### **Main Issues:**

Dual logo. No negative votes from IEC and the new work item is now approved. Six specialists have been appointed to the WG from IEC. Comments were received from a number of countries and these were reviewed in the meeting.

The document is now in IEC format and Task Forces were set up which will look at sections of the document over the next few months with a target to have a complete revised document ready for first ballot in February. As this is a dual logo WG it is intended to have one meeting per year in Europe, and two meetings per year in the USA (at the switchgear committee meetings). The first European meeting will be held in January to review the document before it goes out for first ballot/CD.

The schedule is designed to have received comments both from IEEE ballot and IEC CD in time for these to be reviewed at the Spring switchgear committee meeting. After which depending on the level of comments we will go to a final ballot/CDV.
