

The State of the World's Children 2024

The Future of Childhood in a Changing World

Statistical Compendium

Accurate data on children's well-being is a powerful tool to shape policies and create a world where every child can thrive.

This Statistical Compendium offers vital statistics on child survival, development, and protection worldwide, supporting UNICEF's commitment to tracking progress toward global goals for children's and women's rights.

Vidhya Ganesh, Director

João Pedro Azevedo, Chief Statistician and Deputy Director, Data and Analytics Section

Data and Analytics Section Contributors: Tashrik Ahmed, Garen Avanesian, Jorge Bica, Savvy Brar, Claudia Cappa, Joel Conkle, Yadigar Coskun, Enrique Delamónica, Ayca Donmez, Lauren Francis, Attila Hancioglu, Karoline Hassfurter, Chika Hayashi, Lucia Hug, Yves Jaques, Benjamin Johnson, Robert Johnston, Munkhbadar Jugder, Chibwe Lwamba, Tatjana Karaulac, Yoshito Kawakatsu, Dohyung Kim, Julia Krasevec, Yang Liu, Sakshi Mishra, Vrinda Mehra, Taleen Vartan Nakashian, Colleen Murray Gastón, Maria Muniz, George Mwinnyaa, Daniele Olivotti, Sebastián Palmas, Lauren Pandolfelli, Nicole Petrowski, Eva Quintana, Anshana Ranck, David Sharow, Alberto Pedro Sibileau, Tom Slaymaker, Khaing Soe, Rohini Sampoornam Swaminathan, Turgay Ünalan, Sameen Wajid, Dee Wang, Danzhen You, Sahar Zandinia

General note on the data

Data sources

Data presented in the following statistical tables are derived from UNICEF global databases and are accompanied by definitions, sources and, where necessary, additional footnotes. The indicators data draw on inter-agency estimates and nationally representative household surveys such as Multiple Indicator Cluster Surveys (MICS) and Demographic and Health Surveys (DHS). In addition, data from administrative sources and other United Nations organizations have been used. More detailed information on data sources is provided at the end of each table.

The demographic indicators and many of the population-related indicators in these tables were based on the latest population estimates and projections from World Population Prospects 2024 and World Urbanization Prospects: The 2018 revision, published by the United Nations Population Division, Department of Economic and Social Affairs. Data quality is likely to be adversely affected for countries that have recently suffered disasters or conflicts, especially where basic country infrastructure has been fragmented or where major population movements have occurred.

UNICEF supports countries in collecting and analysing data for monitoring the situation of children and women through MICS, its global household survey programme. Since the mid-1990s, as many as 375 surveys have been completed in 117 countries and areas. MICS is the leading data source for shaping government policies and programmes around the world, and for measuring the 2030 Sustainable Development Goal (SDG). More information is available at <mics.unicef.org>.

Regional and global aggregates

Unless otherwise mentioned, regional and global aggregates for indicators were generated as population-weighted averages using data from World Population Prospect 2024. They accord with the relevant age and sex groups for each indicator. For example, the indicator for the total number of live births is based on unweighted population averages and the indicator for females aged 15–49 years with anaemia is based on weighted population averages. Unless otherwise noted, global and regional estimates are only reported for indicators with population-level data coverage of at least 50 per cent.

Data disaggregation

The COVID-19 crisis has underscored the importance of disaggregated data for understanding the differential health and socioeconomic effects of the pandemic on women and children, which have exacerbated long-standing structural disparities and discrimination. Beyond the crisis, high-quality, comparable and timely disaggregated data, as well as data simultaneously disaggregated along more than one dimension, are essential to identifying priority groups for various types of interventions and to fulfil the 2030 Sustainable Development Agenda mandate to leave no one behind.

Different sources of data, including household surveys, vital registrations and administrative records are utilized to compile and analyse disaggregated data. While space constraints do not permit the full presentation of these data in the following statistical tables, efforts have been made to present disaggregated data along key dimensions, including sex, age, residence and wealth status. Given UNICEF's core commitment to gender equality and the empowerment of women and girls, the presentation of sex-disaggregated data, when available, is prioritized in the statistical tables, except when statistically significant differences between boys and girls are not observed in the majority of countries for a given indicator. In these instances, the sex-disaggregated data are available online at <data.unicef.org>. For further information about the disaggregation of individual indicators, please refer to the footnotes below the statistical tables.

Data comparability

Efforts have been made to maximize the comparability of statistics across countries and time. Nevertheless, data used at the country level may differ in terms of the methods used to collect data or arrive at estimates, and in terms of the populations covered.

Furthermore, data presented here are subject to evolving methodologies, revisions of time-series data (e.g., immunization and maternal mortality ratios), and changing regional classifications. Also, data comparable from one year to the next are unavailable for some indicators. It is therefore not advisable to compare data from consecutive editions of *The State of the World's Children*.

Further methodological information

Data presented in the following statistical tables generally reflect information compiled and updated from January through October 2024, with a specific cut-off time associated with individual indicators described in the 'main data sources' section underneath each table. The 'last updated' time stamp reflects when the data were compiled and updated as part of country consultation or inter-agency processes that are specific to individual topics.

Interested readers are encouraged to visit <data.unicef.org> for methodological details of the indicators and statistics.

Data presented in the tables are available online at <<https://www.unicef.org/reports/state-of-worlds-children>> and via <data.unicef.org>. Please refer to these websites for the latest data and for any updates or corrigenda subsequent to printing.

Child mortality estimates

Under-five mortality is used as the principal indicator of progress in child well-being. Here are under-five mortality rates and deaths by UNICEF region.

UNDER-FIVE MORTALITY RATE (DEATHS PER 1,000 LIVE BIRTHS)

| UNICEF Region | 1980 | 1985 | 1990 | 1995 | 2000 | 2005 | 2010 | 2015 | 2020 | 2022 |

Cyprus: Some UN IGME indicators are calculated using population and live birth numbers from the World Population Prospects: The 2022 revision (WPP). WPP numbers for Cyprus refer to the whole country. However, the underlying data sent by the Health Monitoring Unit of the Cyprus Ministry of Health capture only the government-controlled area, whereas according to Eurostat, the number of live births in 2022 was 10,150 (<https://ec.europa.eu/eurostat/databrowser/view/tps00204/>), the population on 1 January 2022 was 904,705 (<https://ec.europa.eu/eurostat/databrowser/view/tps00001/>), the population under 5 was 48,311, adolescent population was 95,467 and the number of women of reproductive age was 231,287 (https://doi.org/10.2908/DEMO_PJAN).

India: The UN IGME estimates are not the official statistics of India. The Sample Registration System (SRS) of ORGI is the official data source of India for all mortality estimates. The most recent national official estimates of the mortality rates were 4.7 for the age group 1–4, 2.6 for age group 5–9 and 10–14, 3.9 for age group 15–19 and 5.6 for age group 20–24 based on SRS Abridged Life Table, 2016–2020.

Kosovo: All references to Kosovo in the UN IGME estimates should be understood in the context of United Nations Security Council resolution 1244 (1999).

Nicaragua: The UN IGME estimates are not the official statistics of Nicaragua. The most recent national official estimates of neonatal, infant and under-five mortality rates available to the UN IGME come from the vital registration system for 2022, with a rate of 8.1, 11.7 and 13.3 deaths per 1,000 live births, respectively. Following a request from the Government of Nicaragua and per the objectives of the UN IGME, the UN IGME will continue to assess all data sources in the country relevant to child mortality estimation.

Qatar: The most recent official national estimates of neonatal, infant and under-five mortality rates in Qatar are from the vital registration system, with a rate of 3.6, 5.0 and 6.4 deaths per 1,000 live births for both sexes, respectively, in 2021.

Ukraine: The State Statistics Service of Ukraine (SSSU) have suspended the compilation of impartial statistical information

on births and deaths starting from 2022 and on the number of population starting from data as of January 1, 2023, onwards. Consequently, no data is available for 2022.

Uzbekistan: The most recent official national estimates of neonatal, infant and under-five mortality rates in Uzbekistan are from the vital registration system, with a rate of 4.5, 8.7 and 11.4 deaths per 1,000 live births for both sexes, respectively, in 2022. The most recent official sex-specific estimates from the vital registration system for infant and under-five mortality for males are 9.6 and 12.4 deaths per 1,000 live births and 7.7 and 10.2 deaths per 1,000 live births for females, respectively, in 2022.

Notes on specific tables

TABLE 1. DEMOGRAPHICS

The demographics table contains selected indicators on some of the most important demographic information of each population, including the total population and the total population broken down by age, as well as annual population growth rates. The annual number of births is a function of both population size and current fertility. The total fertility rate allows for the comparison of fertility levels internationally. A total fertility level of 1.1 is called 'replacement level' and represents a level at which, over the long term, the population would remain the same size. Life expectancy at birth is a measure of the health status and the development of a population and continues to increase in almost all countries. The dependency ratio is the ratio of the not-working-age population (i.e., the economically 'dependent' population) to the working-age population (aged 15–64 years). This can be divided into a child dependency ratio (ratio of children under 15 years of age to working-age population) and an old-age dependency ratio (ratio of population 65 years and older to working-age population). The total dependency ratio is usually U-shaped over time, reflecting a changing age structure as a result of the demographic transition. This can be understood as the combination of opposing trends in child and old-age dependency ratios. For example, decreasing fertility leads to a decreasing share of children in the population and therefore to a decrease in the child dependency ratio. Increasing life expectancy (as a consequence of decreasing mortality) will lead to a larger share of older people and therefore to an increase in the old-age dependency ratio.

The proportion of the urban population and the annual urban population growth rate describe the status and dynamics of the urbanization process. The net migration rate refers to the difference between the number of immigrants and the number of emigrants; a country/area with more immigrants than emigrants shows a positive value, while a country with fewer immigrants than emigrants shows a negative value. All demographic indicators are based on *World Population Prospects 2024*. Urban population indicators are based on *World Urbanization Prospects: The 2018 revision*.

Regional aggregates are based on all countries and areas associated with the respective region, even if they are not included in the 202 reporting countries. Thus, the reported global population under 18 years of age, for example, is larger than the sum of the presented country values.

TABLE 1. DEMOGRAPHICS

| Countries and areas | Population (thousands) 2023 | | | Annual population growth rate (%) | | Annual number of births (thousands) 2023 | Total fertility (live births per woman) 2023 | Life expectancy at birth (years) | | | Dependency ratio (%) 2023 | | | Share of urban population (%) 2023 | Annual growth rate of urban population (%) | | Net migration rate (per 1,000 population) 2023 |

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>.

It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

Sex disaggregated data available at United Nations, Department of Economic and Social Affairs, Population Division (2024). World Population Prospects 2024.

NOTES

- Data not available.

A Based on medium-fertility variant projections.

Regional and global values are based on more countries and areas than listed here. Therefore, country values don't add up to the corresponding regional values and global value.

DEFINITIONS OF THE INDICATORS

Population (thousands) – Total population

Annual population growth rate – Average exponential rate of growth of the population over one year. It is calculated as $\ln(P_t/P_0)/T$ where P_0 is the population at the beginning of the time period, P_t the population at the end of the time period,

and T the length of the period. It is expressed as a percentage.

Annual number of births – Annual number of births for the reference year. Data are presented in thousands.

Total fertility – The average number of live births a hypothetical cohort of women would have at the end of their reproductive period if they were subject during their whole lives to the fertility rates of a given period and if they were not subject to mortality. It is expressed as live births per woman.

Dependency ratios – The total dependency ratio is the ratio of the sum of the population aged 0–14 and that aged 65+ to the population aged 15–64. The child dependency ratio is the ratio of the population aged 0–14 to the population aged 15–64. The old-age dependency ratio is the ratio of the population aged 65 years or over to the population aged 15–64. All ratios are

presented as number of dependents per 100 persons of working age (15–64).

Life expectancy at birth – Number of years newborn children would live if subject to the mortality risks prevailing for the cross section of population at the time of their birth.

Share of urban population – Urban population as a percentage of the total population.

Annual growth rate of urban population – Average annual exponential rate of growth of the urban population over a given period, expressed as a percentage.

Net migration rate – The number of immigrants minus the number of emigrants over a period, divided by the person-years lived by the population of the receiving country over that period. It is expressed as net number of migrants per

TABLE 1. DEMOGRAPHICS

1,000 population.

MAIN DATA SOURCES

All demographic data – United Nations, Department of Economic and Social Affairs, Population Division (2024). World Population Prospects 2024.

Urban data – United Nations Department of Economic and Social Affairs, Population Division, World Urbanization Prospects: The 2018 revision. Adjusted based on the 2022 revision of the World Population Prospects.

