WHAT IS CHATGPT

Abba Giza

March 11, 2023

ChatGPT is an extensive language stereotype chatbot brought into existence by OpenAI contingent on GPT-3.5. It has an amazing potential to interrelate in conversation and have surprisingly human reactions.

According to Wikipedia ChatGPT is an intelligent retrieval chatbot brought into existence by OpenAI and launched in November 2022. It is set up on top of OpenAI's GPT-3 family of extensive language stereotypes and has been fine-tuned (an approach to transfer learning) using both superintended and reinforcement learning techniques.

HOW DOES CHATGPT INFLUENCE THE CLASSROOM?

Nowadays, students' use of ChatGPT has become a concern for teachers, as students use it to write assignments and complete paperwork for them, undermining pupils' desire to develop skills such as writing and research. The tool allows students to complete assignments effortlessly and raises concerns about cheating, academic misconduct, and, most significantly, loss of learning ability. Educators fear this will turn students into lazy intellectuals who won't be able to develop lifelong skills like critical discerning, research, or writing.

Additionally, if a student uses technology to produce an unoriginal text, this can also be considered plagiarism, which is a serious offense in an academic setting. This has a negative impact on students and schools as it undermines the integrity of the education system and the hard work of other students.

However, despite these odds, the benefit of ChatGPT cannot be over-emphasized. Teachers are encouraged to use AI as another teaching tool for their students. It's like teachers giving their students the basics of how to email them and how to search on the Google search engine properly. Educators are advised to create clear lessons on how the ChatGPT bot can help with essay writing. Recognizing the existence of artificial intelligence and helping students use it

can change the learning process. Rather than asking AI to produce fake work without thinking about how students should focus their creativity, teachers should teach AI to give appropriate and morally correct instructions. Plans, templates, and guidelines using ChatGPT. Experts say that ChatGPT can provide students with a foundation for any writing project. Teachers can use this CHATGPT to show students how to generate prompts to improve their writing process. These little things will help students keep coming up with ideas

THE POTENTIAL BENEFIT OF CHATGPT IN EDUCATION

Individual Learning: An impending benefit of using ChatGPT in education is the ability to distinguish each student's learning. ChatGPT can generate
personalized query responses so you can provide learners with personalized feedback and support. This allows students to learn at their own pace and style, resulting in better learning outcomes.

Assist students on Assignments: ChatGPT is another resource students can use to get answers quickly. ChatGPT is a great concept. If you're looking for quick answers that
don't require scrolling, ChatGPT is perfect for homework.

Improvement in Writing skills: There are several writing aids, such as Grammarly. ChatGPT works the same way. For example, students can type a sentence and ask ChatGPT
to make corrections to see how they can change it.

Assessment: ChatGPT can help create an
assessment. Teachers can provide information and context to the AI program, and
ChatGPT returns results. This may take some tweaking, but it can be a good starting point for teachers when creating grades from scratch.

Assist in Research: ChatGPT is very smart and resourceful. However, the database consists of internet sources, some of which are inevitably inaccurate. This means that students should use ChatGPT as a Wikipedia-like resource. While this can be a great way to reinforce common sense and serve as a starting point, it shouldn't be used as a citation source.

Automation: Automation is everywhere and allows teachers to simplify one of the most arduous tasks: grading. ChatGPT ranks projects and provides feedback, giving teachers more time to create engaging lesson plans and focus on students.

THE DRAWBACK OF CHATGPT IN EDUCATION

Precision restrictions: ChatGPT is not entirely precise since its data is heavy from the internet.

Unavailability of framework: ChatGPT is quick but can misinterpret context, which will, in turn, lead to unseemly output.

Absence of critical thinking: Largely appreciated effects pupils can nurture is acute thinking. If the solutions are always available, they will no longer have to think by themselves.

Absence of new thought: ChatGPT can bring out a total essay. If students have ChatGPT write their works for them, it is plagiarism due to the lack of originality. This is one of the most noteworthy worries surrounding ChatGPT.

HOW TO PREVENT CHATGPT FROM CHEATING

There are many issues raised to ChatGPT being used inappropriately. Nevertheless, some educators interviewed also made it clear there are many aptitudes to ChatGPT that should not be disregarded.

Methods educationalists can prevent the inaccuracies of ChatGPT is for short weekly essays or questions on discussion forums, educators can fence ChatGPT-generated content, potentially generating more meaningful responses in the process, allowing students to relate the material to their lives. Also, another way to avoid too many responses generated by ChatGPT is to focus more on student replies and communications than the original message.

Furthermore, another way to prevent cheating in ChatGPT is to identify a number of ChatGPT trackers that have emerged, from the makers of ChatGPT designed to help teachers track content generated on the platform.

Also, another step in preventing cheating and promoting the proper use of ChatGPT is to openly discuss technology, academic integrity and honesty with students themselves.

IMPORTANCE OF CHATGPT IN MY CONTENT AREA

In education, the use of ChatGPT in easing some aspects of it is important as well as for students. These are some of the ways education benefits from ChatGPT.

Discussion Prods: Instructors can use ChatGPT to create dialogue prods for students based on a literary document, topics, events, concepts, etc. This allows instructors to offer interesting questions to discuss numerous topics hastily. This is exclusively useful if pupils can benefit from personalized requests. Teachers rarely have the time to design personalized questions for students, but this technology could make that possible.

Multiple Choice Questions: Creating well-written multiple-choice and multiple-choice questions is often a time-consuming task for teachers. ChatGPT can quickly generate multiple-choice vocabulary or other factual questions. This is useful when assessments or exercises for students.

Examples Generation: ChatGPT can breed multiple examples to help explain a focus or concept to pupils and form other practice chances. I found that it generates a list of examples showing how to apply various math formulas, and real examples using the formulas. It also generates sentences that illustrate examples of literary devices and how domain-specific vocabulary is used in context. Finally, I asked him to list examples of successful apparitions in history, and he was able to provide specific examples and details. Then when I ask for more examples, he gives me four different examples.

WHY SCHOOLS AND DISTRICTS BLOCK ACCESS TO CHATGPT?

A growing number of school districts are banning ChatGPT for fear of cheating, but some experts say schools should try to use the software to their advantage. Teachers and school administrators fear the inevitable plagiarism when students use ChatGPT for homework. Plagiarism is a serious offense in academia, and some schools threaten to expel students if convicted. Studies have shown that at least 58% of high school students plagiarize. Most district schools say they are temporarily blocking to safeguard academic scrupulousness while a menace/advantage assignment is shepherded. The risky special effects on pupil scholarship and fears vis-à-vis the welfare and accurateness of content.

CONCLUSION:

Finally, concerns remain about the impact of GPT chat on the future of education. The first victim, in particular, will be thinking ability. At this point, it may not be possible to predict future complications accurately. One thing is for sure: chat GPT is not the end of these groundbreaking technological inventions! More cutting-edge technologies may emerge soon. To

promote and support human growth, learning and development, relevant application of technology must be identified for all stakeholders, especially in education.
