*Correction Sheet*
**Issued 16 October 2003**

**In Clause 6.1: Overview of Object Management, top of page 71 currently reads**

c) Either the instance attribute's corresponding class attribute is a subscribed attribute

    1)   Of the known class of the object instance, or

    2)   Of the instance attribute overlaps the subscription region set of the instance attribute's corresponding class attribute at the known class of the instance attribute at the subscribing joined federate

it should read as follows:

c) either
    1) The instance attribute's corresponding class attribute is a
    subscribed attribute of the known class of the object instance, or

    2) The instance attribute's corresponding class attribute is a
    subscribed attribute of the known class of the object instance with
    regions, and the update region set of the instance attribute overlaps the
    subscription region set of the instance attribute's corresponding class attribute
    at the known class of the instance attribute at the subscribing joined federate.
