Worked at eBay, Yahoo, now Google

5 Google TVs as GIFTS

## Google TV

**01** Introduction to Google TV (What?)

02 Opportunities to Participate

03 Getting Started

# Product Overview

## Introduction to Google TV

### Google TV

#### Google TV is an operating system

- Android 3.2 (Honeycomb) optimized for TV devices (e.g. TV, STB, BD player, buddy-box)

#### Google TV openly accessible

- Google Chrome browser (full internet access)
- Google Play (open platform for TV apps)
- Android SDK (tools/ APIs for developing apps)

### Seamlessly integrates TV, web, and apps

#### Google TV integrates web and apps into TVs

- enables access to TV screen for content providers and app developers

#### Linear TV remains at center of experience

- Simple and easy-to-use UI
- Seamless integration with existing TV set-up (no switching between inputs necessary)

▶ Google TV is an open operating system that seamlessly integrates TV, web, and apps

5

# Apps and web on the TV

## Introduction to Google TV

### Google Play

#### Google TV has Google Play

- allows users to browse and download TV optimized apps published by third parties

#### Developers can build an Android app for TV

- create new or optimize existing Android app
- publish on Google Play
- promote, distribute, and monetize

### Chrome browser

#### Google TV has a full Chrome browser

- allows users to easily browse the web and access TV optimized websites

#### Developers can optimize web site for TV

- develop Web app using modern HTML5, CSS, JavaScript platforms
- optimize UI, sound, navigation

▶ Two easy ways to directly access the TV screen via Google TV: Android Apps and Web Apps

6

# Significantly improved version 2

## Introduction to Google TV

Better, simpler UI

Google Play for TV-optimized apps

All applications

Chrome Browser for full internet access

# GTV v2: Home

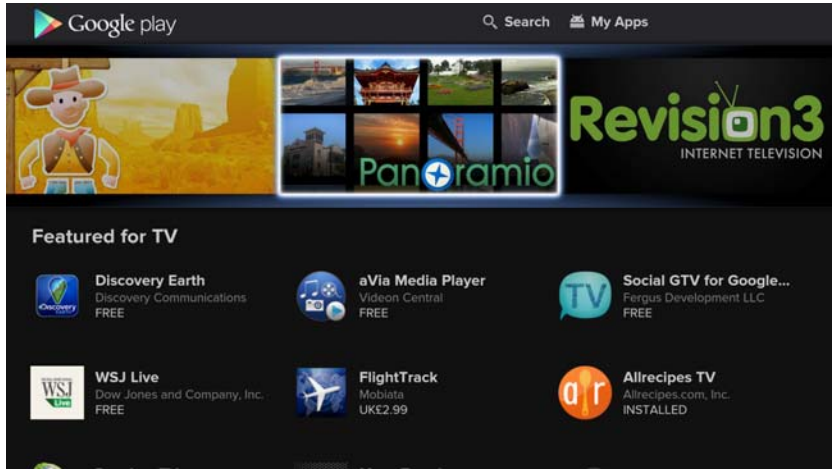

## Introduction to Google TV

▶ Home screen is simple, easy-to-use, and customizable by users

# GTV v2: Google Play

## Introduction to Google TV

▶ Access to Google Play, an open application platform for TV apps

9

# GTV v2: All Applications

## Introduction to Google TV

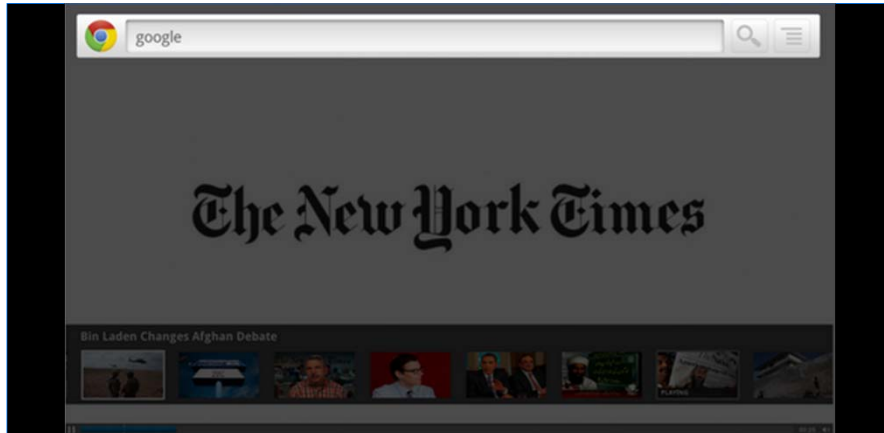

▶ All Applications shows downloaded and installed apps

10

# GTV v2: Chrome browser

## Introduction to Google TV

▶ Chrome Browser enables open access the web displays general internet content as well as TV optimized Web Apps (e.g. "The New York Times"-App)

