Acknowledgments

The authors gratefully acknowledge the many people who contributed to this report. Elaine Allensworth, Jessica Tansey, Chen An, and Bronwyn McDaniel gave thorough and thoughtful feedback on our drafts. We would also like to thank Peyton Cunningham, who provided instrumental support with updating and editing findings.

This report was supported by the Crown Family Philanthropies and Crankstart. We thank them for their support and collaboration on the To&Through Project. The UChicago Consortium gratefully acknowledges the Consortium Investor Council which funds critical work at the Consortium: putting the research to work, refreshing the data archive, seeding new studies, replicating previous studies, and making research equitable. Consortium Investor Council members include: Brinson Foundation, CME Group Foundation, Crown Family Philanthropies, Joyce Foundation, Lewis-Sebring Family Foundation, Lloyd A. Fry Foundation, Mayer & Morris Kaplan Family Foundation, Robert R. McCormick Foundation, McDougal Family Foundation, Polk Bros. Foundation, Spencer Foundation, Steans Family Foundation, Square One Foundation, The Chicago Public Education Fund, the Vivo Foundation, and two anonymous foundations. The UChicago Consortium also thanks the Lewis-Sebring Family Foundation, whose operating grant supports our work.

If current rates hold,
31%
of current CPS ninth-graders would complete a
college credential within 10 years.

This annual analysis provides a district-level view of Chicago Public Schools (CPS) students' patterns of educational attainment. It presents a starting place for thinking about *why* these patterns exist and *what can be done* to improve these patterns.

We focus on three key milestones—high school graduation, college enrollment, and college completion—and use them to calculate a Post-secondary Attainment Index (PAI). Where possible, we disaggregate the data by race/ethnicity and gender, disability status, and English Learner (EL) status.

The PAI and its components are best understood as a measure of progress over time rather than point-in-time estimates for a particular cohort. We therefore recommend focusing more on long-term trends than on year-to-year fluctuations. Continue scrolling for more details on each of these components and key findings for each. To see what these 2023 attainment rates and educational milestones look like in *your* school or community, visit the online [To&Through Milestones Tool: https://toandthrough.uchicago.edu/tool/cps/](https://toandthrough.uchicago.edu/tool/cps/).

Fully supporting CPS students throughout their high school *and* post-secondary journeys will likely require an unprecedented level of investment and new partnerships across the city. We also need an understanding of the lived experiences of CPS students and graduates impacted by the COVID-19 pandemic to inform investments, partnerships, and changes to practice. See the stories the To&Through Project has collected so far: <https://toandthrough.uchicago.edu/resources/cps-student-stories>.

Post-secondary Attainment Index

FIGURE 1

2023 Post-secondary Attainment Index

Of 100 2023–24 ninth-graders, 31 would earn a college credential by the time they're about 25 years old, if current rates of attainment stayed the same

Note: The high school graduation rates used in calculating the PAI are the four-year high school graduation rates, and the denominators of all college enrollment and completion rates are also limited to students who graduated from high school within four years. For this reason, the enrollment and completion rates used to calculate the PAI shown in Figure 1 do not match the enrollment and completion rates shown in Figures 7–15), which include CPS high school graduates who graduated high school in five or six years. The exact enrollment and completion rates used to calculate the PAI are available in Appendix A, Table A.1. Photos by Jasmin Awad / Nate Umstead / Alfredo Lietor / baona for Getty Images.

The PAI¹ represents the proportion of current CPS ninth-graders who would complete any degree or certificate from a two-year or four-year college within 10 years, if current high school and college attainment rates were to hold constant over the next decade. To find the attainment rates² used to calculate the PAI, see the Appendices.

The PAI shows the combined influence of high school graduation, college enrollment, and college graduation patterns on eventual degree attainment. Note that the PAI is not intended to be a prediction of what will happen. Continued efforts to improve rates of attainment will hopefully result in more CPS students completing high school and college. The PAI is intended to summarize current rates of high school and college attainment and put these rates in context with one another, as a starting place for thinking about why these patterns exist and what can be done to change these patterns.

¹ The PAI is not a true cohort attainment rate, in that it does not follow one single cohort of students for 10 consecutive years. Instead, to provide more timely information, it combines information from multiple recent cohorts to suggest what their college outcomes might be, if the most recent available rates of attainment were to hold constant during the next decade.

² The 2023 PAI synthesizes four-year high school graduation data for the class of 2023, immediate college enrollment data for the high school class of 2023, and six-year college outcomes for the high school class of 2017.

2023 PAI — Key Points

- If 2023 rates held over the next decade, of 100 current CPS ninth-graders, 85 would graduate from high school within four years.
- Of those 85 high school graduates, 43 would immediately enroll in a four-year college, 14 would immediately enroll in a two-year college, and 28 would not immediately enroll in college.
- Six years after high-school graduation, a total of 31 of the original 85 high school graduates would have completed a college credential—24 with a bachelor's degree and 7 with an associate degree or certificate.³
- The 2023 PAI of 30.6%, which we report rounding to whole numbers as 31%, shows a 0.4 percentage point increase over the 2022 PAI of 30.2%.⁴

2023 PAI by Race/Ethnicity and Gender

Before examining the PAI for different student groups, it is critical to restate that the PAI should be understood as the product of the cumulative effects of historical and present systemic racism, including oppressive policies and structures in high schools and colleges. The PAI also reflects the broader context of systemic racism that differentially impacts rates of attainment by race/ethnicity and gender. We report these numbers to contribute to critical examinations about how those working within the education field can change practices and disrupt policies that have contributed to these inequitable outcomes. To learn more about how we disaggregate by race/ethnicity and gender, please reference the box *Interpreting Disaggregated Data Within the Context of Structural Oppression* and the "Data Definitions" section of the Appendices.

Rates for Native American/Alaskan students are reported in the figure notes on Figures 2, 4, and 8, combining information across cohorts to meet the minimum reporting sizes.

³ The high school graduation rates used in calculating the PAI are the four-year high school graduation rates, and the denominators of all college enrollment and completion rates are also limited to students who graduated from high school within four years, which is why the denominator here is comprised of the 85 high school graduates.

⁴ [Usher, Mahaffie, & Nagaoka. \(2023\)](#). Earlier PAI rates are available in the Appendices.

Interpreting Disaggregated Data Within the Context of Structural Oppression

Where possible, we disaggregate data by race/ethnicity and gender, disability status, and English Learner (EL) status to understand which students face more barriers to educational attainment and where different strategies and supports are needed. We report these numbers to contribute to critical examinations about whether high schools and colleges are making progress toward fostering equitable outcomes, and how high schools and colleges can further change practices and disrupt policies contributing to inequitable outcomes.

We urge readers to examine disaggregated rates of educational attainment within the context of structural oppression—particularly the history and present reality of systemic racism—while moving through the stages of questioning needed to affect change. There is a considerable body of research that has informed our understanding of the role that systemic racism plays in Chicago’s schools and history, which we recommend as a starting place for readers seeking to learn more.^a Specifically, we hope readers will...

- Interrogate how disparities in attainment are due to issues of equity—particularly racial equity—within the district and higher education institutions in addition to the broader context of systemic racism in which schools are situated.
- Beyond questioning why these disparities exist, question what can be done, both within and outside of education, to change them.
- Understand that, while important, examining these data is only a part of the efforts necessary to determine what questions should be asked to understand and improve students’ experiences at CPS and after graduation.

