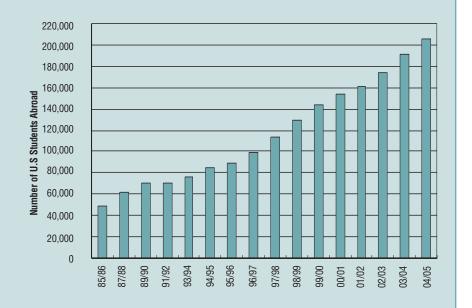

20 06 opendoors

205,983 U.S. students for academic an increase of 8% from the previous year.

U.S. study abroad to destinations outside of Europe continued to grow; 11 of the top 20 destinations were located in regions other than Europe.

studied abroad credit in 2004/05,

The number of U.S. students who studied abroad for academic credit has increased by 144% in a decade, and by 43% in just the past five years.

Nearly seventy percent of U.S. students who studied abroad in one of the top 20 host destinations were in locations where English is not the primary language.

U.S. STUDY ABROAD

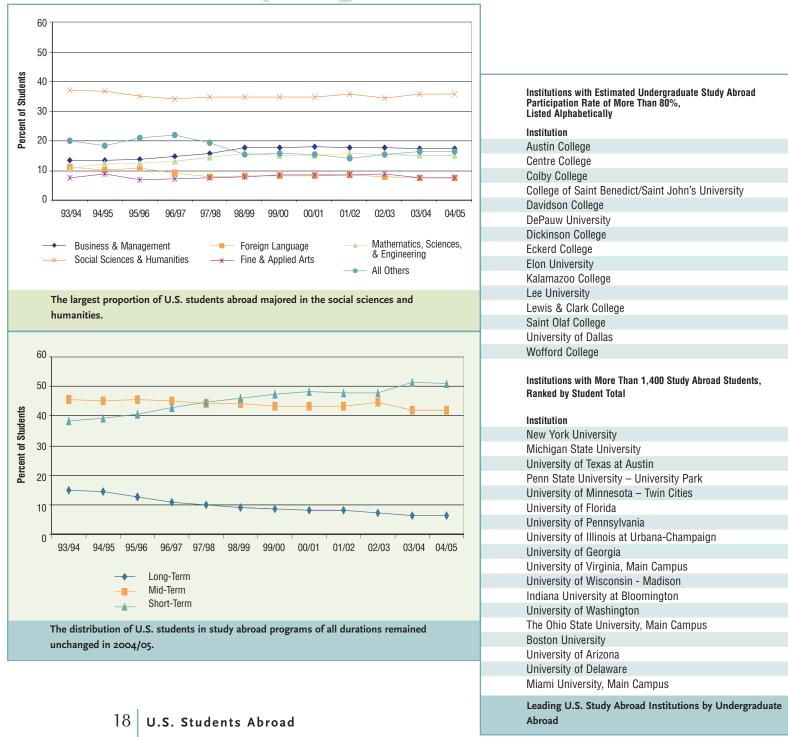

n 2004/05, 205,983 U.S. students studied abroad for academic credit, an 8% increase from the previous year. This growth continued the trend of the past decade. In 1994/95, 84,403 students studied abroad; by 2004/05, this number had increased by 144% to 205,983 students.

Europe continued to host the largest proportion (60%) of U.S. students abroad in 2004/05; the leading four destinations – United Kingdom, Italy, Spain, and France – hosted 45% of all U.S. students studying abroad. Australia remained the fifth leading destination, but experienced a 5% decline in the number of U.S. students it hosted for the first time in almost a decade.

Despite the large number of U.S. students who studied abroad in Europe, 11 of the top 20 destinations were in Africa, Asia, Latin America, and Oceania. Argentina, Brazil, and India were new to the list of top 20 destinations. In addition, almost 70% of students in these top 20 destinations were in countries where English is not the primary language. These findings suggest that U.S. students are increasingly selecting non-traditional study abroad destinations that might offer linguistic, cultural, and professional experience in emerging global markets.

