

# Ethernet Tech Day Key Note

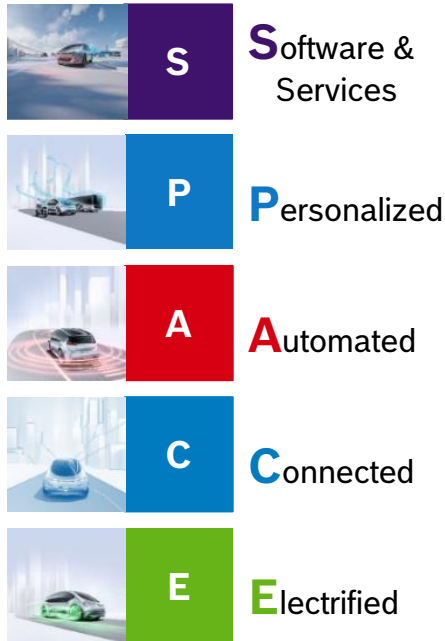

18.09.2023, Axel Kirschbaum,  
Robert Bosch GmbH

# SW driven, Personalized, Automated, Connected and Electrified cars need new E/E-architectures to address important needs

SPACE changes...

...customer and OEM needs; which needs to be addressed by...

...a new E/E-architecture

Fast and easy integration of updates, upgrades / new features

Manage EE architecture complexity

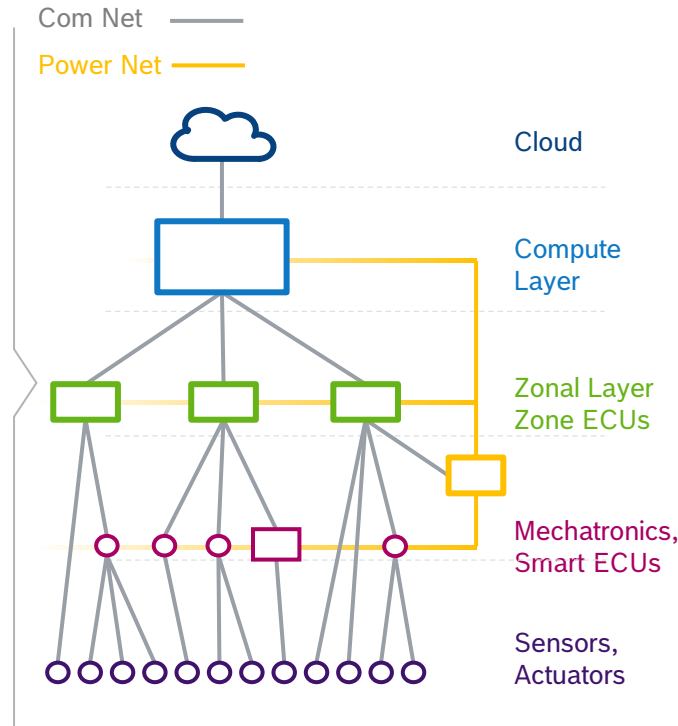

Improve multi-party collaboration for cross-domain features

Get ready for the future!  
Enable SdV!

Resource efficiency (power consumption, weight, size, bus-load, memory, ...)

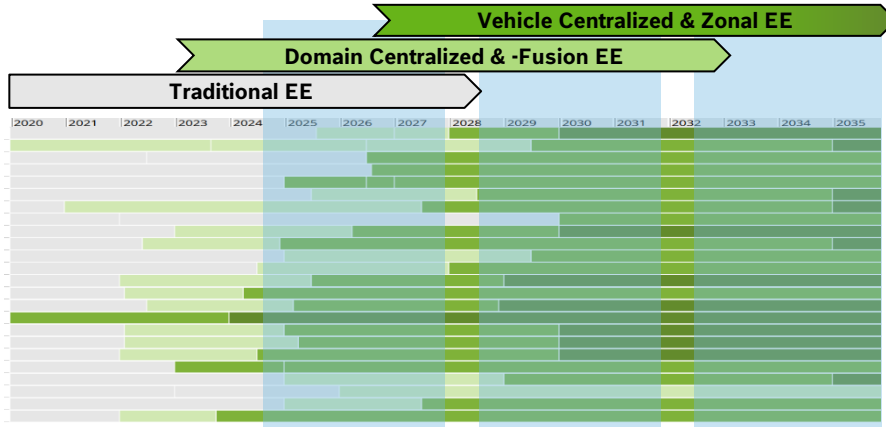

Security & Safety (ensure freedom of interference, OBD, ...)