TABLE 2. CHILD MORTALITY

Each year, in *The State of the World's Children*, UNICEF presents a series of mortality estimates for children. These figures represent the best estimates available at the time of printing and are based on the work of the United Nations Inter-Agency Group for Child Mortality Estimation (UN IGME), which includes UNICEF, the World Health Organization (WHO), the World Bank Group and the UN Population Division. UN IGME mortality estimates are updated annually through a detailed review of all newly available data, which can result in changes to previously reported estimates. As a result, consecutive editions of *The State of the World's Children* should not be used for analysing mortality trends over time. Country-specific mortality indicators, based on the most recent UN IGME estimates, are presented in Table 2 and are available at <data.unicef.org/child-mortality/under-five> and <www.childmortality.org>, along with methodological notes.

TABLE 2. CHILD MORTALITY

| Countries and areas | Under-five mortality rate | | | Annual rate of reduction in under-five mortality rate | Under-five mortality rate 2022 | | Infant mortality rate | | Neonatal mortality rate | | | Mortality rate among children aged 5–14 years | | Stillbirth rate | | Annual rate of reduction in stillbirth rate | Under-five deaths | Neonatal deaths | Neonatal deaths as a percentage of under-five deaths | Deaths among children aged 5–14 years | Stillbirths |

NOTES

- Data not available.

DEFINITIONS OF THE INDICATORS

Under-five mortality rate – Probability of dying between birth and exactly 5 years of age, expressed per 1,000 live births.

Annual rate of reduction in under-five mortality rate – The annual percentage reduction in the under-five mortality rate (U5MR) defined as $ARR=100*(\ln(U5MR_{t_2}/U5MR_{t_1}))/((t_2-t_1))$, where $t_1=2010$ and $t_2=2022$.

Infant mortality rate – Probability of dying between birth and exactly 1 year of age, expressed per 1,000 live births.

Neonatal mortality rate – Probability of dying during the first 28 days of life, expressed per 1,000 live births.

Mortality rate (children aged 5 to 14 years) – Probability of dying at age 5–14 years expressed per 1,000 children aged 5.

Under-five deaths – Number of deaths among children under 5 years of age.

Neonatal deaths – Number of deaths occurring within the first 28 days of life.

Neonatal deaths as a percentage of under-five deaths – The percentage of under-five deaths occurring within the first 28 days of life.

Deaths among children aged 5–14 years – Number of deaths among children aged 5 to 14 years.

Stillbirth rate – Stillbirth rate (SBR) is defined as the number of babies born with no sign of life at 28 weeks or more of gestation per 1,000 total births.

Annual rate of reduction in stillbirth rate – The annual percentage reduction in the stillbirth rate (SBR) defined as $ARR=100*(\ln(SBR_{t_2}/SBR_{t_1}))/((t_2-t_1))$, where $t_1=2000$ and $t_2=2021$.

Stillbirths – Number of stillbirths.

MAIN DATA SOURCES

United Nations Inter-agency Group for Child Mortality Estimation (UNICEF, World Health Organization, United Nations Population Division and the World Bank Group). Last update: 2024.

TABLE 3. MATERNAL AND NEWBORN HEALTH

The maternal and newborn health table includes a combination of demographic and coverage indicators. The demographic indicators consist of life expectancy for females and maternal mortality estimates, including the number of maternal deaths, maternal mortality ratio and lifetime risk of maternal death.

The life expectancy indicator comes from the UN Population Division. The maternal mortality data are estimates generated by the United Nations Maternal Mortality Estimation Inter-agency Group (MMEIG), which includes WHO, UNICEF, the United Nations Population Fund (UNFPA), the World Bank Group and the UN Population Division. MMEIG mortality estimates are updated regularly through a detailed review of all newly available data points. This process often results in adjustments to previously reported estimates. As a result, consecutive editions of *The State of the World's Children* should not be used for analysing maternal mortality trends over time.

Coverage encompasses indicators for family planning, antenatal care, delivery care and postnatal care for mother and baby. The data for these indicators come from national household survey programmes such as DHS and MICS and other reproductive health surveys. Regional and global estimates are calculated using a weighted average method. The variables used for weighting are indicator-specific and applied to each country. They accord with the appropriate target population for each indicator (the denominator) and are derived from the latest edition of *World Population Prospects*. Only the most recent data points from 2017–2023 or modelled annualized estimates for each country were used to calculate regional and global aggregates.

The service coverage sub-index on reproductive, maternal, newborn and child health, which is a component of the Universal Health Coverage (UHC) index, was newly added to the last edition of this table. It is defined as the average coverage of essential services based on eight tracer indicators related to interventions across reproductive, maternal, newborn and child health areas. The index is calculated as a weighted average of the included indicators and is reported on a scale from 0 to 100.

TABLE 3. MATERNAL AND NEWBORN HEALTH

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>.

It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.
- x Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- C Maternal mortality estimates are from the 2023 United Nations inter-agency maternal mortality estimates. Periodically, the United Nations Maternal Mortality Estimation Inter-agency Group (WHO, UNICEF, UNFPA, the World Bank and the United Nations Population Division) produces internationally

comparable sets of maternal mortality data that account for the well-documented problems of under-reporting and misclassification of maternal deaths, including also estimates for countries with no data. Please note that owing to an evolving methodology, these values are not comparable with previously reported maternal mortality ratio 'adjusted' values.

R Data refer to the most recent year available during the period specified in the column heading.

Life expectancy at birth – Number of years newborn female children would live if subject to the mortality risks prevailing for the cross-section of population at the time of their birth.

Universal health coverage Service Coverage sub-index on reproductive, maternal, newborn and child health – Average coverage of essential services based on eight tracer indicators related to interventions across reproductive, maternal, newborn and child health areas. The index is calculated as a weighted average of the included indicators and is reported on a scale of 0 to 100.

DEFINITIONS OF THE INDICATORS

TABLE 3. MATERNAL AND NEWBORN HEALTH

| | | |
|--|---|---|
| Demand for family planning satisfied with modern methods – Percentage of adolescent girls and women (aged 15–49) who have their need for family planning satisfied with modern methods. | health check while in facility or at home following delivery or a postnatal visit. | Antenatal care (at least one visit) – DHS, MICS and other national household surveys. Last update: October 2024. |
| Antenatal care (at least one visit) – Percentage of adolescent girls and women (aged 15–49) attended at least once during pregnancy by skilled health personnel (typically a doctor, nurse or midwife). | Number of maternal deaths – Number of deaths of women from pregnancy-related causes (modelled estimates). | Antenatal care (at least four visits) – DHS, MICS and other national household surveys. Last update: October 2024. |
| Antenatal care (at least four visits) – Percentage of adolescent girls and women (aged 15–49) attended by any provider at least four times. | Maternal mortality ratio – Number of deaths of women from pregnancy-related causes per 100,000 live births during the same time period (modelled estimates). | Skilled birth attendant – Joint UNICEF/WHO SAB database, based on DHS, MICS and other national household surveys as well as national administrative data. Last update: March 2024. |
| Skilled birth attendant – Percentage of births from adolescent girls and women (aged 15–49) attended by skilled health personnel (typically a doctor, nurse or midwife). | Lifetime risk of maternal death – Lifetime risk of maternal death takes into account both the probability of becoming pregnant and the probability of dying as a result of that pregnancy, accumulated across a woman's reproductive years (modelled estimates). | Institutional delivery – DHS, MICS and other national household surveys. Last update: October 2024. |
| Institutional delivery – Percentage of adolescent girls and women (aged 15–49) who gave birth in a health facility. | | C-section – DHS, MICS and other national household surveys. Last update: October 2024. |
| C-section – Percentage of births delivered by Caesarean section. C-section rates between 10 per cent and 15 per cent are expected with adequate levels of emergency obstetric care. | | Postnatal health check for newborn and mother – DHS, MICS and other national household surveys. Last update: October 2024. |
| Postnatal health check for newborn – Percentage of last live births in the last two years who received a health check within two days after delivery. For MICS, health check refers to a health check while in facility or at home following delivery or a postnatal visit. | | Number of maternal deaths – United Nations Maternal Mortality Estimation Inter-agency Group (WHO, UNICEF, UNFPA, the World Bank and the United Nations Population Division). Last Update: February 2023. |
| Postnatal health check for mother – Percentage of adolescent girls and women (aged 15–49) who received a health check within 2 days after delivery of their most recent live birth in the last 2 years. For MICS, health check refers to a | | Maternal mortality ratio – United Nations Maternal Mortality Estimation Inter-agency Group (WHO, UNICEF, UNFPA, the World Bank and the United Nations Population Division). Last Update: February 2023. |
| | | Lifetime risk of maternal death – United Nations Maternal Mortality Estimation Inter-agency Group (WHO, UNICEF, UNFPA, the World Bank and the United Nations Population Division). Last Update: February 2023. |

MAIN DATA SOURCES

Life expectancy – United Nations Population Division, World Population Prospects 2024. Last update: July 2024.

Universal health coverage Service Coverage sub-index on reproductive, maternal, newborn and child health – WHO Global Health Observatory, based on DHS, MICS and other national household surveys. Last update: May 2023.

Demand for family planning satisfied with modern methods – United Nations, Department of Economic and Social Affairs, Population Division, United Nations Population Fund (UNFPA), based on Demographic and Health Surveys (DHS), Multiple Indicator Cluster Surveys (MICS), Reproductive Health Surveys, other national surveys, and National Health Information Systems (HIS). Last Update: August 2024.

TABLE 4. CHILD HEALTH

The child health table includes a set of indicators that capture information on the coverage of effective interventions delivered to children under the age of 5 years and at the household level. These include a range of immunization indicators (described below) and indicators on interventions for the prevention or treatment of pneumonia, diarrhoea and malaria (the three leading killers of young children). The main data sources for the indicators on prevention and treatment of childhood illnesses are nationally representative household surveys such as the DHS, MICS and the Malaria Indicator Surveys (MIS). Regional and global estimates are calculated using a weighted average method. Variables used for weighting are indicator-specific and applied to each country. They accord with the appropriate target population for each indicator (the denominator) and are derived from the latest edition of the *World Population Prospects*. Only the most recent data points from 2017–2023 or modelled annualized estimates for each country were used to calculate regional and global aggregates. For indicators that capture information about households, the total population was used.

Immunization

The child health table presents WHO and UNICEF estimates of national immunization coverage. Since 2000, these estimates have been updated annually in July, following a consultation process during which countries are provided with draft reports for review and comment. As new empirical data are incorporated into the process for generating the estimates, the revised estimates supersede prior data releases. Coverage levels from earlier revisions are not comparable. A more detailed explanation of the process can be found at <data.unicef.org/child-health/immunization>. Regional averages for the reported antigens are computed as follows: For Bacillus Calmette–Guérin (BCG) vaccine, regional averages include only those countries where BCG is included in the national routine immunization schedule. For diphtheria-tetanus-pertussis (DTP), poliovirus (polio), measles, hepatitis B (HepB), Haemophilus influenzae type b (Hib), pneumococcal conjugate vaccine (PCV), and rotavirus vaccines, regional averages include all countries since these vaccines are universally recommended by the World Health Organization (WHO). For protection at birth (PAB) from tetanus, regional averages include only the countries where maternal and neonatal tetanus is endemic.

TABLE 4. CHILD HEALTH

| Countries and areas | Immunization for vaccine preventable diseases (%) 2023 (J) | | | | | | | | | | | 2017–2023 (R) | | | | |

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. Sex disaggregated data for specific child health indicators are available at <<https://data.unicef.org/topic/child-health/>>.

It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

TABLE 4. CHILD HEALTH

NOTES

- Data not available.
- X** Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- F** Generally, the second dose of measles-containing vaccine (MCV2) is recommended for administration during the second year of life; however, in many countries, MCV2 is scheduled after the second year. World Population Prospects (2024 revision) estimates of the second year of life target population were used to calculate regional and global aggregates.
- G** WHO and UNICEF use a complex process employing administrative data, surveys (routine and supplemental), serosurveys, and information on other vaccines to calculate the percentage of births that can be considered as protected against tetanus because pregnant women were given two doses or more of tetanus toxoid (TT) vaccine.
- J** For the calculation of regional and global vaccination coverage, the national coverage is considered to be 0 per cent for the countries that did not introduce the vaccine in their national schedule or did not report coverage, with the exception of BCG, which is only recommended in countries or settings with a high incidence of tuberculosis or high leprosy burden. World Population Prospects (2024 revision) estimates of target populations were used in the calculation of global and regional aggregates.
- R** Data refer to the most recent year available during the period specified in the column heading.
- h** Excludes China.