11

# Sony's Google TV boxes

## Introduction to Google TV

Internet TV Blu-ray Disc player powered by Google TV

• With the **NSZ-GP9**, search everything with the world's first Internet TV Blu-ray Disc player powered by Google TV

### What's the Wow?

•All in one network home entertainment with a Sony Internet TV box powered by Google TV

### Highlights

- Find your favorite content easy thanks to the new touch-pad remote control
- Use your Smartphone as a remote control with Sony's Media Remote app

Network Media Player powered by Google TV

• Sony's new **NSZ-GS7** Netbox will upgrade your HDTV, providing you with full internet capabilities thanks to Google TV

### Virtual Input Devices

Google TV Remote

Able Remote

## Smart TV: Multi-Screen Experience

## Google TV Agenda

01 Introduction to Google TV

**02** Opportunities to Participate (Why?)

03 Getting Started

## You all know this guy....

Friday, April 20, 12

17

## America's #1 Past Time:

Friday, April 20, 12

2.9 TVs per household Nielsen

~5 hr TV watching daily Nielsen

500M web enabled TVs by 2015 Source Crave Asia, July, 2011

18

# Work with a compelling solution

## Opportunities to Participate

### Build once and for all

#### Develop for multi screens

- Android compatibility across devices (TV, tablet, smart phone)

#### Build across devices

- access to devices (TVs, STBs, BD players etc.) of div. manufacturers

#### Obtain global reach

- easy internationalization

### Work with known platforms

#### Android software framework

- incl. access to known APIs and development tools

#### Google Play for app publishing

- incl. monetization tools (e.g. in-app payments)

#### Full Chrome web browser

- work on HTML5 to build Web Apps

### Benefit from innovation

#### Create a multi-screen experience

- enable phones, tablets and other devices to interact with Google TV

#### Work on latest TV software

- tap into rapid pace of innovation
- maintain backwards compatibility

▶ Google TV makes it easy to manage applications across screens and devices

19

# Promote, distribute and monetize

## Opportunities to Participate

### Paid Apps

#### Sell your Android app

- price relative to your category and region to optimize sales
- in-app payments in addition possible

### In-app Payments

#### Monetize within Android apps

- in-app purchases can include add-ons, game tokens, music, video, and other content

#### Grant authenticated access

- authenticate access to content via an app
- more views, higher ratings, more monetization opportunities

### Advertising

#### Advertise on the TV screen

- all current ad formats supported
- no associated fees or revenue share

#### Innovate with new ad formats

- host innovative targeted ads in apps or on websites
- use third party advertising

▶ Promotion and distribution for content, products, and brands  
 ▶ Monetization opportunities (in-app payments, authenticated access, paid apps, in-app ads)

20

# Google TV

## Agenda

01 Introduction to Google TV

02 Opportunities to Participate

03 Getting Started (How?)

03 Getting Started (How?)

A Development Options: Web vs Android

B Setup and Configuration

C UX Design, Best Practice, All That

## Two Development Options Web vs Android Javascript vs Java

### Web: Optimized sites for Google TV (For Web Developers)

# TV Optimization

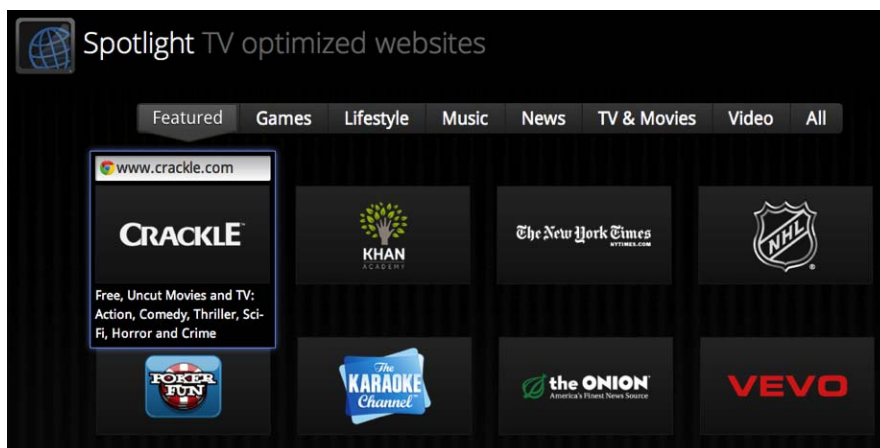

# TV Optimization !

# TV Optimization !

- 
- 
- 
-

# Creating Android Apps

**03**

Getting Started (How?)