Finally, limitations to note include:

- We do not have information on students who pursue post-secondary pathways other than a college degree such as the workforce or the military. We are also limited by the data CPS collects on students’ race/ethnicity,^b gender,^c disability status, English Learner status,^d and other identifiers.
- These data represent individual students who face and overcome barriers to educational attainment every day. Students can bring a wealth of lived experience to bear on the inequitable policies and practices that prevent CPS students from reaching their full potential.

^a Publications that have informed authors’ understanding include: Ewing (2018); Payne (2008); Todd-Breland (2018); Chicago Beyond Equity Series (2019); Drake & Clayton (1945); Henricks, Lewis, Arenas, & Lewis (2017); Moore (2016); Rothstein (2017); Sampson (2011); Wilson (1987). See references for full details.

^b We acknowledge that the race/ethnicity and gender categories available in our data are limited and do not fully reflect the spectrum of identities embodied by CPS students. Further, we have chosen to combine or suppress data for several groups because the small numbers of students in those groups makes it difficult to reliably interpret their rates. More specifically, CPS changed its race/ethnicity categories in the 2010–11 school year to include a Multiracial option and the Asian/Pacific Islander category was split into two categories: Pacific Islander/Hawaiian and Asian. In this brief, our “Asian American/Pacific Islander” category combines three CPS data categories—Asian, Pacific Islander/Hawaiian, and Asian/Pacific Islander—due to the small number of students in the latter two categories. Students who identified as Native American/Alaskan Native and Multiracial students were not included in the figures, also due to the small numbers of students in these categories in the administrative records. However, on relevant figures, the figure notes include rates for these students from the past three cohorts combined.

^c Many students do not fit into one of the two gender categories CPS has historically collected data on (male and female), but we believe that there are still insights to be gained from analysis of this data. Starting in 2020–21 the gender categories in the CPS demographic questionnaire were: male, female, and non-binary; however, we are not currently reporting data on non-binary students due to small group sizes. We hope in the future to be able to report data that more fully describes the identities of CPS students.

^d In 2017, hundreds of CPS schools were cited by the district for not supporting English Learners to the degree legally required (Belsha, 2017 June 28). We acknowledge this reality with the aim of highlighting system-level disparities and discouraging people from ascribing English Learners’ educational outcomes solely to the choices and capacity of English Learner students and their families.

FIGURE 2
2023 Post-secondary Attainment Index by race/ethnicity and gender

Note: The high school graduation rates used in calculating the PAI are the four-year high school graduation rates, and the denominators of all college enrollment and completion rates are also limited to students who graduated from high school within four years. For this reason, the enrollment and completion rates used to calculate the PAI shown in Figure 1 do not match the enrollment and completion rates shown in Figures 7–15), which include CPS high school graduates who graduated high school in five or six years. The exact enrollment and completion rates used to calculate the PAI are available in Appendix A, Table A.1. Data for Multiracial, Native American/Alaskan Native, and students who didn't report their race/ethnicity in CPS records are not included because we suppressed rates for groups of fewer than 100 students to avoid reporting fluctuations in rates that do not reflect consistent trends in student outcomes. Historically, data has been collected in a way that groups students into one of two categories: male and female. Starting in 2020–21, the gender categories in the CPS demographic questionnaire were: male, female, and non-binary; however, we are not currently reporting data on non-binary students due to small group sizes. Due to rounding, individual rates may not sum exactly to the total rate displayed.

2023 PAI by Race/Ethnicity and Gender — Key Point

- In 2023, 66% of CPS ninth-graders indicated that they aspired to obtain at least an associate degree or certificate.⁵ However, of the eight race/ethnicity groups displayed in Figure 2, only one (Asian/Pacific Islander young women) would have at least 66% of students attain a college degree or certificate in 10 years, if the most recent available rates of attainment for CPS students were not to change over the next decade.

CPS Rates of Attainment Reported by the UChicago To&Through Project

The To&Through Project also reports rates of attainment—high school graduation, college enrollment, and college completion—and more for each CPS high school and each community area in Chicago on the [To&Through Milestones Tool](https://toandthrough.uchicago.edu/tool/cps/): <https://toandthrough.uchicago.edu/tool/cps/>.

Both this report and the Tool share annual data. This web page is updated annually, to report on how attainment rates are changing in the district year-over-year. The Tool is typically also updated annually, but may also have more frequent updates to provide users with timely data. In that case, data on the Tool may differ from the data on this report web page.

⁵ Consortium analysis of the 2023 5Essentials Survey.

CPS High School Graduation Rate

Among 2019–20 first-time ninth-graders, 85% graduated from high school by spring 2023. This is the highest rate we have ever reported.

For detailed information on how this metric is calculated, see the Appendices.

FIGURE 3

Four-year high school graduation rates of CPS ninth-grade cohorts over time

Note: All CPS high school students, including charter and Options school students, were included in this analysis. Students were counted as high school graduates if they completed high school within four years of their first-time ninth-grade year of high school—the 2023 high school graduation year rate, for example, represents students who began high school in the fall of 2019. Ns represent the total number of ninth-graders in each cohort. While students who transferred between CPS schools were included in this analysis, Students who transferred to a non-CPS school during high school were excluded from this analysis.

2023 CPS High School Graduation Rate — Key Points

- Aside from the slight decline in 2021, the high school graduation rate has steadily increased each year over the past decade, from 75.4% in 2013 to 85.0% in 2023.
- The high school graduation rate of CPS students increased by around 1 percentage point, from 84.1% in 2022 to 85.0% in 2023. The 2022 school year was the second year affected by the COVID-19 pandemic, and the only school year when the majority of instructional days were remote in CPS.

High School Graduation: Disaggregated Data

High School Graduation by Race/Ethnicity and Gender

FIGURE 4

Four-year high school graduation rates by race/ethnicity and gender

2019–20 CPS ninth-grade cohort

Note: All CPS high school students, including charter and Options school students, were included in this analysis. Students were counted as high school graduates if they completed high school within four years of their first-time ninth-grade year of high school. While students who transferred between CPS schools were included in this analysis, students who transferred to a non-CPS school during high school were excluded from this analysis. The number of students in each of the race/ethnicity and gender categories does not sum to the number of students in the “All students” category because there were some students whose specific race/ethnicity groups are not shown in the figure, but who are included in the overall numbers. Specifically, Native American/Alaskan Native students, Multiracial students, and students whose did not report their race/ethnicity are not shown because fewer than 100 students identified in each of those categories, making it difficult to reliably interpret rates. When combined together (in order to meet minimum cohort reporting sizes), Native American/Alaskan Native young women (101 students) from the last three graduating classes graduated from high school at a rate of 87.2%, while Native American/Alaskan Native young men from the last three graduating classes (111 students) graduated from high school at a rate of 73.9%. Historically, data has been collected in a way that groups students into one of two categories: male and female. Starting in 2020–21, the gender categories in the CPS demographic questionnaire were: male, female, and non-binary; however, we are not currently reporting data on non-binary students due to small group sizes.

High School Graduation Rate by Race/Ethnicity and Gender — Key Points

- Within each race/ethnicity group, young men graduated from high school at a rate lower than young women of the same race/ethnicity.
- The graduation rates for Black young men (78.2%) and Latino young men (82.8%) were below the district average (85.0%).

