

Arc Flash Hazards and Mitigation Techniques

Hosted by the IEEE Orlando PES/PELS/IAS

Dates & Time: Tuesday April 21th at 6pm

In this session you will learn how an Arc Flash Assessment identifies issues that may lead to an arc flash or blast. Arc Flash Assessment is the path to risk reduction for electricians and electrical technicians. To help reduce the risk of an arc flash or blast, an Arc Flash Assessment includes:

- Electrical power systems analysis
- Short circuit current analysis
- Over current protective device coordination analysis
- Determine PPE to be used in Arc Flash Boundary

Arch Flash mitigation techniques will also be discussed.

Locations:

Located just off SR 436
OUC Pershing Facility
6003 Pershing Ave
Orlando 32822.

Please RSVP to khaldin@cdmsmith.com if you plan to attend by no later than Friday March 27th, 2015.