A

Development Options: Web vs Android

**B**

Setup and Configuration

C

UX Design, Best Practices, All That

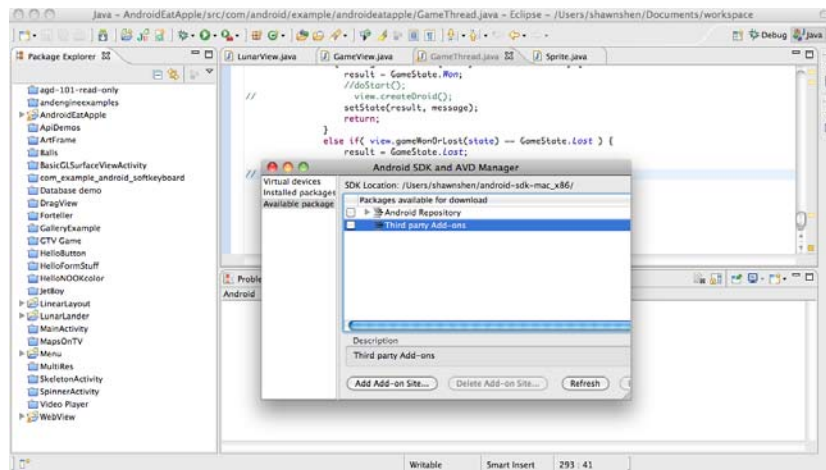

## Android Setup

- Install the Android SDK
- Install Google TV Add-on for Eclipse
- Set up Google TV Boxes

33

34

## Configuring Google TV

The screenshot shows a sequence of settings screens on a Google TV interface. The path taken is: Options (Home icon) > System settings > Settings > Development > Debugger IP address. In the 'Debugger IP address' dialog, the IP address '192.168.1.32' is entered into a text field. Below the field are 'Set' and 'Cancel' buttons. Other visible settings include 'Remote debugging', 'Mock locations', and 'Applications'.