Enable UX features and smarter vehicles with deep in vehicle data access

# E/E-Architectures & product evolution towards “True North” Vehicle Centralized & Zonal EE

Customer & Architectures

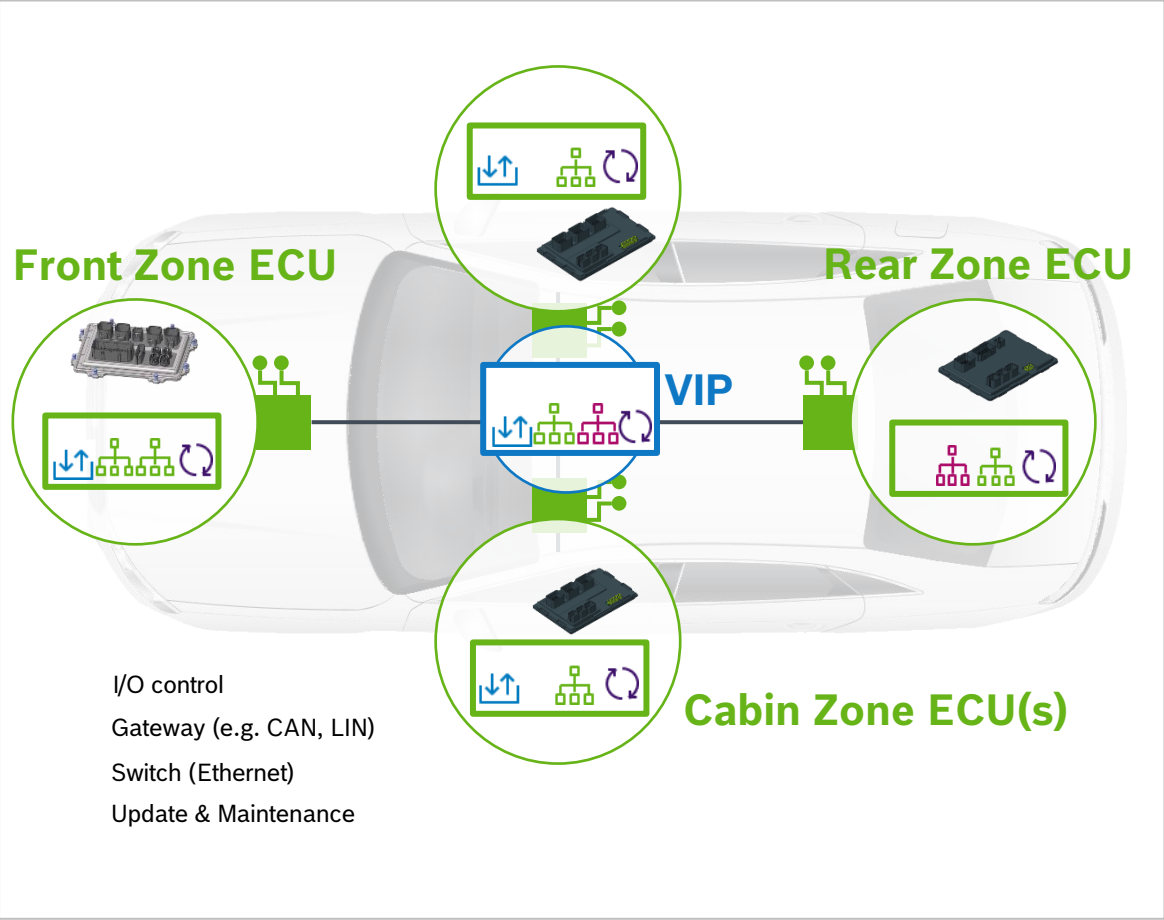

WW PC vehicles

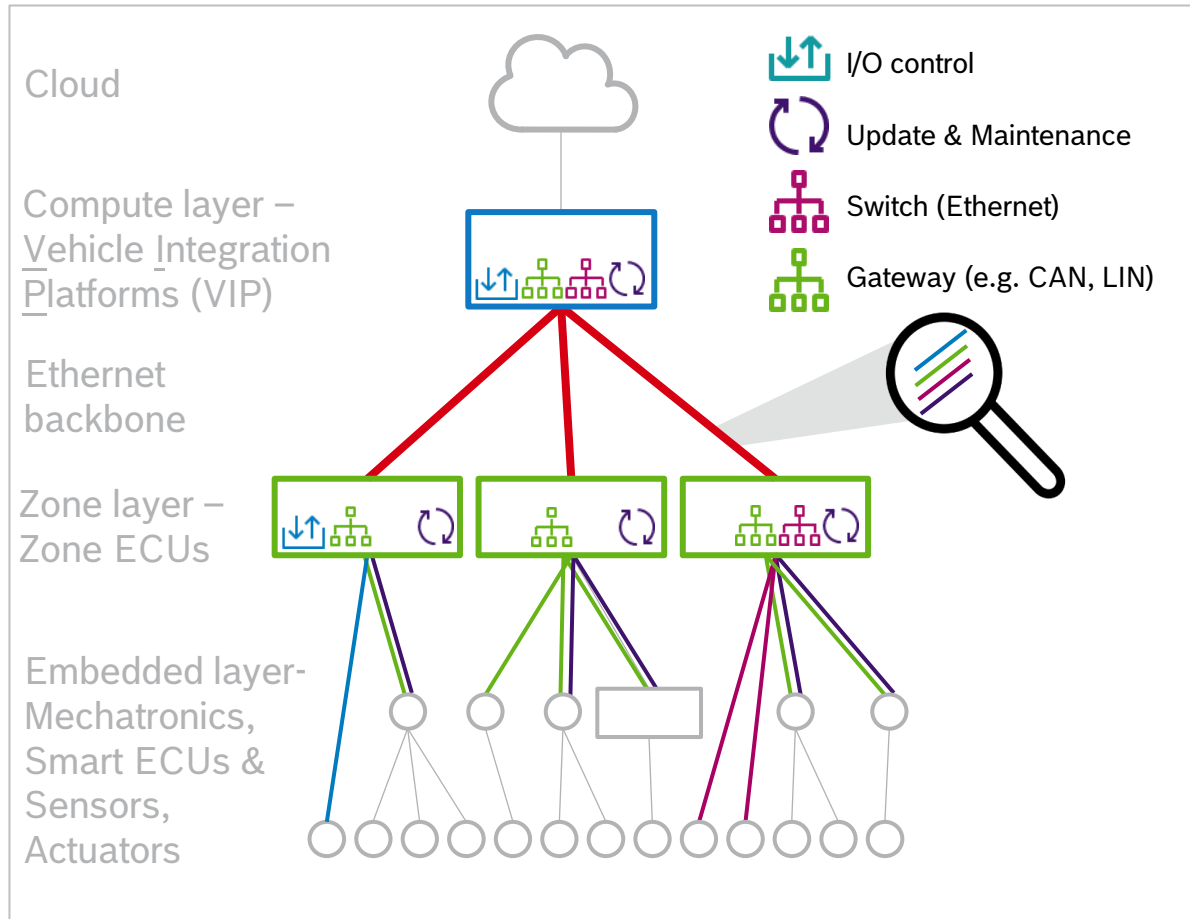

Products & Competencies