Of note in 2004/05 was the substantial number of destinations in the top 20 with double-digit increases. Of these 13 destinations, four (all outside of Europe) had increases of over 25%: Argentina (53%), India (53%), China (35%), and Brazil (28%).

Half of all study abroad students participated in short-term programs.

Study Abroad Participation Rate and Total Number of Students

U.S. STUDY ABROAD

Duration of Study Abroad

Beginning in 1998/99, U.S. student participation in shortterm study abroad programs surpassed mid-term programs. In 2004/05, just over half (51%) of all U.S. students who studied abroad chose short-term programs compared with the 42% who selected mid-term programs, and the 6% who selected long-term programs. Short-term programs have witnessed the largest percentage growth since 1993/94. Although long-term programs have attracted a fairly consistent number of students over the past ten years (ranging between 11,300 and 12,770 students per year),

their overall share has declined in comparison with short- and mid-term programs. Short-term programs allow a greater variety of students to study abroad, especially those who would be unable to spend a semester or longer abroad due to financial, academic, personal, or other limitations; however, short-term programs do not provide the same opportunity for immersion in the culture and language of the host destination as do programs of longer duration.

Institutional Type

Student participation in different types of study abroad programs varied based on the type of institution in which the student was enrolled. While the majority of students at all institutions except Baccalaureate ones chose short-term programs, the proportions ranged from 52% at Doctoral/Research institutions to 70% at Associate's institutions. Over half (51%) of study abroad students at Baccalaureate institutions chose mid-term programs.

Fields of Study

Even though the relative share of the social sciences and humanities compared with other fields of study has declined over the past 15 years, these fields still accounted for the largest proportion (36%) of study abroad students in 2004/05. Business & management, mathematics, sciences, and engineering have all seen increases over the same period. The proportions of study abroad students in the fine & applied arts and all other fields of study have remained fairly stable, while the proportion pursuing foreign languages has declined.

Profile of U.S. Students Abroad

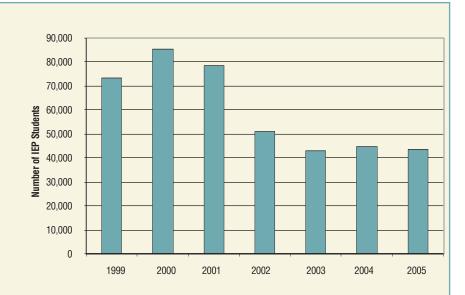

The personal and academic characteristics of U.S. students have changed little over time. Those who studied abroad in 2004/05 were largely Caucasians (83%), females (66%), and undergraduate students in their junior year of study (36%). Among under-represented groups, Asian-Americans made up 6% of U.S. study abroad, followed by Hispanic-Americans (6%), African-Americans (4%), Multiracial students (1%), and Native-Americans (less than 1%).

The largest growth in IEP enrollment in 2005 was from Saudi Arabia, which had more than a threefold increase in students from the previous year.

Programs enrolled students in 2005, the previous year.

After a 4% increase in 2004, IEP enrollments decreased slightly by 2% in 2005.

INTENSIVE ENGLISH

he number of international students enrolled in Intensive English Programs (IEPs) in the U.S. in 2005 declined by 2% to 43,580. This decline followed the 4% growth in 2004, preceded by a period of declines that began in 2001. Prior to 2001, enrollment in IEPs peaked at 85,238 students in 2000. Despite the slight decline in student headcount in IEPs in 2005, there was a 14% increase in the duration of intensive English study as measured by student-weeks*. Because of the short duration of IEPs, enrollment totals in these programs are more sensitive to economic, political, and educational shifts as compared with enrollment in U.S. higher education degree programs of longer duration.