To learn more about how we disaggregate by race/ethnicity and gender, see the Appendices. To track high school graduation rates disaggregated by race/ethnicity and gender over time, see the [To&Through Milestones Tool](https://toandthrough.uchicago.edu/tool/): <https://toandthrough.uchicago.edu/tool/>.⁶

⁶ The [To&Through Milestones Tool](https://toandthrough.uchicago.edu/tool/) is a public resource that allows users to explore rates of educational attainment across a variety of metrics, for individual CPS schools and the district as a whole.

High School Graduation by English Learner Status

FIGURE 5

Four-year high school graduation rates by English Learner (EL) status

2019–20 CPS ninth-grade cohort

Note: All CPS high school students, including charter and Options school students, were included in this analysis. Students were counted as high school graduates if they completed high school within four years of their first-time ninth-grade year of high school. While students who transferred between CPS schools were included in this analysis, Students who transferred to a non-CPS school during high school were excluded from this analysis. The “Former English Learners” category includes students who took the ACCESS test at any point after their entry into CPS and then later demonstrated English proficiency (scoring above the cut score) on the ACCESS test, and thus were no longer classified as active English Learners at any point during high school. The “Active English Learners” category includes students who were active English Learners at some point during high school. We define students who were never classified as English Learners as students who were never eligible to receive EL services, either because their native language was English or because they took the English proficiency screening test when they began school in CPS and scored high enough to be considered proficient in English. The three EL status categories do not sum to the total N for all students because some students are missing an EL status due to data anomalies. Students can exit out of EL status as early as the first year during which they were classified as English Learners, including if that year is kindergarten. CPS kindergarteners who were designated as English Learners and exited out of EL status at the end of kindergarten are included in former English Learners. Many students who began as English Learners exited out of EL status by the third grade. Furthermore, most students who began as English Learners exited out of EL status by the time they reached high school. About one in five students who began as English Learners remained classified as English Learners upon high school enrollment (de la Torre et al, 2019).

High School Graduation Rate by English Learner Status — Key Points

- Among 2019–20 ninth-graders, students formerly classified as English Learners as of ninth grade graduated from high school at a higher rate (89.0%) than students who had never been classified as English Learners (84.1%).
- Students who were still classified as English Learners as of ninth grade graduated from high school at a slightly lower rate (82.2%) than students who had never been classified as English Learners (84.1%).

To learn more about how and why we disaggregate data by EL status, see the Figure 5 note and the Appendices.

High School Graduation by Disability Status

FIGURE 6

Four-year CPS high school graduation rates by disability category

2019–20 CPS ninth-grade cohort

Note: All CPS high school students, including charter and Options school students, were included in this analysis. Students were counted as high school graduates if they completed high school within four years of their first-time ninth-grade year of high school. While students who transferred between CPS schools were included in this analysis, Students who transferred to a non-CPS school during high school were excluded from this analysis. Please see the Appendices for details about the disability categories used in this table.

High School Graduation Rate by Disability Status — Key Points

- Among 2019–20 first-time ninth-graders, students with a learning disability graduated from high school within four years at a rate that approaches the four-year district average of 85.0%.
 - The four-year graduation rate for the 2,513 2019–20 CPS ninth-graders receiving services related to a learning disability was 81.8%.
- The four-year graduation rate for the 1,510 2019–20 CPS ninth-graders receiving services related to another disability was 55.9%.

An Individualized Education Program (IEP) is a legal document to provide a plan for services and supports for students with disabilities in public schools. There are also students with disabilities that are not captured by the IEP label alone. To learn how we disaggregate by disability status, see the Appendices.

CPS Immediate College Enrollment Rate

Among the CPS graduating class of 2023, 63% enrolled in a two-year or four-year college in the first summer or fall following high school graduation.⁷

For detailed information on how this metric is calculated, see the Appendices.

FIGURE 7
Immediate college enrollment of CPS graduates over time

Note: These are immediate college enrollment rates for all CPS high school graduates, including those who graduated high school in five or six years. When broadening the definition of enrollment to include students who first enrolled in the spring following their high school graduation, an additional 413 students (1.8%) from the high school class of 2023 enrolled in college, for a total first-year college enrollment rate of 65.1%. Due to rounding, individual rates may not sum exactly to the total rate displayed.

2023 CPS Immediate College Enrollment Rate — Key Points

- The four-year college enrollment rate has increased over time since 2010, but the two-year college enrollment rate has seen more fluctuations and decreased overall.
- In 2023, the four-year college enrollment rate increased 2.5 percentage points to an all-time high of 47.5%, while the two-year college enrollment rate declined slightly to 15.7%.

⁷ The To&Through Project's definition of immediate college enrollment differs from CPS's definition of college enrollment in that CPS includes spring enrollments as immediate enrollments. The figures in this report include only immediate summer and fall enrollments as immediate enrollments.

Immediate College Enrollment: Disaggregated Data

Immediate College Enrollment by Race/Ethnicity and Gender

FIGURE 8

Immediate college enrollment rates by race/ethnicity and gender

Note: These are immediate college enrollment rates for all CPS high school graduates, including those who graduated high school in five or six years. The number of students in each of the race/ethnicity and gender categories does not sum to the number of students in the “All students” category because there were some students whose specific race/ethnicity groups are not shown in the figure, but who are included in the overall numbers. Specifically, Native American/Alaskan Native students, Multiracial students, and students whose did not report their race/ethnicity are not shown because fewer than 100 students identified in each of those categories, making it difficult to reliably interpret rates. When combined together (in order to meet minimum cohort reporting sizes), Native American/Alaskan Native young women from the last three graduating classes (99 students) enrolled in a four-year college at a rate of 49.5% and enrolled in a two-year college at a rate of 21.2%. Native American/Alaskan Native young men from the last three graduating classes (84 students) enrolled in a four-year college at a rate of 44.0% and enrolled in a two-year college at a rate of 23.8%. Historically, data has been collected in a way that groups students into one of two categories: male and female. Starting in 2020–21, the gender categories in the CPS demographic questionnaire were: male, female, and non-binary; however, we are not currently reporting data on non-binary students due to small group sizes. Due to rounding, individual rates may not sum exactly to the total rate displayed.

Immediate College Enrollment Rate by Race/Ethnicity and Gender — Key Points

- Among 2023 graduates, young women of all race/ethnicity groups immediately enrolled in four-year colleges at a rate higher than young men within the same race/ethnicity category.
- Only 36.3% of Latino young men immediately enrolled in a four-year college, vs. the districtwide enrollment rate of 47.5%. However, Latino young men and Latina young women enrolled in two-year colleges at the highest rates among all groups (20.7% and 21.0% respectively, vs. a districtwide average of 15.7%).

To learn more about how we disaggregate by race/ethnicity and gender, see the Appendices. To track immediate college enrollment rates disaggregated by race/ethnicity and gender over time, see the [To&Through Milestones Tool](https://toandthrough.uchicago.edu/tool/): <https://toandthrough.uchicago.edu/tool/>.⁸

⁸ The [To&Through Milestones Tool](https://toandthrough.uchicago.edu/tool/) is a public resource that allows users to explore rates of educational attainment across a variety of metrics, for individual CPS schools and the district as a whole.