DEFINITIONS OF THE INDICATORS

- BCG** – Percentage of live births who received bacilli Calmette-Guérin (vaccine against tuberculosis).
- DTP1** – Percentage of surviving infants who received the first dose of diphtheria, pertussis and tetanus vaccine.
- DTP3** – Percentage of surviving infants who received three doses of diphtheria, pertussis and tetanus vaccine.
- Polio3** – Percentage of surviving infants who received three doses of the polio vaccine.
- MCV1** – Percentage of surviving infants who received the first dose of the measles-containing vaccine.
- MCV2** – Percentage of children who received the second dose of measles-containing vaccine as per national schedule.
- HepB3** – Percentage of surviving infants who received three doses of hepatitis B vaccine.
- Hib3** – Percentage of surviving infants who received three doses of Haemophilus influenzae type b vaccine.
- Rota** – Percentage of surviving infants who received the last dose of rotavirus vaccine as recommended.
- PCV3** – Percentage of surviving infants who received three doses of pneumococcal conjugate vaccine.
- Protection at birth (PAB)** – Percentage of newborns protected at birth against tetanus with tetanus toxoid.
- Care seeking for children with symptoms of Acute Respiratory Infection** – Percentage of children under age 5 with symptoms of pneumonia (cough and fast or difficult breathing due to a problem in the chest) in the two weeks preceding the survey for whom advice or treatment was sought from a health facility or provider.
- Diarrhoea treatment with oral rehydration salts** – Percentage of children under age 5 who had diarrhoea in the

two weeks preceding the survey and who received oral rehydration salts (ORS packets or pre-packaged ORS fluids).

Care seeking for children with fever – Percentage of children under age 5 with fever for whom advice or treatment was sought from a health facility or provider. Excludes drug vendor, stores, shops and traditional healer. In some countries, particularly non-malaria endemic countries, pharmacies have also been excluded from the calculation.

Children sleeping under ITNs – Percentage of children under age 5 who slept under an insecticide-treated mosquito net the night prior to the survey.

Households with at least one ITN – Percentage of households with at least one insecticide-treated mosquito net.

MAIN DATA SOURCES

Immunization – WHO and UNICEF estimates of national immunization coverage, 2023 revision. Last update: July 2024.

Care seeking for children with symptoms of Acute Respiratory Infection (ARI) – DHS, MICS and other national household surveys. Last update: October 2024.

Diarrhoea treatment with oral rehydration salts (ORS) – DHS, MICS and other national household surveys. Last update: October 2024.

Care seeking for children with fever – DHS, MICS, MIS and other national household surveys. Last update: October 2024.

Children sleeping under ITNs – DHS, MICS, MIS and other national household surveys. Last update: October 2024.

Households with at least one ITN – DHS, MICS, MIS and other national household surveys. Last update: October 2024.

TABLE 5. ADOLESCENT HEALTH

This table contains a set of key indicators related to adolescent mortality, adolescent health and well-being. Mortality indicators include the adolescent mortality rate for ages 10–19 years, the number of adolescent deaths as well as the annual rate of reduction in the adolescent mortality rate. Reproductive health indicators presented in this table include adolescent birth rate (for age groups 10–14 years and 15–19 years), early childbearing (which refers to women aged 20–24 years who gave birth before age 18), demand for family planning satisfied with modern methods among adolescents aged 15–19 years, and informed decisions for reproductive health (sexual relations, contraceptive use and reproductive health care). The following maternal health indicators are presented for adolescents aged 15–19 years: antenatal care with at least four visits and delivery-care indicators including skilled birth attendant, institutional deliveries and births by C-section. The following risk factors for non-communicable diseases (NCDs) are presented: alcohol use among adolescents aged 15–19 years, tobacco use among adolescents aged 13–15 years and insufficient physical activity among school-going adolescents aged 11–17 years. Though vaccination against the human papillomavirus (HPV) can benefit boys and girls, HPV vaccination is presented for girls who received the last dose of the HPV vaccine per the national schedule.

WHO/UNICEF produce two main coverage indicators for HPV vaccination. One is the HPV vaccination programme performance coverage that describes vaccination coverage according to a national schedule and the programme's eligibility criteria for each calendar year (the programme's target population up to 14 years of age). The second describes HPV vaccination coverage by 15 years of age, representing the proportion of the population turning 15 in the reporting year who have been vaccinated against HPV at any time between the ages of 9 and 14 years, at any time up to the calendar year in question. Data are always reported at the national level and may not necessarily show differences at the subnational level. Both indicators are calculated for the first dose (HPV1) and the full recommended schedule (HPVc), and by sex. For the vaccines currently on the market, the schedule depends on age. The general recommendation¹ is a one- or two-dose schedule for girls aged 9–14 years and girls and women aged 15–20 years, and a two-dose schedule for women aged 21 years and older. When using a two-dose schedule, the doses should be spaced a minimum of six months apart. Individuals known to be immunocompromised or infected with HIV (regardless of age or antiretroviral therapy status) should receive at least two doses and, where possible, three doses. To establish denominators, the methodology uses as a default the UN Population Division country estimates. To address the different ways countries set and change eligibility criteria over time, a normalization process is used to translate eligibility into denominators. This includes translating school-grade eligibility in population cohorts and dealing with multiple cohort eligibility (changes) over time. For more details, see Laia Bruni et al. in Preventive Medicine, <doi.org/10.1016/j.ypmed.2020.106399>.

Two new indicators were added to the last edition of this table: adolescent birth rate for girls aged 10–14 years, sourced from the UN Population Division, and the percentage of adolescents and young women aged 15–19 years who make their own informed decisions regarding sexual relations, contraceptive use and reproductive health care, sourced from household surveys. The latter indicator is defined as the percentage of adolescents and young women aged 15–19 years (married or in union) who make their own decisions in all three selected areas. That is, they (1) decide on health care for themselves, either alone or jointly with their husbands or partners, (2) decide on use or non-use of contraception, either alone or jointly with their husbands or partners, and (3) can say no to sex with their husband/partner. When all three criteria are met, an adolescent girl or young woman is considered to have autonomy in reproductive health decision-making and to be empowered to exercise her reproductive rights.

TABLE 5. ADOLESCENT HEALTH

| Countries and areas | Adolescent mortality rate 2022 | Adolescent deaths 2022 | Annual rate of reduction in the adolescent mortality rate 2010–2022 | Adolescent birth rate 2017–2023 (R) | | Births by age 18 (%) 2017–2023 (R) | Demand for family planning satisfied with modern methods (%) 2017–2023 (R) | Informed decisions for reproductive health (%) 2017–2023 (R) | Antenatal care (%) (At least 4 visits) 2017–2023 (R) | Skilled birth attendant (%) 2017–2023 (R) | Girls vaccinated against HPV (%) 2023 | Risk factors (%) | | | | | |

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.
- x Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- R Data refer to the most recent year available during the period specified in the column heading.
- h Excludes China.

DEFINITIONS OF THE INDICATORS

Adolescent mortality rate – The probability of dying among adolescents aged 10–19 years expressed per 1,000 adolescents aged 10.

Adolescent deaths – Number of deaths aged 10 to 19 years.

Annual rate of reduction in adolescent mortality rate – The annual rate of reduction in adolescent mortality rate (AMR) defined as $AMR = 100 * (\ln(AMR_{t2}/AMR_{t1})/(t1-t2))$, where t1=2000 and t2=2021.

Adolescent birth rate – Number of births per 1,000

adolescent girls and young women aged 10–14 and 15–19.

Births by age 18 – Percentage of women aged 20–24 who gave birth before age 18. The indicator refers to women who had a live birth in a recent time period, generally two years for MICS and five years for DHS.

Demand for family planning satisfied with modern methods – Percentage of adolescent girls and young women (aged 15–19) who have their need for family planning satisfied with modern methods.

Informed decisions – Percentage of adolescent girls and young women (aged 15–19) years who make their own informed decisions regarding sexual relations, contraceptive use and reproductive health care.

Antenatal care (at least four visits) – Percentage of adolescent girls and young women (aged 15–19) attended by any provider at least four times.

Skilled birth attendant – Percentage of births from adolescent girls and young women (aged 15–19), attended by skilled health personnel (typically a doctor, nurse or midwife).

Girls vaccinated against HPV (%) – Percentage of girls who received the last dose of human papillomavirus (HPV) vaccine per national schedule.

Alcohol use – Percentage of adolescents aged 15–19 who had at least one alcoholic drink at any time during the last twelve months.

Tobacco use – Percentage of adolescents aged 13–15 who smoked cigarettes or used smoked or smokeless tobacco products at any time during the last one month.

Insufficient physical activity – Percentage of school going adolescents aged 11–17 not meeting WHO recommendations on physical activity for health, i.e. doing less than 60 minutes of moderate- to vigorous-intensity physical activity daily.

MAIN DATA SOURCES

Adolescent mortality rate – United Nations Inter-agency Group for Child Mortality Estimation (UNICEF, World Health Organization, United Nations Population Division and the World Bank Group). Last update: January 2023.

Adolescent deaths – United Nations Inter-agency Group for Child Mortality Estimation (UNICEF, World Health Organization, United Nations Population Division and the World Bank Group). Last update: January 2023.

Annual rate of reduction in the adolescent mortality rate – United Nations Inter-agency Group for Child Mortality Estimation (UNICEF, World Health Organization, United Nations Population Division and the World Bank Group). Last update: January 2023.

Adolescent birth rate – Global SDG Indicators Database, 2024. Last update: September 2024.

Births by age 18 – DHS, MICS and other national household surveys. Last update: October 2024.

Demand for family planning satisfied with modern methods (adolescent girls and young women 15–19) – United Nations, Department of Economic and Social Affairs, Population Division (2024). World Contraceptive Use 2024. New York: United Nations; based on Demographic and Health Surveys (DHS), Multiple Indicator Cluster Surveys (MICS), Reproductive Health Surveys, other national surveys, and National Health Information Systems (HIS). Last Update: July 2024.

Informed decisions – DHS, MICS and other national household surveys. Last update: October 2024.

Antenatal care (at least four visits) (adolescent girls and young women 15–19) – DHS, MICS and other national household surveys. Last update: October 2024.

Skilled birth attendant (adolescent girls and young women 15–19) – DHS, MICS and other national household surveys. Last update: March 2024.

Girls vaccinated against HPV – WHO/UNICEF estimates of human papillomavirus (HPV) immunization coverage, 2023 revision. Last update: July 2024.

Alcohol use – WHO estimates based on international surveys (WHS, STEPS, GENACIS, and ECAS) as well as national surveys. Last update: October 2018.

Tobacco use – WHO Global Health Observatory, based on School-based surveys, other national surveys and censuses. Last update: October 2024.

Insufficient physical activity – Main data sources included the Global School-based Student Health Survey (GSHS), the Health Behaviour in School-aged Children (HBSC), and some other national surveys; Data host: WHO Global Status Report on NCDs. Last update: November 2019.

TABLES 6 AND 7: HIV/AIDS

In 2024, the Joint United Nations Programme on HIV/ AIDS (UNAIDS) released new global, regional and country-level HIV and AIDS estimates for 2023 that reflect the most up-to-date epidemiological estimates. The estimates also reflect coverage data for antiretroviral therapy (ART), prevention of mother-to-child transmission (PMTCT) and early infant diagnosis for HIV. The estimates are based on the most current available science and WHO programme guidelines. These guidelines have resulted in improvements in assumptions of the probability of HIV transmission from mother-to-child, fertility among women by age and HIV serostatus, net survival rates for children living with HIV and more. Based on this refined methodology, UNAIDS has retrospectively generated new estimates of HIV prevalence, the number of people living with HIV and those needing treatment, AIDS-related deaths, new HIV infections and other important trends in the HIV epidemic.

Key indicators on the HIV response for children are divided into two tables: Table 6. HIV/AIDS: Epidemiology and Table 7. HIV/AIDS: Intervention coverage.

Epidemiology

Table 6 includes key indicators used to measure trends in the HIV epidemic. Data are disaggregated by children under age 15 (0–14 years) who are all assumed to have acquired HIV through mother-to-child transmission). In addition, adolescents aged 15–19 years living with HIV include new HIV infections that occur through sexual transmission and injection drug use, depending on the country context. Due to significant gender disparity among adolescents evident in HIV epidemic trends and programmatic response, disaggregates by sex are now included for all HIV/ AIDS epidemiology indicators. For better comparison between countries and regions, the indicator on the number of new HIV infections has been replaced with HIV incidence per 1,000 uninfected population. Similarly, the number of AIDS-related deaths has been replaced with AIDS-related mortality per 100,000 population. These two indicators provide relative measures of new HIV infections and AIDS-related deaths and more accurately demonstrate the impact of the HIV response.

Interventions

Table 7 includes indicators on essential interventions in the HIV response for children. These coverage indicators have been revised from previous editions of *The State of the World's Children* to better reflect progress in current HIV/AIDS programmes and policy. For example, the indicator for early infant HIV diagnosis captures information on what percentage of HIV-exposed infants received an HIV test within two months of birth. All coverage indicators are calculated from the most recent and reliable data available from population-based surveys and programme service statistics.

Each coverage indicator is aggregated regionally or globally using a population weighted average. Due to sometimes sparse data, indicators from population-based surveys are only aggregated if the data in that area represent at least 50 per cent of the adolescent population.

TABLE 6. HIV/AIDS: EPIDEMIOLOGY

| Countries and areas | HIV incidence per 1,000 uninfected population | | | | AIDS-related mortality per 100,000 population | | | | Number of children living with HIV | | | |

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.
- Due to rounding of the estimates, disaggregates may not add up to the total.