Korea surpassed Japan as the leading place of origin of IEP students in 2005 (22% of all IEP students); it was also the leading place of origin by number of student-weeks. Japan and Taiwan were second and third by total number of students (21% and 11%, respectively), as well as by student-weeks. Saudi Arabia rose to number four in 2005, largely due to the arrival of students preparing for an academic degree on government-sponsored scholarship programs. China rounded out the top five places of origin, while Brazil and Turkey dropped out of the top five in 2005. Similar to their peers pursuing degree programs at U.S. institutions, students from Asia predominated in IEP enrollments, with just over two-thirds of the total (67%), followed by students from Europe (15%), Latin America (11%), Middle East (5%), and Africa (2%).

* IEP data are for the 2005 calendar year and are reported by total headcount enrollment, as well as by student-weeks (one student studying for one week). The two measures together provide a more complete picture of IEP enrollments in the U.S.

20 06 opendoors

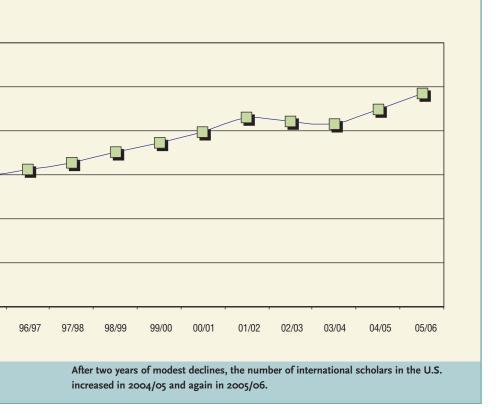

There were 96,981 international scholars in the U.S. in 2005/06, an 8% increase from the previous year.

The sciences and engineering were t	-	

specialization of 67% of international scholars in the U.S.

INTERNATIONAL SCHOLARS

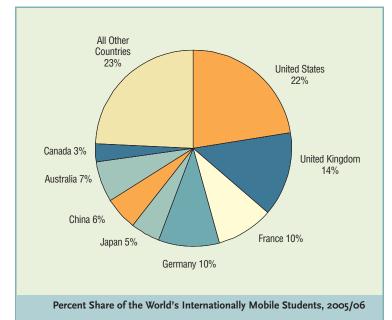

here were 96,981 international scholars at doctoral degree-granting institutions in the U.S. in 2005/06, the majority of whom were pursuing research and/or teaching. This was the second consecutive year with an 8% increase in the total number of international scholars, reversing a two-year period of slight declines.

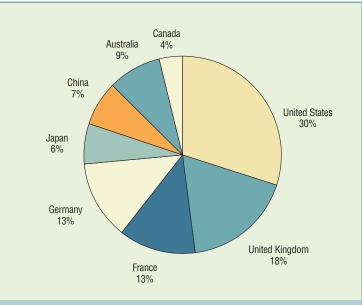

The 19,017 scholars from China, once again the leading place of origin, comprised 20% of the international scholar total in U.S. higher education. The top four places of origin, all in Asia, accounted for 42,360 or 44% of all scholars: China (20%), Korea (9%), India (9%), and Japan (6%). Germany rounded out the top five places of origin (5%). The top 20 places of origin accounted for 80% of international scholars (78,036) in the U.S. Of these top 20 places, 14 were in Asia or Europe, showing the predominance of these two regions in sending scholars to the U.S. Five places had double-digit increases over the previous year: Italy (16%), Brazil (14%), India (14%), Taiwan (13%), and China (12%). Only Turkey saw a moderate decline (5%).

International scholars on U.S. campuses were mainly conducting research (75%), while a smaller proportion were teaching (12%), engaging in both teaching and research (7%), or pursuing some other activity (5%). Two-thirds (67%) were concentrated in the leading four fields of specialization: life & biological sciences (23%), health sciences (20%), physical sciences (12%), and engineering (11%).