Immediate College Enrollment by English Learner Status

FIGURE 9

Immediate college enrollment rates by English Learner (EL) status

Note: These are immediate college enrollment rates for all CPS high school graduates, including those who graduated high school in five or six years. The “Former English Learners” category includes students who took the ACCESS test at any point after their entry into CPS and then later demonstrated English proficiency (scoring above the cut score) on the ACCESS test, and thus were no longer classified as active English Learners at any point during high school. The “Active English Learners” category includes students who were active English Learners at some point during high school. We define students who were never classified as English Learners as students who were never eligible to receive EL services, either because their native language was English or because they took the English proficiency screening test when they began school in CPS and scored high enough to be considered proficient in English. The three EL status categories do not sum to the total N for all students because some students are missing an EL status due to data anomalies. Students can exit out of EL status as early as the first year during which they were classified as English Learners, including if that year is kindergarten. CPS kindergarteners who were designated as English Learners and exited out of EL status at the end of kindergarten are included in former English Learners. Many students who began as English Learners exited out of EL status by the third grade. Furthermore, most students who began as English Learners exited out of EL status by the time they reached high school. About one in five students who began as English Learners remained classified as English Learners upon high school enrollment (de la Torre et al, 2019).

Immediate College Enrollment Rate by English Learner Status — Key Points

- Among 2023 high school graduates, students who were formerly classified as English Learners enrolled in college at a higher rate (70.2%) than students who were never classified as English Learners (62.6%).
- Students who were formerly classified as English Learners enrolled in a four-year college at a similar rate (51.0%) as students who were never classified as English Learners (49.6%), but enrolled in two-year college at a much higher rate (19.2%, compared to 12.9%).
- Students who were still classified as English Learners while in high school enrolled in a four-year college at a much lower rate (32.2%) than their peers, but had the highest two-year college enrollment rate (24.2%).

To learn more about how and why we disaggregate data by EL status, see the Figure 9 note and the Appendices.

Immediate College Enrollment by Disability Status

FIGURE 10

Immediate college enrollment rates by disability category

Note: These are immediate college enrollment rates for all CPS high school graduates, including those who graduated high school in five or six years. Please see the Appendices for details about the disability categories used in this table.

Immediate College Enrollment Rates by Disability Status — Key Points

- The immediate enrollment rate into two-year colleges was higher for students receiving services related to a learning disability (17.9%) than for students with no identified disabilities (15.5%).
- However, students with no identified disabilities immediately enrolled into four-year colleges at a higher rate (50.7%) than students receiving services related to a learning disability (30.4%) and over twice the rate of students receiving services related to another disability (23.4%).
- The immediate enrollment rate into four-year colleges differed by 7 percentage points between students receiving services related to a learning disability (30.4%) and students receiving services related to another disability (23.4%). Students with learning disabilities also enrolled in two-year colleges at a slightly higher rate than students with other disabilities.

To learn how we disaggregate by disability status, see the Appendices.

CPS College Completion Rate

Among the CPS graduating class of 2017, 54% of students who immediately enrolled in a four-year college and 31% of students who immediately enrolled in a two-year college completed a bachelor's degree, associate degree, or certificate within six years.

Figures 11 and 12 show the percentage of students who immediately enrolled in a four-year college or a two-year college, respectively, who completed a degree or certificate. **Figure 13** shows the percentage of delayed and non-enrollees⁹ who completed a degree or certificate. **Figure 14** shows the total *number* of students who immediately enrolled in college and their completion outcomes. We include completion rates through 2017 high school graduates because this is the most recent cohort for which we have six years of available college data. For detailed information on how this metric is calculated, see the Appendices.

⁹ We define delayed enrollees as graduates who delayed entry into college to the spring following high school graduation or later, and we define non-enrollees as graduates who did not enroll in college within six years of high school graduation.

FIGURE 11**Six-year college completion rates among immediate *four-year enrollees* over time***CPS graduating classes of 2010–17*

Note: These are college completion rates for CPS high school graduates who graduated high school within six years. Students are counted as having completed college if they completed a credential within six years of graduating from high school. For example, our 2015 rate includes all 2015 CPS graduates who completed a degree or credential by spring of 2021. The bachelor's degree category includes students who completed an associate degree or certificate in addition to their bachelor's degree. About 2.4% of 2016 CPS graduates who immediately enrolled in a four-year college completed both a bachelor's degree and an associate degree/certificate. Due to rounding, individual rates may not sum exactly to the total rate displayed.

2023 CPS Six-Year College Completion Rate Among Immediate Four-Year Enrollees — Key Points

- The proportion of high school graduates who immediately enrolled in a four-year college who completed a bachelor's degree has increased by about 2 percentage points since 2010, while the proportion who completed an associate degree or certificate has decreased by about one percentage point.
- One-half of 2017 CPS graduates (50.0%) who immediately enrolled in a four-year college completed a bachelor's degree within six years.

FIGURE 12**Six-year college completion rates among immediate two-year enrollees over time***CPS graduating classes of 2010–17*

Note: These are college completion rates for CPS high school graduates who graduated high school within six years. Students are counted as having completed college if they completed a credential within six years of graduating from high school. For example, our 2015 rate includes all 2015 CPS graduates who completed a degree or credential by spring of 2021. Although calculating a six-year completion rate for two-year programs is not standard, we do so here to maintain consistency with our other completion metrics. The bachelor's degree category includes students who completed an associate degree or certificate in addition to their bachelor's degree. About 6.7% of 2016 CPS graduates who immediately enrolled in a two-year college completed both a bachelor's degree and an associate degree/certificate. Due to rounding, individual rates may not sum exactly to the total rate displayed.

2023 CPS Six-Year College Completion Rate Among Immediate Two-Year Enrollees — Key Points

- Among immediate two-year college enrollees, 8.1% of 2017 graduates completed a bachelor's degree within six years (by 2023), and an additional 23.0% completed an associate degree or certificate.
- Among 2017 high school graduates who immediately enrolled in a two-year college, completion rates decreased slightly from the previous year to 31.1%, but remain over 5 percentage points higher than they were for 2010 high school graduates.
 - It's important to note that the high school graduating class of 2015 was the first class eligible for the [STAR Scholarship](https://pages.ccc.edu/apply/star/): <https://pages.ccc.edu/apply/star/> to City Colleges of Chicago.
- More than two thirds (68.9%) of immediate two-year college enrollees had not completed any credential by the end of six years.

FIGURE 13**Six-year college completion rates among *delayed and non-enrollees* over time***CPS graduating classes of 2010–17*

Note: These are college completion rates for CPS high school graduates who graduated high school within six years. Students are counted as having completed college if they completed a credential within six years of graduating from high school. For example, our 2015 rate includes all 2015 CPS graduates who completed a degree or credential by spring of 2021. We define delayed enrollees as graduates who delayed entry into college—including those who enrolled in the spring after their high school graduation—and non-enrollees as graduates who did not enroll in college within six years of high school graduation. The bachelor's degree category includes students who completed an associate degree or certificate in addition to their bachelor's degree. About 0.08% of 2016 CPS graduates who were delayed or non-enrollees completed both a bachelor's degree and an associate degree/certificate. Due to rounding, individual rates may not sum exactly to the total rate displayed.

2023 CPS Six-Year College Completion Rate Among Delayed/Non-Enrollees — Key Points

- Among CPS graduates who did not immediately enroll in college, only 1.8% completed a bachelor's degree within six years. An additional 2.5% of students who did not immediately enroll completed an associate degree or certificate.
- Six-year completion rates among students who did not immediately enroll in college have been declining since 2010, and declined further for 2017 CPS graduates to just 4.3%.