35

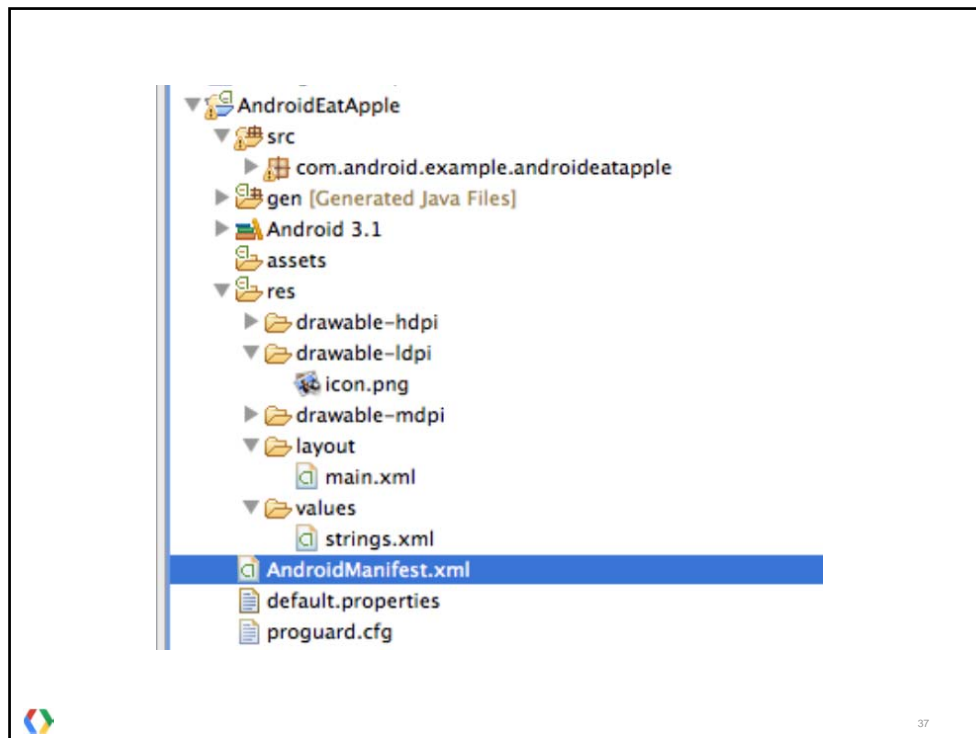

## Connecting from DevBox to Google TV

Command: adb connect 192.168.1.24

The screenshot shows a sequence of settings screens on a Google TV interface. The path taken is: Options (Home icon) > System settings > Settings > Network > Status. The 'Status' screen displays the following network information:

Category	Status
IP address	192.168.1.24/24 (Ethernet cable)
Ethernet MAC address	1c:6f:65:74:66:32
Wi-Fi MAC address	Unavailable
Local network	Connected
Internet	Connected
Ethernet	Connected to the Internet

36

## Manifest and Google TV

- Apps filtered for Google TV Android Market
- No Touch
  - `<uses-feature android:name="android.hardware.touchscreen" android:required="false"/>`
- Landscape
  - `<uses-feature android:name="android.hardware.screen.portal" android:required="false"/>`
- GPS
  - `<uses-feature android:name="android.hardware.location.gps" android:required="false"/>`
    - zip code available to LocationManager

**03** Getting Started (How?)

A Development Options: Web vs Android

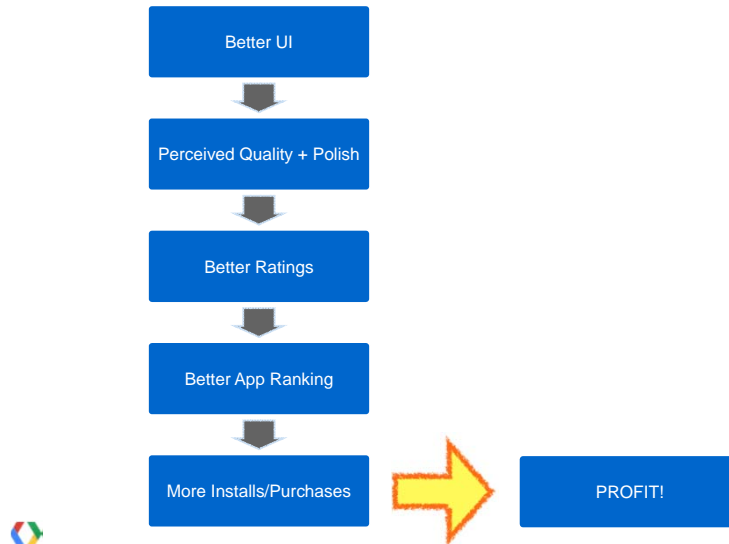

B Setup and Configuration

**C** UX Design, Best Practices, All That

# UX Design & Guidelines

## Why do you care?

41

## 10' UI

- Traditionally for consuming content
- Viewing experience is a mix of computer and TV
- TV's have high-quality sound
- Requires simple and visible navigation tools.

42

## Tips for a Good 10' Experience (cont.)

- Use pure white sparingly use #F1F1F1
- Simplify category navigation
- Distinction between selected and focus should be clear and predictable.
- Use Animation to help users understand what's going on.

43

## UI Design Tips

- Not "just" a big screen Android
- Focus on vital parts of your application
  - Group content, controls & interactions by priority (use progressive disclosure)
- Throw out the non-essential (keep it simple)
- Multiple screens better than overloading users
- Design using fluid layout and scalable assets (9-patch images)
- Have a simple mental model
- Consider hiring an interaction designer

44

## UI Design

- Dark background
- BOLD fonts
- Short lines
- Increased Line Spacing

45

## Social Device

- TVs are used by multiple people, often simultaneously
- Think about how you protect a users private data.
- Consider supporting Multiple accounts.

46

# TV specific guidelines

Let's take a Simple UI...

