

## **Report to IEEE SWC, Main committee**

### **Liaison report from STLNA, Galveston, Texas, 11 May 2006**

#### **1. Meeting**

STLNA met on tuesday night, 9 may, from 18h to 20h.

#### **2. Liaison highlights**

- Work is going on to get a round-robin high current measurement inter laboratory comparison. This will help the laboratories to guarantee you, our clients, that we provide correct and precise high current measurements.
- STLNA is contributing to the preparation of STL guides in order to assure you correct and uniform interpretation of standards test procedures. We are on the way to finalise guides on fuse testings.