# Prerequisite for performant, safe, secure OPs of Zone architecture is best ComNet performance between VIP & Zone ECU

# Single Ethernet backbone – different communication patterns

Data and Services

HW Acceleration / Routing

Configuration / Flexibility

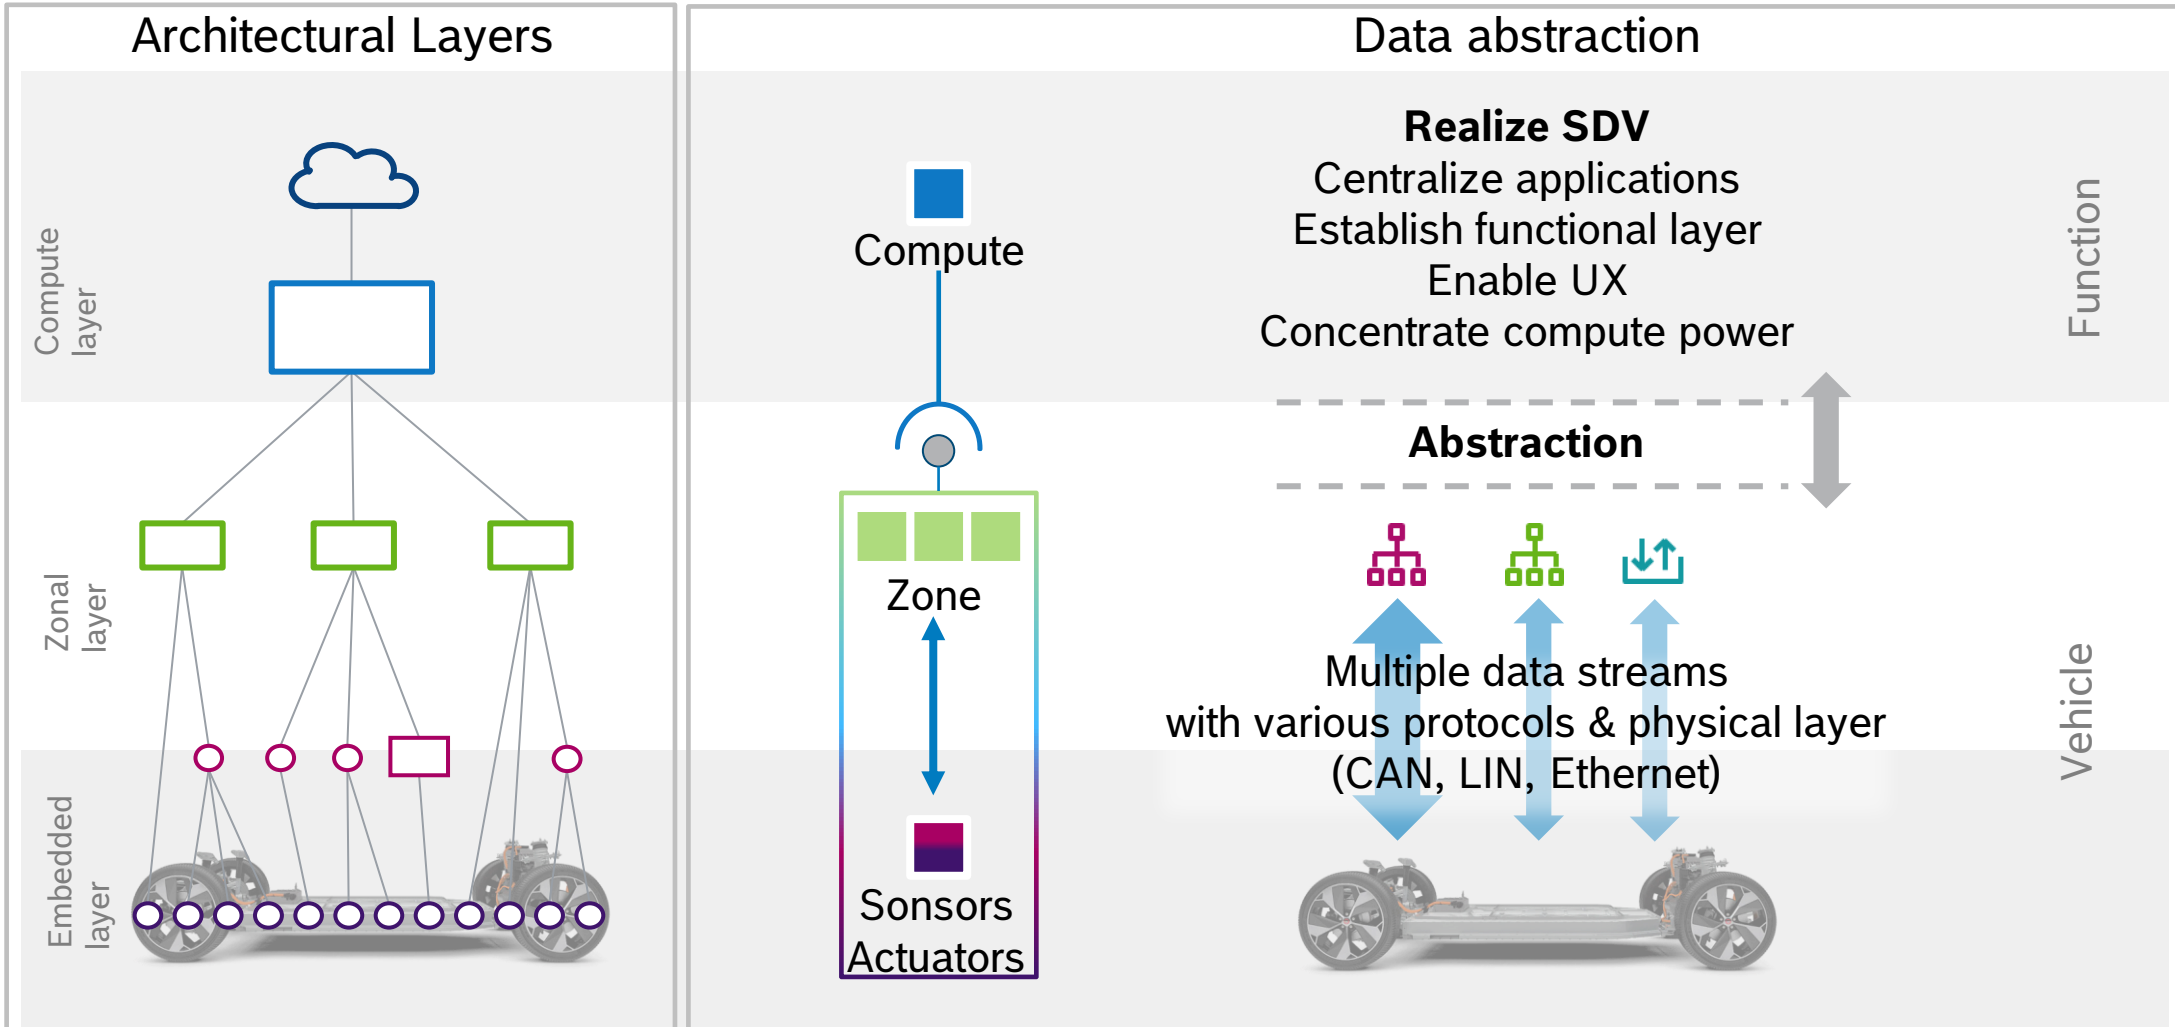