Figure 14 shows the total number of college enrollees and their completion outcomes for all high school graduates¹⁰ who immediately enrolled in either a two-year or four-year institution. To view this graph for students from different race/ethnicity groups, use the dropdown menu under the figure title.

¹⁰ Note that the total number of students enrolling in and graduating from CPS high schools has varied over time (see the numbers in the horizontal axis of Figure 3).

FIGURE 14

Number of immediate college enrollees and degree completion types

Immediate college enrollees and degree completion types, by high school graduation year, 2008–23

Note: In this figure, degree completion is defined as the completion of a bachelor's degree, associate degree, or certificate within six years of graduating high school. The six bars on the right are not divided into completion outcomes because data on six-year degree completion outcomes is not yet available for those cohorts of graduates. As an example of how to read this figure, the 2008 bar can be understood as follows: among high school graduates in 2008, 9,670 students immediately enrolled in college. Of those 9,670 immediate enrollees, 3,370 had completed a bachelor's degree by the end of six years after high school graduation (by spring 2014), 947 had completed an associate degree or certificate, and 5,353 had not completed a college credential.

Number of CPS Immediate College Enrollees and Degree Completion Types - Key Points

- 2,016 more graduates from the CPS class of 2017 completed a bachelor's degree than graduates from the CPS class of 2008, and additional 597 graduates earned associate degrees or certificates.
- Because many more CPS students are enrolling in college, and college completion rates remain at around 50% among those who enroll, there are 2,524 more graduates from the CPS class of 2017 enrolled in college but left college without having earned a degree as compared to the CPS class of 2008.
- Since 2017, the number of immediate college enrollees from CPS has decreased slightly, falling by over 1,000 students during the COVID-19 pandemic and remaining over 500 students below the peak of college enrollment from CPS in 2017. This decline is due to both a decline in enrollment rates, as well as smaller ninth grade class sizes.

College Completion: Disaggregated Data

College Completion by Race/Ethnicity and Gender

FIGURE 15

College completion rates by race/ethnicity and gender

CPS graduating class of 2017 immediate college enrollees

Note: Data for Multiracial, Native American/Alaskan Native, and students who didn't report their race/ethnicity in CPS records are not included because we suppressed rates for groups of fewer than 100 students to avoid reporting fluctuations in rates that do not reflect consistent trends in student outcomes. These are college completion rates for CPS high school graduates who graduated high school within six years. Students are counted as having completed college if they completed a credential within six years of graduating from high school. Historically, data has been collected in a way that groups students into one of two categories: male and female. Starting in 2020–21, the gender categories in the CPS demographic questionnaire were: male, female, and non-binary; however, we are not currently reporting data on non-binary students due to small group sizes. Due to rounding, individual rates may not sum exactly to the total rate displayed.

College Completion Rates by Race/Ethnicity and Gender — Key Points

- Among Black and Latino young men in the CPS graduating class of 2017, fewer than one-third of students who immediately enrolled in college completed a bachelor's degree within six years.
- Latina young women, Asian/Pacific Islander students, and White students completed a college degree or certificate at a rate higher than the CPS average in 2023.
- Young men were less likely to complete a college degree or certificate than young women of the same race/ethnicity.
- Latina young women were the most likely to complete an associate degree or certificate only.

To learn more about how we disaggregate by race/ethnicity and gender, see the Appendices. To track college completion rates disaggregated by race/ethnicity and gender over time, see the [To&Through Milestones Tool](https://toandthrough.uchicago.edu/tool/): <https://toandthrough.uchicago.edu/tool/>.^{11 12}

We are unable to provide a disaggregation of college completion rates for students who are English Learners or students with disabilities, due to the small numbers of students in each category.

¹¹ The [To&Through Milestones Tool](https://toandthrough.uchicago.edu/tool/) is a public resource that allows users to explore rates of educational attainment across a variety of metrics, for individual CPS schools and the district as a whole.

¹² We do not examine rates of college completion for students with disabilities because there is a relatively low number of immediate college enrollees among students in certain disability categories, and we suppress rates for groups of fewer than 100 students to avoid reporting fluctuations in rates that do not reflect consistent trends in student outcomes. To learn how and why we disaggregate by disability status, see the Appendices.

Appendix A: Additional Figures

This appendix provides more detail about how the Post-secondary Attainment Index (PAI) is calculated, and how the PAI and its components have changed over time. Additionally, this appendix provides the Bachelor's Degree Attainment Index (BDAI), which was the focus of older PAI reports. Breakdowns of the PAI and BDAI component rates by race/ethnicity and gender are also included here. Finally, this appendix provides college completion rates over time for all CPS high school graduates, regardless of their immediate college enrollment status. In past versions of the annual PAI report, some of this information was included in the main body of the report; it is now included in the appendix in order to provide a concise and brief webpage for the main body of the report.

FIGURE A.1
Post-secondary Attainment Index

The 2023 PAI is calculated using 2023 high school graduation rates, college enrollment rates for 2023 high school graduates, and rates of college completion for 2017 high school graduates according to the calculation shown in Figure A.1. We use these rates because they are the most recent available for each milestone.

For example, imagine a school district with the following rates:

High School Graduation in 2023:	80%
Immediate Four-Year Enrollment among 2023 Graduates:	50%
Rate of Completion among 2017 Graduates who Immediately Enrolled in a Four-Year College:	40%
Immediate Two-Year Enrollment among 2023 Graduates:	30%
Rate of Completion among 2017 Graduates who Immediately Enrolled in a Two-Year College:	20%
Rate of Completion among 2017 Graduates who did Not Immediately Enroll in College:	10%

This school district's 2023 PAI would be calculated as:

$$80\% \times [(50\% \times 40\%) + (30\% \times 20\%) + (20\% \times 10\%)] = 80\% \times (20\% + 6\% + 2\%) = 80\% \times 28\% = 22\%$$

PAI Over Time

Figure A.2 shows the PAI over time, in order to assess year-over-year changes in the most recent available rates of high school and college attainment. Note that the PAI is not intended to predict attainment for any one cohort of students. It presents a starting place for thinking about why patterns of educational attainment exist and what can be done to improve these patterns. Because the PAI combines data from multiple cohorts, it is best understood as a measure of progress over time, rather than as a point-in-time estimate for a particular cohort. Therefore, we recommend focusing more on long-term trends in the PAI than on year-to-year fluctuations. Figure A.2 also shows what the actual level of attainment was in each year. The PAI and the actual attainment level are different because the component rates changed between the time the PAI was calculated and the outcome year. In each year thus far, the actual attainment level was higher than the PAI because component rates had improved between the time the PAI was calculated and the outcome year.

FIGURE A.2
PAI Rates over time

Note: To calculate these historical rates, we applied the method that we used to calculate the 2023 PAI retroactively to all years of data, rather than using indices that were calculated in the past. For example, the 2023 PAI was calculated using the 2023 high school graduation rate, the 2023 college enrollment rates, and the college completion rates for 2017 high school graduates, so the PAI would be calculated using the high school graduation rate, the college enrollment rates, and the rates of completion for high school graduates. For rates of high school graduation, immediate college enrollment, and college completion used to calculate the PAI over time, see Table A.1.

Table A.1 shows the rates of high school graduation, immediate college enrollment, and college completion used to calculate comparable historical PAI rates over time.

