

Web services developer - PHP

Status:	<i>Full time, employee</i>	Shift:	First shift (Day)	Job location:	Orlando (Florida)	Reference code:	2WS101010
Company information:							
<p>We are a new, stealth-mode IT venture, founded by a team of serial and highly experienced entrepreneurs. We are committed to the development of a series of original, patent-protected solutions that revolutionize the brand-customer relationship thereby making marketing, advertising and sales strategies and programs more productive. Our focus is on total customer engagement.</p> <p>We are currently seeking the best experts to team-up with us for the successful development of the venture. Thanks to the early stage, the team members will be offered unique career opportunities: thrive excellence, apply own creativity, building-up solutions to new relational concepts, and gradually, but quite quickly, assume management responsibilities within the company. The whole world and different cultures will open-up to you.</p> <p>We work in a fast pace, under pressure, handling multiple tasks, concerned about details and individual reliability, BUT we care that you enjoy your work, as well as your private life.</p> <p>Human values are as important as professional skills in our company. Our management belief: to provide to our team the most rewarding working environment of their whole professional life!</p>							
Position description:							
<p>The Web services developer will take in charge the following responsibilities, as short/mid-term objectives:</p> <ul style="list-style-type: none"> • provide key expertise in detailed specifications elaboration, planning, and hands-on software development for all “code-behind” and system oriented resources processes, as well as those that enable the core engines of our products • design and implement an object oriented web-based architecture on 3 tiers, with PHP emphasis on logic and database processes • provide team’s operational main expertise for programs’ testing and debugging <p>This is an ideal professional career path to excellence, breaking ground innovation and to assuming higher level responsibilities within the Company.</p>							
Reporting structure:							
The Server applications developer will report to the CTO.							
Required knowledge, skills and education:							
<ul style="list-style-type: none"> • minimum 5 years relevant experience in building intensive transactional systems with strong user interaction in PHP • excellent Open Source environment programming skills: Linux (kernel, task scheduler, buffer management, memory share, semaphores, etc); PHP and Zend framework; object oriented design experience; experience with multi-threaded programming; network (TCP/UDP/IP) and inter-process communication • experience with database tier (MySQL) • able to rapidly adapt in programming using all PHP technology evolutions components • knowledge of XML technology • at-ease using the Eclipse IDE and software development management under Linux/Ubuntu • strong organizational and troubleshooting skills • excellent communication skills – forward thinker and challenged by innovation <p>Programming experience in a mobile services environment would be a plus. A higher degree in Computer Science/Information Technology is desirable, but proven experience, technology passion and innovation drive are key in our search.</p>							
Company benefits:							
We offer a comprehensive compensation and benefits package, including starter stock.