Global Competition for International Enrollments

Leading Eight Host Countries' Share of Internationally Mobile Students, 2005/06

Note: The data are from the most recently available statistics for leading host countries. Data sources for the above figures include: *UNESCO Global Education Digest, 2006*; IAU World Higher Education Database 2005/06; *Open Doors 2006*; data from Project Atlas members. For more information on these statistics and on international student mobility overall, see the *Atlas of Student Mobility* at *http://atlas.iienetwork.org*, an IIE project supported by the Ford Foundation.

Leading Five Countries' International Enrollment as a Percentage of Total Higher Education Enrollment

International student mobility has been on the rise worldwide, with as many as 2.5 million students pursuing higher education outside their home country (UNESCO, 2006). Of this group of mobile students, the largest proportion selected the U.S. as the destination for their higher education. Although the U.S. share of internationally mobile students has declined since 1997, the U.S. continued to attract 30% of all students among the leading eight host countries, and 22% of all internationally mobile students worldwide. In 2005/06, the U.S. hosted almost 565,000 students, with the relative share of the U.S. shifting as countries in Asia have expanded their own institutions' capacity to host domestic as well as international students.

Compared with major Anglophone host countries and others, the U.S. has a large untapped capacity to absorb significant future growth in international student enrollment. While Australia's international student enrollment has reached nearly 20% of the country's total higher education capacity (15% in the U.K.), international students in the U.S. accounted for less than 4% of total higher education enrollment (with higher proportions at the graduate level).

* Cyprus and Turkey were previously classified in the Middle East category but have been included in Europe for 2004/05 and 2005/06.

** Reported as a separate category in 2005/06

*** Academic level totals by place of origin differ from the official academic level totals reported in Table 18 and throughout, due to the difference in responses from some of the institutions to the nationality and academic level survey questions.

History of the Census

Since its founding in 1919, the Institute of International Education (IIE) has conducted an annual census of international students in the United States. For the first 30 years, IIE and the Committee on Friendly Relations Among Foreign Students carried out this effort jointly. IIE's first independent publication of the results of the annual census was Education for One World, containing data for the 1948/49 academic year. It was renamed the Open Doors Report on International Educational Exchange in 1954/55, and began receiving support from the Bureau of Educational and Cultural Affairs in USIA (now part of the U.S. Department of State) in the early 1970s. Open Doors has long been regarded as a comprehensive source for basic trends in international students, international scholars, and international students in Intensive English Programs in the U.S., as well as U.S. students studying abroad.

Country Classification System

The classification of places of origin into regional groupings that is used throughout this report is based primarily on the Department of State's definitions of world regions and states¹ [Table 42]. 'See www.state.gov for more information.

42 (cont'd) PLACE OF ORIGIN CODES BY PLACE OF ORIGIN WITHIN WORLD REGION Beginning with *Open Doors 2006*, a few changes were made to the classification of world regions. First, the two separate regions of Eastern and Western Europe were collapsed into a single Europe category. Second, Turkey and Cyprus, previously classified in the Middle East, were classified within Europe.

Fields of Study

The fields of study used in this book are from A *Classification of Instructional Programs, 2000*, published by the National Center for Education Statistics (NCES) of the U.S. Department of Education.² See Table 43 for a list of major fields of study. In addition to the CIP 2000 codes, IIE created a separate category for Intensive English Programs. Optional Practical Training has been listed as a separate IIE category since *Open Doors 2005*.

Carnegie Classification System

Since *Open Doors 2004*, IIE has used the 2000 Carnegie Classifications, or codes, for various rankings and analyses.³ Prior to using these codes, IIE used the 1994 codes. Due to the Carnegie Foundation's revision of its Carnegie Classifications, some institutions' codes were changed and they were reclassified into different institutional categories. As a result, comparison to previous editions of *Open Doors* cannot always be made.⁴

² For more information about the codes, see *www.nces.ed.gov/ pubs2002/cip2000*.