DEFINITIONS OF THE INDICATORS

HIV incidence per 1,000 uninfected population – Estimated number of new HIV infections per 1,000 uninfected population at risk of HIV infection.

AIDS-related mortality per 100,000 population – Estimated number of AIDS-related deaths per 100,000 population.

Number of children living with HIV – Estimated number of children living with HIV.

MAIN DATA SOURCES

HIV incidence per 1,000 uninfected population – UNAIDS

2024 estimates. Last update: July 2024.

AIDS-related mortality per 100,000 population – UNAIDS

2024 estimates. Last update: July 2024.

Number of children living with HIV – UNAIDS 2024 estimates. Last update: July 2024.

TABLE 7. HIV/AIDS: INTERVENTION COVERAGE

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.
- Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- Data refer to the most recent year available during the period specified in the column heading.

DEFINITIONS OF THE INDICATORS

Pregnant women living with HIV receiving ARVs for PMTCT – Percentage of the estimated number of pregnant women living with HIV who received effective regimens (excluding single-dose nevirapine) of antiretroviral medicines (ARVs) for prevention of mother-to-child transmission (PMTCT) of HIV.

Early infant HIV diagnosis – Percentage of HIV-exposed infants who received a virologic test for HIV within two months of birth.

Children living with HIV receiving ART – Percentage of children living with HIV who received antiretroviral therapy (ART).

Comprehensive knowledge of HIV among adolescents age 15–19 – Percentage of adolescents aged 15–19 who correctly identify the two ways of preventing the sexual transmission of HIV, who know that a healthy-looking person can be HIV-positive and who reject the two most common misconceptions about HIV transmission.

Condom use among adolescents age 15–19 with multiple partners – Percentage of adolescents aged 15–19 who had more than one sexual partner in the past 12 months reporting the use of a condom during their last sexual intercourse.

Adolescents age 15–19 tested for HIV in the last 12 months and received results – Percentage of adolescents aged 15–19 who have been tested for HIV in the last 12 months and received the result of the last test.

MAIN DATA SOURCES

Pregnant women living with HIV receiving ARVs for PMTCT – Global AIDS Monitoring and UNAIDS 2024 estimates. Last update: July 2024.

Early infant HIV diagnosis – Global AIDS Monitoring and UNAIDS 2024 estimates. Last update: July 2024.

Children living with HIV receiving ART – Global AIDS Monitoring and UNAIDS 2024 estimates. Last update: July 2024.

Comprehensive knowledge of HIV among adolescents age 15–19 – Nationally representative population-based surveys, including MICS, DHS, AIS, and other household surveys 2012–2023. Last update: June 2024.

Condom use among adolescents age 15–19 with multiple partners – Nationally representative population-based surveys, including MICS, DHS, AIS, and other household surveys 2012–2023. Last update: June 2024.

Adolescents age 15–19 tested for HIV in the last 12 months and who have received results – Nationally representative population-based surveys, including MICS, DHS, AIS, and other household surveys 2012–2023. Last update: June 2024.

TABLES 8 AND 9: NUTRITION

Table 8 includes estimates of malnutrition at birth among preschool-aged children, malnutrition among school-aged children and women of reproductive age as well as coverage of birth weighing and key micronutrient programmes. Table 9 includes feeding practices for infants and young children.

Estimates for low birthweight, stunting and overweight among preschool-aged children, thinness and overweight among school-aged children, and maternal underweight and anaemia are from country models. For this reason, these may be different from survey reported or aggregated administrative data estimates. For all other indicators, when raw data were available, the country-level estimates were re-analysed to conform to standard definitions and analysis methods and may therefore differ from survey reported values.

Low birthweight

Estimates are based on methods updated as of 2023. Therefore, country, regional and global estimates may not be comparable with those published in editions of *The State of the World's Children* prior to 2024.

Unweighted at birth

This indicator represents the percentage of births without a birthweight in the data source. More information can be found at: <<https://data.unicef.org/topic/nutrition/low-birthweight/>>.

Stunting and overweight

UNICEF, WHO and the World Bank have continued to harmonize the country dataset of stunting and overweight estimates from household surveys. As of 2021, these have been used to generate country-modelled estimates. UNICEF, WHO and the World Bank transitioned from the use of survey estimates to represent country prevalence to the use of country-level modelled estimates for stunting and overweight. The methodology is based on the updated approach described in a UNICEF-WHO-World Bank publication called *Levels and Trends in Child Malnutrition: Key findings of the 2021 edition of the joint child malnutrition estimates*. Technical notes on methodology can be found at: <<https://data.unicef.org/resources/jme-standard-methodology/>>. The regional and global figures for stunting and overweight are population weighted averages of the country-modelled estimates.

Wasting and severe wasting

Household survey-based estimates are used to report on country prevalence. UNICEF, WHO and the World Bank have continued to update the country dataset of wasting and severe wasting estimates from household surveys, which are used to generate regional and global averages, using a model described by M. de Onis et al. in 'Methodology for Estimating Regional and Global Trends of Child Malnutrition', *International Journal of Epidemiology*, 33, 2004, pp. 1260–1270. For stunting, overweight, wasting and severe wasting, new time-series estimates are released every other year, which supersede all previous estimates and should not be compared.

Vitamin A supplementation

Emphasizing the importance of children receiving two high-dose vitamin A supplements annually (spaced 4–6 months apart), this report presents only a full coverage estimate for vitamin A supplementation. In the absence of a direct method to measure this indicator, full coverage is reported as the lower coverage estimate from semester 1 (January–June) and semester 2 (July–December) in a given year. Estimates for each semester can be found at: <<https://data.unicef.org/topic/nutrition/vitamin-a-deficiency/>>. The regional and global aggregates are comprised of the 64 countries indicated as priority countries for national-level programmes. Hence, the regional aggregates are published in cases where at least 50 per cent of the population coverage for the priority countries in each region has been met and when there are at least five priority countries in the region. Estimates are not shown for Latin America and the Caribbean or Eastern Europe and Central Asia because each of these regions has only two priority countries.

Malnutrition among school-aged children

Indicators under this title reflect the importance of ending malnutrition among children of all ages. Country estimates for malnutrition among school-aged children are based on the NCD Risk Factor Collaboration (NCD-RisC), 'Worldwide Trends in Underweight and Obesity from 1990 to 2022: A pooled analysis of 3,663 population-representative studies with 222 million children, adolescents, and adults', *The Lancet*, vol. 403, issue 10431, 2024, pp. 1,027-1,050.

Underweight women 18+ years

This indicator reflects the importance of maternal malnutrition if malnutrition among children is to be eliminated. Country estimates for underweight women are based on the NCD Risk Factor Collaboration (NCD-RisC), 'Worldwide Trends in Underweight and Obesity from 1990 to 2022: A pooled analysis of 3,663 population-representative studies with 222 million children, adolescents and adults', *The Lancet*, vol. 403, issue 10431, 2024, pp. 1,027-1,050.

Anaemia in women 15–49 years

This indicator also reflects the importance of maternal malnutrition if malnutrition among children is to be eliminated. Country estimates for anaemia are based on: World Health Organization, 'WHO Global Anaemia Estimates: Prevalence of anaemia in women of reproductive age (%)', Global Health Observatory (GHO) data, WHO, Geneva, 2021, <www.who.int/data/gho>.

Iodized salt

The definition of the indicator presented in this report changed in 2016. The indicator previously covered households consuming adequately iodized salt. Since 2016, the indicator measures the consumption of salt with any iodine. Therefore, country, regional and global prevalence estimates are not comparable to those published in previous editions of *The State of the World's Children*.

Infant and young child feeding

A total of 10 indicators are presented, including the following with recent definitional changes or that are new as described in the updated indicator guidance available at: <<https://data.unicef.org/resources/indicators-for-assessing-infant-and-young-child-feeding-practices/>>:

- Continued breastfeeding (12–23 months) replaces two previous indicators of continued breastfeeding at 1 year (12–15 months) and 2 years (20–23 months).
- Minimum dietary diversity (MDD) (6–23 months) is now defined as the percentage of children aged 6–23 months who received foods from at least five out of eight defined food groups during the previous day. The older version of this indicator reflected consumption of at least four out of seven defined food groups during the previous day.
- Minimum meal frequency (MMF) (6–23 months) has a revised indicator definition for non-breastfed children.
- Minimum acceptable diet (MAD) (6–23 months) is revised to align with the change to the MDD and MMF definitions.
- Zero vegetable or fruit consumption (6–23 months) is a new indicator.

Additionally, this table reflects two new indicators defined by UNICEF to assess child food poverty.

More information can be found at: <<https://data.unicef.org/resources/child-food-poverty/>>.

TABLE 8. NUTRITION: NEWBORNS, PRESCHOOL/SCHOOL AGE CHILDREN, WOMEN AND HOUSEHOLDS

| Countries and areas | Weight at birth | | Malnutrition among preschool-aged children (0–4 years of age) | | | | | Vitamin A supplementation, full coverage (6–59 months of age) (%) 2022 (m,vs) | Malnutrition among school-aged children (5–19 years of age) 2022 | | Malnutrition among women | | Percentage of households consuming iodized salt 2016–2022 (R) |
|---------------------------------------|---------------------------------|---|---|-----------------------------|--------|------------------------|--------------|--|---|---------------------------------|--------------------------|----------------------------|--|
| | Low birthweight (%) 2020 (m) | Unweighed at birth (%) 2012–2021 (R,m) | Stunted (%) 2022 | Wasted (%) 2016–2023 (R) | | Overweight (%) 2022 | Thinness (%) | Overweight (%) | Underweight 18+ years (%) 2022 | Anaemia 15–49 years (%) 2019 | | | |

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.
x Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.

ER External Reanalysis

R Data refer to the most recent year available during the period specified in the column heading.

m Gender assessment not possible

vs Identifies countries which are designated 'priority'. Priority countries for national vitamin A supplementation programmes are identified as those having high under-five mortality rates (over 40 per 1,000 live births), and/or evidence of vitamin A deficiency among this age group, and/or a history of vitamin A supplementation programmes.

DEFINITIONS OF THE INDICATORS

Low birthweight – Percentage of infants weighing less than 2,500 grams at birth.

Unweighed at birth – Percentage of births without birthweight in the data source; Note that (i) estimates from household surveys include live births among women aged 15–49 years in the survey reference period (e.g. last 2 years) for which a birthweight was not available from an official document (e.g. health card) or could not be recalled by the respondent at the time of interview and may have been recalculated to count birthweights <250g and >5500g as missing and (ii) estimates from administrative sources (e.g. Health Management Information Systems) were calculated using numerator data from the country administrative source and denominator data were the number of annual births according to the United Nations Population Division World Population Prospects, 2017 edition. These estimates include unweighed births and weighed births not recorded in the system.

Stunting (preschoolers) – Moderate and severe: Percentage of children aged 0–59 months who are below minus two standard deviations from median height-for-age of the WHO Child Growth Standards.

Wasting (preschoolers) – Moderate and severe: Percentage of children aged 0–59 months who are below minus two standard deviations from median weight-for-height of the WHO Child Growth Standards.

standard deviations from median weight-for-height of the WHO Child Growth Standards.

Overweight (preschoolers) – Severe: Percentage of children aged 0–59 months who are above plus three standard deviations from median weight-for-height of the WHO Child Growth Standards.

Overweight (preschoolers) – Moderate and severe: Percentage of children aged 0–59 months who are above two standard deviations from median weight-for-height of the WHO Child Growth Standards (includes severe overweight).

Vitamin A supplementation, full coverage – The estimated percentage of children aged 6–59 months reached with 2 doses of vitamin A supplements approximately 4–6 months apart in a given calendar year.

Thinness (school age children) – Percentage of children aged 5–19 years with BMI <-2 SD of the median according to the WHO growth reference for school-age children and adolescents.

Overweight (school age children) – Percentage of children aged 5–19 years with BMI >1 SD of the median according to the WHO growth reference for school-age children and adolescents.

