Re: [IEEE P802.15-15-07-0860-02-004d-Call-for-Proposal]

Abstract: [To enhance world wide commonality, BPSK-DSSS as a baseline modulation scheme with additional AFA(Adaptive Frequency Agility) functionalities, and Reliable & Simple OFDM option for future provisioning of IEEE802.15.4 PHY, are considered.]

Purpose: [This submission is a proposal of Japanese sub-GHz PHY responding to CFP of IEEE802.15 TG-4d.]

Re-capturing PAR & 5C and Introduction

[Excerpt from PAR & 5C]

This (950MHz PHY amendment) makes it appropriate for many applications for which 2.4GHz is not appropriate, due to improved range and reliability.

Currently 802.15.4 supports 906-928 MHz band in the US and the 868MHz band in Europe. This amendment will allow for similar operation in the sub 1GHz band in Japan for applications benefiting from better propagation characteristics – such as automatic metering, industrial control and monitoring.

Japan is a large and important market which makes undertaking a project like this worthwhile.

[Introduction]

The purpose of IEEE802.15 TG4d is to provide Japanese 950MHz PHY in addition to existing US and Europe sub-GHz PHY, so that such the applications utilizing the propagation characteristics of Sub-GHz are facilitated widely around the world wide market.

Therefore, this proposal was devised through both the world wide commonality enhancements and the regional requirements such as the coexistence with passive RFID systems, and furthermore novel PHY technology in IEEE802.15.4 as the future provisioning for adaptive frequency agility.

(1) As per Japanese regulatory rule, 200kHz sub-channelization and its bundled usage are defined so that the designated sub-channels for Miller sub-carrier type RFID reader/writer are aligned centre on each 600kHz channels.

(2) To avoid interference with other systems sharing same frequency band and to increase reliability and robustness, TX side frequency band selection and sequencing are supported by the extension of PHR through which the channel sequence information are provided at RX PHY.

(3) For future provisioning, simultaneous multiple bands reception using Simple, Adaptive and Reliable OFDM scheme may be included.

Channel Plan & Sub-channels

As RFID system are based on the sub-channel selection function using LBT, WPAN also is to be able to search and select the unused bonded sub-channels which are up to 600kHz maximum (three sub-channels of 200kHz), i.e., a sort of adaptive frequency agility.

DSSS-BPSK as a baseline modulation scheme

Band width : 600KHz
→ Identical as current European 868-868.6MHz PHY

Frequency : 950.8MHz-955.8MHz
→ Frequency accuracy of ± 20ppm

Chip Rate : 300kcps, 15-chip PRBS
→ Current Base Line scheme of sub-GHz PHY is maintained

Data rate : 20kbps
→ To achieve better robustness than 2.4GHz PHY.

Pulse Shaping : Raised Cosine Filter with 100% of Excess Band.
→ Identical as current European 868-868.6MHz PHY

TX Power : 0dBm (3dBmEIRP) for Ch.1-8
or 10dBm (13dBmEIRP) for Ch.9-10