Design and Simulation

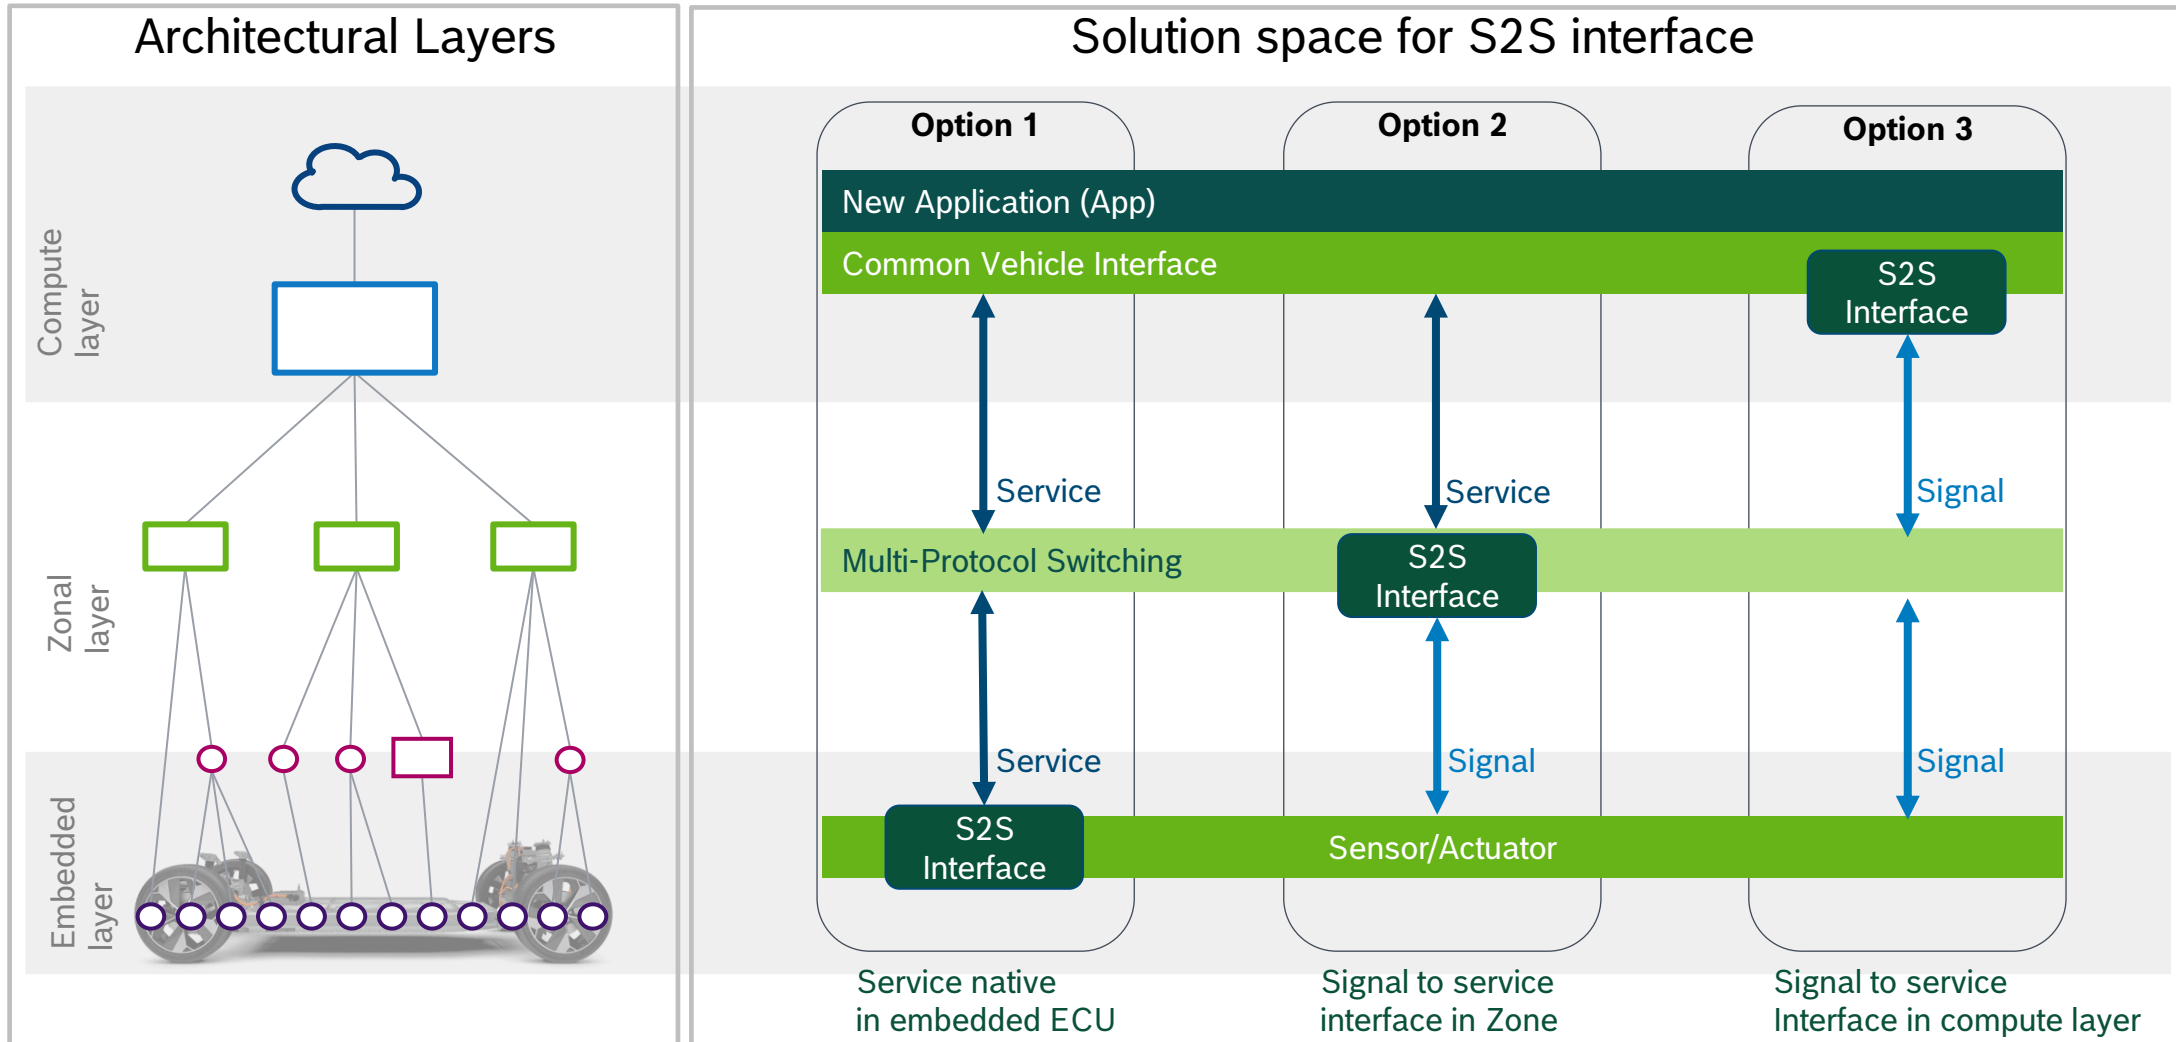

# Data and Services

# Data and Services

# Options for S2S interface

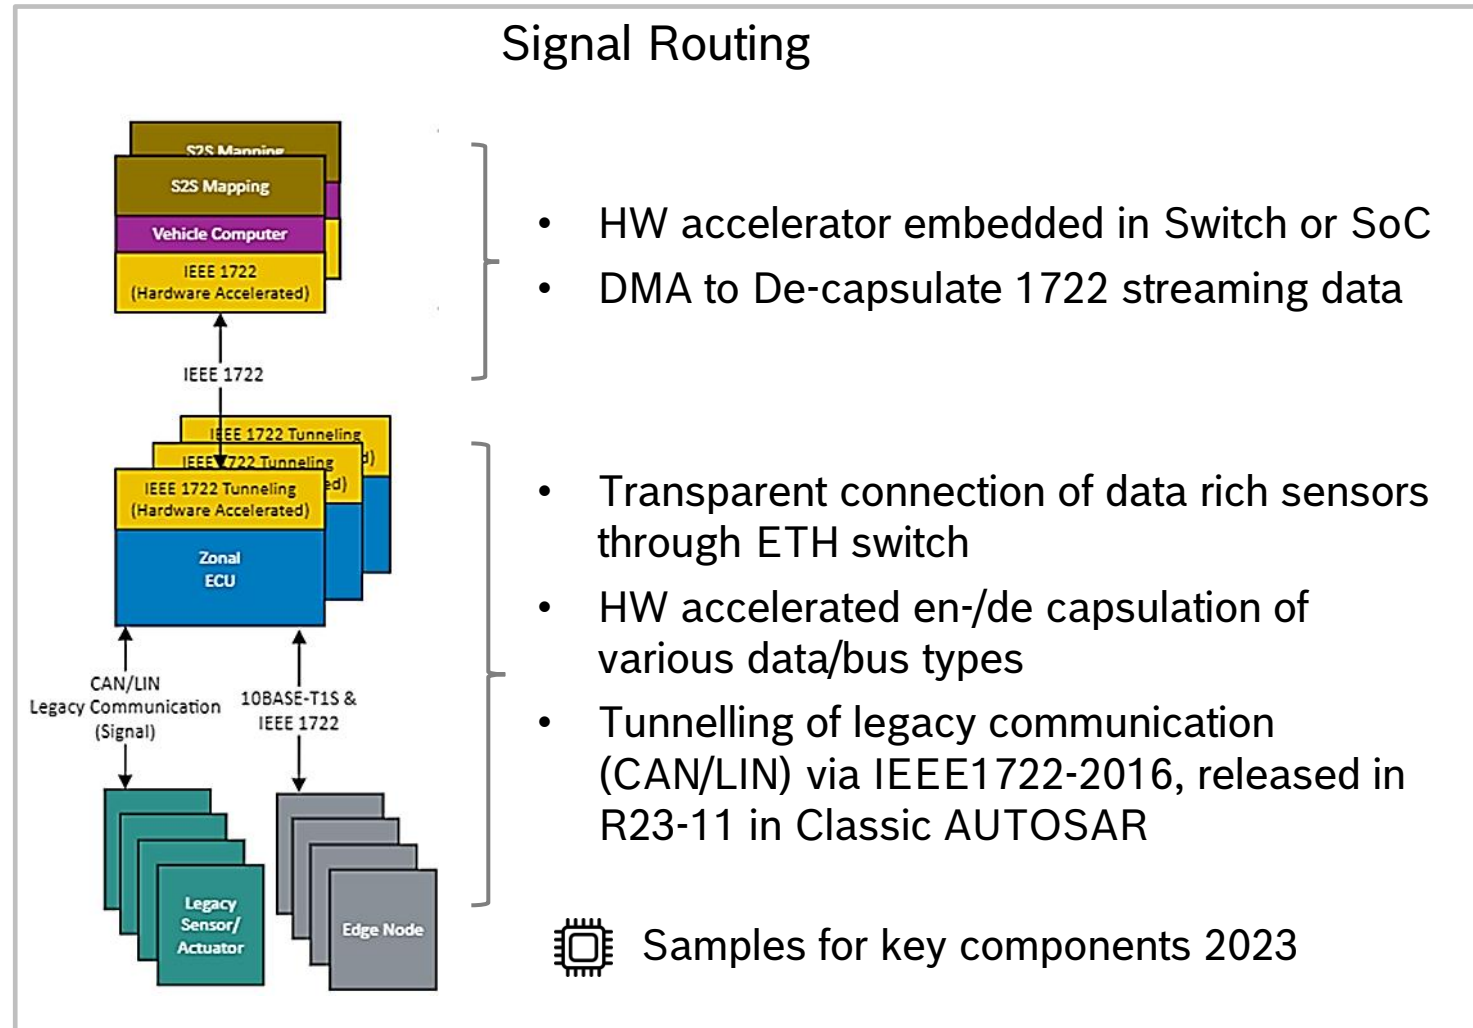

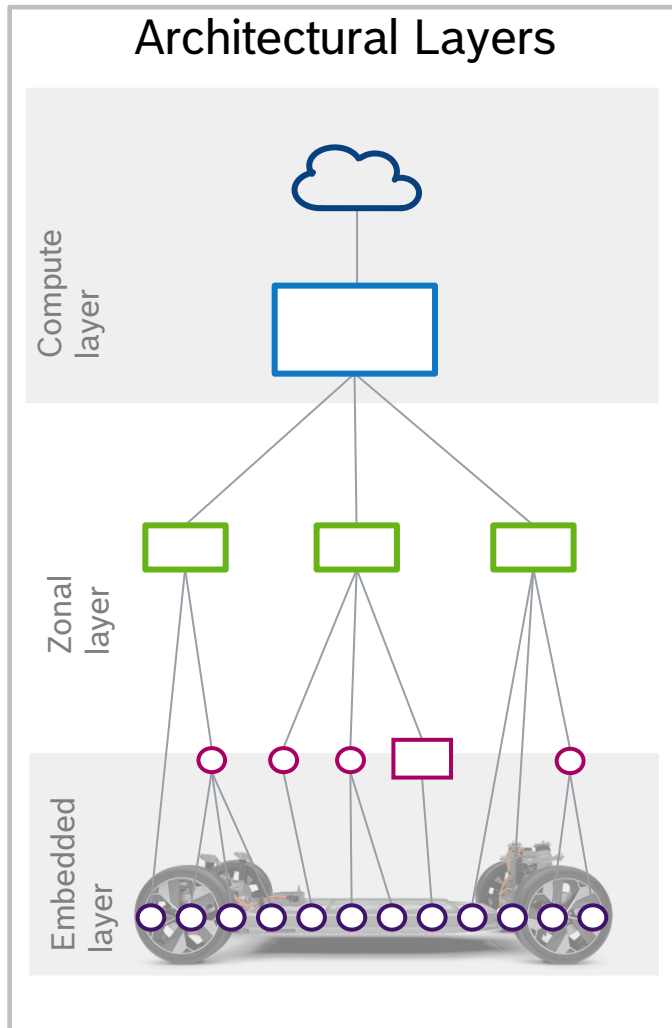

# HW Acceleration / Routing

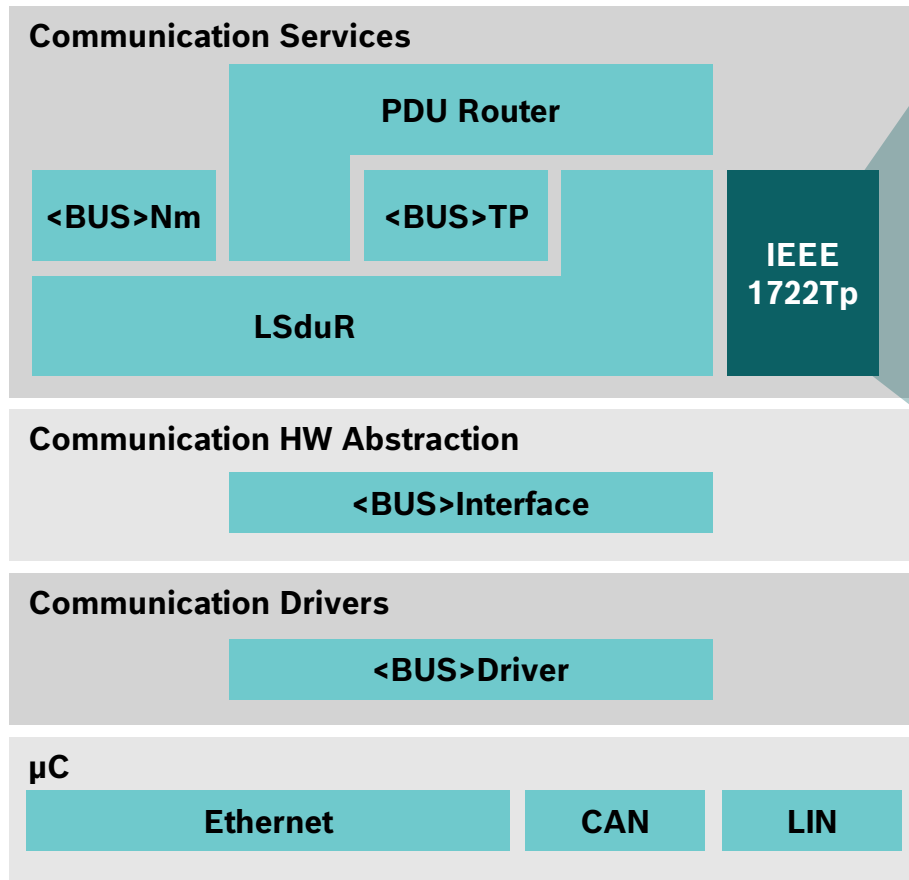