TABLE 8. NUTRITION: NEWBORNS, PRESCHOOL/SCHOOL AGE CHILDREN, WOMEN AND HOUSEHOLDS

| | | |
|--|---|--|
| <p>adolescents.</p> <p>Underweight (women 18+) – Percentage of women 18+ years of age with a body mass index (BMI) less than 18.5 kg/m².</p> <p>Anaemia (women 15-49 years) – Percentage of women aged 15-49 years with a haemoglobin concentration less than 120 g/L for non-pregnant women and lactating women, and less than 110 g/L for pregnant women, adjusted for altitude and smoking.</p> <p>Households consuming salt with iodine – Percentage of households consuming salt with any iodine (>0 ppm).</p> | <p>Low birthweight – Modelled estimates from UNICEF and WHO. Last update: July 2023.</p> <p>Unweighted at birth – Demographic and Health Surveys (DHS), Multiple Indicator Cluster Surveys (MICS), other national household surveys, data from routine reporting systems. Last update: November 2022.</p> <p>Stunting, overweight (preschool children) – Modelled estimates from UNICEF-WHO-World Bank. Last update: May 2023.</p> <p>Wasting and severe wasting (preschool children) – DHS, MICS, and other national household surveys. Last update: November 2023.</p> <p>Vitamin A supplementation – UNICEF. Last Update: September 2023.</p> | <p>Thinness and overweight (school age children), and underweight (women 18+) – NCD Risk Factor Collaboration (NCD-RisC), based on worldwide trends in underweight and obesity from 1990 to 2022: a pooled analysis of 3663 population-representative studies with 222 million children, adolescents and adults. Lancet 2024. DOI: https://doi.org/10.1016/S0140-6736(23)02750-2. Last update: September 2024.</p> <p>Anaemia (women 15-49 years) – Global Health Observatory, WHO. Last update: December 2022.</p> <p>Iodized salt consumption – DHS, MICS, other national household surveys, and school-based surveys. Last update: May 2024.</p> |

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.
- x Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- ER External Reanalysis
- R Data refer to the most recent year available during the period specified in the column heading.
- ch To meet adequate population coverage, East Asia and the Pacific excludes China.
- ci Aggregated estimates for East Asia and the Pacific and the World include estimates for China from the year 2013, which is outside of the year range 2016-2022.

DEFINITIONS OF THE INDICATORS

Early initiation of breastfeeding – Percentage of children born in the last 24 months who were put to the breast within

one hour of birth.

Exclusive breastfeeding (<6 months) – Percentage of infants 0-5 months of age who were fed exclusively with breastmilk during the previous day.

Continued breastfeeding (12-23 months) – Percentage of children 12-23 months of age who were fed with breastmilk during the previous day.

Severe child food poverty (6-23 months) – Percentage of children 6-23 months of age who received foods from less than or equal to two out of eight defined food groups during the previous day.

Moderate child food poverty (6-23 months) – Percentage of children 6-23 months of age who received foods from three or four out of eight defined food groups during the previous day.

Introduction of solid, semi-solid or soft foods (6-8 months) – Percentage of infants 6-8 months of age who were fed with solid, semi-solid or soft food during the previous day.

Minimum Dietary Diversity (6-23 months) – Percentage of children 6-23 months of age who received foods from at least

five out of eight defined food groups during the previous day.

Minimum Meal Frequency (6-23 months) – Percentage of children 6-23 months of age who received solid, semi-solid, or soft foods (but also including milk feeds for non-breastfed children) the minimum number of times or more during the previous day.

Minimum Acceptable Diet (6-23 months) – Percentage of children 6-23 months of age who received a minimum acceptable diet during the previous day.

Zero vegetable or fruit consumption (6-23 months) – Percentage of children 6-23 months of age who did not consume any vegetables or fruits during the previous day.

MAIN DATA SOURCES

Infant and young child feeding (0-23 months) – DHS, MICS and other national household surveys. Last update: December 2023.

TABLE 10. EARLY CHILDHOOD DEVELOPMENT

Early childhood, which spans the period up to 8 years of age, is critical for cognitive, social, emotional and physical development. Optimal brain development requires a stimulating environment, adequate nutrients and social interaction with attentive caregivers. The early childhood development table presents data on some specific indicators with comparable and nationally representative data on children's development status, the quality of care and availability of learning materials at home and access to early childhood care and education. The information in this table is best interpreted alongside data on other areas vital to early childhood development, such as nutrition and protection.

Early stimulation and responsive care by adults

Data on this indicator from the DHS were recalculated according to the MICS methodology for comparability. Therefore, the recalculated data presented here will differ from estimates in DHS national reports.

Learning materials at home: Playthings

Changes in the definition of this indicator were made between the third and fourth round of MICS (MICS3 and MICS4). To allow for comparability with MICS4 and subsequent rounds of MICS, data from MICS3 were recalculated according to the MICS4 indicator definition. Therefore, the recalculated data presented here will differ from estimates reported in MICS3 national reports.

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <https://data.unicef.org/regionalclassifications>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.
- x Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- H A more detailed explanation of the methodology and the changes in calculating these estimates can be found in the section titled, General note on the data.
- R Data refer to the most recent year available during the period specified in the column heading.
- p Based on small denominators (typically 25–49 unweighted cases). No data based on fewer than 25 unweighted cases are

displayed.

y Data differ from the standard definition or refer to only part of a country. If they fall within the noted reference period, such data are included in the calculation of regional and global averages.

DEFINITIONS OF THE INDICATORS

- Attendance in early childhood education** – Percentage of children 36–59 months old who are attending an early childhood education programme.
- Early stimulation and responsive care by adults** – Percentage of children 24–59 months old with whom an adult

has engaged in four or more of the following activities to promote learning and school readiness in the past three days: a) reading books to the child, b) telling stories to the child, c) singing songs to the child, d) taking the child outside the home, e) playing with the child, and f) spending time with the child naming, counting or drawing things.

Learning materials at home: Children's books – Percentage of children 0–59 months old who have three or more children's books at home.

Learning materials at home: Playthings – Percentage of children 0–59 months old with two or more of the following playthings at home: household objects or objects found outside (sticks, rocks, animals, shells, leaves etc.), homemade toys or

TABLE 10. EARLY CHILDHOOD DEVELOPMENT

toys that came from a store.

Children with inadequate supervision – Percentage of children 0–59 months old left alone or in the care of another child younger than 10 years of age for more than one hour at least once in the past week.

Children developmentally on track – Percentage of children 24–59 months who are developmentally on track in health, learning and psychosocial well-being.

MAIN DATA SOURCES

Attendance in early childhood education – Demographic and Health Surveys (DHS), Multiple Indicator Cluster Surveys (MICS), and other national surveys. Last update: March 2024.
Early stimulation and responsive care by adults – DHS, MICS and other national surveys. Last update: March 2024.

Learning materials at home: Children's books – DHS, MICS and other national surveys. Last update: March 2024.

Learning materials at home: Playthings – DHS, MICS and other national surveys. Last update: March 2024.

Children with inadequate supervision – DHS, MICS and other national surveys. Last update: March 2024.

Children developmentally on track – DHS, MICS and other national surveys. Last update: March 2024.

TABLE 11: EDUCATION

This table contains a set of indicators on children's education: equitable access, school completion and learning outcomes.

This table first provides information about equitable access, as measured by the out-of-school children rate (SDG4.1.4). Estimates shown in this table were sourced from the database of the United Nations Educational, Scientific and Cultural Organization (UNESCO) Institute for Statistics (UIS). The out-of-school children rate identifies the segment of the population in the official age range for a given level of education who are not attending school. It can be used to formulate targeted policies to ensure equitable access to education.

In September 2019, UIS changed the methodology for capturing data on out-of-school children at the primary level. Primary school-aged children attending pre-primary education are now considered as in-school children.

Completion rate (SDG 4.1.2) measures the percentage of a cohort of children or young people aged 3–5 years older than the intended age for the last grade of each level of education who have completed that grade. By choosing an age group that is slightly older than the theoretical age group for completing each level of education, the indicator provides more robust measures on the share of children and adolescents completing each cycle of education. Estimates shown in this table were modelled and sourced from the database of the UNESCO UIS.

This table also includes a set of indicators to monitor equitable learning outcomes, including the proportion of children in learning poverty. This indicator is calculated using two SDG indicators, namely, out-of-school rate of children in primary school age (4.1.4) and share of schoolchildren achieving at least a minimum proficiency in reading at the end of primary school (SDG 4.1.1b). The minimum proficiency level is the benchmark of basic knowledge in a domain (i.e., reading) measured through learning assessments. Learning poverty means being unable to read and understand a simple text by age 10. This measure was developed jointly by the World Bank and UNESCO's UIS and is part of the UNICEF Strategic Plan. The indicator combines schooling and learning deprivation. Estimates were sourced from the World Bank database. The share of children with foundational skills in reading and numeracy was estimated from the data from the sixth round of Multiple Indicator Cluster Survey (MICS) in countries that administered the Foundational learning Skills (FLS) module. The indicator measures the proportion of children aged 7–14 years old that have foundational reading and numeracy skills. Foundational reading skills assess children on reading accuracy and reading comprehension. Foundational numeracy skills assess children on number reading, number discrimination, addition and pattern recognition. Researchers can access the microdata related to foundational learning via the MICS website or the Integrated Public Use Microdata Series (IPUMS) MICS website.

Detailed information on the indicators included in this table can be found in the July 2017 UNESCO UIS publication, *Metadata for the Global and Thematic Indicators for the Follow-Up and Review of SDG4 and Education 2030*, July 2017.

TABLE 11. EDUCATION

| Countries and areas | Equitable access | | | Completion | | | Foundational learning skills | | | | | | Learning poverty rate 2001–2022 (R) | | | | | | |

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

TABLE 11. EDUCATION

The database on foundational learning skills based on the MICS6 provides disaggregation by sex, place of residence, wealth, and age group. For more information, please click here < <https://data.unicef.org/resources/dataset/learning-and-skills/>>.

NOTES

- Data not available.
- x** Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- R** Data refer to the most recent year available during the period specified in the column heading.
- pm** The value for Pakistan was aggregated using MICS6 data at the provincial level and weighted according to the population of each province.

DEFINITIONS OF THE INDICATORS

Out-of-school rate for children of primary school age – Number of children of official primary school age who are not enrolled in pre-primary, primary or secondary school, expressed as a percentage of the population of official primary school age.

Out-of-school rate for children of lower secondary school age – Number of children of lower secondary school age who

are not enrolled in primary or secondary school, expressed as a percentage of the population of official lower secondary school age.

Out-of-school rate for children of upper secondary school age – Number of children of upper secondary school age who are not enrolled in primary or secondary school or higher education, expressed as a percentage of the population of official upper secondary school age.

Completion rate for primary education – Number of children or young people aged 3–5 years above the intended age for the last grade of primary education who have completed the last grade of primary school.

Completion rate for lower secondary education – Number of children or young people aged 3–5 years above the intended age for the last grade of lower secondary education who have completed the last grade of lower secondary.

Completion rate for upper secondary education – Number of children or young people aged 3–5 years above the intended age for the last grade of upper secondary education who have completed the last grade of upper secondary.

Foundational learning skills – Refer to the proportion of children aged 7–14 years old that have foundational reading

and numeracy skills. Foundational reading skills assess children on reading accuracy and reading comprehension. Foundational numeracy skills assess children on number reading, number discrimination, addition and patter recognition.

Learning poverty rate – Measures the percentage of children who, by age 10, cannot read and comprehend a basic text. This indicator integrates both schooling and learning dimensions: it starts with the proportion of children who have not reached minimum reading proficiency levels (as assessed in schools) and is then adjusted to account for out-of-school children, who are presumed to lack reading proficiency.

MAIN DATA SOURCES

Out of school rate – UNESCO Institute for Statistics (UIS). Last update: September 2024.

Completion rate – UNESCO Institute for Statistics (UIS). Last update: September 2024.

Foundational learning skills – MICS data. Last update: February 2024.

Learning poverty rate – World Bank Data Catalogue. Last update: July 2024.

TABLE 12. CHILD PROTECTION

Child protection refers to the prevention of and response to violence, exploitation and abuse of children in all contexts. There are many violations that children can be subjected to, but the lack of comparable data limits reporting on the full spectrum. In view of this, the child protection table presents data on a few issues for which comparable and nationally representative data are available.

Birth registration

Changes in the definition of birth registration were made from the third round of MICS (MICS3) to the fourth round (MICS4). To allow for comparability with later rounds, data from MICS3 on birth registration were recalculated according to the MICS4 indicator definition. Therefore, the recalculated data presented here may differ from estimates included in MICS3 national reports.

Child labour

This indicator is consistent with one of the two indicators used for SDG reporting on indicator 8.7.1. It reflects the proportion of children engaged in economic activities and/or household chores at/or above age-specific hourly thresholds (general production boundary basis). For the 5–11 year age group, the threshold refers to children who work at least one hour per week in economic activity and/or are involved in unpaid household services for more than 21 hours per week. For the 12–14 year age group, the threshold reflects children who work at least 14 hours per week in economic activity and/or are involved in unpaid household services for more than 21 hours per week. For the 15–17 year age group, it refers to children who work more than 43 hours per week in economic activity (no hourly threshold is set for unpaid household services for this age group). Country estimates compiled and presented in the global SDG database and reproduced in *The State of the World's Children* have been re-analysed by UNICEF and the International Labour Organization (ILO) in accordance with the definitions and criteria detailed above. This means that country data values will differ from those published in national survey reports.

Child marriage

This statistical table presents the share of individuals who were first married or in union before 18 years of age. While the practice is more widespread among girls, marriage in childhood is a rights violation for both sexes. Therefore, the prevalence of child marriage is shown for both males and females. A secondary indicator on child marriage, shown in the share of women married before 15 years of age, was featured in previous editions of *The State of the World's Children*. In recent years, the indicator has been removed to allow space for data on other topics. The indicator continues to be monitored by UNICEF, and relevant data can be found at <data.unicef.org>.

