Subject: RE: Communication & Information Policy Committee Report

Jim,

A meeting of the CCIP was held on October 21, 2003. The status of CCIP activities were:

- a. Broadband Deployment: Alan McAdams, the committee chairman, was working on a paper entitled "The Case for End-User-Ownership of Advanced Fiber Networks". He will publish it to a web site for review and comments by the full Committee.
- b. Spectrum Management policy: CCIP published a position statement on Cognitive Radio, which is attached.
- c. Cybersecurity: There was no report.
- d. SPAM: There was no report.
- e. Nanotechnology: There was no report. (The primary responsibility was given to the R&D Committee; so, CCIP now just monitors and participates in their discussions.)
- f. Internet Taxation: There was no report.
- g. Voting Technology: The committee chairman reported that interest has increased from the technology and other sectors and there are many issues still to be resolved from the first draft balloting in the standards committee.
- h. Internet Access: There was no report.
- i. Standards & Interoperability: There was no report.
- j. Wireless (Cellular and PCS): There was no report.
- k. Universal Identifier: There was no report
- l. Quality of Service Provision and Regulation: There was no report.

CCIP held a meeting on April 19, 2004 where Luke Maki, the Chair, confirmed the committee leaders. The status of CCIP activities were:

- a. Broadband Deployment: The paper entitled "The Case for End-User-Ownership of Advanced Fiber Networks" was still being reviewed
- b. Spectrum Management policy: CCIP published a position statement on Cognitive Radio, which is attached.
- c. Cybersecurity: There was no report.
- d. SPAM: There was no report.
- e. Nanotechnology: There was no report.
- f. Internet Taxation: There was no report.
- g. Voting Technology: There was no report.
- h. Internet Access: There was no report.
- i. Standards & Interoperability: There was no report.
- j. Wireless (Cellular and PCS): There was no report.
- k. Universal Identifier: A draft position statement was circulated for review.
- l. Quality of Service Provision and Regulation: There was no report.
- m. Voice over IP: FCC NPRM scope includes, but goes beyond, just VoIP, and includes IP 'Services' and 'Applications'. It is very broad set of questions. The CCIP formed a subcommittee to draft a response to FCC.

V/R
Mike
