Threats to long-term assets

- Large-scale disaster
- Human error
- Media faults

Long-term content suffers from more threats than short-term content

- Component faults
- Economic faults
- Attack
- Organizational faults
- Media/hardware obsolescence
- Software/format obsolescence
- Lost context/metadata

SIRF: logical container format

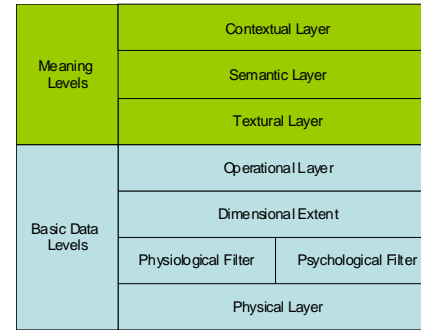

- Being developed by SNIA
 - For long-term storage of digital information
- Logical data format of a mountable unit
- Facilitate transparent logical/physical migration for long-term preservation
- Several implementations envisioned
 - Preservation models, storage interfaces, storage devices, etc.

Metadata Layer Model

- We need a consumer metadata standard that obeys 4 criteria:
 - Flexible
 - Scalable
 - Upgradable
 - Simple
- Plus something that can also integrate the professional standards

Symbiotic Relationship Flash and HDDS

- Almost all consumer flash applications require HDDs
 - Music and video players
 - Cameras
- Consumer flash applications have created greater demand for HDDs
 - Downloads
 - Uploading photos and videos
 - Backup of Consumer Content

In the next decade

- A terabyte in your pocket
- A petabyte in your home
- Exabytes in datacenters
- Zetabytes in the world

44

Preservation storage formats

- We can't predict the future
 - Systems will change, formats will change, systems will fail
- Preservation objects need to be
 - **Self contained** – to ensure objects are complete
 - **Self describing** – so software can interpret it
 - **Extensible** – so it can meet future needs
- A preservation storage format must
 - Facilitate storage of preservation objects
 - Map to a wide variety of storage devices and technologies
 - Be resilient to failures and change
