

**Minutes of the meeting Oct 3, from 2:00 PM to 5: 25 PM
IEEE PC37.06 WG Meeting**

IEEE PC37.06/D7.8 Draft: “Standard AC High-Voltage Circuit Breakers Rated on a Symmetrical Current Basis – Preferred Ratings and Related Required Capabilities for Voltages above 1000 Volts”.

Attendees: 27 members and 16 guests.

Minutes of previous meeting were approved as recorded.

The Chair encouraged all WG members to participate in development of this standard between the Spring and Fall meetings so that standards can be completed in a time frame similar to that accomplished by IEC.

The PAR for this project expired in 2007, as per Matt Ceglia.

Comments from WG members were discussed and implemented into the draft 7.8 including:

1. Find a compromise to Capacitance Switching Tables 8 & 14. These tables were discussed in CIGRE, and with various members of the working groups during the last two months. Finally between at least 4 members, we find a way to have capacitance switching tables acceptable to everybody. (discussions were for about 3 hours).
2. Various items of Tables 4 "Preferred Ratings capacitance switching were indoor breakers" will also be modified Values for S1 and S2 should be the same.
3. Other items suggested by Ted Olsen and Denis Dufournet will be modified.

The draft PC37.06D7.8c will be updated and re-balloted.

Respectfully submitted.

WG Revision of C37.06 – AC High-Voltage Circuit Breakers Rated on a Symmetrical Current Basis – Preferred Ratings and Related Required Capabilities. Meeting October 3, 2006, Milwaukee, WI