# HW acceleration and 1722 enables QoS in communication

# AUTOSAR and IEEE 1722 – Classic Autosar

## AUTOSAR – New architecture w/integrated 1722 module

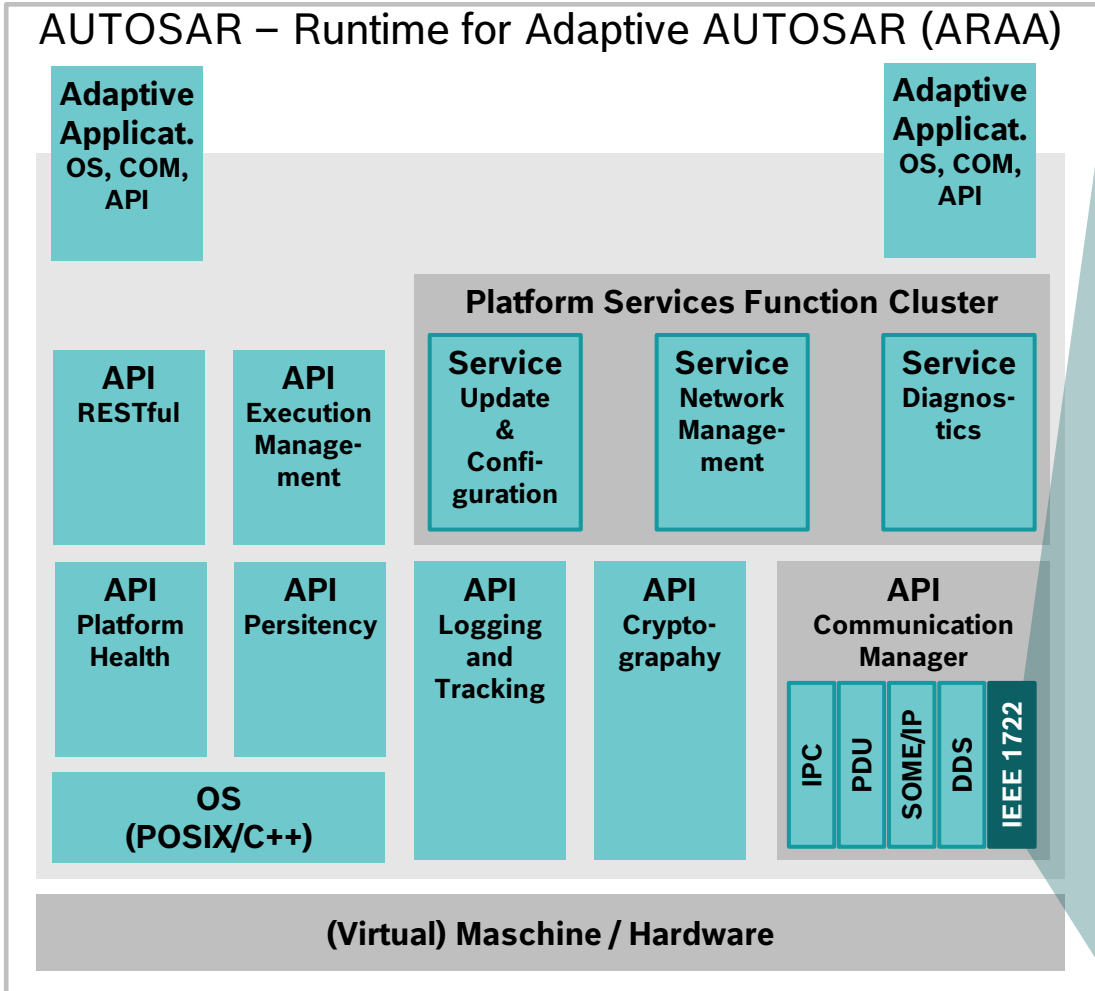

1722 software module (IEEE1722Tp) and model in supports

- Time Reference Plane (Presentation Time, including AVB/TSN mechanism)
- Audio/Video, e.g. IEC 61883/IIDC Format, AVTP Audio Format
- Tunnelling of control data (ACF)
- Clock Reference Format

In addition “Concept 710” introduces a new way of communication in Classic AUTOSAR

- Zero-copy Ethernet driver
- Streams and deterministic communication as a complete system solution

