

Minutes of the meeting held in Denver (CO), on September 28, 2009

The TF Revision/amendment of C37.012 met in the afternoon of September 28, 2009 in Denver, CO, with 14 potential members and 28 guests attending.

The following agenda was used:

- Introduction of members and guests
- Patent slides
- Discussion of the future of C37.012
- Any other business

The need to amend C37.012 was identified. In the preparation of the current version of C37.012 class C0 was used to cover the general purpose circuit breakers. Since C37.04a did not mention this class, it was removed from the document. Class C0 appears in C37.09a and the TF discussion was mainly focused on whether or not this class should be introduced in C37.012. Most of the participants agreed that class C0 needs to be introduced, but only after C37.04 has been updated to include class C0.

The TF proposes to reaffirm C37.012 and start revision/amending after C37.04 has been revised. HVCB will have to decide on the inclusion of class C0 in C37.04.

Anne Bosma

Chair TF Revision/amendment of IEEE C37.012