Table A.2 shows the rates of high school graduation, immediate college enrollment, and college completion used to calculate comparable 2023 PAI rates for students in different race/ethnicity and gender groups.

Note that the high school graduation rates used in calculating the PAI are the four-year high school graduation rates, and the denominators of all college enrollment and completion rates are also limited to students who graduated from high school within four years. For this reason, the enrollment and completion rates used to calculate the PAI shown in Figure 1 do not match the enrollment and completion rates shown in Figures 7-15, which include CPS high school graduates who graduated high school in five or six years. The exact enrollment and completion rates used to calculate the PAI are available in Appendix A, Table A.1.

TABLE A.1
Component rates used to calculate the PAI over time

	4-year HS grad rate	Immediate 4-year college enrollment rate	Immediate 2-year college enrollment rate	Delayed/ non- enrollment rate	Degree completion for immediate 4-year enrollees	Degree completion for immediate 2-year enrollees	Degree completion for delayed enrollees	Post- secondary Attainment Index
2012 PAI	72.5%	40.3%	20.7%	39.1%	52.0%	23.3%	8.2%	21.0%
2013 PAI	75.4%	41.7%	21.3%	37.0%	53.2%	25.3%	8.7%	23.2%
2014 PAI	78.0%	42.7%	20.4%	37.0%	53.6%	25.7%	9.3%	24.6%
2015 PAI	78.7%	43.7%	18.4%	38.0%	54.7%	26.7%	9.1%	25.4%
2016 PAI	79.7%	45.3%	18.5%	36.2%	54.2%	26.6%	10.7%	26.6%
2017 PAI	80.3%	46.7%	21.6%	31.7%	53.6%	26.5%	10.1%	27.3%
2018 PAI	81.0%	44.8%	21.9%	33.3%	54.2%	27.3%	9.0%	26.9%
2019 PAI	82.2%	45.4%	20.6%	34.0%	54.0%	27.1%	8.1%	27.0%
2020 PAI	83.2%	44.4%	16.9%	38.6%	56.5%	29.1%	7.8%	27.5%
2021 PAI	81.9%	46.2%	15.9%	37.9%	56.8%	27.9%	7.9%	27.6%
2022 PAI	84.0%	48.1%	17.0%	34.9%	56.3%	33.5%	9.0%	30.2%
2023 PAI	85.0%	50.4%	16.1%	33.5%	55.3%	32.8%	8.4%	30.6%

PAI Disaggregated Component Rates

TABLE A.2

Component rates of the 2023 PAI by race/ethnicity and gender

	2023 CPS High School Graduates				2017 CPS Graduates			Post-secondary Attainment Index
	4-Year HS grad rate	Immediate 4-year college enrollment rate	Immediate 2-year college enrollment rate	Delayed/ non-enrollment rate	Degree completion for immediate 4-year enrollees	Degree completion for immediate 2-year enrollees	Degree completion for delayed/ non-enrollees	
All students	85.0%	50.4%	16.1%	33.5%	55.3%	32.8%	8.4%	30.6%
Asian/ Pacific Islander young women	95.8%	72.1%	9.2%	18.7%	84.4%	63.6%	14.8%	66.6%
Asian/ Pacific Islander young men	93.0%	68.3%	12.9%	18.8%	79.0%	48.2%	9.4%	57.6%
Black young women	85.4%	53.6%	10.2%	36.2%	45.5%	22.2%	2.9%	23.7%
Black young men	78.1%	42.1%	10.3%	47.7%	29.1%	17.5%	3.0%	12.1%
Latina young women	87.9%	52.4%	21.3%	26.4%	63.2%	40.4%	7.7%	38.4%
Latino young men	82.8%	38.7%	21.6%	39.7%	47.6%	28.1%	4.1%	21.6%
White young women	92.5%	72.5%	10.6%	16.9%	83.6%	47.1%	13.3%	62.7%
White young men	90.0%	62.2%	14.6%	23.2%	75.3%	47.4%	6.0%	49.7%

Note: We include completion rates for 2017 high school graduates because this is the most recent cohort for which we have six years of available college data.

Bachelor's Degree Attainment Index

For the past several years, in addition to calculating the annual PAI, the To&Through Project and the UChicago Consortium have calculated two bachelor's degree attainment indices, which project the proportion of current CPS ninth-graders who will complete a bachelor's degree within 10 years, if the district's current rates of high school graduation, college enrollment, and bachelor's degree completion do not change.

The first of these two attainment indices, the Direct Bachelor's Degree Attainment Index (DBDAI), projects the proportion of current CPS ninth-graders that will go on to complete a bachelor's degree through a direct pathway by graduating high school within four years, *enrolling immediately in a four-year college in the fall after graduation*, and then completing a bachelor's degree within six years.

The second, the Bachelor's Degree Attainment Index (BDAI), accounts for students who do not take a direct path, projecting the proportion of the current CPS ninth-graders that will go on to complete a bachelor's degree within 10 years of their ninth-grade year of high school through any post-graduation pathway, including immediate enrollment in a two-year college or delayed entry into college.

Table A.3 shows the rates of bachelor's degree completion for immediate four-year enrollees, immediate two-year enrollees, and delayed/non-enrollees that are used to calculate the BDAI for different race/ethnicity and gender groups. Only the rates for immediate four-year enrollees in **Table A.3** are used to calculate the DBDAI.

TABLE A.3
Component rates of the 2023 BDAI by race/ethnicity and gender

	Bachelor's degree completion rate for immediate four-year enrollees (2017 HS graduates)	Bachelor's degree completion rate for immediate two-year enrollees (2017 HS graduates)	Bachelor's degree completion rate for delayed/non-enrollees (2017 HS graduates)	Direct Bachelor's Degree Attainment Index	Bachelor's Degree Attainment Index
All students	50.0%	8.1%	1.8%	20.2%	21.9%
Asian/Pacific Islander young women	80.6%	22.2%	12.1%	54.7%	59.0%
Asian/Pacific Islander young men	75.3%	17.0%	3.9%	46.0%	48.9%
Black young women	41.0%	5.2%	1.0%	17.6%	18.4%
Black young men	25.9%	4.7%	1.1%	7.7%	8.5%
Latina young women	57.1%	9.3%	2.6%	25.0%	27.4%
Latino young men	42.7%	5.9%	1.1%	12.8%	14.2%
White young women	80.2%	21.8%	6.9%	52.6%	55.9%
White young men	72.1%	16.7%	4.2%	39.2%	42.3%

Figure A.3 shows college completion rates over time for all CPS high school graduates. For college completion rates for CPS graduates grouped by their college enrollment status immediately after high school graduation, see the Completion section of the report.

FIGURE A.3

Six-year college completion rates among all high school graduates

CPS graduating classes of 2010–17

Note: These are college completion rates for CPS high school graduates who graduated high school within six years. Students are counted as having completed college if they completed a credential within six years of graduating from high school. For example, our 2015 rate includes all 2015 CPS graduates who completed a degree or credential by spring of 2021. The bachelor's degree category includes students who completed an associate degree or certificate in addition to their bachelor's degree. Fewer than 3% of 2017 CPS graduates completed both a bachelor's degree and an associate degree/certificate. Due to rounding, individual rates may not sum exactly to the total rate displayed.