Female genital mutilation (FGM)

Data on the prevalence of FGM among girls aged 0–14 years were recalculated for technical reasons and may differ from those presented in original DHS and MICS country reports. Beginning with the 2019 edition of *The State of the World's Children*, attitudes towards the practice are shown as the share of the population opposing (rather than supporting) FGM. This measure was shown for both males and females in previous editions of the report, but data for males have been removed in recent editions, to make room for data on other topics. The indicator continues to be monitored by UNICEF, and relevant data can be found at <data.unicef.org>.

Regional estimates on the prevalence of FGM and attitudes towards the practice are based on available data only from practising countries with nationally representative data. Since each region includes some countries that do not practise FGM, the data reflect the situation among those living in specific countries where the practice is ongoing.

Violent discipline

The reference age group for this indicator was revised, beginning with MICS5, to children aged 1–14 years. Therefore, estimates from MICS3 and MICS4 are not directly comparable since they refer to children aged 2–14 years.

Children in residential care and children in detention

Figures for these indicators are based on underlying data that rely on the strength of a country's data system and on the degree of coordination between the bodies and institutions that collect these data. Overall, there are several limitations in the availability, consistency and coverage of underlying country data based on administrative records. Therefore, data on these indicators are best interpreted as providing an indication, albeit approximate, of whether, and how well, a country's data system is able to generate and make available a count of these child populations. Accordingly, higher reported figures may actually reflect a more comprehensive system of identifying and monitoring such children and a greater capacity for the systematic collection of such data, rather than an indication of a larger population. Regional estimates should be interpreted with consideration of the wide variation in the number of children and the capacity of record-keeping and reporting systems among countries in the same region.

TABLE 12. CHILD PROTECTION

| Countries and areas | Child labour (%) (H) 2015–2023 (R) | | | Child marriage (%) (H) 2015–2023 (R) | | Birth registration (%) (H) 2014–2023 (R) | | | Female genital mutilation (%) (H) 2014–2022 (R) | | Justification of wife-beating among adolescents (%) 2015–2022 (R) | | Violent discipline (%) (H) 2015–2023 (R) | | | Sexual violence in childhood (%) 2014–2022 (R) | | Children in residential care (H) 2010–2023 (R) | Children in detention (H) 2013–2023 (R) | |

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>.

It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

TABLE 12. CHILD PROTECTION

NOTES

- Data not available.
- x** Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- H** A more detailed explanation of the methodology and the changes in calculating these estimates can be found in the section titled, General note on the data.
- R** Data refer to the most recent year available during the period specified in the column heading.
- Italicized** data are from older sources than data presented for other indicators on the same topic within this table. Such discrepancies may be due to an indicator being unavailable in the latest data source, or to the databases for each indicator having been updated as of different dates.
- P** Based on small denominators (typically 25–49 unweighted cases). No data based on fewer than 25 unweighted cases are displayed.
- V** Estimates of 100 per cent were assumed given that civil registration systems in these countries are complete and all vital events (including births) are registered. Source: United Nations, Department of Economic and Social Affairs, Statistics Division, last update January 2021.
- Y** Data differ from the standard definition or refer to only part of a country. If they fall within the noted reference period, such data are included in the calculation of regional and global averages.

DEFINITIONS OF THE INDICATORS

Child labour – Percentage of children 5–17 years old involved in child labour at the moment of the survey. A child is considered to be involved in child labour under the following conditions: (a) children 5–11 years old who, during the

reference week, did at least one hour of economic activity and/or more than 21 hours of unpaid household services, (b) children 12–14 years old who, during the reference week, did at least 14 hours of economic activity and/or more than 21 hours of unpaid household services, (c) children 15–17 years old who, during the reference week, did at least 43 hours of economic activity.

Child marriage – Percentage of women 20–24 years old who were first married or in union before they were 18 years old; percentage of men 20–24 years old who were first married or in union before they were 18 years old.

Birth registration – Percentage of children under age 5 and under age 1 who were registered at the moment of the survey. The numerator of this indicator includes children reported to have a birth certificate, regardless of whether or not it was seen by the interviewer, and those without a birth certificate whose mother or caregiver says the birth has been registered.

Female genital mutilation (FGM) – (Fa) Women: percentage of women 15–49 years old who have undergone FGM; (Fb) girls: percentage of girls 0–14 years old who have undergone FGM (as reported by their mothers); (Fc) want the practice to stop: percentage of women 15–49 years old who have heard about FGM and think the practice should stop.

Justification of wife-beating among adolescents –

Percentage of girls and boys 15–19 years old who consider a husband to be justified in hitting or beating his wife for at least one of the specified reasons, i.e., if his wife burns the food, argues with him, goes out without telling him, neglects the children or refuses sexual relations.

Violent discipline – Percentage of children 1–14 years old who experience any violent discipline (psychological aggression and/or physical punishment) in the past month.

Sexual violence in childhood – Percentage of women and men 18–29 years old who experienced sexual violence by age 18.

Children in residential care – Rate of children 0–17 years old in residential care per 100,000. Residential care is defined in the Guidelines for the Alternative Care of Children (para 29 (c) iv) as: ‘care provided in any non-family-based group setting, such as places of safety for emergency care, transit centres in emergency situations, and all other short- and long-term residential care facilities, including group homes’. This includes ‘orphanages’, and small group homes.

Children in detention – Rate of children under age 18 years in detention per 100,000. The definition of ‘detention’ includes children detained pre-trial, pre-sentence and post-sentencing in any type of facility (including police custody).

MAIN DATA SOURCES

Child labour – Demographic and Health Surveys (DHS), Multiple Indicator Cluster Surveys (MICS) and other national surveys. Last update: March 2024.

Child marriage – DHS, MICS and other national surveys. Last update: March 2024.

Birth registration – DHS, MICS, other national surveys, censuses and vital registration systems. Last update: March 2024.

Female genital mutilation – DHS, MICS and other national surveys. Last update: March 2024.

Justification of wife-beating among adolescents – DHS, MICS and other national surveys. Last update: March 2024.

Violent discipline – DHS, MICS and other national surveys. Last update: March 2024.

Sexual violence in childhood – DHS, MICS and other national surveys. Last update: March 2024.

Children in residential care – Administrative records. Last update: March 2024.

Children in detention – Administrative records. Last update: March 2024.

TABLE 13. SOCIAL PROTECTION AND EQUITY

This table provides information about social protection coverage and the magnitude of income inequality, both of which impact the context in which children live. Social protection indicators include mothers with newborns receiving cash benefits, the proportion of children covered by social protection, and the distribution of social protection benefits (among the 1st quintile, 5th quintile and bottom 40 per cent of households in terms of income). While the first two indicators capture the coverage of social protection, the third indicator reflects both incidence and distribution across quintiles. The table gives an overview of the social safety net that households – children in particular – have access to within each country.

Inequality indicators include the share of household income (1st quintile, 5th quintile, bottom 40 per cent), Gini coefficient, Palma index, the vast majority income ratio, and gross domestic product (GDP) per capita. The first indicator captures the share of national income each quintile earns within a country. It illustrates the structure of income distribution per country, while the Gini coefficient expresses the extent of inequality and how it deviates from a perfectly equal income distribution. In contrast, the Palma index concentrates on the income difference between the richest 10 per cent and the poorest 40 per cent of a population. This indicator is more sensitive to the tails of distribution and extreme inequalities. Because changes in income inequality are mainly driven by changes in the income of the richest 10 per cent and the poorest 40 per cent, the Palma index offers insights on distributional changes of income inequality. The vast majority income ratio measures the income ratio of the first 80 per cent (vast majority) in the income ranking. GDP per capita complements those indicators as it measures the average standard of living in each country.

Data on social protection and equity indicators do not have an annual frequency and are extracted from the World Bank's *World Development Indicators*, *The Atlas of Social Protection Indicators of Resilience and Equity (ASPIRE)*, and the ILO's *World Social Protection Report*.

TABLE 13. SOCIAL PROTECTION AND EQUITY

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.
- CS** There are sex disaggregated data available in the UNICEF Datawarehouse.
- R** Data refer to the most recent year available during the period specified in the column heading.

DEFINITIONS OF THE INDICATORS

- Mothers with newborns receiving cash benefit (%)** – Proportion of women giving birth covered by maternity benefits: ratio of women receiving cash maternity benefits to women giving birth in the same year (estimated based on age-specific fertility rates published in the UN's World Population Prospects or on the number of live births corrected for the share of twin and triplet births).
- Proportion of children covered by social protection** – Proportion of children covered by social protection benefits: ratio of children/households receiving child or family cash benefits to the total number of children/households with children.

Distribution of Social Protection Benefits – Percentage of benefits going to the 1st quintile, bottom 40% and 5th quintile relative to the total benefits going to the population. Social protection coverage includes: providing social assistance through cash transfers to those who need them, especially children; benefits and support for people of working age in case of maternity, disability; and pension coverage for the elderly.

Share of household income – Percentage of income received by the 20 per cent of households with the highest income, by the 40 per cent of households with the lowest income and by the 20 per cent of households with the lowest income.

Gini Coefficient – Gini index measures the extent to which the distribution of income (or, in some cases, consumption expenditure) among individuals or households within an economy deviates from a perfectly equal distribution. A Lorenz curve plots the cumulative percentages of total income received against the cumulative number of recipients, starting with the poorest individual or household. The Gini index measures the area between the Lorenz curve and a hypothetical line of absolute equality, expressed as a percentage of the maximum area under the line. Thus a Gini

index of 0 represents perfect equality, while an index of 100 implies perfect inequality.

Palma Index of income inequality – Palma index is defined as the ratio of the richest 10% of the population's share of gross national income divided by the poorest 40%'s share.

GDP per capita (current US\$) – GDP per capita is gross domestic product divided by midyear population. GDP is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural resources. Data are in current US dollars.

VMIR (vast majority income ratio) – The Vast Majority Income Ratio measures the income ratio of the first 80% (vast majority) in the income ranking.

Child poverty profile – Children in multidimensional material deprivation, measures exactly the same dimensions, exactly the same indicators, and exactly the same thresholds across all countries to assess deprivation among children (not a disaggregation of a household measure) in order to obtain an internationally comparable measure. The dimensions are:

TABLE 13. SOCIAL PROTECTION AND EQUITY

education, health, housing, nutrition, sanitation, and water.

One deprivation – Children experience deprivations in one and only one dimension out of education, health, housing, nutrition, sanitation, and water.

Two deprivations – Children experience deprivations in two and only two dimensions out of education, health, housing, nutrition, sanitation, and water.

Three deprivations – Children experience deprivations in three and only three dimensions out of education, health, housing, nutrition, sanitation, and water.

MAIN DATA SOURCES

Mothers with newborns receiving cash benefit (%) – SDG Database. Last update: May 2021.

Proportion of children covered by social protection – SDG Database. Last update: May 2021.

Distribution of Social Protection Benefits – The Atlas of Social Protection: Indicators of Resilience and Equity. Last update: May 2024.

Share of household income – World Development Indicators (World Bank). Last update: February 2021.

Gini Coefficient – World Development Indicators (World Bank).

Last update: May 2020.

Palma Index of income inequality – Calculated from data in the World Development Indicators (World Bank). Last update: May 2020.

GDP per capita (current US\$) – World Development Indicators. Last update: February 2021.

VMIR (vast majority income ratio) – UNICEF estimates based on World Development Indicators. Last update: February 2021.

Child poverty profile – UNICEF estimates based on DHS and MICS surveys.

TABLE 14. WASH

This table contains a set of indicators on access to basic water, sanitation and hygiene (WASH) services in households, schools and health care facilities. The WASH estimates in this report come from the WHO/UNICEF Joint Monitoring Programme for Water Supply, Sanitation and Hygiene (JMP). Full details of the JMP indicator definitions, data sources and methods used to produce national, regional and global estimates can be found at <www.washdata.org>. New estimates for each setting are released every two years. These supersede all previous estimates and should not be compared.

TABLE 14. WASH

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <https://data.unicef.org/regionalclassifications>.

It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.

DEFINITIONS OF THE INDICATORS

Population using at least basic drinking water services –

Percentage of the population using an improved drinking water source, where collection time is not more than 30 minutes for a round trip including queuing (improved sources include: piped water; boreholes or tubewells; protected dug wells; protected springs; rainwater; and packaged or delivered water).

Population using at least basic sanitation services –

Percentage of the population using an improved sanitation facility that is not shared with other households. Improved facilities include: flush/pour flush to piped sewerage systems, septic tanks or pit latrines; ventilated improved pit latrines; composting toilets or pit latrines with slabs.

Population with basic hygiene facilities – Percentage of the population with a handwashing facility with water and soap available at home.

Proportion of schools with basic water services –

Percentage of schools with drinking water from an improved source available at the school at the time of the survey.