³ Carnegie Foundation for the Advancement of Teaching, *The Carnegie Classifications of Institutions of Higher Education, 2000 Edition.* Electronic Data File, Fourth Revision, 2003.

⁴ See *www.carnegiefoundation.org/classification* for a fuller discussion about the Carnegie Classification system.

About the Annual Census of International Students

For the purposes of the Census, an international student is defined as an individual who is enrolled for courses at a higher education institution in the United States on a temporary visa, and who is not an immigrant (permanent resident with an I-151 or "Green Card"), a citizen, an illegal alien (undocumented immigrant), or a refugee.

The International Student Census was made available to respondents as a twopart survey: a short web-based survey (Step 1) and a more detailed survey in a downloadable Word document (Step 2) on the Open Doors website, along with detailed instructions and institutional codes. The Census was administered in Fall 2005 and Spring/Summer 2006 to 2.877 institutions. Overall, 2,004 or 70% responded to the survey [Table 44]. Although response rates have declined somewhat in recent years, the response rates are high for a voluntary survey. The response rate was obtained through five mail follow-ups, as well as several rounds of e-mail and telephone follow-ups.

Among the 2,004 responding institutions, 95% (1,913) reported enrolling international students [Table 44]. Of the 2,004 institutions, 12% (247) provided only total international student counts (Step 1) [Table 45]. Although the overall response rate was lower than the previous year, the detailed Step 2 response rate was higher; the majority, 88% (1,757), provided information not only on the total but also on the students'

43 (cont'd) FIELD OF STUDY CATEGORY CODES

place of origin, field of study, academic level, sex, and other characteristics (Step 2). The vast majority of the institutions with international students sent data on some or all of the characteristics on the questionnaire [Table 46]. Data on academic level and field of study were available for almost 100% of the institutions. For other key variables – visa status, sex, place of origin, and enrollment – the response rate was over 90%. On the other hand, the response rates for students' primary source of funding and marital status were under 50%.

About the U.S. Study Abroad Survey

The study abroad population is defined as only those students (U.S. citizens and permanent residents) enrolled for a degree at a U.S. accredited higher education institution, who received academic credit for study abroad from their home institution upon their return. Students studying abroad without credit are not included here, nor are U.S. students enrolled overseas for degrees. Hence, the figures presented here give a conservative picture of study abroad activity.

The Study Abroad Survey was available to respondents as a downloadable Word document, along with detailed instructions and institutional codes, on the *Open Doors* website. The survey was administered in Spring and Summer 2006. Study abroad data was obtained from 969 or 65% of the 1,484 surveyed institutions for the 2004/05 academic year, including summer 2005. The improved response rate is a result of four mail follow-ups, several rounds of phone and e-mail follow-ups, as well as the follow-up assistance given by the NAFSA Education Abroad Data Collection Committee.

Most of the institutions provided detailed information about the characteristics of the students [Table 48]. The proportion of institutions that gave breakdowns for individual variables ranged from 54% for race/ethnicity to 97% for host destination. For the second consecutive year, the survey included questions designed to capture study abroad activity in the current academic year (2005/06). Of the institutions reporting any study abroad activity, 802 or 90% were able to provide 2005/06 data. Of this percentage, 62% estimated their totals while the remaining 38% were able to provide actual figures.

Participation rates: IPEDS data are used to calculate the undergraduate participation rates and capture undergraduate completions. After the IPEDS and study abroad survey files are matched, participation is calculated by dividing the total number of undergraduates who studied abroad in a given year by the total number of undergraduate completions. The IPEDS data used lags one year behind the Open Doors data because the corresponding year is not available at the time of analysis, data release, and publication.5 The undergraduate participation rate is a proxy estimate of the proportions of students in two- or four-year cohorts that go through a study abroad experience at least once during their academic career.