# AUTOSAR and IEEE 1722 – Adaptiv Autosar (target)

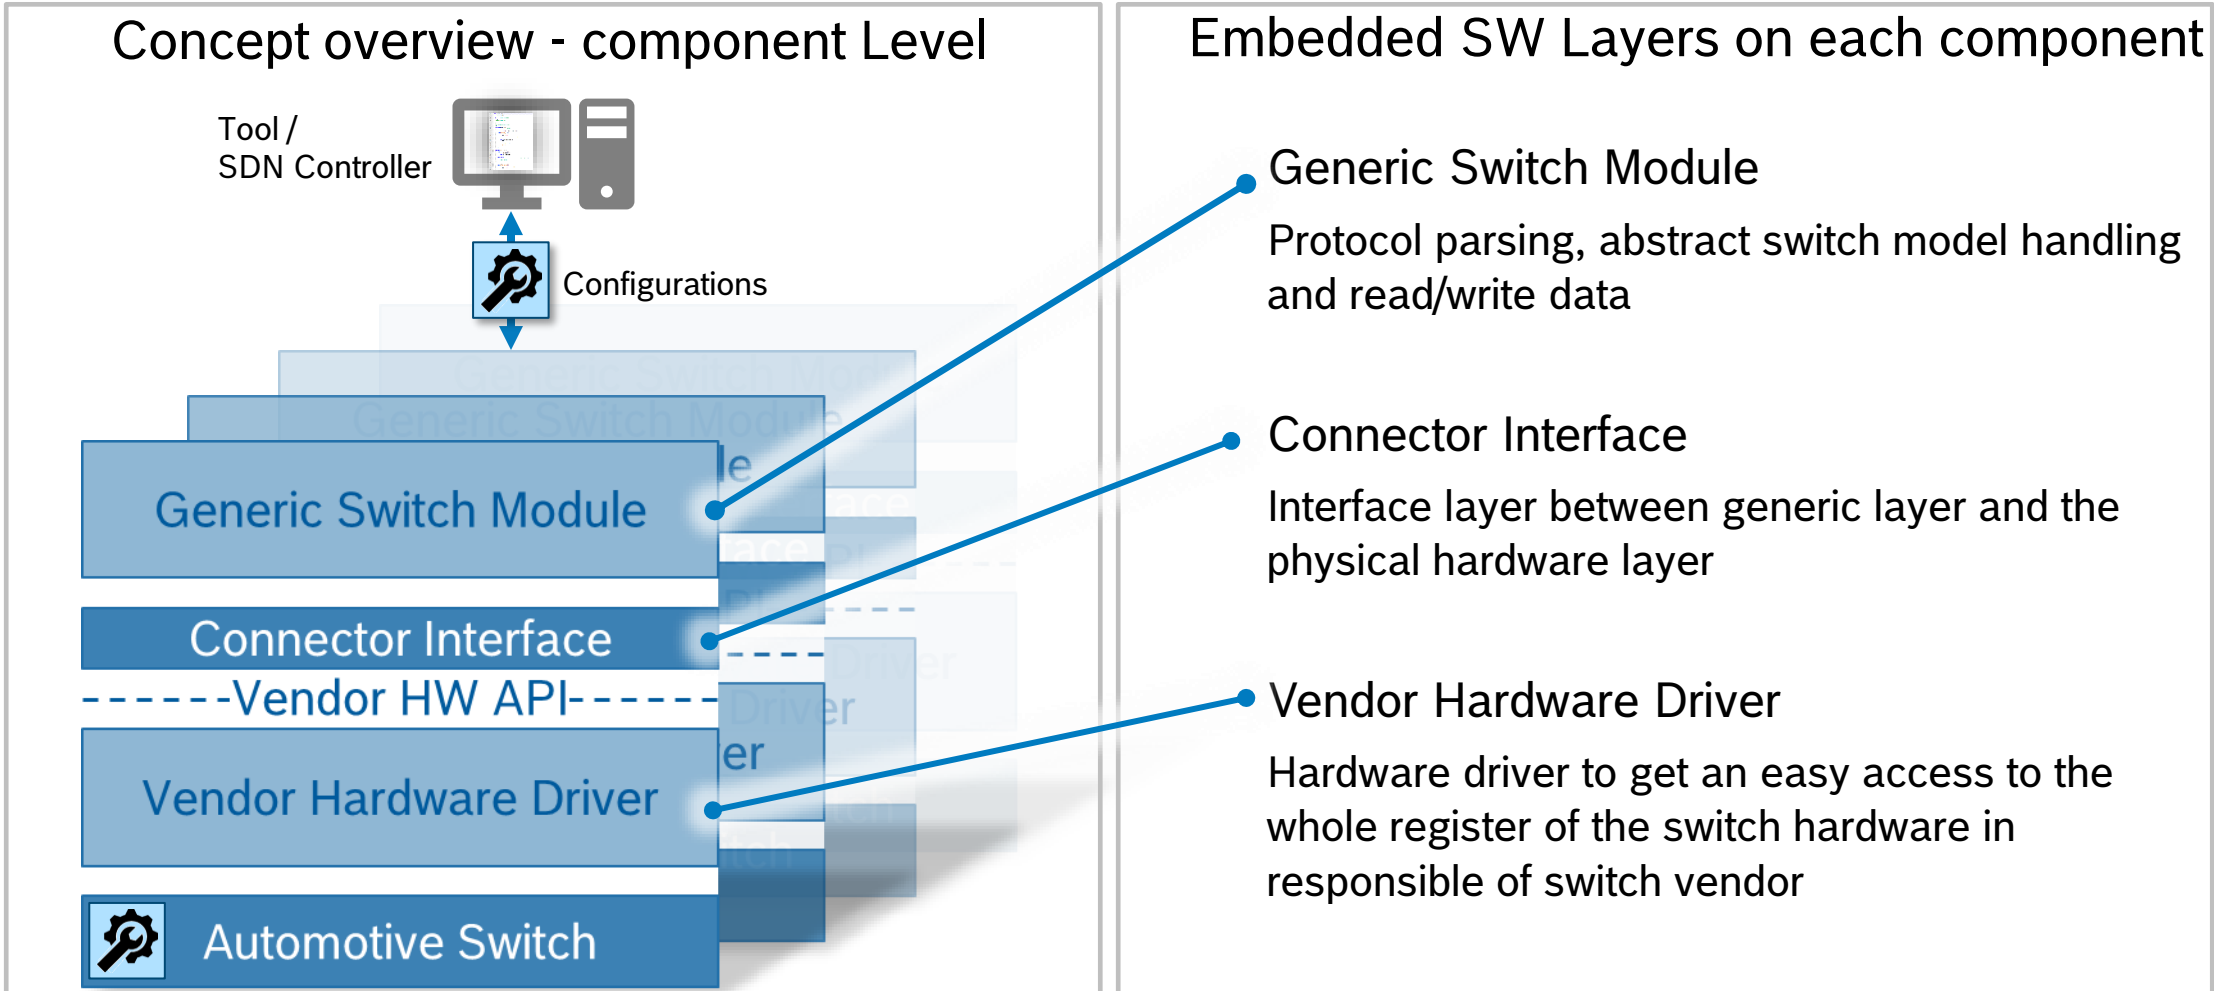

Start a new project or initialize a new part(s) in Concept 710 to define

- IEEE 1722-2016 software module and interfaces to the communication manager for tunnelling of legacy communication
- Based on meta information (e.g. Tspec) a dynamic and static network management configuration for an Ethernet MAC (meta info shall be the same as in CP) in Adaptive AUTOSAR

# Configuration / Flexibility

# Generic software on bridge devices

# Configuration & flexibility, SDN

## System level overview

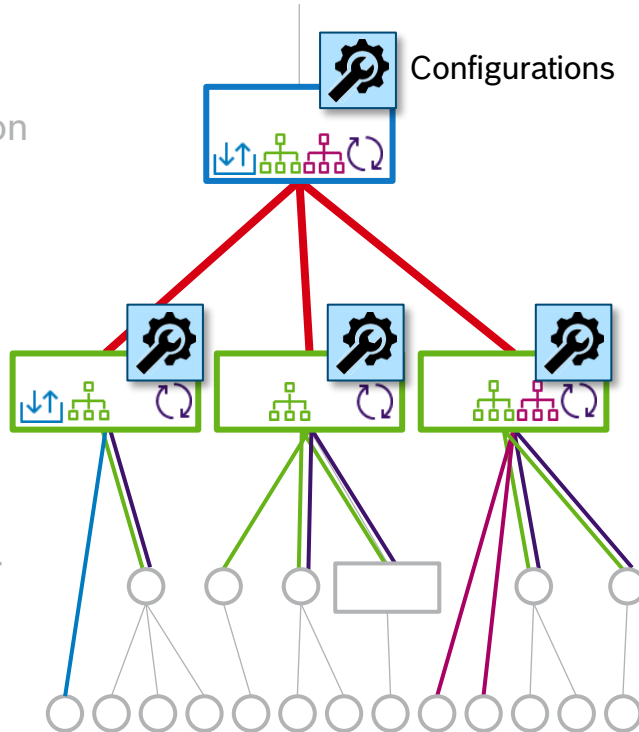

Cloud

Compute layer –  
Vehicle Integration  
Platforms (VIP)