Proportion of schools with basic sanitation services –

Percentage of schools with improved sanitation facilities at the school that are single-sex and usable (available, functional and private) at the time of the survey.

Proportion of schools with basic hygiene services –

Percentage of schools with handwashing facilities with water and soap available at the school at the time of the survey.

Proportion of health care facilities with basic water services –

Percentage of health care facilities with water available from an improved source located on premises.

Proportion of health care facilities with basic sanitation services –

Percentage of health care facilities with improved

sanitation facilities that are usable with at least one toilet dedicated for staff, at least one sex-separated toilet with menstrual hygiene facilities, and at least one toilet accessible for people with limited mobility.

Proportion of health care facilities with basic hygiene services –

Percentage of health care facilities with functional hand hygiene facilities (with water and soap and/or alcohol-based hand rub) available at points of care, and within five metres of toilets.

Proportion of health care facilities with basic waste management services –

Percentage of health care facilities where waste is safely segregated into at least three bins, and sharps and infectious waste are treated and disposed of safely.

TABLE 15. ADOLESCENTS

The table on adolescents presents a selection of indicators on the well-being of adolescents across various domains of their lives: protection, education and learning as well as the transition to work. While adolescent well-being is broad and cannot be exhaustively captured in a small selection of indicators, the measures in Table 15 are meant to serve as an illustrative sample and to complement adolescent-relevant indicators that appear throughout the other statistical tables in this publication. Adolescent health indicators are now presented in Table 5.

NEET and unemployment

Data on the degree to which adolescents are able to effectively transition to work, illustrated through the measures of those not in employment, education or training (NEET) and the unemployment rate among adolescents aged 15–19 years, are drawn from the ILO. Metadata and further notes on interpretation of these indicators are available through the 'Metadata' section of <ilo.org/ilostat>. Some caution is warranted in interpreting these data since the standards for measuring labour statistics are in the midst of a revision that affects the comparability of the current dataset with previous versions. Data shown in this publication are drawn from the data series based on the 13th International Conference of Labour Statisticians. For more details, see the technical note on this topic prepared by the ILO, which maintains these datasets: [Quick guide to understanding the impact of the new statistical standards on ILOSTAT databases](#).

TABLE 15. ADOLESCENTS

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

NOTES

- Data not available.
- x Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- R Data refer to the most recent year available during the period specified in the column heading.

p Based on small denominators (typically 25–49 unweighted cases). No data based on fewer than 25 unweighted cases are displayed.

y Data differ from the standard definition or refer to only part of a country. If they fall within the noted reference period, such data are included in the calculation of regional and global averages.

DEFINITIONS OF THE INDICATORS

Thinness – Percentage of adolescents aged 10–19 years with BMI < -2 standard deviations of the median according to the WHO growth reference for school-age children and adolescents.

Overweight – Percentage of adolescents aged 10–19 years with BMI > 1 standard deviations of the median according to the WHO growth reference for school-age children and adolescents.

TABLE 15. ADOLESCENTS

| | | |
|--|---|---|
| Intimate partner violence – Percentage of ever-partnered girls aged 15–19 years who have experienced physical and/or sexual violence by a current or former intimate partner during the last 12 months. | Unemployment – Percentage of adolescents aged 15–19 years in the labour force who are unemployed. | adolescents and adults. Lancet 2024. DOI: https://doi.org/10.1016/S0140-6736(23)02750-2 . |
| Bullying – Percentage of students aged 13–15 years who reported being bullied on one or more days in the past 30 days. | Engagement in household chores – Percentage of adolescents aged 10–14 years who, during the reference week, spent at least 21 hours on unpaid household services. | Intimate partner violence – DHS, MICS and other national surveys. Last update: March 2024. |
| Proficiency in math – Percentage of children and young people at the end of lower secondary achieving at least a minimum proficiency level in math. | MAIN DATA SOURCES | Bullying – Health Behaviour in School-aged Children Study (HBSC), Global School-based Student Health Surveys (GSHS) and other national surveys. Last update: March 2024. |
| Proficiency in reading – Percentage of children and young people at the end of lower secondary achieving at least a minimum proficiency level in reading. | Adolescent population – United Nations, Department of Economic and Social Affairs, Population Division (2024). World Population Prospects 2024. | Proficiency in math and reading – United Nations Statistics Division. Last update: April 2019. |
| Not in education, employment or training (NEET) – Percentage of adolescents aged 15–19 years not in education, employment or training. | Thinness and overweight – NCD Risk Factor Collaboration (NCD-RisC), based on Worldwide trends in underweight and obesity from 1990 to 2022: a pooled analysis of 3663 population-representative studies with 222 million children, | NEET – International Labour Organization. Last update: January 2024. |
| | | Unemployment – International Labour Organization. Last update: October 2024. |
| | | Engagement in household chores – DHS, MICS and other national surveys. Last update: March 2024. |

TABLE 16. CHILDREN WITH DISABILITIES

This table presents a selection of indicators on child well-being across various domains: child protection, early childhood development, education, nutrition, social protection and equity as well as WASH. For each indicator, data are presented for children with and without disabilities. While measuring well-being is broad and cannot be exhaustively captured in a small selection of indicators, the data in Table 16 are meant to be illustrative of whether disparities exist between these two population groups. Some of the data in this table must be interpreted with caution due to caveats in the tools used to gather the information, as explained below. The values for some countries may differ from previously published values due to the re-calculation of indicators according to standard definitions.

Stunting and overweight

Collecting data on the growth of children with disabilities presents challenges. Anthropometric measurements in surveys are typically carried out by trained measurers and under uniform conditions, which include the use of standardized digital scales and measurement boards. Children with certain types of impairments may not grow in the same way as children who develop more typically. This may mean that their health and development cannot be properly measured by standard tools used in the context of household surveys. Moreover, measuring and weighing children with specific types of impairments may lead to larger measurement errors. Finally, it should be noted that the WHO Child Growth Standards were calculated based on children without physical impairments. Therefore, even when a child's height and weight can be collected, standard nutrition indicators (used to measure stunting and overweight) may be inappropriate to assess growth for children with certain disabilities, making findings more difficult to interpret.

Early childhood education and never attended school

A relevant consideration is the limitation of the data in providing a comprehensive account of all factors affecting a child's learning experience. While the indicators used here measure education uptake, they fall short in fully capturing the experiences of children with disabilities in obtaining an education and the barriers they face.

Another data limitation is the inability to distinguish between children who are in mainstream education and those who are in disability-specific educational settings. This is significant since many countries have highly segregated school systems for children with disabilities. For example, what is considered progression in a special education school may be significantly different from that in a mainstream school, fundamentally altering responses to what is considered 'at level' for the child. If this distinction could be captured, then the reported inequities between children with and without disabilities would likely be even greater.

Foundational learning skills

Data on foundational reading and numeracy skills are only generated for children who can complete three reading tasks and four numeracy tasks. Non-completion observations include children who started but were unable to finish the assessment tasks, who refused to take the assessment (or whose mothers did not permit them to take the assessment) or who could not participate in the assessment due to illness or an impairment. Inaccessibility could thus be a barrier to participation for some children (for example, if a child is blind or requires assistive technology or reasonable accommodations to participate and these could not be provided). Therefore, the results that show differences in foundational learning skills for children with and without disabilities should be interpreted with the understanding that children with certain difficulties are less likely to have been part of such an assessment.

Basic sanitation services on premises

The indicator provides information on the percentage of children aged 2–17 years living in a household with improved sanitation services not shared with other households and located in their own dwelling or in their own yard/plot. The definitions used for service levels and type of facilities are established by the JMP.

In assessing and measuring sanitation services, it is important to consider not only the types of facilities available to households but also whether they are easily accessible and/or shared with other households. The distinction between availability and access is particularly significant for children with disabilities since they often face unique and disproportionate barriers to access even when services are available. However, for indicators on the services, the key metric assessed is the type of facility used and whether it is in the household, shared with other households, or a distance away from the household. Therefore, while the data can demonstrate the availability of WASH services for households with children with disabilities, it is not possible from the current data to assess whether that translates into a usable facility and full accessibility for the children themselves. Further work is required to develop an international standard for measuring the accessibility of WASH facilities for children with disabilities. Moreover, the data do not offer insights into non-household settings in which children with disabilities may find themselves, such as schools, residential care or health-care facilities and other public buildings.

Social transfers

While social protection encompasses a host of interventions beyond social transfers, there is a dearth of internationally comparable data about many, if not most, non-cash interventions. Also, for most countries, it is not possible to know whether the social transfer was in any way related to disability or was provided to the household based on other factors.

TABLE 16. CHILDREN WITH DISABILITIES

NOTES

- Data not available.
- R** Data refer to the most recent year available during the period specified in the column heading.
- P** Based on small denominators (typically 25–49 unweighted cases). No data based on fewer than 25 unweighted cases are displayed.
- Y** Data differ from the standard definition or refer to only part of a country. If they fall within the noted reference period, such data are included in the calculation of regional and global averages.

DEFINITIONS OF THE INDICATORS

Children with disabilities – Children aged 2 to 17 years who have one or more difficulties in at least one functional domain.

Moderate and severe underweight – Percentage of children aged 24 to 59 months who are below minus two standard

deviations of the median weight-for-age of the WHO Child Growth Standards.

Moderate and severe stunting – Percentage of children aged 24 to 59 months who are below minus two standard deviations of the median height-for-age of the WHO Child Growth Standards.

Early stimulation and responsive care – Percentage of children aged 24 to 59 months with whom an adult has engaged in four or more of the following activities to provide early stimulation and responsive care in the past three days: a) reading books to the child, b) telling stories to the child, c) singing songs to the child, d) taking the child outside the home, e) playing with the child, and f) spending time with the child naming, counting or drawing things.

Early childhood education – Percentage of children aged 36 to 59 months who are attending an early childhood education programme.

Never attended school – Percentage of children aged 10 to 17 years who have never attended school.

Foundational learning skills – Percentage of children aged 7 to 14 years who demonstrate foundational numeracy skills and foundational reading skills.

Severe physical punishment – Percentage of children aged 2 to 14 years who experienced severe physical punishment by caregivers in the past month.

Basic sanitation services on premises – Percentage of children aged 2 to 17 years living in a household with improved sanitation facilities not shared with other households and located in their own dwelling or in their own yard/plot.

Social transfers – Percentage of children aged 2 to 17 years living in a household that received any type of social transfers and benefits in the last three months.

MAIN DATA SOURCES

For all indicators in the table – Multiple Indicator Cluster Surveys (MICS) and other national surveys. Last update: September 2024.

TABLE 17. WOMEN'S ECONOMIC EMPOWERMENT

This table presents a selection of indicators measuring women's economic empowerment given its importance to the well-being of children as well as the intrinsic importance of women's economic empowerment as articulated in SDG 5: Achieve gender equality and empower all women and girls.

Social institutions and gender index (SIGI)

Discriminatory laws, attitudes and practices affect the life course of women and girls, restricting their ability to accumulate human, social and productive assets and to exercise agency and voice over choices that affect their well-being. The SIGI, a composite measure of gender discrimination in social institutions, produced by the Organisation for Economic Co-operation and Development, combines qualitative and quantitative data on discriminatory social institutions in four areas: discrimination in the family, restricted physical integrity, restricted access to productive and financial resources, and restricted civil liberties.

Legal frameworks that promote, enforce, and monitor gender equality in employment and economic benefits

Equality and non-discrimination on the basis of sex are core principles enshrined in international legal and policy frameworks, including the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW) and the Beijing Declaration and Platform for Action. Removing discriminatory laws and putting in place legal frameworks that advance gender equality in employment are prerequisites for increasing women's paid and decent work and, in turn, their economic empowerment. The term 'legal frameworks' is defined broadly to encompass laws, mechanisms and policies/plans to promote, enforce and monitor gender equality. Data derived for this indicator, SDG 5.1.1, come from an assessment of a country's legal frameworks completed by national statistical offices and/or national women's machinery, and legal practitioners/researchers on gender equality.

Maternity/paternity leave benefits

Parental leave benefits are critical for supporting the health and well-being of children and women's economic empowerment, including infants' survival and healthy development as well as increased labour force participation and earnings for women. ILO Convention No. 183 provides for 14 weeks of paid maternity benefits to those women for whom the instrument applies. While no ILO standard exists specifically on paternity leave, paternity benefits permit working fathers to be more involved in the care of their children and the sharing of household responsibilities. It is important to note, however, that even in countries with legal rights to parental leave, not all workers will have access, such as those employed part-time or working in the informal economy.

Educational attainment

While primary education provides children with the foundation for a lifetime of learning, secondary education equips them with the knowledge and skills needed to become economically empowered adults. Compared to girls with only a primary education, girls with secondary education are less likely to marry as children and become pregnant as adolescents. And, while women with a primary education earn only marginally more than women with no education, women with secondary education earn twice as much, on average, than women who have not gone to school (see Wodon et al., 'Missed Opportunities: The high cost of not educating girls', *The Cost of Not Educating Girls Notes Series*, The World Bank, Washington D.C., 2018).