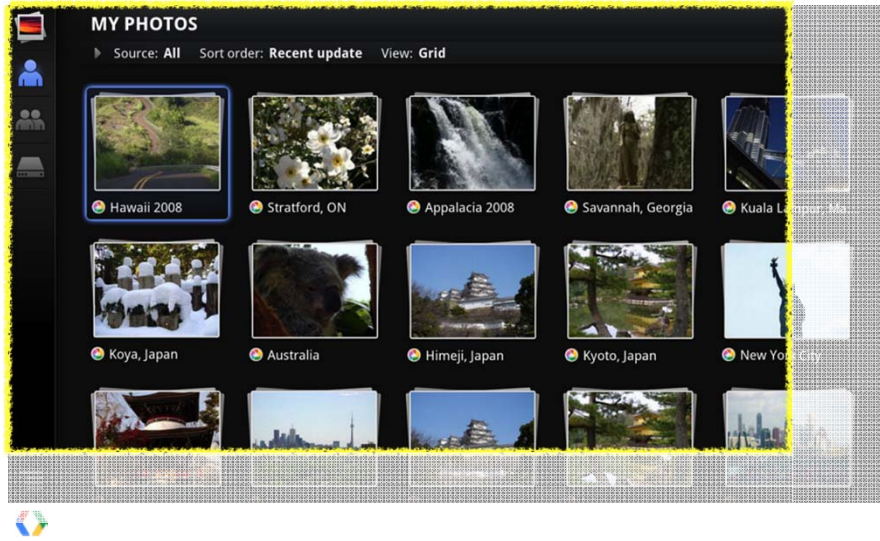

# “Safe Area” for a 720p Video

# Overscan

# Overscan

# Where this fails "horribly"

## Scale Background

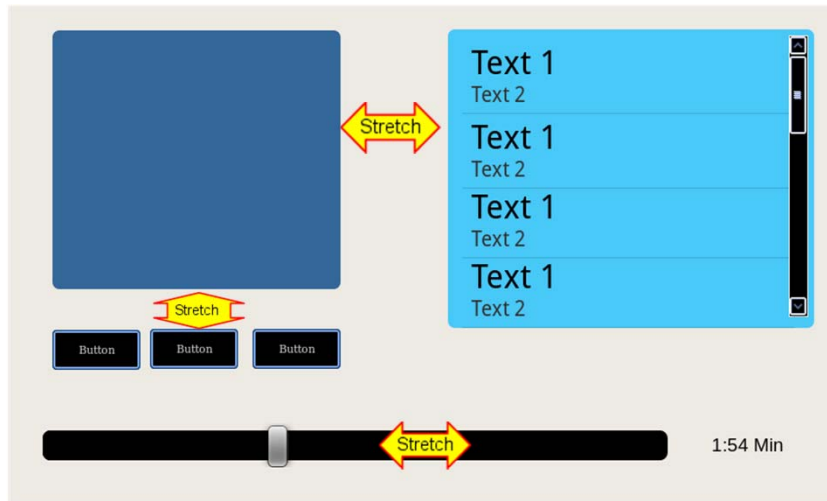

53

## Better: Cropping

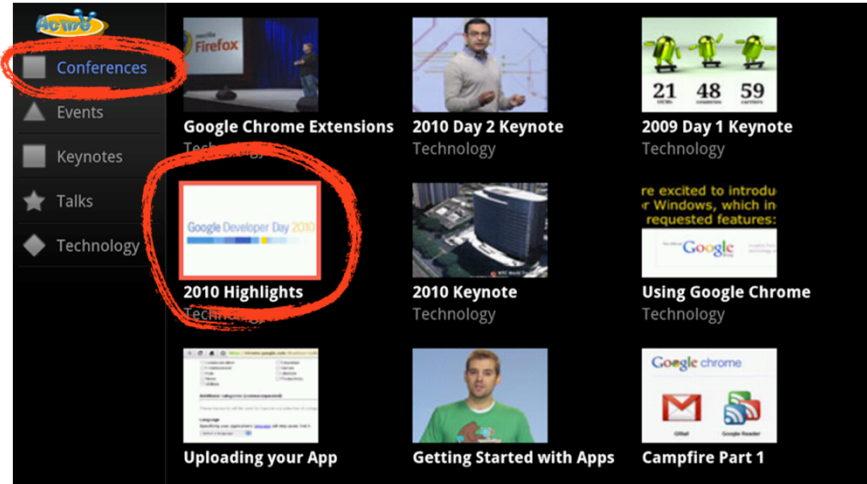

54

## Best: Use Fluid Layouts

## Design Patterns

## Selection and Focus

57

## Selection and Focus

- android:focusable
- Show selection & focus (state list)

```
<selector> <item android:drawable="..."
android:state_focused="false"
android:state_selected="true" />
  <item android:drawable="..."
android:state_focused="true"
android:state_selected="false" />
  <item android:drawable="..."
android:state_focused="true"
android:state_selected="true" /></selector>
```

