

### **C37.13.1 Standard for Definite Purpose Switching Devices Used in Metal Enclosed LV Power Circuit Breaker Switchgear**

WG for PC37.13.1 met on September 21, 2004 in Tucson, Arizona with seven out of ten members and eleven guests. Robert Puckett, unofficial WG chair, led the meeting.

IEEE position on patent disclosure and license agreements was reviewed.

Comments on Draft 11, issued after the May 2004 meeting, resulted in additional changes and raised several questions for discussion. Draft 12, issued prior to the September meeting, was reviewed. Major items of Draft 12 discussions included acceptance of Table 2 with the addition of temperature rise limitations for fuse connections, clarification of design and production tests, and continuous current rating of DPS devices. Draft 13 was developed during the meeting and the WG members present know of no other issues with the document. Draft 13 will be issued for ballot as soon as the WG chair is finalized.