Labour force participation and unemployment rates

Equal access to the labour market is critical for women's economic empowerment. The labour force participation rate is calculated by expressing the number of persons in the labour force during a given reference period as a percentage of the working-age population (usually aged 15 years and older) in the same reference period. The unemployment rate conveys the percentage of persons (usually aged 15 years and older) in the labour force who are unemployed. This reflects the inability of an economy to generate employment for those who want to work but are not doing so, even though they are available for employment and actively seeking work.

Information on unemployment by sex highlights the greater difficulty, in many cases, that women have in entering the labour market, which can be directly or indirectly linked to a country's gender norms.

Mobile phone ownership

Mobile phone ownership provides individuals with access to information, financial services, employment opportunities and social networks, and is an important asset for fostering women's economic empowerment as recognized in SDG5. In SDG5.b.1, an individual is considered to own a mobile phone if she/he has a mobile cellular phone device with at least one active SIM card for personal use. Mobile cellular phones supplied by employers that can be used for personal reasons (to make personal calls, access the Internet, etc.) are included. Individuals who have only an active SIM card(s) and not a mobile phone are excluded. Individuals who have a mobile phone for personal use that is not registered under his/her name are also included. An active SIM card is a SIM card that has been used in the last three months.

Financial inclusion

Measuring women's access to financial services, such as savings, insurance, payments, credit and remittances, is essential to understanding their economic empowerment. Access to financial services can also increase women's bargaining power in the household, with potential benefits for the well-being of children. As measured by SDG 8.10.2, having an account at a financial institution includes respondents who report having an account at a bank; who have an account at another type of financial institution, such as a credit union, microfinance institution, cooperative or the post office (if applicable); or who have a debit card in their own name. It also includes respondents who report receiving wages, government transfers or payments for agricultural products into an account at a financial institution in the past 12 months. In addition, it includes respondents who report having paid utility bills or school fees from an account at a financial institution in the past 12 months or received wages or government transfers into a card in the past 12 months. Users of mobile money accounts include respondents who report personally using GSM Association (GSMA) Mobile Money for the Unbanked (MMU) services in the past 12 months to pay bills or to send or receive money. In addition, it includes respondents who report receiving wages, government transfers or payments for agricultural products through a mobile phone in the past 12 months.

Time use

This indicator measures discrepancies in how much time women and men spend on unpaid domestic and care work, which has implications for their labour force participation and overall well-being. Data presented for this indicator are expressed as a proportion of time in a day, with the proportion of time spent on unpaid domestic and care work calculated by dividing the daily average number of hours spent on unpaid domestic and care work by 24 hours for the total relevant population. While own-use production work can be differentiated based on whether goods or services are produced, the indicator only considers the own-use production work of services or, in other words, the activities related to unpaid domestic services and unpaid caregiving services undertaken by households for their own use. Examples include food preparation, dishwashing, cleaning and upkeep of the dwelling, laundry, shopping, childcare and care of the sick, elderly or disabled household and family members, among others. Comparisons across countries should be made with caution given that international comparability of time-use statistics is limited by a number of methodological considerations.

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

TABLE 17. WOMEN'S ECONOMIC EMPOWERMENT

NOTES

- Data not available.
- X** Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.
- R** Data refer to the most recent year available during the period specified in the column heading.

DEFINITIONS OF THE INDICATORS

Social Institutions and Gender Index (SIGI) – Level of gender discrimination in social institutions defined as discrimination in the family, restricted physical integrity, restricted access to reproductive and financial resources, and restricted liberties. 0 = no discrimination; 100 = absolute discrimination.

Legal frameworks that promote, enforce and monitor gender equality in employment and economic benefits –

Measures as a percentage of achievement from 0 to 100 with 100 being best practice, government efforts to put in place legal frameworks that promote, enforce and monitor gender equality in the area of employment and economic benefits.

Maternity leave benefits – Whether the law provides for 14 weeks or more of paid maternity leave in accordance with the International Labour Organization standards.

Paternity leave benefits – Whether the law provides for paid paternity leave (of any length).

Educational attainment – Percentage of the population aged 25 years and older that completed at least upper secondary education (ISCED 3).

Labour force participation rate – The proportion of a country's working-age population that engages actively in the labour market, either by working or looking for work.

Unemployment rate – The percentage of persons in the labour force who are unemployed.

Mobile phone ownership – Proportion of individuals who own a mobile telephone.

Financial inclusion – The percentage of adults (ages 15+) who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or personally using a mobile money service in the past 12 months.

Time use – Proportion of time spent on unpaid domestic and care work among individuals aged 15 years and older.

MAIN DATA SOURCES

Social Institutions and Gender Equality Index (SIGI) – Organisation for Economic Co-operation and Development (OECD).

Legal frameworks that promote, enforce and monitor gender equality in employment and economic benefits – UN Women, World Bank Group, OECD Development Centre. Last update: September 2024.

Maternity leave benefits – World Bank Women Business and the Law. Last update: March 2024.

Paternity leave benefits – World Bank Women Business and the Law. Last update: March 2024.

Educational attainment – UNESCO Institute for Statistics (UIS). Last update: September 2024.

Labour force participation rate – International Labour Organization (ILO). Last update: June 2024.

Unemployment rate – International Labour Organization (ILO). Last update: June 2024.

Mobile phone ownership – Global SDG Indicators Database, 2022. Last update: September 2024.

Financial inclusion – Global SDG Indicators Database, 2022. Last update: September 2024.

Time use – Global SDG Indicators Database, 2022. Last update: September 2024.

TABLE 18. MIGRATION

This table was added in 2021 due to the significance of migration and displacement for children's well-being and the attention they have received recently. This attention culminated in the Global Compact for Migration and the Global Compact on Refugees, both endorsed by the United Nations General Assembly in 2018.

The data on international migration are based on the International Migrant Stock 2020, published by the UN Population Division. The data provide the number of persons residing outside of their country of birth (for some countries, citizenship was used instead of country of birth, depending on data availability) at mid-year of the reference year. Refugees and asylum seekers are included in this population. The number of children under 18 years of age is estimated based on the five-age year groups of migrant stock published by the UN Population Division. For more details on the definition and methods for estimating the international migrant stock, see the UN Population Division's publication, *International Migrant Stock 2020*.

The data on refugees (including both refugees and persons living in refugee-like situations) and asylum seekers are based on the Refugee Population Statistics Database of the United Nations High Commissioner for Refugees (UNHCR) (see: <www.unhcr.org/refugee-statistics/>). The term 'refugee' is defined in the 1951 Convention amended by the 1967 Protocol. These numbers are stock numbers and refer to the end of the reference year. Data for refugee children are estimated jointly with UNCHR and account for the lack of complete age coverage in many countries. Values for countries with high uncertainties around the point estimate are not shown but are included in the regional age-related aggregates.

Data on internally displaced persons are based on the Global Internal Displacement Database (GIDD) maintained by the Internal Displacement Monitoring Centre (IDMC). They refer to the number of internally displaced persons (IDPs) at the end of the reference year and the number of new internal displacements during the reference year (see: <<https://www.internal-displacement.org/database>>). The IDP numbers are stock data counting the number of persons living in internal displacement. The number of new displacements refers to the aggregate number of independent displacement events during the year; it can also include subsequent displacements of the same persons (during distinct events). For this reason, the number of 'new' displacements cannot be equated with the number of persons displaced. Due to the lack of age-disaggregated data, the number of IDP children and of new displacements of children are estimated using the age structure of the national population. This makes the implicit assumption that internal displacement happens randomly in terms of age and sex. Contrary to this, case studies have shown that women and children tend to be over-represented in the displaced population. As a consequence, the presented child-related data on internal displacement are likely to be an underestimation. Considering these issues, the age-disaggregated data on internal displacement are rounded to the second significant figure. Unrounded numbers are used to calculate regional aggregates.

TABLE 18. MIGRATION

| Countries and areas | International migrant stock 2020 | | | Refugees by asylum country 2023 | | | | Refugees by origin country 2023 | | Internally displaced persons (IDPs) 2023 | | | | New internal displacements 2023 | | | |

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <https://data.unicef.org/RegionalClassifications>. It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

TABLE 18. MIGRATION

NOTES

- Data not available.
- Refugees with origin listed as 'other', 'unknown', 'various' or 'stateless' are not included in the aggregates, making the global totals smaller than the comparable total of refugees by host country.
- Regional and global values are based on more countries and areas than listed here. Therefore, country values do not add up to the corresponding regional and global values.
- Ru** Under 18 estimates rounded to second significant figure (e.g., '1 234' is rounded to '1 200').
- Sd** Share refers to total displacements.
- T** Totals are the sum of unrounded numbers related to conflict and violence, and disasters, respectively, as published by the Internal Displacement Monitoring Centre.

DEFINITIONS OF THE INDICATORS

- International migrant stock** – The number of people born in a country other than that in which they live, including refugees.
- Refugees** – Persons who are forced to flee their home country to escape persecution or a serious threat to their life, physical integrity or freedom. Numbers in this table refer to refugees under UNHCR mandate only. Additional Palestine refugees registered with UNRWA are present in State of Palestine, Lebanon, Syria, and Jordan but are not listed here.
- Internally displaced persons (IDPs)** – Persons who have been forced or obliged to flee or to leave their homes or places of habitual residence and who have not crossed an internationally recognized state border at a given point in time.

New internal displacements – Number of movements of persons who have been forced or obliged to flee or to leave their homes or places of habitual residence and who have not crossed an internationally recognized state border in a given period.

MAIN DATA SOURCES

- International migrant stock** – United Nations Department of Economic and Social Affairs, Population Division (2020). International Migrant Stock 2020.
- Refugees** – United Nations High Commissioner for Refugees, Refugee Population Statistics Database, 2024.
- Internal displacement** – Internal Displacement Monitoring Centre, Global Internal Displacement Database (GIDD), IDMC, 2024.

TABLE 19. ECONOMIC INDICATORS

This table provides a macroeconomic overview of the context affecting children's well-being and development. The indicators serve two purposes: they reflect the government's fiscal capacity to fund welfare programs, as shown by government revenue and Official Development Assistance (ODA) inflows, and they illustrate the allocation of government expenditure across key sectors such as health, education, social protection and, for DAC member countries, foreign aid. Government expenditure is presented as a proportion of each country's GDP and overall public budget, highlighting the relative importance and size of each sector in social policy.

A distinction is made for ODA between inflows/outflows in million US\$ and inflows/outflows as a proportion of each country's Gross National Income. The Economic Indicators data are updated annually and primarily sourced from the World Bank's *World Development Indicators*, with the exception of ODA data, which come from the Organisation for Economic Co-operation and Development (OECD). Due to limited data coverage, government expenditure on social protection as a percentage of the government budget is calculated from the other indicators by taking ratio of government expenditure on social protection as a percentage of GDP to government revenue as a percentage of GDP.

TABLE 19. ECONOMIC INDICATORS

| Countries and areas | Government revenue as % of GDP 2015–2023 (R) | Government Expenditure 2015–2023 (R) | | | | | | | Official development assistance 2015–2023 (R) | | | |
|---------------------------------------|--|--------------------------------------|-----------|--------------|----------------------|---------------------------|--------------|----------------------|---|--------------------------------|--------------------------|-----------------------------|

For a complete list of countries and areas in the regions, subregions and country categories, see page on Regional Classifications or visit <<https://data.unicef.org/regionalclassifications>>.

It is not advisable to compare data from consecutive editions of *The State of the World's Children* report.

While it is possible to analyze the impacts of government revenue and expenditure data on gender equality, there are insufficient data points available to present.

NOTES

- Data not available.

R Data refer to the most recent year available during the period specified in the column heading.

DEFINITIONS OF THE INDICATORS

Government revenue as percentage of GDP – Revenue is cash receipts from taxes, social contributions, and other revenues such as fines, fees, rent, and income from property or sales. Grants are also considered as revenue but are excluded here.

Government expenditure – General government final consumption expenditure (formerly general government consumption) includes all government current expenditures for purchases of goods and services (including compensation of

employees). It also includes most expenditures on national defence and security, but excludes government military expenditures that are part of government capital formation.

Government expenditure expressed as a percentage of GDP – Total government expenditure as well as the specific expenditures on health, education and social protection.

Government expenditure expressed as a percentage of Total government expenditure – Specific expenditures on health, education and social protection.

ODA (Net official development assistance) – Official development assistance flows are defined as those flows to countries and territories on the DAC List of ODA Recipients and to multilateral development institutions which are: (a) provided by official agencies, including state and local governments, or by their executive agencies; (b) each transaction of which is administered with the promotion of the economic development and welfare of developing countries as its main objective; and

(c) is concessional in character.

ODA (Net official development assistance) for donor countries – Expressed as an outflow of resources (in US\$ and as percentage of Gross National Income).

ODA (Net official development assistance) for recipient countries – Expressed as an inflow of resources (in US\$ and as percentage of Gross National Income).