Appendix B: Data Sources

Information on student demographics and high school graduation is from CPS administrative records, which are shared with the UChicago Consortium through its Master Research Services agreement with the district. All data are available for charter school students. Data from the National Student Clearinghouse (NSC) are used for all college enrollment and completion rates. NSC data has many limitations, including incomplete coverage at the student and institutional levels, but is the best available source of student-level data on college enrollment and completion data for CPS graduates.¹³ The NSC houses records on enrollment and post-secondary credentials for colleges throughout the United States, and covers 98% of all post-secondary enrollments nationally.

Data Definitions

Throughout this report, the year refers to the spring of the school year (e.g., 2020 refers to the 2019–20 school year). We have suppressed rates for groups of fewer than 100 students to avoid reporting fluctuations in rates that do not reflect consistent trends in student outcomes.

Ninth-Grade Cohorts

Students were considered first-time ninth-graders and included in the ninth-grade cohort if they had never before been enrolled in a CPS high school and if they either 1) were actively enrolled as a ninth-grader on the 20th day of the school year or 2) enrolled as ninth-grader after the 20th day of the school year and remained enrolled long enough to receive course grades. Students who enrolled in a charter school after the 20th day were included in the first-time ninth-grade cohort, even though we do not know if they remained enrolled long enough to receive grades. For the calculation of high school graduation rates, students who transferred into CPS after ninth grade were retroactively included in the cohort in which they would have been a ninth-grader and were assigned to the first CPS high school they enrolled in.

High School Graduation

The four-year high school graduation rate is the proportion of students in an adjusted, first-time ninth-grade cohort who earned either a regular high school diploma or a diploma from an Options high school within four years, including the summer after their fourth year. For the calculation of high school graduation rates, students who transferred into CPS after ninth grade were retroactively included in the cohort in which they would have been a ninth-grader and were assigned to the first CPS high school in which they enrolled.

College Enrollment

College enrollment refers to the proportion of graduates who enrolled directly in college in the summer or fall following spring or summer high school graduation. Data on college enrollment come from the NSC, which houses enrollment and graduation records for colleges throughout the United States. This does not include students who delayed college entry. Enrollments from North Park University are missing from 2020 and 2021 rates. In 2019, North Park University enrollees comprised around 1% of all immediate enrollees from CPS.

Two-year enrollee

Students who enroll in a two-year college the fall after graduating from high school.

Four-year enrollee

Students who enroll in a four-year college the fall after graduating from high school.

Delayed/non-enrollee

Students did not enroll in college the fall after graduating from high school. Delayed enrollees include students who delayed entry into college, but did enroll at some point within six years of high school graduation. Non-enrollees include students who did not enroll in college within six years of high school graduation.

College Completion

College completion refers to the proportion of two-year and four-year college enrollees who completed a degree or certificate within six years of high school graduation. Data on college completion comes from the NSC. Students who enrolled in a college that does not provide graduation records to the NSC, or whose records are suppressed due to FERPA or other reasons, were not included in these rates.

¹³ See [Nagaoka & Mahaffie \(2020\)](#) for more information.

College Types

Two-year College

Institutions classified in the IPEDs data as having only programs that are less than four years.

Four-year College

Institutions classified in the IPEDs data as having programs that are four years or higher.

English Learners

While reporting data on active English Learners calls attention to students in need of the most support, excluding former English Learners obscures the success of students who reach English proficiency. Assessing the performance of the district in supporting English Learners across their educational trajectories requires understanding the average high school and college attainment for students who began as English Learners. Therefore, we disaggregate four-year high school graduation rates and immediate college enrollment rates by whether students began as English Learners or were never classified as English Learners.

We identify students as English Learners based on whether they took the ACCESS test of English proficiency and whether they reached proficiency on the test—not whether they were actually receiving services. Because ACCESS is required by the state for all English Learners, this allows us to include both English Learners who received services and those who did not.

This method of classification draws from the method of classification originally used by [de la Torre, Blanchard, Allensworth, & Freire \(2019\)](#). However, their analysis only includes students who were continuously enrolled in CPS from kindergarten through eighth grade, and defines “students who began as English Learners” as students who were designated as English Learners based on the ACCESS test when they entered CPS as kindergarteners. The method of classification used in our analysis differs insofar as we include students who entered CPS during or after kindergarten, and we define “students who began as English Learners” as those who took the ACCESS test at any point after their entry into CPS.

In the future, we hope to report on college completion outcomes for students who began as English Learners and track their high school and college attainment over time. We cannot currently report on rates of college completion for students who began as English Learners because the earliest CPS ninth-grade cohort for which kindergarten ACCESS test scores are available is the 2016 ninth-grade cohort, and we use a six-year time frame after high school graduation to track students’ college outcomes.

ACCESS test

ACCESS assesses social and academic English proficiency and is administered to students as early as kindergarten. Students who are English Learners take the test once annually until they reach a score that meets the proficiency benchmark. The ACCESS test is different from the screener test used to determine if students are eligible for English Learner services. For more details, see: isbe.net/Pages/ACCESS-for-ELLs.aspx.

In the 2015–16 school year, ACCESS 2.0 replaced the existing ACCESS test. This new test was more aligned to standards of college and career readiness and therefore more rigorous. Further, the cut score used to determine proficiency also changed over the years. This means that ACCESS test scores prior to the 2015–16 school year should not be compared to scores on the ACCESS 2.0 test. These changes to the test may also result in trend lines that show a spike in the number of students identified as English Learners in the 2015–16 school year.

Students who began as English Learners

Students who took the ACCESS test of English proficiency at any point during their time in CPS. This category includes students who later became former English Learners by demonstrating English proficiency (scoring above the cut score) on the ACCESS test, as well as students who remained as active English Learners throughout high school.

Students who were never classified as English Learners

Students who were never eligible to receive EL services, either because their native language was English or because they scored high enough on the English proficiency screener test—which is different from the ACCESS test—when they entered CPS to be considered proficient in English.

Gender

Historically, data has been collected in a way that groups students into one of two categories: male and female. Starting in 2020–21, the gender categories in the CPS demographic questionnaire were: male, female, and non-binary; however, we are not currently reporting data on non-binary students due to small group sizes. We hope in the future to be able to report data that more fully and accurately describes the identities of CPS students.

Options Students

CPS describes Options schools as “designed to offer a unique learning model for students who are not engaged in a traditional high school and seek an alternative pathway to graduation that leads to college and career success.” Options schools may be known as “alternative schools” in other districts. For more information about Options schools and students, see the report [Bhatt \(2021\): https://urbanlabs.uchicago.edu/projects/data-insights-from-chicago-s-options-schools](https://urbanlabs.uchicago.edu/projects/data-insights-from-chicago-s-options-schools).

Post-secondary Attainment Index

PAI provides an estimate of the proportion of ninth-graders who will earn any college degree or certificate within 10 years of starting high school. The PAI accounts for students who delay college entry or enroll in a two-year college; in addition, it accounts for students who do not earn a bachelor’s degree, but do earn an associate degree or certificate. The PAI uses current rates of high school graduation, any college enrollment, and any college completion.

