

IEEE 802 Emergency Services ECSG

DCN: es-ecsg-09-0006-00

Title: **ES Briefing to 802 Plenary**

Date Submitted: Nov. 16, 2009

Presented at: Atlanta 802 Plenary

Authors/Source: Geoff Thompson, Interdigital

Abstract: Hi level status preso. to 802 Plenary

Presentation release statements

This document has been prepared to assist the IEEE 802 ES-ECSG. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.

The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802 or its subgroups.

The contributor is familiar with IEEE patent policy, as stated in [Section 6 of the IEEE-SA Standards Board bylaws](http://standards.ieee.org/guides/bylaws/sect6-7.html#6)

802 Emergency Services

Executive Committee Study Group

Geoff Thompson, Chair

Plenary Report, November 2009

Meeting T/W/Th this week in

Vinings Conference Room

(Lowest level of the hotel)

Group was chartered at the end of the July meeting

As the successor to ES in 802.1

(802.21 Proposed PAR for ES was withdrawn)

Restricting Scope

We intend to confine the first project to:

Citizen – to – Authority (E911) communications

Focus on IP based “calls”

Drafted proposed new Scope

Scope of Proposed Standard:

- This standard will define a mechanism that supports the need for consistent data that is specifically required for citizen-to-authority emergency services packet data encoded session initiation request and support compliance within IEEE 802 to applicable civil authority requirements.
- A new MAC or PHY is outside the scope of this effort.

Drafted proposed new Purpose

- The purpose of this standard is to support compliance to civil authority requirements complementary to IETF ECRIT specifications for citizen to authority emergency services functionality. This standard intends to encompass voice, data and multi-media requests across IEEE 802 using a new Layer 2 entity and associated behaviors and provide a uniform Structure of Management Information (SMI) for transferring required data for emergency services requests.

Drafted/Revised other PAR text (1)

5.5 Need for the Project:

VoIP emergency calls are less effective than those provided by traditional wireline and contemporary cellular networks.

Data encoded emergency calls across IEEE 802 technologies need to support regulatory requirements to assure successful completion of these calls to the correct Public Service Access Point (PSAP), and to do so utilizing the existing set of IEEE 802 PHYs and MACs.

Drafted/Revised other PAR text (2)

5.6 Stakeholders for the Standard:

Emergency Service authorities and government agencies (e.g. NENA, and the equivalent bodies in ROW); IETF; other telecom, cellular and emergency services standards development organizations (e.g. IETF, 3GPP, ETSI EMTEL). Within IEEE 802, the expected stake holders will be 802.1, 802.3, 802.11, 802.16, 802.20 and 802.22 as potential layer 2 alternatives and 802.21 for related handover development.

Reworked 5 Criteria

- During the meeting we thought we were done.
- Reviewing afterward, I think we need to refine them some more.
- Therefore, I won't go through them here.
- The current state is posted on the Mentor web site as “Agenda ~~~0924~~.pdf”
- See last slide for URL

Plans

Next meetings

- Atlanta Plenary

We will meet mid-week.

(Major activity will be refining PAR & 5C and pitching project to the other WGs)

- January Interim

Will be co-located with 802.16 et al at La Jolla (San Diego), CA, Jan 11 – 14, 2010
(Interim sponsor is IEEE 802)

- Get PAR approved no later than March.
