**REPORT of  
C37.100.1 WORKING GROUP  
ADSCOM SUBCOMMITTEE  
(St. Pete Beach, FL; May 8, 2007)**

The Working Group for C37.100.1 *Common Requirements for High Voltage Power Switchgear* completed its work in March. No meeting was held at St. Pete Beach this year.

The proposed new standard was submitted to RevCom and approved by that committee on May 1, 2007. The IEEE Standards Board will review the recommendation of RevCom at its June meeting and if ratified the documents will then go the IEEE Editorial Department.

Final publication is not likely until before December 2007.

In the meantime, copies of the final balloted version, draft 9, will be made available to Sub Committee and Working Group Chairperson for use in adopting the standard as a normative reference in new relevant equipment standards or those under revision.

Larry Farr and David Stone have offered their services to review the work of the various working groups adopting this standard to answer questions and promote a unified approach to its integration into the IEEE Switchgear Standards.

David T. Stone, Working Group Chairman, C37.100.1  
ADSCOM Subcommittee
