

**The ER&P sub committee requests that minutes be submitted for posting on the website within 2 weeks of the meeting. To facilitate this, we request that those making reports to this subcommittee provide a copy to Doug Edwards within 1 week. We also thank those that have already submitted their reports.**

**The RODE subcommittee will determine whether to request a PAR to develop a standard for switches that meet underground standards to be used for overhead use standards with proper modifications.**

**The ADSCOM committee was reminded of the importance of reviewing papers. This will be discussed under new business.**

**The ADSCOM committee is soliciting input for an article in Power & Energy on the Switchgear Committee. Essentially this is to advertise what we do and encourage new memberships. Please provide input to me for this subcommittee and to the appropriate chair for other subcommittees. They would like to have the input within the next 2 weeks.**

**Common Clauses is looking for a new chair.**

**The ADSCOM committee voted to recommend to the switchgear committee that we pursue the dual logo in principle based on a flow chart of activities that retains control of an IEEE initiated standard within the IEEE with input from an IEC maintenance team.**

**STLNA requested that they be able to work on a standard that would include preconditioning vacuum interrupters to be included in common clauses.**

**A recommendation will be presented to the main committee that we do not provide normative references to IEC documents, when a reference exists within our own documents. Such a reference exists on the current draft of C37.016. There is no problem with other references.**