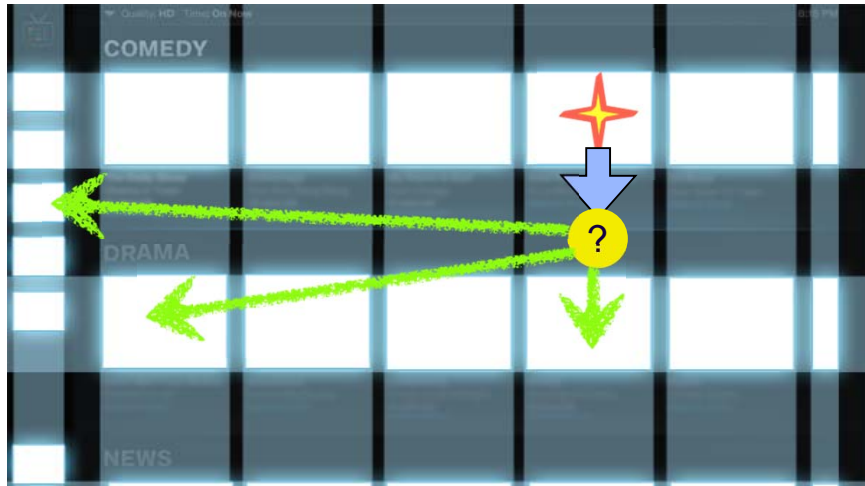

58

## Focus and Navigation

59

## Grid Pattern for Navigation

60

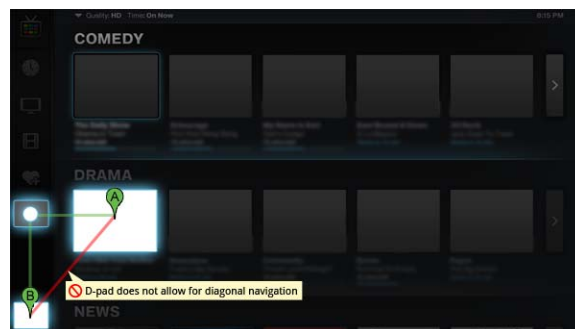

## Focus (cont.)

`android:nextFocusDown`  
`android:nextFocusLeft`  
`android:nextFocusRight`  
`android:nextFocusUp`  
`android:nextFocusForward` [tab]  
`requestFocus()` [default focus;an element]

61

## Scrolling Alignment and Grid Layout

62

## Design your Activities with Zones

63

## Desirable Zone & Pattern Organization

64

## Undesirable Zone & Pattern Layout

65

## Best Practices

## Listen to your users

- Public beta alpha
- Release early, release often
- Provide a place for feedback

## Listen to your users

Content Performance			
Pageviews	Unique Pageviews	Avg. Time on Page	Bounce R
<b>32,171,724</b>	<b>6,310,205</b>	<b>00:17:59</b>	<b>43.31%</b>
% of Site Total: 100.00%	% of Site Total: 100.00%	Site Avg: 00:17:59 (0.00%)	Site Avg: 4
Page	Pageviews ↓	Unique Pageviews	
1. /refresh_earthquakes	25,505,418	3,834,412	
2. /exception_parsing_feed	3,508,268	621,731	
3. /application_created	1,350,416	820,078	
4. /map_view	592,940	319,004	
5. /list_view	529,530	305,304	
6. /widget_enabled	410,780	190,433	
7. /menu_refresh	150,740	121,481	
8. /menu_preferences	45,775	38,485	
9. /quake_detail_dialog	22,166	16,872	
10. /exception_cursor_to_quake	16,507	14,760	

## Google Analytics for Android

- Track every Activity
- Track settings
- Track exceptions and errors

```
// Start tracking
tracker.start("UA-MY_CODE-XX", this);

// Register a page view
tracker.trackPageView("/map_view");

// Send views to server
tracker.dispatch();
```

69

## Be Responsive

Don't block the  
UI Thread

70

## Be fast

- No I/O on the UI thread!
- No serious computing either
- Use StrictMode
- Learn about `AsyncTask` and `IntentService`