About the Intensive English Program Survey

IIE and two leading professional Intensive English Program (IEP) associations, the American Association of Intensive English Programs (AAIEP) and the University and College Intensive English Programs (UCIEP), collaborated to collect national data on IEP activity in the U.S. The survey reflects student enrollments throughout the 2005 calendar year (January 1, 2005 to December 31, 2005). The mix of reporting institutions includes university and college-affiliated programs as well as large for-profit entities that offer English language training. Data elements in this survey include program

sponsorship, the percentage of students intending to continue further (non-IEP) study in the U.S., program duration (18 hours or more, 18 hours or fewer), and place of origin. Student totals capture both headcount enrollment and enrollment by "studentweeks." One student-week equals one student studying for one week. Non-AAIEP and non-UCIEP institutions were also invited to participate in the survey. These IEPs were taken from IIE's *Intensive English USA 2006* directory. In all, 606 programs were contacted by e-mail and returns were obtained from 164 programs for an overall response rate of 27%, a slight decrease over last year's rate of 29%. The response rate was obtained through five e-mail follow-ups, as well as reminders sent out by the two associations to their members. Although the overall response rate was not as high as the previous year, response rates for individual variables were generally higher this year. As with the other surveys, not all programs providing total numbers were able to provide detailed breakouts for every variable; responses ranged from 100% for total number of students, number of students by place of origin, and number of student-weeks by place of origin, to 92% for percent of students pursuing further study [Table 49].

About the International Scholar Survey

For the purposes of this survey, interna-

tional scholars are defined as non-immigrant, non-student academics (teachers and/or researchers, administrators) in the U.S. Other scholars may be affiliated with U.S. institutions for other activities such as conferences, colloquia, observations, consultations, or other short-term professional

development activities, but the survey was limited to doctoral degree-granting institutions where most J Visa scholars were based. This web-based survey captured data for the period beginning on July 1, 2005 and ending June 30, 2006. Institutions were asked about the prima-

⁵ For Open Doors 2005, the IPEDS completion data were consistent with the U.S. Study Abroad Survey reporting academic year: that is, both reflected activity in 2003/04.

ry function of the scholars (research, teaching, both, or other), place of origin, academic field of specialization, sex, and visa status. Responses were received from 252 of the 353 institutions polled, for a response rate of 71%. The response rate was obtained through four mail follow-ups, as well as e-mail and telephone follow-ups.

Most institutions reporting international scholars in 2005/06 were able to provide detailed information on the characteristics of their scholars, and the

ous survey items generally exceeded those seen in years past [Table 47]. The proportion of institutions that provided breakdowns for individual variables ranged from 100% for visa status to 77% for primary function.

response rates for the vari-

Imputation and Estimation

Throughout this publication, total international student enrollments, U.S. study abroad totals, international scholar totals, IEP totals, and the various percentages herein are calculated directly from campus-based survey responses. Other student counts are determined by imputation, since not all campuses are able to provide detailed breakdowns by the various categories, such as place of origin, field of study, etc. Estimates of the number of students for each of the variables collected by the various surveys are

. .	Base	% of Int'l

imputed from the total number of students reported. For each imputation, base or raw counts are multiplied by a correction factor that reflects the ratio of difference between the sum of the categories being imputed and the total number of students reported by institutions. For this reason, student totals may vary slightly within this publication. In addition, due to rounding, percentages do not always add up to 100% (whether or not numbers are imputed). The data collection methodology was designed to produce stable, national estimates of international education activity. Analysis for units that reflect relatively small numbers of students (such as certain places of origin, fields of study, sources of financial support) and especially those that are cut by other variables may reflect greater error variation than variables with a larger response base. In addition, to account for potential instability in annual institution-level counts, estimates based on

counts from the previous reporting year (if available) are sometimes used to account for any given non-reporting institution, but only if there is a history of reporting to *Open Doors* surveys and the previous year's figures were not estimated. For International Students and Study Abroad, these estimates are based upon the prior year's number adjusted by the average percent change among institutions that reported in the prior and current academic years. For International Scholars counts, estimates to account for non-reporting campuses were based on numbers reported in the previous year (if available and not estimated itself), with no additional adjustment. The only case where estimation was not performed was for Intensive English; unlike the other survey data presented in this current volume, and consistent with past years' practices, no estimates were produced to account for IEP nonreporting. While estimation refinements were made for this edition and will continue to be made for future editions, the general practice of estimating based on previous years' numbers is entirely consistent with past years' Open Doors analysis protocols.

