

# **MINUTES FOR Wind Loading Working Group**

Asheville, NC  
May 5, 2009

The WG approved the minutes from the previous meeting in Calgary, AB from October 2008.

The committee reviewed the March 2008 Patent slides.

The scope of the approved PAR was reviewed.

The calculations portion of the guide was reviewed. Because this is a guide and not a standard, it was decided that height for which a wind force is calculated would be variable. The variability of the factors will require tables to be used. Jim Houston will contact Mathew Ceglia to determine if tables from NESC can be used and how to reference NESC in the standard.

The committee decided to include information on switch controls that would help with the understanding with apply the guide. Ken Harless is to provide diagrams at the next meeting.

The schedule for completing the guide was discussed.

Sample calculation will be included as an annex.

Jim Houston will move the documents that the committee is currently working with into the IEEE MS template.

The meeting was adjourned.