What's NOT on: Workaround

## Typical TV Applications

- Better Program Guide
- Overlay IMs / Social over TV
- Embed TV inside your App

73

## User Location

Get the device's **Geo Coded Postal Code**.

```
android.permission.ACCESS_COARSE_LOCATION
```

```
LocationManager lm = (LocationManager)  
    this.getSystemService  
        (Context.LOCATION_SERVICE);
```

```
Location loc =  
    lm.getLastKnownLocation("static");
```

# Channel Listing & Changing

Channel Listing Content Provider

`com.google.android.tv.permission.READ_CHANNELS`

`content://com.google.android.tv.provider/channel_listing`

<code>_ID</code>	<code>channel_name</code>	<code>callsign</code>	<code>channel_number</code>	<code>channel_uri</code>
1	CNBC	CNBC	401	[tv uri]
2	Discovery Channel	DSC	445	[tv uri]
3	KQED	KQED	500	[tv uri]
...	...	...		...

... so you want to Overlay on top of TV

Consider Android Toasts

Think about `Toast.setView (View v)`

Remember `Toast.setBackgroundColor`

(keep in mind - Transparent IS a color)

Consider `Toast.setDuration`

... you want to embed TV in your View

Don't Do it.

It is not supported, and it WILL break.

77

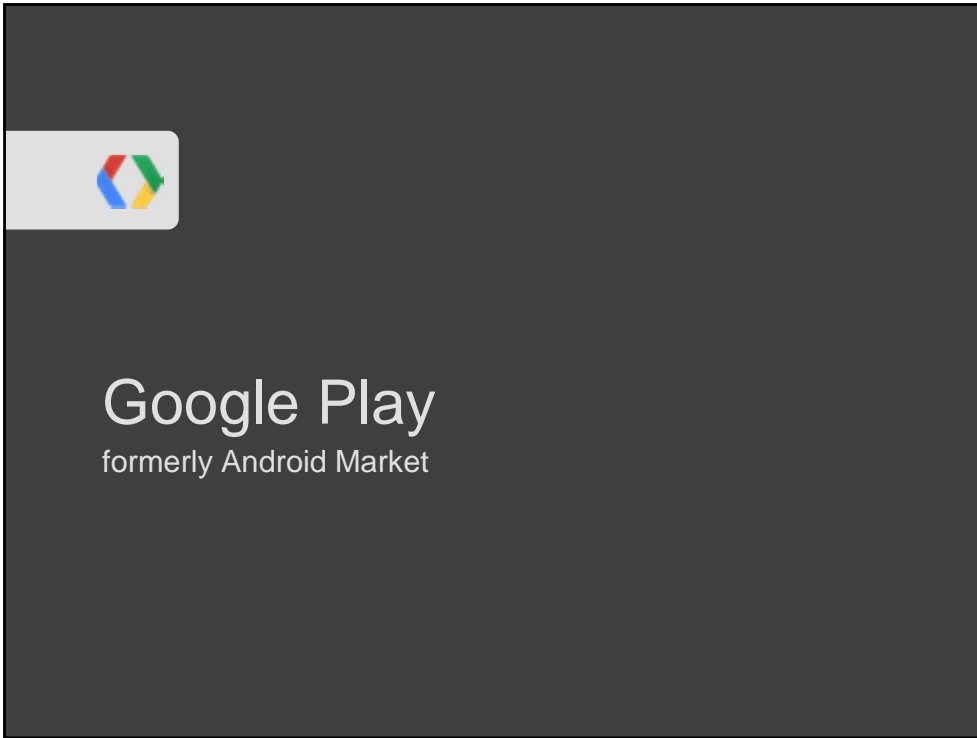

But....