Differences exist between the sum of undergraduate/graduate breakdowns by place of origin [Table 2] and the official aggregate undergraduate/graduate totals [Table 18]. The official figure is based on data from each reporting U.S. institution of their total enrollment of international students by academic level. While most institutions report academic level breakdowns by place of origin, others are unable to do so. The data shown in Table 2 are adjusted only to the extent to which institutions are able to provide academic level data by place of origin. In practice, Open Doors does not adjust further for this discrepancy, and uses the overall academic level, not the academic level by place of origin, as the basis for calculating changes from year to year and for analyses.

A C K N O W L E D G M E N T S

Producing the *Open Doors Report* involves the cooperation and contributions of many individuals and organizations. The Bureau of Educational and Cultural Affairs of the U.S. Department of State has provided funding for the project since the 1970s. This grant enables the Institute to collect, analyze, publish, and disseminate the data on international students, U.S. students abroad, and international scholars in the *Open Doors* publication and online. The American Association of Intensive English Programs (AAIEP) and University and College Intensive English Programs in the USA (UCIEP), two leading intensive English language program organizations, have provided support to the Institute to collect and report data on international students in Intensive English Programs in the U.S. since 1999.

The American Association of Collegiate Registrars and Admissions Officers, College Board, Council of Graduate Schools, and NAFSA: Association of International Educators, serve on the advisory committee for Open Doors. Glenn Cerosaletti, Chair, and the rest of NAFSA's Education Abroad Data Collection Subcommittee worked with the Institute to continue to improve reporting among study abroad data providers. Ann Frentzen, Vice-President for Advocacy at AAIEP, John Leyland, Director of the AAIEP Central Office, and Dawn Turton, President of UCIEP, assisted in publicizing the IEP survey to their members and in encouraging responses to the survey. Judith Irwin, Director, and Wayne Wheeler, Program Assistant of International Programs & Services of the American Association of Community Colleges (AACC), assisted by sending out follow-up reminders about the surveys to their members. Jason Baumgartner and Lynn Schoch of Indiana University at Bloomington analyzed the economic impact of international students in the U.S. Catherine Serico, Associate Director, Data Management at College Board, provided the U.S. higher education enrollment data. And without the work of thousands of colleagues at higher education institutions across the U.S. who provide IIE the data each year, *Open Doors* would not be the comprehensive and reliable data source that it is.

Several individuals outside of the Institute assisted throughout the production process. Robin Koo worked tirelessly to ensure that the data were as accurate as possible and to increase survey responses. Lenora Komlacevs at DRS Imaging oversaw the data entry. Renée Meyer, of Renée Meyer Graphics, designed the finished product. Jane Cruz and Alan Flint at Automated Graphic Systems assisted with the printing process.

At the Institute, Peggy Blumenthal, Executive Vice-President, provided overall guidance for the project. Patricia Chow not only assisted with data editing, but also provided much needed and invaluable assistance with many other aspects of the project as the newest member of the research team. Daniel Obst, assisted by Robert Gutierrez, maintained the *Open Doors* website on IIENetwork.org. Sharon Witherell, assisted by Hannah Thompson at the Institute and Deborah Gardner at Halstead Communications, ensured that *Open Doors* data were disseminated to the media and to wider audiences.

We at the Institute hope that *Open Doors* continues to serve as a valuable information resource for higher education professionals, as well as for policy makers, researchers, and others with an interest in academic mobility and international educational exchange.