Race/Ethnicity

Reported data are grouped into four race/ethnicity categories: Asian/Pacific Islander, Black, Latinx, and White. The “Latinx” category is composed of people who self-identified as Hispanic or Latino, regardless of which race they selected. All other race/ethnicity categories are composed of people who identified as not Hispanic or Latino, and the category is based on the race they selected. CPS changed its race/ethnicity categories in 2010–11 to include a Multiracial option, and the Asian/Pacific Islander category was split into two categories: Pacific Islander/Hawaiian and Asian. Our groupings by race/ethnicity include Pacific Islander/Hawaiian students in one Asian/Pacific Islander category, due to the small number of CPS students who are Pacific Islander/Hawaiian. Native American/Alaskan Native and Multiracial students are not shown because fewer than 100 students identified their race/ethnicity in this category, making it difficult to reliably interpret rates. The racial categories available in our data are limited and therefore do not accurately reflect the full spectrum of races and ethnicities embodied by CPS students.

Appendix C: CPS Disability Categories

Definitions

Thousands of students in each ninth-grade cohort have one or more documented disabilities. Students with disabilities are often treated as a single group, however, students' disabilities vary widely in type and extent. As a result, their experiences in school and attainment rates are also far from homogeneous.

In this analysis, we disaggregate rates of six-year high school graduation based on whether students have an Individualized Education Plan (IEP) related to a disability.¹⁴ We report rates for three groups of students: students with IEPs related to a specific learning disability, students with other IEPs, and students without IEPs. After conversations with CPS's Office of Diverse Learner Supports and Services, we decided to report rates with these categories because students with learning disabilities represent a plurality of students with IEPs and because finer categorizations of IEPs have changed over time. The "students with other IEPs" category includes students with a wide range of disabilities, including physical, cognitive, and behavioral disabilities.

The definitions of the 16 categories of disability present in CPS administrative data are below. These definitions can be found in the CPS Procedural Manual: Guidance on Providing Special Education and Related Services to Students with Disabilities Pursuant to the Individuals with Disabilities Education Act (IDEA), published in August 2021.¹⁵ Students with IEPs related to any disability other than Specific Learning Disability (SLD) are included in the Other IEP category.

Autism

A developmental disability significantly affecting verbal and nonverbal communication and social interaction, generally evident before age three that adversely affects a child's educational performance. Other characteristics often associated with autism are engagement in repetitive activities and stereotyped movements, resistance to environmental change or change in daily routines, and unusual responses to sensory experiences. The term does not apply if a child's educational performance is adversely affected primarily because the child has an emotional disability.

Deaf/Blindness

The student exhibits concomitant hearing and visual impairments, the combination of which causes severe communication, developmental, and educational needs that cannot be accommodated by special education services designed solely for students with either deafness or children with blindness.

Deafness

A hearing impairment that is so severe that the child is impaired in processing linguistic information through hearing, with or without amplification that adversely affects a child's educational performance.

Emotional Disability

(This includes schizophrenia but does not apply to children who are socially maladjusted, unless it is determined that they have an emotional disability.)

A condition exhibiting one or more of the following characteristics over a long period of time and to a marked degree that adversely affects a child's educational performance:

- An inability to learn that cannot be explained by intellectual, sensory, or health factors;
- An inability to build or maintain satisfactory interpersonal relationships with peers and teachers;
- Inappropriate behavior or feelings under normal circumstances;
- A general pervasive mood of unhappiness or depression; or
- A tendency to develop physical symptoms or fears associated with personal or school problems.

Hearing Impairment

An impairment in hearing, permanent or fluctuating, that adversely affects a child's educational performance but that is not included under the definition of deafness.

¹⁴ If a student is identified by the district as having one or more disabilities, we categorize the student into only one of these four groups based on the primary disability type designated by CPS. A student's primary disability is designated by CPS during the services eligibility determination process, during which an IEP team determines whether a student is eligible for services under Individuals with Disabilities Education Act (IDEA).

Intellectual Disability

(Mild, Moderate, Severe/Profound)

Cognitive development significantly below that of their typically developing peers, existing concurrently with deficits in adaptive behavior and manifested during the developmental period, that adversely affects a child's educational performance.

Multiple Disabilities

Concomitant impairments (such as intellectual disability-blindness or intellectual disability-orthopedic impairment, etc.), the combination of which causes severe educational needs that cannot be accommodated in special education programs solely for one of the impairments. *(Does not include deaf-blindness.)*

Other Health Impairment

Limited strength, vitality, or alertness, including a heightened alertness to environmental stimuli that results in limited alertness with respect to the educational environment due to chronic or acute health problems such as a heart condition, asthma, sickle cell anemia, hemophilia, epilepsy, lead poisoning, attention deficit hyperactivity disorder (ADHD), leukemia, diabetes, rheumatic fever, or Tourette syndrome, and adversely affects a child's educational performance.

Physical (Orthopedic) Impairment

A severe orthopedic impairment that adversely affects a child's educational performance. The term includes impairments caused by congenital anomaly. The term includes impairments caused by a congenital anomaly, disease or other cause (e.g., cerebral palsy, amputation, fractures, or burns).

Specific Learning Disability (SLD)

A disorder in one or more of the basic psychological processes involved in understanding or in using language, spoken or written, that may manifest itself in the imperfect ability to listen, think, speak, read, write, spell, or to do mathematical calculations, including conditions such as perceptual disabilities, brain injury, minimal brain dysfunction, dyslexia and developmental aphasia.

Speech or Language Impairment

A communication disorder, such as stuttering, impaired articulation, a language impairment, or a voice impairment that adversely affects a child's educational performance.

Traumatic Brain Injury

An acquired injury to the brain, caused by an external force. This injury results in total or partial functional disability, or psychosocial impairment, or both, that adversely affects a child's educational performance. This term does not apply to brain injuries that are congenital, degenerative or induced by birth trauma.

Visual Impairment

An impairment in vision that, even with correction, adversely affects a child's educational performance *(includes both partial sight and blindness).*

About

The University of Chicago Consortium on School Research (UChicago Consortium)

The UChicago Consortium: <https://consortium.uchicago.edu/> conducts research of high technical quality that can inform and assess policy and practice in the Chicago Public Schools. We seek to expand communication among researchers, policymakers, and practitioners as we support the search for solutions to the problems of school reform. The UChicago Consortium encourages the use of research in policy action and improvement of practice, but does not argue for particular policies or programs. Rather, we help to build capacity for school reform by identifying what matters for student success and school improvement, creating critical indicators to chart progress, and conducting theory-driven evaluation to identify how programs and policies are working.

The To&Through Project

In collaboration with educators, policymakers, and communities, the [To&Through Project](https://toandthrough.uchicago.edu/): <https://toandthrough.uchicago.edu/> aims to significantly increase high school and post-secondary completion for under-resourced students of color in Chicago and around the country by providing education stakeholders with research-based data on students' educational experiences and facilitating dialogue on its implications for adult practice. At the To&Through Project, we:

- Conduct research and publish data on what matters for the attainment of Chicago Public Schools students (in collaboration with the University of Chicago Consortium on School Research).
- Design data tools and resources for education stakeholders that make data meaningful and actionable, including the publicly available To&Through Online Tool.
- Foster conversations about what matters most for students' high school and post-secondary success.
- Facilitate a network of middle grades educators committed to building more equitable and supportive educational environments that promote the success of middle grades students in high school and beyond.

The To&Through Project is located at the University of Chicago Urban Education Institute in the Crown Family School of Social Work, Policy, and Practice.

This report reflects the interpretation of the authors. Although the UChicago Consortium's Steering Committee provided technical advice, no formal endorsement by these individuals, organizations, the full Consortium, or the To&Through Project, should be assumed.