Read: <http://en.wikipedia.org/wiki/HDCP>

<http://code.google.com/p/googletv-issues/>

78

## What Is Google Play?

App marketplace for compatible Android devices

2

80

## Google Play is Open for Business

- Publish anytime, as many times as you want
- Users have access to your apps right away
- Available for compatible Android devices

81

## Easy for Developers

- Android SDK
- Development resources
- Developer Advocates

- Create profile & register
- Developer Distribution Agreement
- Setup merchant account

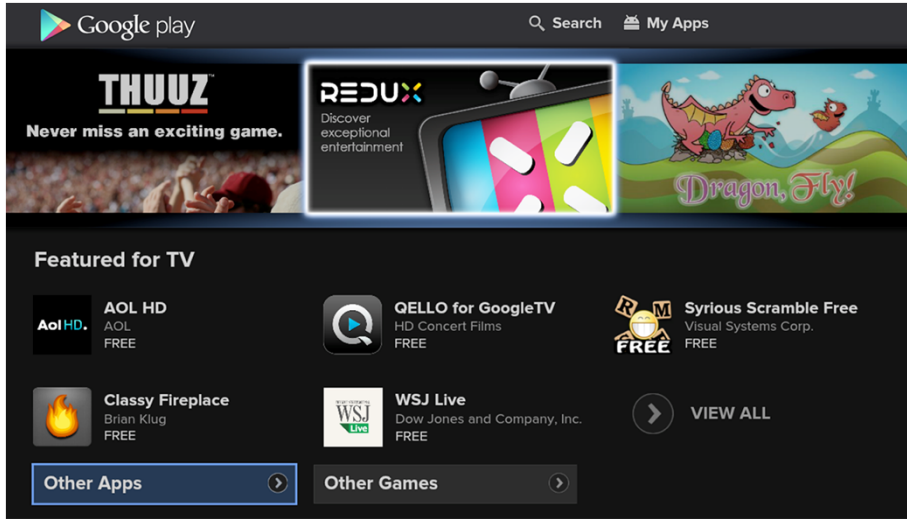

- Sign & upload .apk
- Filtering options
- Marketing & promotions

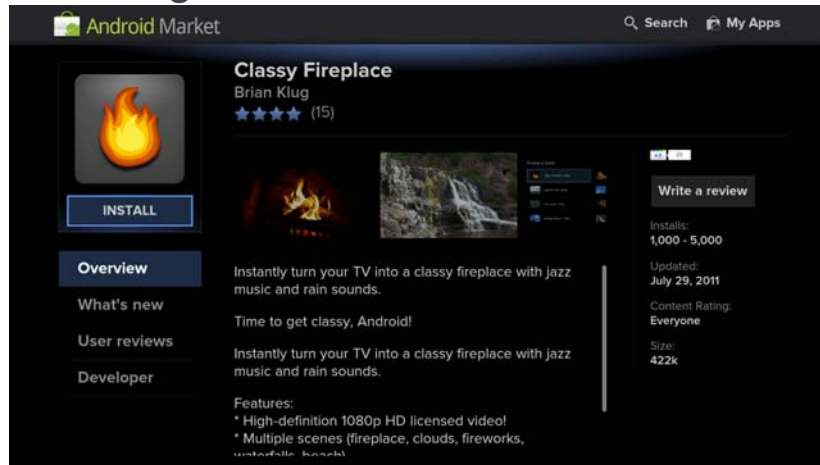

82

## The Google Play Store on Google TV

83

## Installing

84

## Designed for Flexibility

- **Capability targeting**
  - Platform version, Screen size & density, OpenGL ES version, Hardware/software features, GL texture-compressions format, ABI
- **Business targeting**
  - Countries and carriers
- **Support for multiple apks**
  - Platform versions, Screen sizes & densities, Texture compression formats
- **Device availability list – based on app manifest file**
  - Show all supported devices for published or draft apps
  - Option to exclude specific devices if need be
- **Detailed stats**
  - Country, Language, Screen size, OS version
  - Comparison against other apps in the same category
- **Large Apps**
  - Support for large apps – 50MB app package + up to two 2 GB archives

85

## “Special” Features

- android.hardware.touchscreen
  - Only feature required by default
  - Must be disabled for apps destined for Google TV

```
<uses-feature
android:name="android.hardware.touchscreen"
android:required="false" />
```

XML

- com.google.android.tv
  - Can be used to target a class of devices

```
<uses-feature
android:name="com.google.android.tv"
android:required="target" />
```

XML

86

## Checking Your App's Manifest

```
$ aapt dump badging MyApplication.apk
```

CL

```
package: name='com.example.mysweetapp' versionCode='1' versionName='1.0'  
sdkVersion:'12'  
targetSdkVersion:'13'  
uses-permission:'android.permission.INTERNET'  
uses-permission:'android.permission.ACCESS_NETWORK_STATE'  
uses-feature:'com.google.android.tv'  
uses-feature-not-required:'android.hardware.touchscreen'  
...
```
