

Limiting our daily sitting/lying to just 23.5 hours: too ambitious?

Karim Khan

Thank you to *BJSM* guest editor Steven Blair¹ and all our January and February authors (<http://bjsm.bmj.com/content/vol43/issue1>; <http://bjsm.bmj.com/content/vol43/issue2>). If we apply Bono's battle cry "There has been a lot of talk, maybe too much talk"...to the subject of physical inactivity, we can now proclaim it's time for action. The January and February *BJSM* issues bring together global authorities and focus on practical steps. Medical clinicians will be interested in the analysis by Erica Frank and colleagues (*see page 124*) of the activity levels of medical students and their propensity to prescribe physical activity (or not!).² Is it time to add a physical activity question to the medical student selection process? Should the Medical College Admission Test ask for a shuttle run/beep test score?

EXERCISE PHYSIOLOGISTS, PHYSIOTHERAPISTS AND FAMILY PHYSICIANS: DOING YOUR PART?

Barry Franklin and colleagues³ make a compelling case for the role of the exercise physiologist in clinical exercise prescription; the clinical exercise physiologist will be a new concept to some readers. Evert Verhagen bats for physical therapists/physiotherapists⁴ and Nefyn Williams shares his wisdom as to how family physicians can instill in patients that "the wise, for cure, on exercise depend".⁵

AN OVERLOOKED RISK FACTOR IN THE "SPORTS MEDICINE WORLD": THE PHYSICAL ENVIRONMENT

The link between the physical environment and inactivity has been largely ignored in the sports medicine literature. Anyone who has tried to "walk" the half-mile (crow flies) between a conference hotel and an American College of Sports Medicine convention centre by climbing

up the freeway embankment, stepping over the steel barriers, dashing hopefully across breaks in eight lanes of Hummers and then navigating a clover-leaf interchange using the global positioning system in the iPhone, knows that the environment has something to do with activity levels. Those of you who took the 4-mile trip by limo to the same destination were probably already convinced. Billie Giles-Corti and Abby King bring a two-nation perspective to the environment's role across the lifespan.⁶ Inconvenient truths for city planners. Larry Frank and colleagues,⁷ including Jim Sallis, report rare original data on the role of food outlet visits in a study of >10 000 participants. *BJSM* is delighted to start to bring these important determinants of health to readers' attention.

MORE INNOVATIONS IN THIS PRACTICAL ISSUE: USING COMPUTER-BASED INTERVENTIONS

Now here's a case of poacher turned gamekeeper! Or is a "jiu-jitsu move" a better analogy? Why not use the scourge of physical inactivity – computers – to promote activity! Bess Marcus, who put Rhode Island back on the world map after Newport lost its claim to the America's Cup competition, shares evidence and makes practical suggestions.⁸ Ready to use. No down time.

AND THE COVER STORY: DON'T TAKE IT SITTING DOWN!

As the late night knife advertisements say: "all this and much, much more!" Physical activity is a legitimate medical therapy; when will we treat it as the magic bullet and polypill it is?⁹ Avoiding inactivity is also crucial! Sedentary behaviour itself is an *independent* risk factor for chronic disease. Epidemiologists Owen, Brown and Bauman¹⁰ provide the steak for *BMJ* cartoonist Malcolm Willett's "sizzle": the cover of this issue. The same authors also review how this field has developed over 50 years. Editorial Board member George Santayana suggested we

accept that paper because "those who cannot remember the past are condemned to repeat it".

So speaking of history (http://www.youtube.com/watch?v=Eih_ybKdVXU), don't forget to check back to the January issue for the supersized version of *BJSM* Physical Activity. Also, you probably missed the December issue when you were busy baking, and wrapping gifts. December's *BJSM* focused on back pain and included Paul Hodges' rare summation of a decade that traverses 130 studies.¹¹ Those three concise pages are compulsory reading – even if you have to sit for a few moments to do it.

Also, please do check out the *BJSM* blog (<http://blogs.bmj.com/BJSM>), keep an eye (ear?) out for our monthly podcasts. They'll be signalled on the home page. But in the meantime, let's all try to limit our lying down and sedentary behaviour to just 23.5 hours per day. Perhaps even to 23 hours a day for the real zealots! Or is that just too high a price for years of improved quality of life?

Competing interests: None.