Ethernet  
backbone

Zone layer –  
Zone ECUs

Embedded layer-  
Mechatronics,  
Smart ECUs &  
Sensors,  
Actuators

## Components to enable automotive SdN

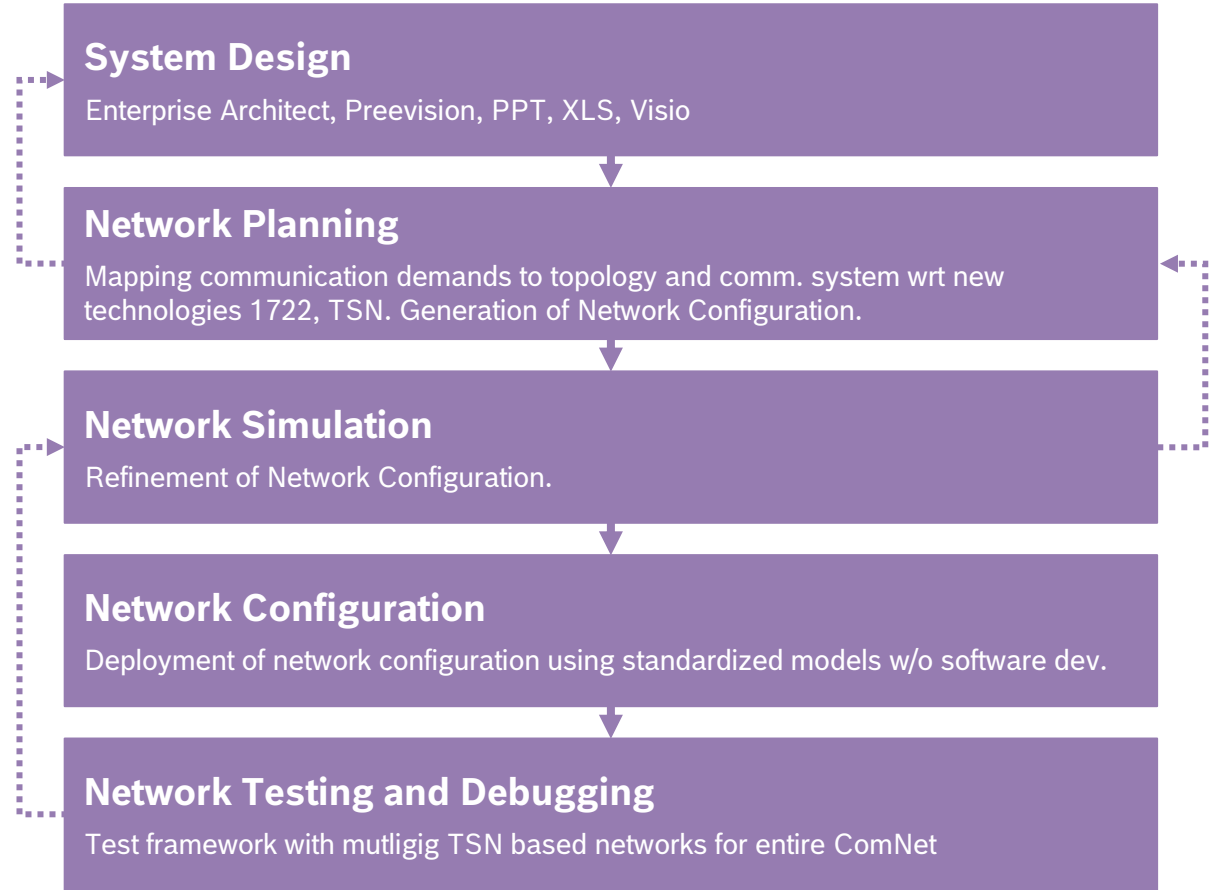

- SdN capable ETH HW
  - Dynamic reconfiguration of COM Net
- Configuration tooling
  - Ethernet bridges and End-stations ( $\mu\text{C}$  /  $\mu\text{P}$ )
- ASW with SdN support
  - Functions with active SdN config requests
- Com Net design and test concept
  - Support of dynamic configuration and test / analyze concept on system level wrt. SdN

# Design and Simulation

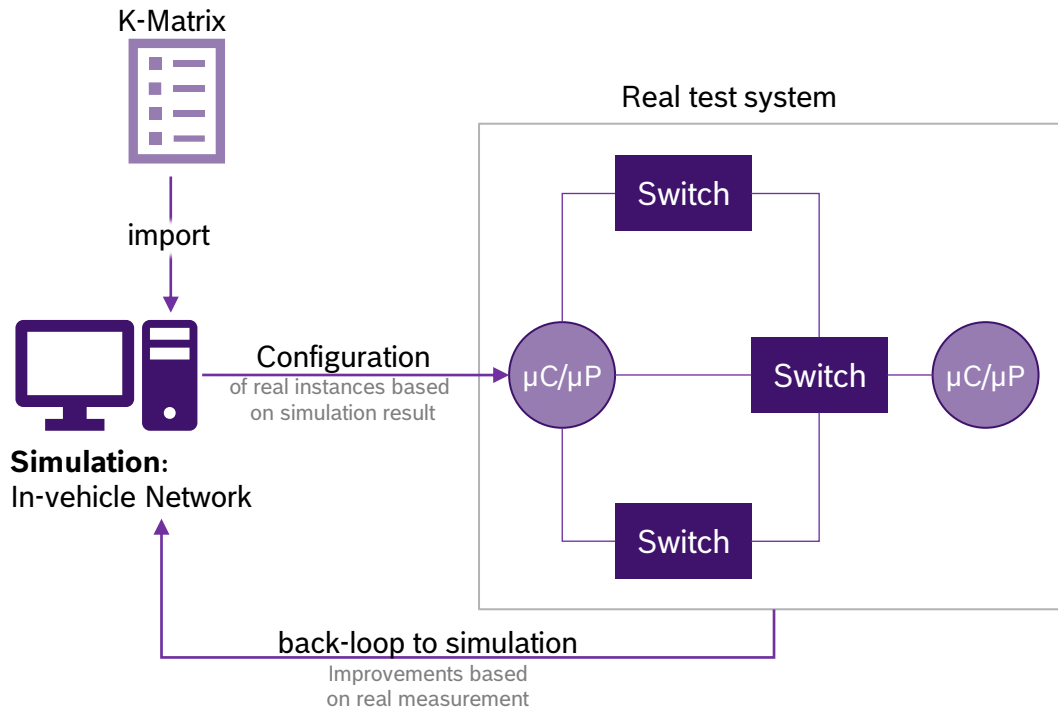

# Design / Simulation

# Hardware-in-the-loop: From simulation to real hardware

## Loop – Design / Simulation – Real world

- Based on the concept of Software-defined networking (SDN), a generic configuration deployment of bridges and end stations is possible
- In combination of in-vehicle network simulation, deploying the results of the simulation (configuration of end-stations, bridges) via SDN mechanism and verifying the real behaviour, an automatic testing would be possible
- Finally, the results of the real hardware measurement can be used to improve the simulation tool

# Wrap Up

## Data and Services

- SdV pushes introduction of centralized architectures
- Functional differentiation requires S2S mapping on “right” layer

## HW Accelerating and Routing

- HW acceleration and 1722 enables QoS in communication
- AUTOSAR classic specifies 1722 with deterministic communication - first release Nov'23
- Target to introduce 1722 with deterministic communication in AUTOSAR adaptive (2025ff)

## Configuration / Flexibility

- SW configuration for automotive Ethernet devices needs to be standardized
- Future COM networks has to be Software defined

## Design and Simulation

- Network simulation required for realize stable and performant COM Net solution
- Closed loop approach between design – simulation and physical set up of COM Net

# ETHERNET & IP @ AUTOMOTIVE TECHNOLOGY DAY

19-20 September 2023 | São Paulo, Brazil
