5.8.4 CSK constellation overview

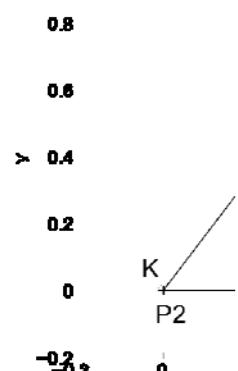

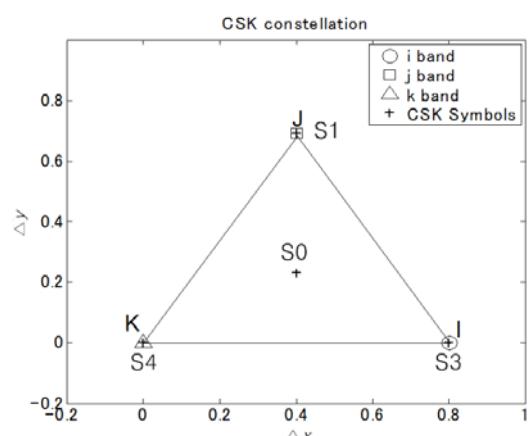

The CSK signal is generated by using 3 color light sources out of the 7 color bands that are defined in 5.1.1. The 3 vertices of CSK constellation triangle are decided by the center wave length of the 3 color bands on xy_color coordinates. It is possible that some of the optical sources would have a spectral peak at a different frequency than the center of the bandplan. It is also possible that the spectrum of the optical source would be distributed among over multiple frequency bands. Implementers of CSK systems can select the color band based on the center wave length of the actual optical source. Table 29 shows the xy color coordinates values assuming the optical source is chosen with the spectral peak occurring at the center of each of the 7 color bands. The color calibration function in 5.8.5 can compensate color coordinate errors caused by the optical source characteristics and cancel any interference between the 3 colors.

Figure 38 shows the center of color bands of Table 29 on xy color coordinates.

5.8.4.1 CSK constellation design rules

5.8.4.1 Design rule for 4-CSK

4-CSK symbol points are defined by the design rule in Figure 39. Points I, J and K show the center of the 3 color bands on xy color coordinates in Table 29. In figure 39, x-axis and y-axis are the relative value. S0 to S3 are 4 symbol points of 4-CSK. S1, S2 and S3 are 3 vertices of the triangle IJK. S0 is the centroid of the triangle IJK. The absolute values for 4-CSK for multiple combinations of the optical sources assuming the spectral peak of the optical source is at the center of the bandplan can be obtained in [xx].

서식 있음: 글꼴: 10 pt

Figure 39 Symbol points allocation design rule for 4-CSK

5.8.4.1.2 Design rule for 8-CSK

8-CSK symbol points are defined by the design rule in Figure 40. Points I, J and K show the center of the 3 color bands on xy color coordinates in Table 29. S₀ to S₇ are 8 symbol points of 8-CSK. S₀, S₄ and S₇ are 3 vertices of the triangle IJK. S₁ and S₂ are points that divide side JK and side JI in the ratio 1:2. Point B and C are midpoints of the line JI and line JK. S₆ is a midpoint of the line KI. Point A is the centroid of the triangle B-S₆-I. Point D is the centroid of the triangle C-K-S₆. S₃ is a point that divides line AB in the ratio 1:2. S₅ is a point that divides line DC in the ratio 1:2. The absolute values for 8-CSK for multiple combinations of the optical sources assuming the spectral peak of the optical source is at the center of the bandplan can be obtained in [xx].

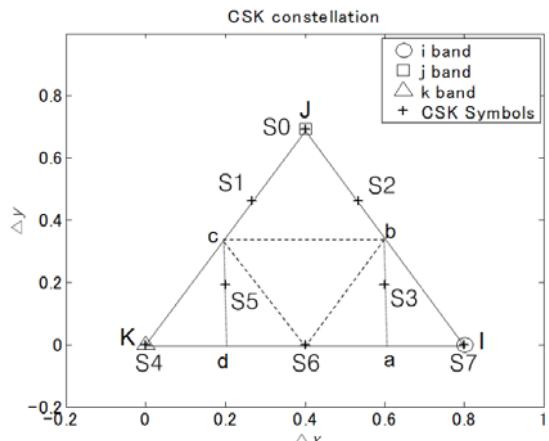

Figure 40 Symbol points allocation design rule for 8-CSK

5.8.4.1.3 Design rule for 16-CSK

16-CSK symbol points are defined by the design rule in Figure 41. Points I, J and K show the center of the 3 color bands on xy color coordinates in Table 29. S₀ to S₁₅ are 16 symbol points of 16-CSK. S₅, S₁₀ and S₁₅ are 3 vertices of the triangle IJK. S₂ and S₈ are points that divide side JK in one third. S₃ and S₁₂ are points that divide side JI in one third. S₁₁ and S₁₄ are points that divide side KI in one third. S₀ is the centroid of the triangle IJK. S₁, S₄, S₆, S₇, S₉ and S₁₃ are the centroids of each of the smaller triangles. The absolute values for 16-CSK for multiple combinations of the optical sources assuming the spectral peak of the optical source is at the center of the bandplan can be obtained in [xx].

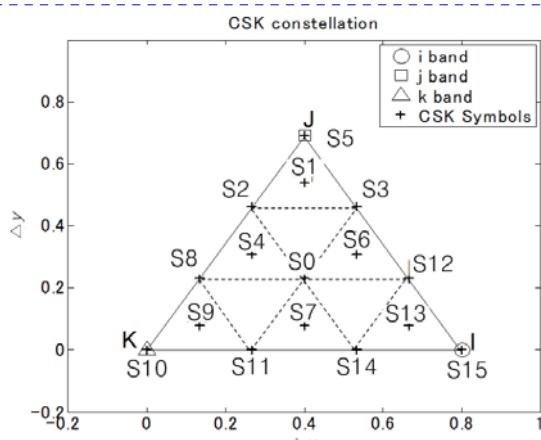

Figure 41 Symbol points allocation design rule for 16-CSK

5.8.4.2 Data mapping for CSK

4-CSK data mapping is shown in Figure 42. Two bits are assigned per one symbol.

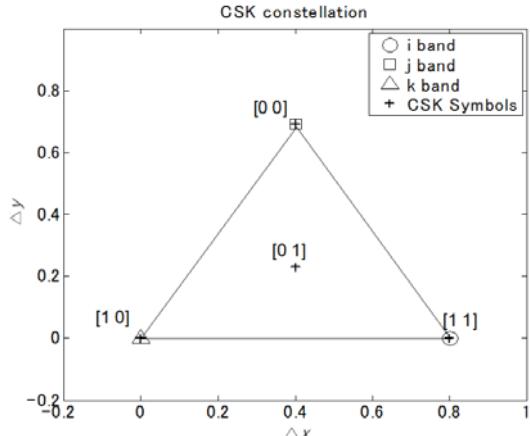

Figure 42 Data mapping for 4-CSK

8-CSK data mapping is shown in Figure 43. Three bits are assigned per one symbol.

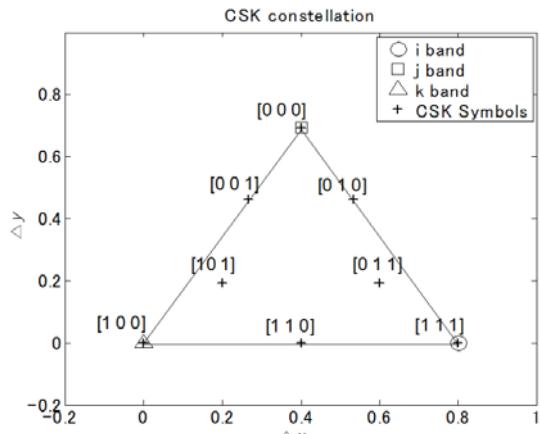

Figure 43 Data mapping for 8-CSK

16-CSK data mapping is shown in Figure 44. Four bits are assigned per one symbol.
